a UNITED STATES OF AMERICA,
Western District of Kentucky,
Sixth Judicial Circuit, ss:

To Cumberland Telephone & Telegraph Company, Greeting:

You are hereby cited and admonished to be and appear at a session of the Supreme Court of the United States to be holden at the City of Washington, D. C., on the 12th day of August next, pursuant to an appeal allowed by the Circuit Court of the United States for the Western District of Kentucky, wherein City of Louisville, Kentucky, is appellant and you are appellee, to show cause, if any there be, why the decree rendered against the said appellant, as in the said appeal mentioned, should not be corrected, and why speedy justice should not be done to the parties in that behalf.

Witness the Honorable Edward D. White, Chief-Justice of the United States, this 17th day of July, in the year of our Lord one thousand nine hundred and eleven, and of the Independence of the United States of America the one hundred and thirty-sixth.

[Seal 6th Circuit Court, Wes. Dist. Ky., U. S. of America.]

WALTER EVANS, *Judge.*

Service of the within citation is hereby acknowledged this 7th day of August, 1911.

W. L. GRANBERY,
ALEX. P. HUMPHREY,
W. PRATT DALE,
Solicitors for Appellee.

1 Proceedings of the Circuit Court of the United States for the Western District of Kentucky, at a regular term begun and held at the Federal Court Hall, in the City of Louisville, on Monday, March 13th, 1911.

Present: Honorable Walter Evans, sitting as Circuit Judge.

CUMBERLAND TELEPHONE & TELEGRAPH COMPANY, Complainant,
vs.
THE CITY OF LOUISVILLE, KENTUCKY, Defendant.

Be it remembered that heretofore, to-wit, on the 8th day of March, 1909, came the complainant by Wm. L. Granbery and Fairleigh, Straus & Fairleigh, its counsel, and filed in the Clerk's office of our said Court its bill of complaint against the above named defendant.

The bill of complaint above referred to is as follows:

2 UNITED STATES OF AMERICA:

In the United States Circuit Court for the Western District of Kentucky, at Louisville.

In Equity.

CUMBERLAND TELEPHONE & TELEGRAPH COMPANY
v.
THE CITY OF LOUISVILLE, KENTUCKY.

To the Honorable the Judges of the Circuit Court of the United States in and for the Western District of Kentucky, sitting at Louisville:

The Cumberland Telephone & Telegraph Company, a corporation organized under and pursuant to the laws of the Commonwealth of Kentucky, and having its principal place of business in the city of Louisville, in said State, brings this, its bill of complaint, against the city of Louisville, Kentucky, a municipal corporation created and existing under and pursuant to the laws of the Commonwealth of Kentucky; and,

I.

Thereupon your orator complains and says that on the 8th day of June, 1883, there was duly incorporated under the laws of the Commonwealth of Kentucky a corporation known as the "Cumberland Telephone & Telegraph Company"; that thereafter its charter
3 was amended on December 21, 1883, by increasing its capital stock, and thereafter, on the 14th day of May, 1889, its charter was again amended, and on February 3, 1896, it duly and legally accepted the provisions of the present Constitution of the Commonwealth of Kentucky.

On the 8th day of June, 1883, there was incorporated under the laws of the Commonwealth of Kentucky a corporation called the "Great Southern Telephone & Telegraph Company," which, on August 16, 1897, duly and legally accepted the provisions of the present Constitution of the Commonwealth of Kentucky; and thereafter, on the 4th day of March, 1898, pursuant to the laws of the Commonwealth of Kentucky, said two corporations were duly consolidated under the name of the "Cumberland Telephone & Telegraph Company."

By an Act of the General Assembly of the Commonwealth of Kentucky, approved April 3, 1886, there was created a corporation under the name of "The Ohio Valley Telephone Company," and on January 22, 1900, The Ohio Valley Telephone Company duly and legally accepted the provisions of the present Constitution of the Commonwealth of Kentucky, known as the Constitution of 1891; and thereafter, on January 27, 1900, said The Ohio Valley Telephone Company and the Cumberland Telephone & Telegraph Company were duly and legally consolidated under the name of the "Cumberland Telephone & Telegraph Company." Said consoli-

dated corporation had a capital stock fixed in said Articles of Consolidation at six millions of dollars, and by amendment duly made and filed on January 9, 1903, its capital stock was increased to twenty millions of dollars, and thereafter, to-wit, on the 26th day of September, 1907, its charter was further amended by increasing its capital stock to twenty million, two hundred thousand dollars, and changing its legal domicile from Hopkinsville, Christian County, Kentucky, to Louisville, Jefferson County, Kentucky.

A copy of the charters of the original Cumberland Telephone & Telegraph Company, the Great Southern Telephone & Telegraph Company, and The Ohio Valley Telephone Company, together with the various amendments, and the acceptances of the present Constitution of the Commonwealth of Kentucky, is hereto attached as Exhibit No. 1 hereto, and made a part hereof, but need not be copied in the issuance of process.

4

II.

The charter of The Ohio Valley Telephone Company, by special act of the General Assembly of the Commonwealth of Kentucky, provides in Section five that:

"The said Company may construct, equip and maintain said telephone systems and exchanges, and erect poles and string wires thereon, and operate its telephone lines over, along, or under any highway, street, or alley in the City of Louisville, with and by the consent of the General Council of said city; and it may purchase or lease from any corporation created under the laws of this Commonwealth, on such terms as may be agreed upon, any telephone system or exchange, its poles, wires, apparatus, contracts, licenses, patents, or interests therein, equipments, rights of way, easements and servitudes, in highways, streets and alleys in the City of Louisville, together with all of its properties; and when purchased or leased, shall have the power to maintain and operate the same along, over, or under the highways, streets and alleys in the said City of Louisville; provided, however, that such telephone poles, lines and systems have heretofore been granted the right of way or easements in the highways, streets and alleys in the said City of Louisville by the General Council thereof. And the said Company may also construct, equip and maintain telephone lines along, over, or under the highways, streets, and alleys, and across any water-course within this Commonwealth, so as not to obstruct the same; and said Company may connect its lines with those of any other Company, on such terms as may be agreed upon."

And thereafter, on August 17, 1886, there was approved an ordinance by the legislative department of the city of Louisville, by its General Council, in the words and figures as follows, to-wit:

"An ordinance confirming and ratifying section 9 of an act passed by the General Assembly of the Commonwealth of Kentucky, and approved on the 3rd day of April, 1886, and entitled 'An Act to incorporate The Ohio Valley Telephone Company,' and granting to the said The Ohio Valley Telephone Company the
5 right to construct, equip, operate and maintain telephone systems and exchanges, and to erect poles and string wires thereon; to construct, operate and maintain conduits and manholes; to lay pipes, cables, conductors and wires, and to operate its telephone lines over, along or under any highway, street or alley in the city of Louisville.

"Whereas, The General Assembly of the Commonwealth of the State of Kentucky passed an Act entitled, 'An Act to incorporate The Ohio Valley Telephone Company,' which was approved on the 3rd day of April, 1886, section 5 of which said act is as follows:

"'SEC. 5. The said company may construct, equip and maintain said telephone systems and exchanges, and erect poles and string wires thereon, and operate its telephone lines over, along or under any highway, street or alley in the city of Louisville, with and by the consent of the General Council of said city; and it may purchase or lease from any corporation created under the laws of this Commonwealth, on such terms as may be agreed on, any telephone system or exchange, its poles, wires, apparatus, contracts, licenses, patents or interests therein, equipments, rights of way, easements, servitudes, in the highways, streets and alleys in the city of Louisville, together with all of its properties, and, when purchased or leased, shall have power to maintain and operate the same along, over or under the highways, streets and alleys of the city of Louisville; provided, however, that such telephone poles, lines and systems have heretofore been granted the right of way or easements in the highways, streets and alleys in the said city of Louisville by the General Council thereof. And the said company may also construct, equip and maintain telephone lines along, over or under the highways, streets and alleys, and across any water-course within this Commonwealth, so as not to obstruct the same; and said company may connect its lines with those of any other company on such terms as may be agreed on.'

"Therefore, be it ordained that the said act, in so far as it refers to the constructing, equipping, operating and maintaining telephone systems and exchanges, and erecting poles and stringing wires thereon; to constructing, operating and maintaining conduits and manholes; to laying pipes, cables, conductors and wires, and operating telephone wires over, along or under the highways, streets and alleys in the city of Louisville is hereby ratified and confirmed, and the right is hereby granted and confirmed to the said The Ohio Valley Telephone Company, its successors and assigns, to construct, equip, operate and maintain telephone systems and exchanges, and to erect poles and string wires thereon; to construct, operate and maintain conduits and manholes; to lay pipes, cables, conductors and wires, and operate its telephone lines over, along or under any street, avenue, alley or sidewalk in the city of Louisville, provided—

"First. That the said Telephone Company, its successors and assigns, shall agree to carry on its poles, or through any underground system which it may construct, such wires or conductors as
6 may be necessary for operating the fire and police systems of the said city of Louisville, free of charge to the said city, said wires or conductors to be furnished by the city of Louisville, and to be placed in position at the cost of said city, but under the direction of the said The Ohio Valley Telephone Company, its successors or assigns, and in such manner as not to interfere with the effective operation of the wires or conductors of said The Ohio Valley Telephone Company, its successors or assigns.

"Second. That in each and every case wherein the said The Ohio Valley Telephone Company, its successors or assigns, shall construct any underground conduit, or lay any underground pipes, cables, conductors or wires, in no case shall the city be liable for any injury or damage to any third party which may be caused by the putting down of said conduits, pipes, cables, conductors or wires by the said The Ohio Valley Telephone Company, its successors or assigns; and the said Telephone Company, its successors or assigns, shall protect the city and hold it harmless from any and all damages which may arise from said cause.

"Third. The said Telephone Company, its successors or assigns, shall not at any time open or encumber more of any street, avenue, alley or sidewalk than may be necessary to enable them to perform the work with proper economy and efficiency in the laying of their pipes, cables, conductors or wires, nor shall they permit such opening or encumbrance to remain for a longer period than may be necessary to do the work for which said opening shall have been made, and they shall put up and maintain about said openings and encumbrances such barriers and lights as will effectually prevent the happenings of any accidents by reason of such openings or encumbrances.

"Fourth. In constructing the conduits or in laying their pipes, cables, conductors or wires, the said Telephone Company, its successors or assigns, shall do no permanent injury to any street, avenue, alley or other public place or shade tree, nor shall they unnecessarily disturb or interfere with any sewers, water-pipes or gas pipes now laid in the city or which may be laid at said time.

"Fifth. All said work of opening said streets, alleys, avenues and sidewalks, for the purpose of constructing a conduit, or of laying said pipes, cables, conductors or wires by the said Telephone Company, its successors or assigns, shall be done under the supervision of the City Engineer, and subject to his approval.

"Sixth. Whenever the said Telephone Company, its successors or assigns, shall open ground for the purpose of constructing a conduit, or of laying their pipes, cables, conductors or wires, they shall with all due diligence, after the completion of said work, restore said streets, avenues, alleys and sidewalks so opened, or any sewer, gas pipe or water pipe located thereon to a condition equally as good as when said opening was made, at their own expense and to the satisfaction of the City Engineer; and in case of their failure

or refusal to do so, the City may proceed to do the same, and the said Telephone Company, its successors or assigns, shall be liable for the cost thereof.

"Seventh. As soon as practicable after the approval of this ordinance, and before the said Telephone Company, its successors or assigns, shall be allowed to open any street, avenue, alley or sidewalk for the purpose hereinbefore stated, the said Telephone Company, its successors or assigns, shall execute a bond for the sum of $50,000.00, with good and sufficient security, in favor of the city of Louisville, conditioned that the said Telephone Company, its successors or assigns, shall hold the said city of Louisville,
7 harmless and free of all damages which may be caused by the opening of any street, avenue, alley or sidewalk for the purpose hereinbefore stated, said bond to be renewed from time to time, with such security as the General Council may require.

"Eighth. Nothing in this ordinance shall be construed as to give to said Telephone Company, its successors or assigns, any exclusive right to erect poles or to lay underground conduits, pipes, cables; conductors or wires in the streets, avenues, alleys or sidewalks of the city of Louisville.

"Ninth. That (within thirty days from the passage of this ordinance) the said The Ohio Valley Telephone Company, its successors or assigns, shall formally agree, in writing, to accept the terms of the provisions of this ordinance, and file the said written copy of said agreement and also the aforementioned bond with the Mayor of the city of Louisville, and from and after the date of said acceptance this said ordinance shall take effect and be in force as a contract between the said city of Louisville and the said The Ohio Valley Telephone Company.

L. R. McCLEERY, *C. B. C.*
OLIVER LUCAS, *C. B. A.*
CARY B. BLACKBURN, *P. B. C.*
JAS. C. GILBERT, *P. B. A.*
P. B. REED, *Mayor.*

Approved August 17, 1886."

And thereafter, at a called meting of the directors of The Ohio Valley Telephone Company, held at its office, room No. 9 at 444 West Jefferson Street, Louisville, Kentucky, at twelve o'clock M. August 18, 1886, a motion was unanimously adopted, accepting said ordinance, and the president was directed to prepare a good and sufficient bond for fifty thousand dollars, in compliance with section seven of said ordinance; and the secretary of said company was directed to deliver said bond to the Mayor of the city of Louisville, and also to notify said Mayor of the acceptance by said company, as required by section nine of said ordinance, and to furnish him, the said Mayor, with an official copy of the proceedings of said meeting within thirty days thereafter.

And thereafter, on September 3, 1886, W. H. Newman, secretary of The Ohio Valley Telephone Company, addressed a letter under

8 the corporate seal of the company, to Hon. P. B. Reed, who was at that time the Mayor of the city of Louisville, in the words and figures as follows, to-wit:

"OFFICE OF THE OHIO VALLEY TELEPHONE COMPANY,
ROOM NO. 9, NO. 444 WEST JEFFERSON ST.,
LOUISVILLE, KY., *September 3rd*, 1886.

Hon. P. B. Reed, Mayor of the City of Louisville.

DEAR SIR: I have the honor to officially notify you of this company's acceptance of an ordinance passed by the General Council of this city and approved August 17th, 1886, as per extract from the minutes of a meeting of the Board of Directors of The Ohio Valley Telephone Company held at the office of the Company—Room No. 9, No. 444 West Jefferson St. in the City of Louisville, Ky., at 12 o'clock M., August 18th, 1886, to-wit:

(Extract from Minutes.)

'An ordinance passed by the General Council of the City of Louisville, entitled:

'An Ordinance confirming and ratifying Section Five of an act passed by the General Assembly of the Commonwealth of Kentucky and approved on the 3rd day of April, 1886, and entitled 'An Act to incorporate the Ohio Valley Telephone Company:' and granting to the said The Ohio Valley Telephone Company the right to construct, equip, operate and maintain telephone systems and exchanges and to erect poles and string wires thereon; to construct, operate and maintain conduits and manholes; to lay pipes, cables, conductors and wires and to operate its telephone lines over, along or under any highway, street or alley in the City of Louisville.' Approved August 17th, 1886'—

was then read and the following resolution was unanimously adopted, to-wit:

'Resolved, That this Company hereby accepts the terms and provisions of said ordinance.'

"On motion, the Secretary of the Company was directed to notify you as the Mayor of the City of Louisville of the above official action of the Company under the official seal of said Company as their official act and deed in accepting said ordinance.

"I am further directed by the Board of Directors of this Company, as its Secretary, to deliver to you as the Mayor of the City of Louisville, the bond of this Company for the sum of Fifty Thousand Dollars as required by the provisions of said ordinance, and herewith have the honor to submit same for your approval and acceptance and request your official answer to this communication and enclosure of bond herewith submitted.

Very respectfully,

[SEAL.] W. H. NEWMAN,
Secretary of the Ohio Valley Telephone Company.

9 And accompanying said letter was a bond in the sum of fifty thousand dollars, in words and figures as follows, to-wit:

"Bond of the Ohio Valley Telephone Company to the City of Louisville, in Pursuance of an Ordinance of Said City Approved August 17th, 1886.

"Whereas, the General Council of the City of Louisville enacted an ordinance approved August 17th, 1886, entitled

'An ordinance confirming and ratifying Section 5 of an Act passed by the General Assembly of the Commonwealth of Kentucky and approved on the 3rd day of April, 1886, and entitled 'An Act to incorporate The Ohio Valley Telephone Company:' and granting to the said The Ohio Valley Telephone Company the right to construct, equip, operate and maintain telephone systems and exchanges and to erect poles and string wires thereon; to construct, operate and maintain conduits and manholes; to lay pipes, cables, conductors and wires and to operate its telephone lines over, along or under any highway, street or alley in the City of Louisville.'

"Which said ordinance has been accepted by the said The Ohio Valley Telephone Company as provided therein;

"And whereas, Section Seventh of said ordinance required that said The Ohio Valley Telephone Company shall execute a bond as specified therein, now therefore,

"Know all men by these presents: that in compliance with said Section Seventh of said ordinance, we, the said The Ohio Valley Telephone Company, as principal, and J. B. Speed and James Clark, as sureties, do hereby bind ourselves, our successors, executors, administrators, heirs and assigns to and with the said City of Louisville, that the said The Ohio Valley Telephone Company, its successors and assigns, shall hold the said city of Louisville harmless and free of all damage which may be caused by the opening of any street, avenue, alley or sidewalk for the purpose as provided in said ordinance.

"Provided: That liability under this bond shall not exceed the sum of Fifty Thousand Dollars.

"Witness the hand and seal of said Telephone Company by its President, and the hands of said sureties at Louisville, Ky., this twenty-eighth day of August, 1886.

THE OHIO VALLEY TELEPHONE COMPANY.
By J. B. SPEED, *President.*
J. B. SPEED.
JAMES CLARK.

Approved Sept. 9th, 1886.

(Signed) By OLIVER LUCAS,
Clerk Board of Aldermen.
L. R. McCLEERY,
Clerk Board of Council."

10 And thereafter, on September 4, 1886, Hon. P. B. Reed, Mayor of the city of Louisville, addressed a letter to W. H. Newman, Secretary of The Ohio Valley Telephone Company, in the words and figures as follows, to-wit:

MAYOR'S OFFICE.
LOUISVILLE, KY., *Sept. 4th*, 1886.

W. H. Newman, Esq., Secretary of The Ohio Valley Telephone Company, Louisville, Ky.

DEAR SIR: I have the pleasure to acknowledge receipt of your letter of the 3rd inst., officially notifying me of the acceptance on the part of The Ohio Valley Telephone Company of an ordinance passed by the General Council of this City, entitled: 'An ordinance confirming and ratifying Section Five of an act passed by the General Assembly of the Commonwealth of Kentucky, and approved on the 3rd day of April, 1886, and entitled, 'An act to incorporate the Ohio Valley Telephone Company;' and granting to the said The Ohio Valley Telephone Company the right to construct, equip, operate and maintain telephone systems and exchanges and to erect poles and string wires thereon; to construct, operate and maintain conduits and manholes; to lay pipes, cables, conductors and wires, and to operate its telephone lines over, along or under any highway, street or alley in the city of Louisville.'

Approved August 17th, 1886.

Also to acknowledge the receipt of a bond for Fifty Thousand dollars in favor of the City of Louisville with your company as principal and J. B. Speed and James Clark, as sureties, in compliance with Section Seventh of said ordinance, and to notify you that the said notification of acceptance and bond will be referred to the General Council of this city for approval.

Respectfully,

P. B. REED, *Mayor.*

From that time continuously to January 27, 1900, the said The Ohio Valley Telephone Company operated a telephone exchange in the City of Louisville, and at all times thereafter the city of Louisville and its officials recognized The Ohio Valley Telephone Company as legally and lawfully occupying the streets, alleys and public places of said city of Louisville, with its poles, wires, cables, conduits, and other apparatus and structures, under and pursuant to its said charter hereinabove set out, and said ordinance and official acceptance and ratification thereof; and upon the consolida-

11 tion of The Ohio Valley Telephone Company and the Cumberland Telephone & Telegraph Company, on January 27, 1900, the consolidated company, under the name of the "Cumberland Telephone & Telegraph Company," has continuously to the present time, and is now occupying the streets, alleys and public places of the city of Louisville with its poles, wires, cables, conduits, and other apparatus and structures, and has continuously to the present time, and is now engaged in operating a telephone exchange or plant under the name of the Cumberland Telephone & Telegraph Company, and the city of Louisville has officially and otherwise at all times, until January, 1909, recognized said company as lawfully

and legally occupying the streets, alleys and public places with its structures and operating a telephone plant in said city.

On April 7, 1902, the city of Louisville, through its General Council, adopted an ordinance entitled, "An ordinance requiring the Cumberland Telephone & Telegraph Company to execute bond as required by section seven of the ordinance relating to the rights and duties of The Ohio Valley Telephone Company, its successors and assigns, approved August 17, 1886,"—and in accordance with said ordinance the Cumberland Telephone & Telegraph Company, your orator herein, executed a bond, with the American Bonding & Trust Company as its surety in the penal sum of fifty thousand dollars, payable to the city of Louisville, which bond was in the words and figures as follows, to-wit:

"Bond of the Cumberland Telephone and Telegraph Company, Successor of the Ohio Valley Telephone Company.

"In pursuance of an ordinance of the City of Louisville, approved April 7th, 1902, entitled 'An ordinance requiring the Cumberland Telephone & Telegraph Company to execute bond as required by section seven of the ordinance relating to the rights and duties of the Ohio Valley Telephone Company, its successors and assigns, approved August 17th, 1886.'

"We, the undersigned, Cumberland Telephone & Telegraph Company, a corporation organized and existing under the laws of the State of Kentucky, successor of the Ohio Valley Telephone Company, as principal, and the American Bonding and Trust
12 Company, of Baltimore City, a corporation organized and existing under the laws of the State of Maryland, and authorized to do business in the State of Kentucky, as surety, do hereby bind and obligate ourselves, our successors and assigns, in the sum of fifty thousand dollars ($50,000.00) to and with the city of Louisville, State of Kentucky, that the said Cumberland Telephone & Telegraph Company, its successors and assigns, shall hold the said city of Louisville harmless and free from all damage which may be caused by the opening of any street, avenue, alley or sidewalk for the purpose as provided in said ordinance of August 17th, 1886.

"It is understood and agreed, however, that this bond is executed to cover a term of five (5) years only, but is renewable at the option of the surety herein named.

"In witness whereof, we have herewith affixed our signatures under our respective corporate seals, this first day of May, 1902.

CUMBERLAND TELEPHONE AND TELEGRAPH COMPANY,
By JAMES E. CALDWELL, *President.*

Attest:
[SEAL.] LELAND HUME, *Secretary.*

THE AMERICAN BONDING AND TRUST COMPANY OF BALTIMORE CITY,
By ERNEST HOEN, Jr., *2nd Vice President.*

Attest:
[SEAL.] EDWIN W. POE,
Assistant Secretary.

And thereafter, on June 7, 1902, the General Council of the city of Louisville passed a resolution in the following words and figures, to-wit:

Resolved by the General Council of the City of Louisville: That the foregoing bond of the Cumberland Telephone & Telegraph Company, successor of the Ohio Valley Telephone Company, principal, and the American Bonding and Trust Company, of Baltimore City, as surety, be, and the same is, hereby adopted and approved, and the said Ohio Valley Telephone Company, together with its sureties, J. B. Speed and James Clark, are hereby released from all liability under their bond to the City of Louisville, dated August 28th, 1886, and approved September 9th, 1886.

CHAS. C. MARTIN, *C. B. C.*
D. W. PARKHILL, *C. B. A.*
F. J. HUMMEL, *P. B. C.*
PAUL B. BARTH, *P. B. A. P. T.*

Approved June 7, 1902.

CHARLES F. GRAINGER, *Mayor.*

And from time to time since June 7, 1902, your orator, the Cumberland Telephone & Telegraph Company, has renewed said bond in favor of the city of Louisville, as often as requested so to do
13 by the proper authorities of said city.

III.

On January 22, 1909, the General Council of the city of Louisville, adopted an ordinance, which, on January 23rd, was adopted by the Board of Councilmen, and on the same day approved by the Mayor of the city of Louisville, in the following language, to-wit:

"An ordinance repealing an ordinance entitled 'An ordinance confirming and ratifying section 5 of an act passed by the General Assembly of the Commonwealth of Kentucky, and approved on the 3rd day of April, 1886, and entitled, 'An Act to incorporate The Ohio Valley Telephone Company,' and granting to the said The Ohio Valley Telephone Company the right to construct, equip and operate and maintain telephone systems and exchanges, and to erect poles and string wires thereon; to construct, operate and maintain conduits and manholes; to lay pipes, cables, conductors and wires, and to operate its telephone lines over, along or under any highway, street or alley in the city of Louisville,' approved August 17, 1886.

"Be it ordained by the General Council of the City of Louisville:

"SECTION 1. That an ordinance entitled 'An ordinance confirming and ratifying section 5 of an act passed by the General Assembly of the Commonwealth of Kentucky, and approved on the 3rd day of April, 1886, and entitled 'An Act to incorporate The Ohio Valley Telephone Company, and granting to the said The Ohio Valley Telephone Company the right to construct, equip and operate and

maintain telephone systems and exchanges, and to erect poles and string wires thereon; to construct, operate and maintain conduits and manholes; to lay pipes, cables, conductors and wires, and to operate its telephone lines over, along or under any highway, street or alley in the city of Louisville,' approved August 17, 1886, be, and the same is, hereby repealed.

"SEC. 2. This ordinance shall take effect from and after its passage.

(Passed by the General Council January 22, 1909.
Passed by the Board of Councilmen January 23, 1909.
Approved by the Mayor on January 23, 1909.)"

And said city authorities and the defendant, the City of Louisville, are now insisting that by virtue of said ordinance last above mentioned, that your orator is without right to occupy the streets, alleys and public places in said City of Louisville with its poles, wires, conduits and other structures, and is unlawfully and illegally
14 conducting a telephone business and operating an exchange in said city. Your orator charges that said ordinance was passed without any notice whatever to your orator of the intention of the City of Louisville to adopt the same, and it was adopted without any just cause, or without assigning any just cause therefor to your orator or any one else; and said city is threatening to, and will, unless restrained by this Honorable Court, interfere with your orator's right to conduct a telephone business in said city, and will, unless restrained by this Honorable Court, seek to deprive your orator of its property in said City of Louisville, and its right to occupy the streets, alleys and public places of said city with its poles, wires, conduits and other structures; and your orator charges that said ordinance seeks to impair, and unless its enforcement is restrained, will impair the obligation of your orator's contract with the City of Louisville, in violation of Section 10 of Article 2 of the Constitution of the United States, which provides:

"No State shall enter into any treaty, alliance or confederacy; grant letters of marque or reprisal; coin money, emit bills of credit; make anything but gold and silver coin a tender in payment of debts; pass any bill of attainder, ex post facto law, or law impairing the obligation of contracts, or grant any title of nobility."

And will also deprive your orator of its property without due process of law, and deny to it the equal protection of the laws, in violation of the fourteenth amendment to the Constitution of the United States, which provides:

"Nor shall any Sate deprive any person of life, liberty or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws."

IV.

Your orator further states that it is engaged in the telephone and telegraph business in a territory beginning in Southern Indiana and

Southern Illinois and extending thence southwardly through
15 the States of Kentucky, Tennessee, Mississippi and Louisiana, to the Gulf of Mexico; that on January 1, 1909, it owned and operated its telephone exchanges connected together with 95,164 miles of telephone toll lines; that its gross revenue for the year 1908 was $6,141,817.95, and of that amount it collected in Louisville, both for exchange and long distance service, the sum of $370,373.71. That its capital stock outstanding was on January 1, 1909, and is now, $19,680,150.00; that its bonded debt was then, and is now, $1,000,000.00; that its floating indebtedness was $2,553,264.00; that each dollar of its capital stock and each dollar of its bonded debt and floating indebtedness represents actual cash investment, and no part of its securities were issued at less than par value, and that its securities are absolutely and entirely free from any fictitious over-valuation or over-capitalization; that its securities outstanding represent an actual investment in money, and whatever franchises, rights of way, easements, good will, or other intangible value it has, is not represented in or by any part of its outstanding capital stock and bonded debt, but the same represents actual money invested in constructing and developing its various plants and lines.

Its exchanges are constructed by erecting at a central point in each city a building in which is located a switchboard, and from this board lines of small wire are erected upon poles or in conduits to the business houses or residences of each subscriber, and there connected with the telephone instrument. In this way, each subscriber can signal an operator at the central office and receive connection with any other subscriber. For this character of service a monthly rental is paid, which entitles the subscriber to receive unlimited service from the local exchange.

In the same manner the toll lines are brought into the city attached to the same poles, and connected to the switchboard, and each subscriber to the local exchange is entitled to signal the operator at
the exchange and receive connection over the toll lines of
16 your orator to all other cities and places where its exchanges or lines are located, and there be connected with any other of your orator's subscribers, who, on January 1, 1909, numbered 187,259. The charge for this character of service is, generally speaking, one half of one cent per air mile between the two cities thus connected, for each three minutes of conversation, and one third the initial charge for each additional minute of conversation. This is the exact rate charged non-subscribers who use the toll lines from the central office.

In the City of Louisville your orator has erected four exchanges, called "Main," "West," "East" and "South." These exchanges are so arranged that any two subscribers in the City of Louisville can be at once put into communication. In addition to the four exchanges in the City of Louisville, all of which are considered and treated as one exchange, for its patrons in said city, your orator has erected and operates in Jefferson County, Kentucky, exchanges at Anchorage, Harrod's Creek, Jeffersontown, Pleasure Ridge Park and St. Matthews. It also has erected, owns and operates exchanges

in Jeffersonville and New Albany, Indiana. The telephone patrons of the City of Louisville have access to, without additional charge or compensation, and the right to communicate and hold conversation with any of your orator's subscribers in Jeffersonville, numbering 1,288, and New Albany, numbering 727, and with those to the other exchanges in Jefferson County, Kentucky, paying for and entitled to receive Louisville service as follows:

Anchorage, 42; Harrod's Creek, 42; Jeffersontown, 36; Pleasant Ridge Park, 41, and St. Matthews, 63. Your orator further states that on January 1, 1909, the number of its subscribers to the Louisville Exchange was 9,657. Any one of these subscribers had the right to unlimited connection with any one or more of the other subscribers, upon the payment of the monthly charge; and
17 in addition thereto, had access to and a free communication with said subscribers to the various smaller exchanges in Jefferson County, and to all of your orator's subscribers in Jeffersonville and New Albany, Indiana, as hereinabove set out.

Its rates for service in the City of Louisville, as hereinabove explained, were, on January 1, 1909, and are now the following:

Business.

Within the two mile radius of nearest exchange.

Private metallic	$8.00	per	month
2-station metallic	5.00	"	"
Public pay station (Coin Device) Private	4.00	"	"
"Agent's service free out and in, and divide with any cash deposits for local city calls.)			
City and County telephone within city limits	4.00	"	"

Residence.

Private, within city limits	4.00	"	"
Private, beyond city limits and within three miles of nearest exchange	4.50	"	"
2-station, within city limits	3.00	"	"
2-station, beyond city limits and within three miles of nearest exchange	3.50	"	"
Extension set	1.25	"	"

Country Rates.

Private Metallic.

Business or residence—add to the exchange radial rate 50¢ per month, per mile, or fraction thereof, if subscribers are located beyond the echange radius. Exchange radius for business is two miles—for residence three miles—from nearest Louisville exchange.

4-Party Metallic.

Business or residennce—add to the exchange radical rate 25¢ per month, per mile, or fraction thereof, if the subscriber is located beyond the exchange radius. For exchange radius, see above.

Extension set ..... $1.25 per month

A discount of 50 cents per month is allowed on all rates above enumerated if rental is paid quarterly in advance.

Private line instruments $12.00 per year, per instrument, to which is added mileage charge of $30.00 per mile, per annum.

Extension bells (business or residence)	Net.....	$0.15	per	month
Joint user (business).....	"	1.00	"	"
List (business)	"	.25	"	"
List (residence)	"	.25	"	"
Loud ringing extension gongs.....	"	.25	"	"
Buzzers and Push Buttons.....	"	.25	"	"

18 These rates were in effect during the whole of 1908, and on January 1, 1909, your orator had 758 patrons paying the city of Louisville the $8.00 business rate, and 875 paying the $4.00 residence rate. All the remainder of your orator's patrons in the City of Louisville had some other kinds of service at the various rates hereinabove set out for business and residence purposes.

The gross income derived by your orator from its Louisville exchange for the year 1907 was $366,928.77, this being the gross amount received by your orator for telephone rentals, tolls collected at Louisville for points over your orator's entire system embracing a territory four hundred miles wide by a thousand miles long,—messenger fees, directory advertisements and miscellaneous revenue; and, in the same manner, your orator's gross revenue at its Louisville exchange for the year 1908 was $370,373.71 and of this amount only $311,117.01 was received from telephone rentals, the remainder being received from directory advertisements, messenger fees, miscellaneous revenue and long distance tolls from all points throughout your orator's entire territory.

Your orator further states that it has expended in building said exchange in the city of Louisville, up to January 1, 1909, the sum of $1,700,045.26; that said property has been constructed economically, prudently, honestly and skillfully; that said property has been built with the best business judgment with respect to the present and future interests of the business in said city, and that the same could not have been constructed and cannot be reproduced at the present time for a less amount of money.

Your orator further states that during the year 1908, its total expenses of the Louisville Exchange were as follows:

General:		
Proportion of Gen'l Office Expense	$11,282.22	
Legal	3,268.90	
Uncollectible accounts	3,814.64	
Taxes	19,563.85	
		37,929.61
Operating:		
Salaries and wages	58,002.27	
Rent, light and heat	13,268.56	
Postage, printing & stationery	3,352.25	
Directory	4,439.44	
Advertising and canvassing	5,631.21	
Incidental	4,126.04	
		88,819.76
19 Maintenance:		
Salaries & Wages	$51,498.11	
Rent, light and heat	2,967.27	
Material	11,200.14	
Travelling	6,513.51	
Incidental	7,369.56	
Conduit, pole and roof rent	630.18	
Insurance	3,583.11	
Damage and compensation	1,945.81	
		$85,707.69
Instrument rental		14,270.88
Total expense		$226,727.94

And your orator charges that over and above the ordinary and necessary expenses of maintaining said exchange and structure, there is of necessity a depreciation or deterioration of said plant, which cannot be taken care of as it occurs, but must be provided for out of the receipts of the exchange, so as to provide a fund with which to take care of this decay and depreciation when the various pieces of property comprising the exchange can no longer be used and have to be replaced with raw material; that the switchboard, however carefully it may be maintained and operated will, in the process of time, be so worn and decayed as to necessitate its replacement with a new one. In like manner, the poles, wires, cables and all of the various and many items of property entering into a telephone exchange, must, from time to time, be replaced and renewed after they have served their usefulness; and this renewal is in addition to and beyond the mere current repairs required to maintain the plant in an operating condition. This depreciation must, of necessity, be provided for out of the receipts, year by year, and in order to do this properly your orator, of necessity, is required to take from its gross receipts each year seven and one half per cent of the actual cost of the plant, with which to provide a proper, reasonable and just depreciation fund, less whatever amount has been expended

during that particular year on re-constructing parts of the plant; so that, at the end of each year, before any part of its receipts can be considered profit, there just be deducted seven and one-half per cent of the actual cost of the plant, less whatever amount has been expended during that year on re-constructing the plant. For this reason, the annual amount set aside for depreciation varies,
20 year by year, according as a larger or less amount may have been expended in re-constructing parts of the plant during that year.

Your orator therefore charges that during the year 1908 its gross receipts of the Louisville exchange were $370,373.71; that the expense of operating and maintaining the exchange was $226,727.94. That in its gross receipts there is included $52,769.73 of long distance tolls which were collected in Louisville for the use of the toll lines radiating from Louisville to each of the 518 exchanges owned and operated by your orator, but no part of the cost of said toll lines is included in the capitalization or cost of its Louisville plant; and your orator charges that only fifteen per cent of the long distance tolls should be credited to the Louisville exchange, that being a just, reasonable and fair percentage to allow the exchange for handling long distance tolls in said city; but, if the entire tolls are to be included in the receipts of the exchange, then, of necessity, a proper part of the cost of such toll lines, and the expense of maintaining the same should be added to the value of the plant and the cost of maintaining the same.

V.

On January 1, 1907, your orator adopted a schedule of charges for telephone services in the city of Louisville, herein before set out, which was somewhat higher, in some respects, than the rates theretofore in force. This action of your orator resulted in a protest from the Board of Trade of the City of Louisville against the charges that your orator was proposing to make, and resolutions were adopted, copies of which were furnished your orator by direction of the Board of Directors of the Board of Trade. A reply thereto was made by your orator's president, under date of March 6, 1907, as follows:

"Mr. James F. Buckner, Jr., Superintendent Louisville Board of Trade, Louisville, Kentucky.

"My dear Sir: Your letter of February 27th, addressed to our Superintendent, Mr. George G. Hall, of your city, together with a copy of the resolutions adopted by your Board of Directors, has been referred to this office, and in reply thereto, I have to say, that on a former occasion we endeavored to give your body a full,
21 complete and truthful statements of the conditions confronting us, and connected with our business in your city.

I do not understand from your resolutions that you dispute the facts we presented, or challenge the correctness of our conclusion, but, that you conclude that in view of the fact that another telephone company is operating in your city 'furnishing,' as you say, 'nearly a similar service to about the same number of patrons at from one-

half to two-thirds of the rates charged by us'; that you find similar conditions existing in other cities, and therefore you conclude that we are not warranted in making the charge for our service that we are, but that, on the contrary, the conditions set forth by you should justify us in doing likewise.

As business men I am quite sure that you do not follow this course of reasoning or procedure in your own affairs; you do not price your best and most valuable wares in competition with cheap and inferior wares, nor do you indeed sell your goods at less than cost simply because some rival sees fit to do so, but the whole history of commerce is to the effect that prudent people have always permitted their rivals, who are so foolish as to sell goods *blow* cost, to do so until they are bankrupted and exhausted, and this is precisely our attitude in the matter.

This company was not organized for the purpose of exploiting a stock and bond scheme, but for the sole purpose of meeting the fair, legitimate and proper demands for a telephone service, and paying a fair, proper and legitimate return upon the actual money employed in giving the service. There is not one dollar of inflation or water in the securities of this company, and it is only seeking, and is actually only paying a decent and reasonable return upon the actual cash money that has been invested in the property, wherewith to serve you. This is all that it expects to derive, and this it certainly feels that it is justly entitled to and that it has a perfect — to claim and to strive to get.

We offer you every facility and opportunity for certifying the statements which we made to you, and we respectfully submit that unless it is demonstrated that our business is conducted in an extravagant, reckless and improper manner that we should not be asked to make any less price, but, on the contrary, if it is demonstrated that it is run with prudence and economy and no inflation or return on any capital except that which is absolutely necessary to carry on the business, then there should be no criticism whatever, but, on the contrary, we should be encouraged and our action approved.

"Permit me to state deliberately and emphatically that, no matter what may be said, it is a fact that this company is conducting its entire business along the closest and most economical lines, is capitalized on the very lowest possible basis, and is not guilty of one single, solitary thing that is being promis-nously and indiscriminately charged so freely about corporations generally with regard to stock and bond jobbing, watering, inflation, etc., and it invites a most searching inquiry into and verification of these facts.

"I beg to assure you that we regret exceedingly to find ourselves in the least at variance with your Board. We have made a sincere and earnest effort to develop the telephone business in your entire section of the country, to afford you facilities which should enable you to conduct your business with greater ease and economy;
22 we are still trying striving along these lines, and we confidently hoped and expected that by so doing we would challenge your approbation and merit your confidence and esteem. We

know full well that if you would take the trouble to acquaint yourselves fully and completely with all the facts connected with this business that you would vindicate us promptly and completely.

Yours very truly,

JAMES E. CALDWELL,
President."

Following this correspondence, a personal meeting was held between the Board of Trade and the representative of your orator, which resulted in a contract being entered into on the 18th day of April, 1907, as follows:

"Whereas, The Board of Trade of the City of Louisville, Kentucky, through its Board of Directors, has taken up the question of telephone rates to be charged by the Cumberland Telephone & Telegraph Company in the city of Louisville; and

Whereas, It is the desire of both the Board of Trade and the Telephone Company that the rates charged shall be fair and reasonable, and shall be adjusted in accordance with proper business principles;

"Therefore, It is mutually agreed as follows:

"First. The Board of Trade, through its Board of Directors, has appointed a committee of citizens, consisting of George Gaulbert, Attilla Cox, William R. Belknap, Marion E. Taylor and Logan C. Murray, who, acting as a committee representing the Board of Trade of the city of Louisville, and the Cumberland Telephone & Telegraph Company, shall investigate fully the facts and determine what shall be reasonable and fair rates to be charged telephone users in the city of Louisville by the Cumberland Telephone & Telegraph Company, for a period of three years, beginning the first day of July, 1907; and at the end of this period, at the instance of either the Board of Trade of the City of Louisville, or the Cumberland Telephone & Telegraph Company, another committee of five shall be selected in like manner, who shall determine the rates to be charged for another three years, under like conditions and terms as specified in this contract.

"Second. The Cumberland Telephone & Telegraph Company, hereby binds itself to abide by the report of said committee and agrees to put into effect on the first day of July whatever rates said committee shall determine to be fair and equitable, both to the company and its patrons; and maintain the same for a period of three years; and the Cumberland Telephone & Telegraph Company further agrees and binds itself in the event the rates determined by said committee shall be less than the rates now charged, to refund to its patrons all amounts it may have collected between January 1st and July 1st, 1907, from its patrons in excess of the rates in force on March 31, 1907. And the Directors of the Board of Trade hereby obligate themselves to abide by and recommend whatever rates said committee shall determine to be fair and equitable and agree to use their influence to protect said rates in all reasonable and proper ways during said period of three years.

23 "Third. The Cumberland Telephone & Telegraph Company further agrees that it will afford to said committee all the assistance desired by it in determining what rates shall be charged; and to this end, agrees that all of its books, accounts, vouchers, receipts and other papers shall be freely exhibited to said committee or its representatives, and agrees that no fact or paper of any kind or description in its possession, or under its control, shall be withheld from said committee; but on the contrary, shall be exhibited to said committee or its representatives at all times during the investigation to be made by said committee.

"And it is further agreed that all reasonable and proper opportunity shall be afforded the committee to make its investigation, and the company to submit facts and arguments and full opportunity shall be given to both parties to fully investigate any fact or circumstance that may be developed and which either party may wish to verify or explain,—it being the purpose and intention of this agreement to avoid all technicalities and to ascertain the real truth in justice both to the company and its patrons.

"In witness whereof, this agreement has been signed on this, the 18th day of April, 1907, by the president of the Board of Trade of the City of Louisville, Kentucky, for the directors of said Board of Trade; and by the president of the Cumberland Telephone & Telegraph Company, for and on its behalf.

THE BOARD OF TRADE OF LOUISVILLE, KENTUCKY,
By W. W. HITE, *President.*
CUMBERLAND TELEPHONE & TELEGRAPH COMPANY,
By JAMES E. CALDWELL, *President.*"

Thereafter, on August 16, 1907, the committee appointed by the Directors of the Louisville Board of Trade, made a report as follows:

"LOUISVILLE, KY., *Aug. 16th*, 1907.

To the President and Directors, Louisville Board of Trade.

GENTLEMEN: The undersigned, a special committee appointed by the Board of Trade and accepted by the Cumberland Telephone & Telegraph Company as a committee to investigate as to what constitutes a fair and reasonable rate for the Cumberland Telephone & Telegraph Company to charge for its service in the city of Louisville, now beg to report:

1st. After considering the subject carefully and ascertaining all the facts bearing on it which could be ascertained from trustworthy sources, notably by sixteen meetings held at Board of Trade Rooms, beginning April 3rd, by frequent personal conferences with the officers and more expert employees of the Cumberland Telephone & Telegraph Company, and by a thorough examination of the books and accounts of said Cumberland Telephone & Telegraph Company, at the hands of an expert accountant, selected by the committee, viz.: W. J. Munster of Cincinnati, we find that the average net

yield to said Cumberland Telephone & Telegraph Company from its investment on the city of Louisville, since it acquired ownership of the Louisville property seven years ago, has been but 4¼ per cent per annum.

24 2nd. That the rates for telephone service in the City of Louisville proposed and put into effect by said Cumberland Telephone & Telegraph Company March 1, 1907, are proper and reasonable, because they will not yield to said Cumberland Telephone & Telegraph Company more than a fair and equitable earning on its investments in the city of Louisville.

3rd. The committee further declares that the rate or rates for the various classes of telephone service in the city of Louisville put into effect by said Cumberland Telephone & Telegraph Company March 1, 1907, should be maintained as a rate for such service the three years beginning July 1, 1907.

"This report is predicated on the promise and agreement of the company to give the best possible service to its subscribers and to furnish them at all times with the most approved devices and appliances for the transmission of messages.

Respectfully submitted,

MARION E. TAYLOR, *Chairman.*
WILLIAM R. BELKNAP.
ATTILLA COX.
GEORGE GAULBERT.
LOGAN C. MURRAY."

And thereafter, in November, 1908, another committee was appointed by the Board of Directors of the Board of Trade of Louisville to ascertain whether or not your orator was in fact, charging the rates provided in said schedule, hereinabove set out, and that committee made a report as follows:

"LOUISVILLE, KY., *Dec.* 16, 1908.

President and Directors Louisville Board of Trade.

GENTLEMEN: The special committee provided for by resolution of the Board of Directors, August 26, 1908, to make investigation as to the complaint of Mr. C. M. Bullitt that the Cumberland Telephone & Telegraph Company was unfairly raising its rates for services in this city, and was discriminating in rates amongst its patrons, etc., have to report that they have carefully made inquiry as to the facts and have failed to find a single instance in which said telephone company has charged a rate for any of the various classes of telephone service other than was determined by the old committee of the Board of Trade, (which agreement was to determine the rate for a term of three years) in its report submitted to the Board of Directors of the Board of Trade September 4, 1907, nor have we found any discrimination as between patrons except that the increase in rates allowed by the old committee was not made by the telephone company to apply to all patrons at the same time, for the reason, as stated by the company, that there were outstand-

ing contracts between the company and its patrons which expired at different times, and for the further reason that it was not feasible for the company to at once so alter its rules as to make the new rates apply to all patrons at the same date.

In regard to whether the rates determined upon by the old committee, under the agreement between the Board of Directors and the Cumberland Telephone & Telegraph Company in April, 1907, are fair and reasonable, your committee have only to say that the old committee appears to have made a most thorough investigation of the whole subject, their inquiry extending through five months, during which time they held sixteen meetings; had before them for interrogation officers and employés of the Telephone Company, and others, and the assistance of a high grade, expert accountant employed by the committee, and we have nothing before us on which we can base an opinion that the old committee erred in its conclusion.

Your committee desires to call your attention to the fact that under the agreement with the Telephone Company, the rates fixed by the old committee were to stand for three years from July 1, 1907, and that about one-half of that time has now expired. If at the expiration of the full period of three years it is found that the profits of the Telephone Company, after careful and economical conducting of its business, have been greater than should be allowed, the rates and charges for the future can be intelligently adjusted.

We ask that this report be received and filed and that the committee be discharged.

Respectfully submitted,

MARION E. TAYLOR, *Chairman.*
WILLIAM R. BELKNAP.
LOGAN C. MURRAY.
HARDY BURTON.
CHARLES EARL CURRIE."

On December 30, 1908, the following resolution was adopted by the Board of Trade:

"That the Board of Trade disapprove the action of the Board of Directors in respect to the matter of the rates of the Cumberland Telephone & Telegraph Company, and request the Board of Directors so to advise the Cumberland Telephone & Telegraph Company.

A copy of this resolution was furnished the Mayor of the City of Louisville, and thereupon said agreement with the Louisville Board of Trade was rescinded.

VI.

Your orator further charges that there is now and has been in the City of Louisville since about 1901 another telephone company, operating a telephone exchange in said city; that its maximum rates are for business purposes $4.00, and for residence purposes $2.50 per month; that it has a large number of subscribers, and is actively seeking relief from a provision in its contract with the City of Louisville prohibiting it from increasing its rates without permis-

sion of the city authorities. Its officers have publicly stated that its rates are ruinously low and that it is unable to care for its plant and operate the same upon the rates fixed in its contract with the city. The question of telephone rates has, in this way, been brought to the attention of the public and has created and occasioned a great deal of discussion, both among the citizens and the various
26 business organizations, and the newspapers published in the city of Louisville; and your orator verily believes and charges that many statements are made with respect to the telephone business in Louisville which are wholly untrue and are entirely misleading, but which have resulted in inflaming the public mind resulting in the action of the city officials in undertaking to ruthlessly, wantonly and without any just cause destroy your orator's right to conduct a telephone business in said city and to cause it to lose its large investment in said city.

Your orator further charges that the telephone business is inherently and essentially different from all other known kinds of business. The plant of necessity can never in the nature of things be a finished or completed property. Each new customer requires separate and distinct apparatus, separate and distinct wires to be run from the nearest switchboard to his office or residence and there connected to a separate and distinct telephone instrument. Separate and distinct wiring and a place on the switchboard is necessary for his accommodation and the switchboard must then be connected in such a way that any of the existing subscribers may at once be put into connection with his telephone. This necessitates a continued and constant expenditure of new capital, and as the number of patrons increase, the capital invested must correspondingly increase; nor can the wires formerly serving one patron often be used to serve new patrons, for the reason that the loss of a patron is usually at a different place in the city from the residence or office of the new patron, so that it results in the nature of the business that many wires after being used by patrons but a short time, when they discontinue their patronage cannot be used by new patrons, but new wires must be strung to serve such new patrons.

So long as your orator continues to serve its patrons in the city of Louisville, it must of necessity continue to invest new capital day by day, month by month, and year by year, and must of necessity continue to string new wires, add to its switchboard capacity, and connect up these new subscribers with its old subscribers.

And your orator charges that it has and is now conducting
27 the telephone business in the city of Louisville as prudently, economically and honestly as the ability of its management will permit, and the rates charged by your orator in Louisville are less than the *the* value of the service rendered, and do not afford your orator a reasonable or fair return upon the actual investment, or the actual value of its plant used in giving its patrons service; and of necessity your orator is compelled to conduct its business in Louisville in such a way as will prevent the expense of giving the service necessitating too high a rate, even though it does not yield a fair return upon the investment, for the reason that when the rates

are beyond what your orator's patrons conceive to be a reasonable price, they decline to take the service; and therefore the paramount duty upon the management of your orator's property is to practice every possible economy and make the rates to its subscribers as low as it is possible, and in this way alone can the telephone be continued what it is now commonly called, "a necessity," both to business and residence.

Your orator charges that its affairs and business has from the beginning been conducted honestly, prudently, skillfully and economically; that from time to time serious controversies have arisen with respect to its rates and charges; that it, at all times, and now, not only is willing to but invites a most searching investigation of its affairs and its business, of its capitalization, of its management and of its charges to its patrons, it believes and charges that its business in Louisville has been mis-represented and is wholly misunderstood, and that a full and fair investigation is all that is needed to satisfy its patrons as to the reasonableness and justness of its rates and charges, and that its rates and charges cannot be reduced without ruin to its stockholders and disaster to its patrons, who have come to rely upon your orator's service, and especially its patrons in Louisville, who not only use but require your orator's facilities in conducting their business, since your orator's toll lines and exchanges cover practically the entire trade area of the
27½ city of Louisville, and this development has been made by your orator from time to time with the greatest energy, zeal and ability at the request of its patrons in Louisville who realized the enormous value that would result to them from this development, and your orator made its investment in the full belief that its efforts would be appreciated and would receive the commendation of the business interests of the city of Louisville.

Your orator charges that the amount in dispute far exceeds the sum or value of five thousand dollars, exclusive of interest and costs, and that any interference with your orator's property in the city of Louisville would cause your orator irreparable injury and damage, and that the city authorities of the city of Louisville will, unless restrained, injure, destroy and otherwise interfere with and irreparably damage your orator's property and business in said city.

VII.

Forasmuch as your orator can have no adequate relief except in this court, and to the end therefore that the defendant if it can, show why your orator should not have the relief hereby prayed for, and make answer to the matters hereinbefore stated and charged, your orator prays that your honors grant unto it a writ of subpœna of the United States of America directed to said city of Louisville, Kentucky commanding it on a certain day to appear and answer unto this bill of complaint, and to abide and perform such order and decrees in the premises as to the court shall seem proper and required by the principles of equity and good conscience.

And your orator further prays that a provisional or preliminary injunction issue, restraining the said defendants, its officers, agents

and employés, and all other persons, from any interference with the property of your orator, and any interference with its business in the city of Louisville Kentucky; and that it be restrained and enjoined from taking any action or interfering in any manner with the right of your orator to erect and maintain its poles, wires, conduits, cables and other apparatus in the streets, alleys and public places in the city of Louisville, Kentucky, and from in any manner interfering with or disturbing its vested rights, or from in
28-74 any manner interfering with or seeking to impair the obligation of said contract; and from in any way interfering with or disturbing its business and right to conduct a telephone business in the city of Louisville, Kentucky.

And your orator further prays that upon a final hearing, its right to conduct a telephone business in the City of Louisville, Kentucky, be declared and sustained; and that its rights secured under an act of the legislature of the Commonwealth of Kentucky, and ratified and approved by the city of Louisville, to erect and maintain its poles, wires, cables, conduits and other structures in the streets, alleys and public places of said city, be declared and adjudged a valid and subsisting contract, and that the provisional or preliminary injunction be made perpetual.

And your orator prays for such other, further and general relief as may to equity and good conscience belong.

CUMBERLAND TELEPHONE & TELEGRAPH COMPANY,
[L. S.] By JAMES E. CALDWELL, *President.*
FAIRLEIGH, STRAUS & FAIRLEIGH,
WM. L. GRANBERY, *Solicitors.*

UNITED STATES OF AMERICA,
Middle Division of the Middle District of
Tennessee, Davidson County:

Personally appeared before me, the undersigned, James E. Caldwell, who made oath in due form of law that he is the President of the above named complainant, the Cumberland Telephone & Telegraph Company, and that the matters and things stated in the foregoing bill are true, in substance and in fact, as he verily believes.

[L. S.] JAMES E. CALDWELL.

Sworn and subscribed before me this the 6th day of February, 1909.

GEO. R. KNOX, JR.,
Notary Public.

75 Upon which bill of complaint there issued the following subpœna in Chancery:

The President of the United States of America to the City of Louisville, Kentucky, Greeting:

You are hereby commanded to appear before our Circuit Court of the United States of America, for the Western District of Kentucky,

at the Federal Court Hall in the City of Louisville, on the first Monday in April next, to answer a bill in equity exhibited against *it* in our said Court by Cumberland Telephone & Telegraph Company, which you shall in no wise omit, under the penalty of the law.

Witness the Honorable Melville W. Fuller, Chief-Justice of the Supreme Court of the United States of America, and the seal of our said Circuit Court hereto affixed, at the Clerk's office of said court, in Louisville, this 8th day of March, A. D., 1909, and in the 133rd year of our Independence.

Attest:

A. G. RONALD,
C. C. C., W. K. D.,
By HENRY F. CASSIN,
His Deputy.

MEMORANDUM.—The defendant is to enter its appearance in the suit in the Clerk's Office on or before the 5th day of April next, the day at which the writ is returnable, otherwise the bill may be taken pro confesso.

A. G. RONALD, *Clerk.*
By HENRY F. CASSIN,
His Deputy.

Upon which the Marshal made the following return:

"Received the within Spa. in Chancery at Louisville, Ky., March 8, 1909, and executed the same on the City of Louisville, March 10, 1909, by delivering a true copy hereof to James F. Grinstead, Mayor of said city. This March 10, 1909.

G. W. LONG, *U. S. Marshal.*
By W. HARRY AMOS, *D. M.*"

76 And at a term of our said court held for its March Term, 1909, continued and held, to-wit, on March 8th, 1909, the following proceedings were had:

No. 7194.

CUMBERLAND TELEPHONE & TELEGRAPH COMPANY
vs.
THE CITY OF LOUISVILLE, KENTUCKY.

This day came the complainant, the Cumberland Telephone and Telegraph Company, and moved the Court to grant a restraining order against the defendant, the City of Louisville, conformable to the prayer of the bill; and now, upon the reading of the bill and the exhibits therewith filed, it is considered that cause exists for the granting of a restraining order. It is therefore ordered that the defendant, The City of Louisville, its officers, attorneys, agents and employés, and each of them, and all other persons, be, and they are hereby,

strictly enjoined and restrained from, in any manner, enforcing or undertaking to enforce against the complainant, the Cumberland Telephone & Telegraph Company, the provisions, or any provision, of an ordinance entitled "An Ordinance fixing the maximum rates to be charged for telephone service in the City of Louisville," passed by the Common Council of the defendant, The City of Louisville, and approved by the Mayor of said city on the 6th day of March, 1909, and from in any way, under color of said ordinance, or any provision thereof, interfering with the property of the said complainant, or with its rates or charges for telephone service in the City of Louisville, until the 29th day of March, 1909, until which time the complainant, the Cumberland Telephone & Telegraph Company, is given within
77 which to move the Court for a preliminary injunction pendente lite. This restraining order shall remain in force until said time, and until said motion for a preliminary injunction shall have been heard and disposed of, and until the further order of this Court.

Upon which restraining order the Marshal made the following return:

"Received the within Restraining Order and one copy at Louisville, Ky., March 11-1909, and executed same at Louisville, Ky., March 13-1909, on the City of Louisville by delivering a true copy hereof to James F. Grinstead, Mayor of the City of Louisville, Ky.

This March 13-1909.

G. W. LONG,
U. S. Marshal,
By W. L. HAZELIP, *D. M.*"

And on another day of said term of said court, continued and held, to-wit, on Monday, March 29th, 1909, the following proceedings were had:

No. 7194.

CUMBERLAND TELEPHONE & TELEGRAPH COMPANY
vs.
THE CITY OF LOUISVILLE, KENTUCKY.

This day came the complainant, the Cumberland Telephone & Telegraph Company, by Wm. L. Granbery and Fairleigh, Straus & Fairleigh, its counsel. Came also the defendant, the City of Louisville, by Clayton B. Blakey and Huston Quin, its counsel.

The complainant, the Cumberland Telephone & Telegraph Company, moves the Court to grant a preliminary injunction pendente lite in accordance with the prayer of the bill.

Came again the defendant, the City of Louisville, by its said
78 counsel and filed its answer herein.

Came again the defendant by its said counsel and filed the affidavits of S. M. Wilhite, R. A. Batman, Charles Meriwether, Louis Summers, George T. Wood, Louis Seelbach, W. H. Crumb, H. N. Gifford, George S. Marshall, M. Victor, J. A. Hodges, Mrs. Sue M.

Davis, Mrs. R. L. Brucker, Mrs. M. Riley, Mrs. T. Murphy, Evan S. Rees, Miss A. Black, Miss Mida Staebler, Wm. Ruby, C. F. Wimberly, Jos. Piazza, H. Bachman, Mrs. Jno. Wilhelm, Jno. P. Morton & Co., Harbison & Gathright, Schoppenhorst Bros., International Hardware Co., American Tobacco Co., J. T. S. Brown & Sons, Sunnybrook Distillery, American Machine Co., W. J. Whitesides, Peaslee-Gaulbert Co., Brown, Forman Co., R. E. Wathen & Co., Laib Co., Louisville Paper Co., Bernheim Distilling Co., Schlitz Brewing Company, Bodley & Baskin, Leon Abraham, Christ Klipper, Max Schimpler, Ed. Linden, Jacob Hartshern, Fred Knauer, Simon N. Jones, Flack Bros., W. E. Winkler, Centennial Creamery, J. M. Schoenbaechler, Geo. Aufenkamp, John C. Fisel, G. Ernst, E. G. Randolph, Geo. C. Struber, Frank Zeigler, Jos. Lehman, J. M. Allen, T. Jones, H. Steummler, T. Story, Thos. Lanahan, F. W. Lyon, Dr. J. H. Heuser, Edw. H. Hackett, Jack Marx, Fishback Compressed Air Carpet Cleaning and Manufacturing Company, Val. Blatz Co., Russell & Co., Fernecliff Distilling Co., Jacob Isaacs, M. J. Doll, C. Troxler, Ky. Clothing Co., L. P. Hyman, Edw. H. Marcus, German Insurance Bank, Wm. Schuff & Co., L. H. Harping, Eclipse Vinegar Works, Geo. Schuster, Grab-Webb Co., Louvest Bros., White Mills Distilling Co., Stipulation of Complainant and 1 Exhibit to be read as an affidavit for defendant.

Came again the defendant, the City of Louisville, and moves the Court to modify the restraining order granted herein and to eliminate from said restraining order all that portion of same which restrains any person or persons other than the City of Louisville and its officers from enforcing, or attempting to enforce, against the complainant the provisions of the rate ordinance referred to in Paragraph four of the bill.

Came again the complainant, the Cumberland Telephone & Telegraph Company, by its said counsel and filed its Replication to the answer of the defendant herein.

79 The Answer above referred to is as follows:

UNITED STATES OF AMERICA:

In the United States Circuit Court for the Western District of Kentucky, at Louisville.

CUMBERLAND TELEPHONE & TELEGRAPH COMPANY, Complainant,
vs.
THE CITY OF LOUISVILLE, KENTUCKY, Defendant.

Answer of the City of Louisville to the Bill of Complaint.

I.

The defendant, the City of Louisville, reserving all manner of exceptions that may be had to the uncertainties and imperfections of the bill comes and answers thereto, or to so much thereof as it is advised is material to be answered, and says that it is true, as stated in Paragraph 1 of said Bill of Complaint, that the Cumberland Tele-

phone & Telegraph Company was incorporated under the laws of the Commonwealth of Kentucky, as stated in the bill, and that the amendments to said charter were duly and regularly made as charged in said bill:

Defendant also admits that the Great Southern Telephone & Telegraph Company was incorporated under the laws of the Commonwealth of Kentucky, as charged in the bill, and that said complainant company and said Great Southern Telephone & Telegraph Company were thereafter consolidated, as charged in the bill.

80 Defendant admits that the Ohio Valley Telephone Company was created by an Act of the General Assembly of the Commonwealth of Kentucky, as charged in the bill, and that said company was thereafter consolidated with the complainant company, as charged in the bill.

Defendant admits that an ordinance was approved by the General Council of the City of Louisville on August 17, 1886, as charged in the Bill of Complaint, and that said ordinance is in substance the same as that set out in the Bill of Complaint.

Defendant admits that the Directors of the Ohio Valley Telephone Company accepted said ordinance and gave the bond referred to in the bill, and that said The Ohio Valley Telephone Company furnished the Mayor of the City of Louisville an official copy of the proceedings of said meeting, as charged in the bill.

Defendant admits that Hon. P. B. Reed, Mayor of the City of Louisville, addressed the letter referred to in Paragraph 2 of the bill, dated September 4, 1886, to W. H. Newman, Secretary of The Ohio Valley Telephone Company, as charged in said bill

Defendant admits that continuously from said time to the 27th of January, 1900, said The Ohio Valley Telephone Company operated a telephone exchange in the City of Louisville, and that said The Ohio Valley Telephone Company was recognized by the City of Louisville as legally occupying the streets, alleys and public places of the City of Louisville with its poles, wires, cables and other apparatus, as charged in the bill, and admits that from the consolidation of said The Ohio Valley Telephone Company with complainant company on the 27th day of January, 1900, the said complainant company has been continuously, and is now, occupying the streets, alleys and public places of the City of Louisville with its wires, cables, conduits and other apparatus and structures, and has continuously, and is now, engaged in operating a telephone exchange or plant in the City of Louisville.

Defendant admits that it has at all times until January, 1909, recognized the said company as legally and lawfully occupying the streets and other public places with its structures and operating its plant in the City of Louisville.

81 Defendant admits that on April 7, 1902, the General Council adopted an ordinance requiring the complainant company to execute bond as set out in the bill, and admits that said complainant company did execute bond, as charged in the bill; admits that on June 7, 1902, the General Council passed a resolution approving said bond, as charged in the bill.

Defendant says it has no knowledge or belief as to whether the complainant has renewed said bond, or any bond, in favor of the City of Louisville since April 7, 1902, as often as requested by the proper authorities of the City of Louisville, but demands strict proof of the truth of said charge.

II.

For further answer, defendant says that it is true, as stated in Paragraph 3 of the Bill of Complaint, that the General Council of the City of Louisville did, in the month of January, 1909, adopt an ordinance which was, on January 23, 1909, approved by the Mayor of the City of Louisville, which ordinance repealed an ordinance of the General Council of the City of Louisville approved on the 17th day of August, 1886, as set out in the Bill of Complaint.

Defendant admits, and now insists and charges, that it is true that by virtue of said ordinance approved on January 23, 1909, complainant is without right to occupy the streets, alleys and public places of the city of Louisville with its poles, wires, conduits and other structures, and says that it is true, and charges, that said complainant is unlawfully and illegally conducting a telephone business and operating an exchange in the City of Louisville.

Defendant says that it is not true that said ordinance was passed without any notice to complainant of the intention of the City of Louisville to adopt same; says that it is not true that said ordinance was adopted without any just cause, or without assigning any just cause to the complainant.

82 Defendant denies that it seeks to deprive, or in any manner will deprive, the complainant of its property in the City of Louisville, and denies that said ordinance seeks, or that the defendant in any manner seeks, to impair, or in any manner will impair, the obligation of the complainant's contract with the City of Louisville, or any contract with the City of Louisville, in violation of Section 10 of Article 2 of the Constitution of the United States, or of any other provision of the Constitution of the United States. Defendant says it has no contract with complainant company.

Defendant denies that said ordinance, or any act on the part of the defendant, will deprive complainant of its property without due process of law, or that any such ordinance, or any act on the part of the defendant, will deny to complainant the equal protection of the law, in violation of the Fourteenth Amendment of the Constitution of the United States, or in violation of any provision of the Constitution of the United States.

III.

For further answer, and especially in answer to Paragraph 4 of the bill, defendant says that it is true that in the month of February, 1909, the City of Louisville, through its legislative department, adopted an ordinance entitled, "An Ordinance fixing the maximum rates to be charged for telephone service in the City of Louisville," and admits that said ordinance was approved by the Mayor on the

6th day of March, 1909; admits that said ordinance, as set out in words and figures in said Paragraph 4 of the bill, is in substance a copy of the ordinance so passed.

Defendant admits that the ordinance referred to in Section 4 of the above mentioned ordinance, provided that the maximum telephone rates in the City of Louisville should be $4.00 per month for business telephones and $2.00 per month for residence telephones; and admits that complainant instituted a suit in the United States Circuit Court for the Western District of Kentucky, seeking
83 to enjoin the enforcement of said ordinance, and admits that a temporary injunction was granted in said case.

Defendant admits that the latter part of Section 4 of said ordinance above set out was intended to prevent any increase in rates by the Louisville Home Telephone Company, a corporation conducting a telephone business in the City of Louisville under a contract with the City of Louisville limiting its rates to less than maximum rates provided in the ordinance above set out; but defendant denies that said ordinance was intended to apply exclusively and alone to the complainant.

IV.

For further answer, and especially in answer to Paragraph 5 of said bill, defendant says that it has no knowledge or belief as to the allegation that the complainant's telephone plant in the City of Louisville and its immediate suburbs cost complainant to January 1st, 1909, the sum of $1,700,045.36, and defendant demands strict proof of the truth of said allegation.

Defendant denies that the complainant's telephone plant in the City of Louisville cannot be disconnected or disassociated from that part of the exchange outside of the City Limits of Louisville, Kentucky.

Defendant says that it has no knowledge or belief as to the allegation that complainant has 9,657 subscribers to said exchange on January 1st, 1909, but demands strict proof of the truth of said allegation.

Defendant denies that the revenue derived by said complainant from its said exchange in Louisville, Kentucky, for the year 1908 was only as follows:

84

Exchange service	$311,112.63
Proportion of tolls earned by exchange	7,728.08
Messenger service	655.02
Directory advertisement	3,181.15
Miscellaneous	2,926.66
	$325,603.54

And defendant says that said revenue was largely in excess of the amounts above set out.

Defendant denies that complainant's expenses of conducting its telephone business in the City of Louisville for the year ending December 31, 1908, amounted to $239,710.48.

Defendant says it is not true that the percentage of net revenue derived by said complainant of the cost of said plant is 5.11% ; denies that said 5.11% does not include any depreciation upon the plant; says it has no knowledge or belief as to the allegation that if the rates prescribed by said ordinance referred to in Paragraph 4 are put into effect, it will result in a decrease in the complainant's revenue, based upon present rates, and its present stockholders located inside the corporate limits of the City of Louisville, amounting to $33,-554.00, and at the same time will not decrease in any respect the expenses of conducting said business, but defendant demands strict proof of said allegation.

Defendant says that it is not true that if the rates prescribed in said ordinance, referred to in Paragraph 4, had been in effect during the year 1908, and the number of its subscribers had been the same at the new rates that they were at the rates that the complainant charged, then the gross revenue to said complainant would have been $33,504.00 less than it was, or that said gross revenue would have been at all less than it was as charged in said bill. On the contrary, defendant says that said revenue would have been in excess of $311,-112.63, the amount named in the bill had said rates been in force and charged to all subscribers alike.

85 Defendant says it has no knowledge or belief as to the allegation that the complainant's expenses would not have decreased at all had the rates provided for in the ordinance referred to in Paragraph 4 been in force, but demands strict proof of said allegation.

Defendant denies that if the rates established by said ordinance, referred to in Paragraph 4, had been in force during the year 1908, that the complainant would not have received a net profit of more than 3.08%.

Defendant says it is not true that the said rates prescribed in said ordinance, referred to in Paragraph 4, are confiscatory, and denies that if said rates are enforced, the enforcement thereof will require the complainant to operate its plant in Louisville, Kentucky, without just compensation, and denies that the enforcement of said ordinance would take complainant's property without due process of law.

V.

For further answer to the bill, and especially in answer to Paragraph 6 of said bill, defendant admits that complainant owns and operates exchanges in the various towns named in said bill, and that the same are operated in the manner set out in said bill, and admits that the toll lines are brought into the city and connected with the switch-boards, and that subscribers to said exchanges are entitled to receive connections over the toll lines. Defendant admits that complainant makes a charge for the last named character of service, but defendant says it has no knowledge or belief as to the truth of the allegation that said complainant charges for said character of service one half of one per cent per mile between two cities thus connected for each three minutes of conversation, and one third of the initial

charge for each individual minute of conversation, but demands strict proof of the truth of said allegation.

86 Defendant admits that complainant has erected four exchanges, as charged in the bill; that said exchanges are so arranged that any two subscribers in the City of Louisville can be at once put into communication; admits that there are exchanges operated in the various towns and cities named in the bill, and says it has no knowledge or belief as to the truth of the allegations made in regard to the number of subscribers to said exchanges in said towns, but demands strict proof thereof.

Defendant says it has no knowledge or belief as to the truth of the allegation that any one of the subscribers to the Louisville Exchange on January 1st, 1909, had the right to unlimited connection with any one or more of the other subscribers upon the payment of the monthly charge, or as to whether or not any one of said subscribers had access to and free communication with said subscribers in the various smaller exchanges in Kentucky and Indiana, as charged in the bill, but defendant demands strict proof of said allegation.

Defendant says it has no knowledge or belief as to the allegation, that the rates for service charged by the complainant in the City of Louisville, as explained in said bill, were from March 1st, 1907, or are now, as set out in Paragraph 6 of the bill, to-wit, $8.00 per month for a private metallic business telephone; $5.00 per month for a two-station, metallic business telephone service; $4.00 for a private residence telephone, and $3.00 for a two-station residence telephone, and the other rates named in said paragraph—but defendant demands strict proof of said allegation.

Defendant says it is not true that the rates mentioned in Paragraph 6 of said Bill of Complaint were in effect as to all customers of said telephone company at any time during 1908, or on January 1st, 1909.

Defendant says it has no knowledge or belief as to the allegation that complainant had, at the dates named, only 738 patrons paying the $8.00 business rates, and only 875 patrons paying the $4.00 residence rate, but demands strict proof thereof.

87 Defendant denies that all the remainder of the complainant's patrons in the Louisville Exchange had some other kind of service at the various rates set out in said bill.

Defendant says that it has no knowledge or belief as to the allegation that there is, of necessity, or at all, a depreciation or deterioration of complainant's plant over and above the ordinary and necessary expenses of maintaining said exchange or structure, and which cannot be taken care of as it occurs, but must be provided for out of the receipts of the exchange so as to provide a fund with which to take care of this decay and depreciation when the various pieces of property comprising the exchange can no longer be used and have to be replaced with new material, but demands strict proof of said allegation.

Defendant admits that the switchboards, poles, wires, cables and all of the various and many items of property must, from time to time, be replaced and renewed after they have served their useful-

ness, but denies that such renewal is in addition to or beyond the mere current repairs required to maintain the plant in operating condition.

Defendant says that it is not true that such depreciation referred to in said bill must, of necessity, or at all, be provided for out of the receipts year by year, and says that it is not true that in order to do this properly, complainant, of necessity, or at all, is required to take from its gross receipts each year 7½% of the actual cost of the plant with which to provide a proper, reasonable and just depreciation fund, less whatever amount has been expended during that particular year in reconstructing parts of the plant, and defendant says it is not true that at the end of each year, before any part of its receipts can be considered profit, there must be deducted 7½% of the actual cost of the plant, less whatever amount has been expended during that year on reconstructing the plant.

Defendant says it has no knowledge or belief as to whether the annual amount set aside for depreciation varies year by year.

VI

88 For further answer to the bill, and especially for answer to Paragraph 7 of the bill, defendant admits that on January 1st, 1907, the complainant adopted a schedule of charges higher than the rates theretofore charged. Defendant admits that such action resulted in the protest of the Board of Trade of the City of Louisville, and admits that a letter was written by James E. Caldwell, President, to James F. Buckner, Superintendent, as charged in the bill. Admits that a contract was entered into on the 18th of April, 1907, between the Board of Trade and the complainant, as set out in the said bill; admits that a report was made to the Board of Trade by certain members thereof on August 16, 1907, as set out in said bill, and thereafter another report from another committee was made to said Board of Trade on December 16, 1908; admits that on December 30, 1908, a resolution referred to in said bill was adopted, and that a copy of said resolution was furnished the Mayor of the City of Louisville, and that thereupon the agreement between the Louisville Board of Trade and the Cumberland Telephone & Telegraph Company was rescinded.

Defendant says that it has no knowledge or belief as to the membership of the Board of Trade, but demands strict proof thereof; says it has no knowledge or belief as to whether one member at that meeting stated that the committee appointed by the Board of Trade who had investigated and approved the schedule of rates, set out in the bill as being fair, just and reasonable, had been misled and deceived by the complainant in their investigation, or as to whether there was any just foundation for such statement, or, as to whether it was untrue, but demands strict proof of all of said allegations.

Defendant admits that the members of said committee are men of the highest character and among the most prominent business men of the city, but denies that said men could not be imposed upon; and defendant says that said committee which recommended the making of the contract between said Board of Trade and said

complainant company was imposed upon by said complain-
89 ant company and was deceived by said complainant, and that said committee was induced to recommend said contract and the rates therein named by reason of the deception and false representations on the part of the complainant, and by reason of the fact that statements wholly false and untrue were made by said complainant to said committee relative to the value of its property and the amount of its earning capacity and the receipts and cost of its operations, and defendant says that when said Board of Trade learned that its committee had been imposed upon, and had been deceived by said complainant, it rescinded the action which it had theretofore taken and which is more fully set out in the bill.

VII.

For further answer to the bill, and especially for answer to Paragraph 8 of the bill, defendant admits that there has been in the City of Louisville, since 1901, another telephone company charging the rates referred to in said Section 8; that said telephone company has a large number of subscribers, and that said company is seeking a release from its contract with the City of Louisville; admits that the officers of said company have publicly stated that its rates are ruinously low, and stated that said company is unable to care for its plant and operate the same upon the rates fixed in its contract with the city.

But defendant denies that said statement so made by the officers of said telephone company is true. On the contrary, says that said company is able to care for and operate its plant at the rates fixed in its contract and provide a depreciation fund to take care of the wear and tear of its property, and to pay a reasonable dividend on the value of its property.

Defendant says that said company has, since its inception, operated at a profit, and is now operating at a profit.

90 Defendant says it is not true that the telephone question has been brought to the attention of the public by reason of the desire on the part of the above-mentioned telephone company to increase its rates, but the discussion of said telephone question has been brought about by reason of the arbitrary and dictatorial methods and lack of courtesy used by the complainant company and by the exorbitant charges made by the complainant company to its customers, and by the poor service rendered by the complainant company to its said customers.

Defendant denies that any untrue or misleading statements have resulted in inflaming the public mind and have resulted in the action of the city officials in undertaking to destroy the complainant's right to conduct a telephone business in the City of Louisville, or to cause it to operate its large investment without due compensation.

Defendant says it is not true that the telephone business is inherently and essentially different from all other known kinds of business; says that it is not true that said telephone plant of neces-

sity can never, in the nature of things, be a finished or completed property.

Defendant admits that each new customer requires a separate and distinct wire connected with a separate telephone instrument, separate wiring, and a separate place on the switchboard, but defendant denies that this necessitates a continued and constant expenditure of new capital, and denies that *at* the number of telephones increases the capital invested must correspondingly, or at all, increase; says that it is not true that the wires formerly serving one telephone cannot often be used to serve new telephones; denies that this results in many wires being used by telephones for a short time which cannot thereafter be used for other telephones.

Defendant denies that so long as complainant continues to serve its patrons in Louisville, it must, of necessity, continue to invest new capital, but admits that said company must string new wires, add to its switchboard capacity and connect the new sub-
91 scribers with the old subscribers.

Defendant admits that it is impossible to conduct the telephone business in a city of the size of Louisville without making provisions for the future growth of the business; denies that it takes usually one year to install an equipment or provide for probable increase in subscribers; admits that it is proper and prudent that appellant should provide in advance for anticipated patronage.

Defendant denies that complainant has pursued this policy in good faith, or at all, and defendant admits that the cost of any such added facilities must be added to the cost of the exchange; but denies that the depreciation on the facilities must, of necessity, or at all, be added to the capital and expense account of conducting the business.

Defendant denies that the complainant is conducting its telephone business as prudently and economically and honestly as the ability of its managers will permit; denies that the rates charged are less than the value of the service rendered and do not afford complainant a reasonable or fair return upon the actual investment, or the actual value of its plant.

Defendant says it is not true that the complainant is compelled to conduct its business in such a way as will prevent the expense of giving the service necessitating too high a rate, even though it does not yield a fair return from the investment.

Defendant admits that the paramount duty of the appellant is to practice economy and make the rates to the subscribers as low as possible, but that directly the opposite course has been pursued by said complainant since it began to conduct a telephone business in the City of Louisville.

Defendant denies that the business affairs have, from the beginning, or at all, been conducted honestly, prudently, skillfully and economically; admits that from time to time serious controversies have arisen, not only with respect to the rates and charges
92 made by complainant, but also with respect to the character of service furnished by it.

Defendant says that instead of the charge being true that said

complainant is willing and invites such investigation of the affairs of its business and capitalization,—on the contrary, said complainant, after consenting that this defendant might investigate its property and examine its books and inspect its physical property, and after this defendant had employed an expert in telephone work at a large expense to come to the City of Louisville and make such examination, said complainant declined and refused to allow said expert to make any such examination or inspection, or to examine any of the books of said company, or to inspect any of the property of said company.

Defendant denies that complainant's business in Louisville has been misrepresented, and is wholly, or at all, misunderstood; denies that the rates heretofore charged by said complainant company are reasonable; denies that said rates cannot be reduced without ruin to its stockholders or disaster to its telephones, and denies that the development of the trade area of the City of Louisville has been made by complainant with the greatest energy, zeal and ability at the request of its patrons in Louisville who realized the enormous value that would result from this development.

VIII.

For further answer, and especially for answer to Paragraph 9 of said bill, defendant states that no intelligent investigation of complainant's business, or its rates, was had by the city authorities of the City of Louisville before the passage of said ordinance reducing its rates, as hereinabove set out.

Defendant denies that a comparison of rates in other cities is unjust to the complainant, or misleading.

93 Defendant says that it is not true that there are no two cities in the United States where conditions are sufficiently similar to warrant such comparison; denies that the question of telephone rates is purely and essentially a local one.

Defendant admits that said telephone rates are, to a large extent, controlled by the four factors mentioned in the bill; denies that such comparison with other cities is useless.

Defendant admits that under the rate ordinance referred to in the bill every user of a business telephone may have the same at not exceeding $4.00 per month, and every person using a residence telephone may have the same at not exceeding $2.00 per month; admits there is nothing compelling any patron of the complainant to pay a rate exceeding $4.00 for business telephones, $2.00 for residence telephones, but denies that if the whole of complainant's patrons should elect to take the lower rates, complainant could be compelled to operate its plant at a heavy loss, or at any loss each year, which would result in bankruptcy; and defendant says that in order to get the lowest rates prescribed in said rate ordinance, it is necessary for the patrons to take party lines; that under the rates named by the complainant in its bill as the rates charged by it, every patron could take party lines and obtain a much less rate proportionately than under the rates established by the rate ordinance referred to; but that, as a matter of fact, over 45% of the present

patrons of said company, at the present time, take single lines in preference to party lines, and more than 45% of said patrons will, under the present rate ordinance, continue to take single line telephones and pay therefor the highest rate prescribed in said ordinance.

Defendant denies that the greatest benefit in the rates prescribed over those now in effect is to those patrons best able to pay a fair price, and who have the least cause for complaint as to the present rates.

94 Defendant has no knowledge or belief as to whether the residence or business class now paying the so-called maximum rates are each less than 500, or, as to whether or not such users are the heavy users of telephone service or make use of complainant's telephone service in business and social affairs to a much greater extent than other patrons of the complainant who pay a lower rate, but defendant demands strict proof of said allegations.

Defendant admits that there is a slight reduction in the price charged by complainant to those using the cheaper class of service, but denies that there is a heavy decrease in the price to be paid by the heaviest and most frequent users of complainant's service.

Defendant admits that the underlying and fundamental nature and necessity of the telephone business is to place it within the reach of every one, and admits that rates must be classified with the object in view to reach the multitude, and admits that in the beginning of the business there was a flat rate for business and a flat rate for residence telephones without party lines, but denies that the result was, that only a few desired to use the service or patronize the company. Admits that the large class of people in the community are unwilling to pay high prices for telephone service; admits that experience shows that it was necessary to provide different classes of service; admits that providing different classes of service resulted in an enormous increase in the patrons and an increase in the value of the service; that the telephone is, therefore, of great value to the city; admits that it is necessary to the complainant and to the plant that the rates to be charged for telephone service shall be adequate to operate and maintain the plant and provide a fair return upon the investment, but denies that the telephone company, in the nature of things, can never be finished or completed property; denies that it must continue to grow from time to time; denies that new capital must be procured from the investing public; denies that it is necessary that additional capital be provided from time to time by the issuance and sale of stock; admits that unless the complainant can show a fair and reasonable re-

95 turn, the investing public are unwilling to invest their money in such business.

Defendant admits that the value of the service increases as the number of subscribers increases; admits that as the service increases, the expense of conducting the business increases, but denies that each additional telephone involves additional capital.

IX.

Defendant, for further answer, and especially for answer to Paragraph 10, denies that the rates charged as established by the complainant for telephone service rendered by it to its patrons in Louisville are reasonable rates; denies that said rates yield only a fair, reasonable and just return upon the capital invested. Defendant denies that said rates and charges provided by said rate ordinance are arbitrary and unreasonable, or at all unreasonble, unjust or confiscatory, and denies that if said rates are enforced the same will not yield to the complainant sufficient money to meet the necessary cost of conducting its said business in said city and maintaining its plants and appliances, and will yield no just, fair return upon the large capital invested by it, and denies that the stockholders of complainant will be deprived of a fair and just return and dividend upon their stock; denies that complainant and its stockholders will be deprived of said property without due process of law; denies that the property of said complainant or its stockholders will be taken for public use, or at all taken without just compensation, or contrary to the 14th Amendment of the Constitution of the United States.

Defendant, for further answer, and especially for answer to Paragraph 11 of the bill, admits that said rate ordinance provided that it should be unlawful for any corporation, firm or individual furnishing telephone service to charge therefor amounts exceeding
those fixed in the ordinance, and that any violation of the
96 provisions of said ordinance shall be punished by a fine of
not less than five, nor more than twenty-five dollars, and each charge in excess of the amount fixed shall constitute a separate offense.

Defendant admits that the City of Louisville is threatening and will undertake to enforce said ordinance unless restrained by this Court, and will prosecute complainant or any other company who violates the provisions of said ordinance, and will issue and will cause to be issued numerous warrants against the complainant in case it does violate the provisions of said ordinance, but denies that the complainant will suffer great and irreparable injury, or any injury, unless this defendant is restrained from executing and enforcing said ordinance.

Defendant denies that complainant has no adequate remedy at law for the redress of the injuries which will be inflicted upon it, and denies that any injury will be inflicted upon it or upon its property and business by the enforcement of said ordinance, or by the issuance or suing out of processes of law by defendant for the purpose of enforcing said ordinance; denies that it is necessary, in order to protect the complainant's rights and property, that a court of equity shall interfere.

X.

For further answer, and especially for answer to Paragraph 12 of the bill, defendant admits that the amount in dispute exceeds the value of $5,000.00, exclusive of interest and costs; denies that interference with the complainant's property in the City of Louisville,

or any interference with the rates and charges established by the complainant for the use of its telephone service in said city, will cause complainant irreparable injury and damage, or any injury or damage; denies that the city authorities of the City of Louisville will unless restrained, or at all, injure, destroy or otherwise interfere with and seriously, or at all, damage complainant's business in said city.

97 XI.

For further answer to said Bill of Complaint, defendant says that the complainant company has been conducting and operating a telephone system in the City of Louisville for many years; that its policy since it began to operate such telephone system has been dictatorial, arbitrary and offensive to the citizens of Louisville, and without proper regard to the City of Louisville or its citizens; and instead of furnishing to citizens of Louisville the best service possible, at the lowest price consistent with business principles, complainant has pursued the policy of furnishing to the citizens of Louisville a poor class of service and charged said citizens the very highest rate it could extort from them; that in 1901 the telephone service furnished by said company became so unsatisfactory that certain citizens of Louisville procured from the General Council of the City of Louisville a franchise to operate another telephone system in the City of Louisville; that since the said second telephone company has been operating in the City of Louisville the complainant company has pursued a policy which has given even more dissatisfaction to the citizens of Louisville than its former policy; that the policy so pursued, and now pursued, by said complainant company is in substance as follows:

Said complainant company has a substantial monopoly on all long distance service in and around Louisville on account of its connection with the American Bell Telephone Company. All customers of the complainant company who are compelled, for business reasons, to have long distance connections with customers outside of the City of Louisville are compelled to pay the highest possible price for their telephone service, and the rates charged have been gradually increased on all such customers. To all customers who do not require long distance service, said complainant company will

98 furnish, and does furnish, a telephone of the same character as above mentioned at a much less rate, and, in many instances, furnishes such telephone service for a nominal charge only; that such course has been pursued in order to stifle competition; that the result has been that many customers and citizens of Louisville are charged rates at less than the cost of the service furnished, thereby imposing on the customers of said complainant company who are so situated as to require the service of the complainant's long distance connections the necessity of paying the complainant company's losses in trying to crush out competition.

Defendant says that the situation above detailed became so burdensome to some of the citizens of the City of Louisville that the Mayor and General Council of the City of Louisville attempted, in the year

1908, to remedy the situation by passing an ordinance authorizing the sale of a franchise for a comprehensive system of telephones in the City of Louisville, which it was hoped by the Mayor and General Council of the City of Louisville would result in one comprehensive system of telephones, with the right to charge such uniform rates as would be fair and just to all citizens, and, at the same time, permit the company acquiring such franchise to operate its system of telephones and obtain a fair return on its investment.

Defendant says that said ordinance was prepared by the City Attorney of the City of Louisville upon request of the Mayor; that it was introduced in one of the Boards of its General Council, and passed said Board by practically a unanimous vote, and was favorably reported to the other Board of its General Council, and would have been adopted by said Board and approved by the Mayor but for the fact that the complainant company, through its President and attorneys, appeared before the Mayor of the City of Louisville and before the Board of Aldermen of the City of Louisville and stated to said Mayor and to said Board of Aldermen that the complainant company had a franchise which was irrevocable and irrepealable, and that the City of Louisville was powerless to interfere with the rights of the complainant company in the conduct of its business or otherwise in the City of Louisville, and said officials and attorneys for said company further stated in
99 unequivocal terms to the Mayor and Board of Aldermen of the City of Louisville that it, the said complainant company, would not become a bidder at the sale of such a franchise or in any manner acquire, or attempt to acquire, the franchise which, by said ordinance, was proposed to be sold.

Defendant says that by one of the provisions of said ordinance, viz., Clause 16, it was proposed to repeal the ordinance which was approved on August 17, 1886, referred to in the Bill of Complaint, that said repealing clause of said ordinance was in substance the same as the repealing ordinance referred to in Paragraph 3 of the Bill of Complaint. Defendant files a copy of said proposed ordinance herewith and makes same a part hereof, marked "Exhibit A."

Defendant, therefore, says that inasmuch as the defendant, at the time it first proposed to repeal the ordinance under which the complainant claims its right to conduct its business in the City of Louisville, proposed at the same time to offer for sale a franchise similar in nature to that now exercised by the complainant company, and inasmuch as the complainant refused to become a purchaser, or to acquire the franchise so proposed to be sold, said Board of Aldermen declined to pass the ordinance above mentioned, and, in lieu thereof, passed the ordinance referred to in the Bill of Complaint, being the ordinance referred to in Paragraph 3 of the Bill of Complaint.

Defendant says that in connection with the repealing ordinance, referred to in Paragraph 3 of the complaint, which was recommended to the General Council of the City of Louisville for passage by the Mayor of the City of Louisville, said Mayor sent with the

said ordinance a written recommendation, which recommendation was in part as follows:

"As to the repealing ordinance, it may be said that it is unjust to the Cumberland Telephone Company, to repeal the ordinance under which it obtained its right to do business in the City of Louisville, and not at the same time pass an ordinance authorizing the sale of a similar right or franchise, in order that the Cumberland Telephone Company might have an opportunity to purchase such a similar right or franchise.

100 "In answer to this contention, I have to say that an ordinance repealing the ordinance which granted to the Cumberland Telephone Company its right to do business in the City of Louisville, and at the same time ordering the sale of a similar right or franchise was introduced in the lower board of the General Council, but while that ordinance was pending, and before it was put upon its final passage, the Cumberland Telephone Company, through its President, and through its Attorney, at a public meeting held by the General Council for the purpose of considering the ordinance in question, stated unequivocally that it would, under no circumstances, bid for such a franchise, and that the Cumberland Telephone Company did not care to purchase any similar franchise at this time. It, therefore, seems to me that there is no occasion to pass an ordinance authorizing the sale of such a franchise until it is determined that the City has a right to repeal the ordinance under which the Cumberland is now acting, and I take it for granted that the General Council would at the proper time, upon the request of the Cumberland Telephone Company, offer for sale a franchise which would be fair and just to the Cumberland Telephone Company and its patrons."

Defendant says that it is the purpose of the General Council of the City of Louisville, and of the Mayor of the City of Louisville, to offer for sale a franchise of a nature similar to that heretofore exercised by the complainant company whenever said complainant company desires to purchase such a franchise.

Defendant says, moreover, that under the laws of the State of Kentucky, the City of Louisville can be compelled to offer for sale such franchise of a similar nature, upon the request of the complainant company.

Defendant says, therefore, that said complainant company is operating its telephone system in the City of Louisville, Kentucky, without right and without authority of law; that said complainant is a trespasser in the City of Louisville, and is a wrong-doer, and, therefore, is not entitled to question the rates established by said rate ordinance, referred to in Paragraph 3 of the bill, or to seek or obtain any relief from this Court.

XII.

101 Defendant says that complainant's plant and property used in the City of Louisville in connection with its telephone system, exclusive of real estate and buildings, can be reproduced new throughout, with all modern up-to-date equipment, for

the sum of $1,000,000.00, and that said property as it now stands is not worth more than $800,000.00.

Defendant says that the constructing, maintaining and operating of the telephone system has extended over a period of more than twenty-five years; that telephone systems have been constructed, and are now being operated in practically every city, town and hamlet of the United States which has a population of more than 500 inhabitants; that the construction of the telephone system and the cost of such construction has passed its experimental stage; that there is nothing complicated or abstruse connected with the construction or operation of a telephone system at the present day.

XIII.

Defendant says that complainant operates a system of telephones over a large territory, and has many toll lines and valuable connections with companies operating long distance telephone systems; that the Exchange at Louisville, Kentucky, is one of the largest exchanges in the complainant's system of telephones; that a large portion of the receipts of said complainant company from toll service is derived through and by reason of the Louisville Exchange; that for the year 1908, the complainant derived at least $1,654,699.41 from its toll service; that, according to the Bill of Complaint, only about ½ of 1% of said toll receipts is credited to the Louisville exchange; that the Louisville Exchange earned 7 3-10%
102 of the gross revenue from Exchange service over the entire system; that the Louisville Exchange paid 6 6-10% of the gross operating expenses of the complainant over its entire system; that the Louisville Exchange paid 6 8-10% of the gross cost of maintenance, reconstruction, &c., of the complainant over its entire system; that the Louisville Exchange paid 6% of the gross taxes charged against and paid by said complainant over its entire system; that, according to complainant's valuation of the cost of its property, said cost is 6½% of the entire value of the complainant's property over its entire system.

Defendant says that the Louisville Exchange, instead of being credited with only $7,728.08 as its portion of the toll service, should be credited with at least 6% of the total receipts from toll service over the entire system operated by said complainant company, and that if said Louisville Exchange were so credited for the year 1908, with 6% of the gross receipts from said toll service, then said complainant's receipts for the year 1908, from its property in Louisville, Kentucky, amounted to more than $90,060.00 in excess of the receipts indicated in the Bill of Complaint from said item alone.

XIV.

For further answer, the defendant says that complainant issued on the 1st of January, 1909, a printed Telephone Directory in the City of Louisville; that in said telephone directory there appears in detail the names of subscribers to the complainant's telephone system in the City of Louisville, together with the number of their re-

spective telephones and the class of service furnished by the complainant to each subscriber.

Defendant says that, based on the number of telephone subscribers belonging to each class, as shown by said telephone directory, and assuming that it is true that the complainant company
103 has 9,657 subscribers to its telephone system in the City of Louisville, as charged in its bill, then a mathematical calculation shows that had the rates established in the rate ordinance, referred to in Paragraph 3 of the bill, been in force during the year 1908, complainant would have received more than $400,752.00 for operating its telephone exchange in the City of Louisville, which amount is exclusive of all other items of receipts.

Defendant does not file with its answer said telephone directory as part of its answer for the reason that said telephone directory contains more than 300 pages of closely printed matter, and the cost of copying said directory, if the same became necessary, would be very great.

XV.

Defendant says that the rate ordinance, referred to in Paragraph 4 of the bill, was passed after as thorough and complete investigation as the authorities of the City of Louisville were able to make; that said investigation was based on the reports made by the complainant to the Louisville Board of Trade,—on the published annual and monthly reports made by the complainant, wherein the operations and other facts in connection with the telephone system of said complainant company were detailed, and on the facts gathered from the Telephone Directory issued by the complainant, and on a comparison of the respective charges, operations, property, receipts and operating expenses of the complainant company, and the Louisville Telephone Company.

Defendant says that said rate ordinance was adopted also as a means of forcing the complainant to cease discriminating between its customers and to adopt a policy that would be fair and just to all the citizens of Louisville, instead of permitting said company to pursue a policy of forcing one class of citizens to pay exor-
104 bitant telephone rates and another class of citizens an unreasonably low rate for the same class of telephone service.

Defendant says that if the rates named in said rate ordinance, referred to in Paragraph 4 of the bill, were enforced, and if all subscribers to said complainant company, having the same class of telephone service, and in like condition, were charged according to the rates established by said rate ordinance, then the said complainant company would derive a much larger income from operating its telephone system in Louisville than it now derives from the charges actually made against its subscribers; and that the rates, if so enforced, will permit the complainant to derive an income sufficient to pay its operating and other expenses and maintain its property, provide a sufficient sum to take care of any and all depreciation of its property and earn an income in excess of seven (7%) per cent on the value of the property used by it in connection with its Louisville Exchange.

XVI.

Having thus made full answer to all the matters and things contained in the bill, this defendant prays to be dismissed hence, with its costs in this behalf expended.

CITY OF LOUISVILLE,
By J. F. GRINSTEAD, *Mayor.*

Solicitors.

105 STATE OF KENTUCKY,
County of Jefferson:

James F. Grinstead makes solemn oath and says he is the Mayor and chief executive officer of the City of Louisville, the defendant herein. He says that the foregoing answer is true to the best of his knowledge, and that so much thereof as concerns the acts or deeds of any other person or persons he believes to be true.

J. F. GRINSTEAD.

Subscribed and sworn to before me, by James F. Grinstead, this 27th day of March, 1908. My commission expires on the 11th day of January, 19—.

HUSTON QUIN,
Notary Public, Jefferson County, Kentucky.

106 "EXHIBIT A" WITH ANSWER.

No. —.

Series 1908.

An Ordinance Creating a Franchise for a Comprehensive Telephone System in the City of Louisville and Providing for the Sale Thereof and Repealing Certain Ordinances Granting the Right to Use the Public Ways for Telephone Purposes and Regulating Charges for Telephone Service.

107 No. —. Series 1908.

An Ordinance Creating a Franchise for a Comprehensive Telephone System in the City of Louisville and Providing for the Sale Thereof and Repealing Certain Ordinances Granting the Right to Use the Public Ways for Telephone Purposes and Regulating Charges for Telephone Service.

Be it ordained by the General Council of the City of Louisville:

SEC. 1. That there shall be sold to the highest and best bidder for a term of twenty years, the franchise or privilege to construct,

purchase or otherwise acquire, and to maintain and operate a telephone system for public and private use in the City of Louisville, which franchise or privilege shall include the right of way over, along, under, through and in the streets, avenues, alleys, lanes, parks, squares, bridges and other public places in said city, for the purpose of erecting, constructing, maintaining and operating, whether overhead or underground, poles, wires, manholes, subways and other equipment necessary or convenient for the construction and operation of such telephone system, and the right to extend such system from time to time during the existence of this franchise or privilege herein ordered to be sold; all of which shall be in accordance with the conditions, terms and limitations of this ordinance.

SEC. 2. That it shall be the duty of the Board of Public Works, (as soon as practicable after the passage of this ordinance,) to offer said franchise or privilege for sale at public auction to the highest and best bidder at the front door of the City Hall, on Sixth Street, in the City of Louisville, Kentucky, after having given notice of the time, place and terms of said sale by advertisement for fifteen (15) days in the two daily newspapers elected to do the public advertising of the city, the first publication in each of said papers to contain this ordinance in full, and the subsequent publica-
108 tions need not contain the ordinance in full, but may refer to the first publication for the terms of said ordinance, and said Board shall accept the highest and best bid therefor and report the same to the General Council for its approval, and the General Council shall have the right, for and on behalf of the city, to reject any and all bids for said franchise or privilege, and in case the bid reported by the said Board shall be rejected by the General Council, it shall be the duty of the Board of Public Works to immediately proceed, after advertising as herein provided, to again sell said franchise from time to time in the manner and under the regulations herein provided until a sale of the franchise herein offered shall be made and approved. Said sale shall be for cash, to be paid by the purchaser within fifteen (15) days after the sale has been so approved by the General Council, and upon the payment of the purchase price and the execution and approval of the bond hereinafter required the franchise or privilege provided for herein shall immediately vest in such purchaser and continue for a term of twenty (20) years thereafter.

SEC. 3. That no bid for said franchise or privilege shall be received by the Board of Public Works for less than Twenty Thousand ($20,000) Dollars, nor unless the bidder shall before making his bid deposit with said Board a check for Ten Thousand ($10,000) Dollars, certified to be good by a bank doing business in the City of Louisville, which check shall be payable to the City Treasurer, and in case the bid shall be accepted the proceeds thereof shall be credited upon the amount of the purchase price, and if said bid be not accepted, then said check shall be forthwith returned to the unsuccessful bidder.

SEC. 4. That within ninety (90) days after the approval of said

sale by the General Council the purchaser of said franchise or privilege, if he have not already a system of telephones in operation in the City of Louisville, shall begin in good faith upon the work of constructing said telephone system, and shall thereafter in good faith proceed continuously to the satisfaction of the Board
109 of Public Works with such construction, and in any event such purchaser, his successors or assigns, must have complete and ready for operation in the City of Louisville within two years after the approval of the sale herein provided for, a first-class, modern telephone plant, with an immediate capacity for operating not less than five thousand telephone lines, a party line to count but one, including in said plant underground and aerial lines of the number aforesaid, and an exchange and central energy switch board, ready and equipped for five thousand such lines, with the right to add to such plant from time to time as business may require.

In case of failure to comply with this section of the ordinance the franchise herein ordered to be sold shall ipso facto become null and void; in which event it shall be the duty of the Board of Public Works to proceed, after proper advertisement as herein required, to again advertise and sell said franchise as provided in Section 2 hereof, and so to proceed from time to time until such a system as is herein provided for shall be secured.

SEC. 5. That any person acquiring said franchise or privilege may assign or transfer the same, but only on the express condition that such assignee or transferee shall be bound by all of the terms and conditions of this ordinance.

SEC. 6. That all work upon said telephone system, either in the construction or maintenance, so far as same is in the public highways and places of the City of Louisville, shall be under the supervision of the Board of Public Works and shall be controlled by the provisions of an ordinance of the City of Louisville, entitled, "An ordinance concerning telegraph, telephone and electric light and power wires in the City of Louisville," approved June 18, 1903, so far as applicable and so long as said ordinance continues in force, and the right is reserved to said Board upon reasonable notice to order and require the removal of any pole, and upon the failure of the owner or operator of such system to comply with said
110 order and requirement, said Board shall have the right to require such pole to be removed at the cost of such owner or operator.

All the underground conduits and ducts used in the construction of said plant shall be so erected and constructed as not to interfere with or disturb underground structures, conduits, pipes, sewers, or other property belonging to the City of Louisville, and nothing contained in this ordinance shall preclude the City of Louisville from prosecuting or authorizing any public work of any character; and if any conduits, ducts, poles or other structures of the owner of this franchise shall obstruct or interfere with the prosecution of said public work or improvement, the City shall have the right, if it deems necessary, to require the removal of the same to some other

location, and the same shall be so removed by the purchaser or owner of said franchise or privilege within a reasonable time upon the order of the Board of Public Works; and in case of failure on the part of said owner to comply with any such order, then the said Board may make such removal or change at the cost of said owner.

SEC. 7. That the owner or operator of said franchise shall in its conduits provide, at least, one duct for the use of the City of Louisville in laying and placing the wires for its fire alarm and police patrol system therein, and said ducts shall be for the exclusive use of the City of Louisville for said purposes. And such owner or operator shall also provide space upon its poles for the carrying of such wires, all of which shall be provided without charge to the City of Louisville, and the owner or operator of said franchise shall place the said wires in said conduits and on said poles without cost to the City of Louisville, except for the material, all of which shall be furnished by said city. But the said wires for the exclusive use of the City of Louisville shall be so placed as not to interfere with the effective operation of either said telephone system or said fire alarm and police patrol systems.

111 SEC. 8. That whenever it shall be necessary to disturb the streets, alleys, or sidewalks, or other public ways in the construction, repair, or other appliances of said telephone company, the said streets, alleys, sidewalks, or public ways shall be restored under the supervision of the Board of Public Works to their former good condition, at the expense of the owner or owners of said telephone system, which expense shall include the cost of such supervision, and all rubbish shall be removed from the streets, alleys, sidewalks, or other public ways, where the same have been disturbed, as promptly as possibel.

SEC. 9. That the rents to be charged by the owner or operator of said telephone system during the first ten years of the existence of this franchise shall not exceed the following schedule, namely:

For a single line business telephone not more than Six ($6.00) Dollars per month. For a party line business telephone not more than Three and Fifty-one-hundredths ($3.50) Dollars per month. For a single line residence telephone not more than Three ($3.00) Dollars per month. For a party line residence telephone not more than Two ($2.00) Dollars per month.

That the rents to be charged by the owner or operator of said telephone system during the last ten years of the existence of this franchise shall not exceed the following schedule, namely:

For a single line business telephone not more than Seven ($7.00) Dollars per month. For a party line business telephone not more than Four ($4.00) Dollars per month. For a single line residence telephone not more than Three and Fifty-one-hundredths ($3.50) Dollars per month. For a party line residence telephone not more than Two and Fifty-one-hundredths ($2.50) Dollars per month.

Such owner or operator shall also have the right to establish, maintain and operate public pay stations.

SEC. 10. That the apparatus, instruments, switch boards, ap-

pliances and equipment of said system shall be composed of
112 the most modern and approved type, and all switch boards shall be maintained during the period and existence of this franchise with the best practical equipment and the telephone service shall be first class in all respects and continuous and unlimited for twenty-four hours in every day during the entire life of this franchise, except interruptions from unavoidable causes.

SEC. 11. The owner or operator of said franchise shall provide and furnish for the use of the City of Louisville, free of charge, twelve (12) telephones, to be placed in such public offices or institutions within the City of Louisville as may be designated by resolution of the General Council, and any additional telephones so provided and furnished to the City of Louisville shall be paid for by the City at the rate of twenty-five per cent less than the charge imposed upon other business telephones.

SEC. 12. That when the owner or operator of said franchise or privilege shall have in use within the City of Louisville six thousand instruments (not counting extension telephones) furnishing telephone service to six thousand persons, firms or corporations, then the said owner or owners of said telephone plant or system shall pay to the City of Louisville, in addition to all municipal taxes, the sum of One Dollar per annum for each such additional telephone service or instrument in excess of six thousand, which payments shall be made semi-annually on January 1st and July 1st of each year to the City Treasurer, and it shall be the duty of the owner or operator of said franchise or privilege on the first days of January and July of each year to make a report to the City Comptroller, which shall be in writing and sworn to before the chief officer or general manager of said telephone system, setting forth the number of patrons and the number of such telephone instruments it has in use at the date of each such report.

113 SEC. 13. That the owner or operator of said franchise shall connect the lines of its telephone system, so far as practicable, with any and all telephone lines of other companies operating in the State of Kentucky, on reasonable terms and without discrimination, the owners of such other lines to agree, as a condition of such connection, to receive and transmit on like terms all messages in which the owner or operator of the franchise herein granted may be interested. In case there shall be any disagreement between the owner or operator of the franchise herein provided for and the owner of such other telephone lines as to the terms and conditions upon which such connection shall be made, as to hinder or delay same, then such difference and disagreement shall be promptly submitted to an arbitration committee, to be composed of three freeholders and voters of the State of Kentucky, one of whom shall be named by the owner of said franchise, one by the owner of such other line or lines, and the third by the Mayor of the City of Louisville, and the decision of a majority of said committee as to the terms and conditions upon which said connection ought to be made shall be final and conclusive upon all such parties.

SEC. 14. The purchaser or owner of this franchise or privilege

shall within fifteen (15) days after the approval of said sale by the General Council, execute bond to the City of Louisville, with good and sufficient surety, to be approved by the Board of Public Works in the sum of Thirty Thousand Dollars, conditioned upon the faithful performance and discharge by the owner or operator of this franchise of all the obligations imposed by this ordinance, and that said owner or operator shall restore the sidewalks and pavements of all public ways to their original condition and shall save the City harmless from all loss or damage which may be done to its public ways and other property, or to the person or property of individuals on account of any wrongful act or omission of such owner or operator, and that such owner or operator shall defend all suits and pay all judgments against the City of Louisville arising out of the construction, maintenance or operation of said telephone system. Said bond shall be renewed from time to time as and when re-
114 quired by the City of Louisville, through its Board of Public Works, provided, however, that when said purchaser or owner has completed and ready for operation a telephone plant with such capacity as is required by Section 4 of this ordinance, then the amount of said bond shall be renewed for the sum of Ten Thousand instead of Thirty Thousand Dollars.

SEC. 15. That the franchise or privilege herein provided for shall not be construed as being in any manner exclusive, or as preventing the General Council of the City of Louisville from providing for and causing to be sold other franchises or privileges for conducting a telephone system in the City of Louisville.

If any individual, firm, or corporation now operating a telephone system under any ordinance of the City of Louisville granting a franchise, privilege, or license therefor, shall become the purchaser or owner of the franchise or privilege herein authorized to be sold, such previously granted franchise, privilege or license shall immediately upon the acquisition of the franchise or privilege herein ordered to be sold, become null and void and be forever surrendered to the City of Louisville, and all obligations created by the ordinance granting the same or the acceptance thereof, shall immediately cease and determine, it being the intention to provide by this ordinance a complete and comprehensive telephone system in the City of Louisville.

SEC. 16. That an ordinance, entitled "An ordinance granting to the Ohio Valley Telephone Company permission to lay underground pipes, cable conductors and wires," approved January 26, 1884, be, and the same is hereby, repealed; and also an ordinance entitled "An ordinance confirming and ratifying Section 5 of an act passed by the General Assembly of the Commonwealth of Kentucky, and approved on the 3rd day of April, 1886, and entitled 'An Act to incorporate The Ohio Valley Telephone Company,' and granting to the said The Ohio Valley Telephone Company the right to construct, equip, operate and maintain telephone systems and exchanges,
115 and to erect poles and string wires thereon; to construct, operate and maintain conduits and manholes; to lay pipes, cables, conductors, and wires, and to operate its telephone lines over, along,

or under any highway, street, or alley in the city of Louisville," approved August 17, 1886, be, and the same is hereby, repealed; and also an ordinance entitled "An ordinance regulating the charges for telephone service in the City of Louisville," approved November 12, 1906, be, and the same is hereby, repealed.

SEC. 17. Should said franchise or privilege be purchased by any individual, firm, or corporation now operating a telephone system in the City of Louisville, such purchaser may use his or its conduits, subways, manholes, wires, poles and other properties constituting such existing telephone system as now established in operating the franchise or privilege created and sold under this ordinance.

SEC. 18. This ordinance shall take effect from and after its passage.

116 The Replication above referred to is as follows:

Circuit Court of the United States for the Sixth Circuit and Western District of Kentucky.

No. 7194.

CUMBERLAND TELEPHONE & TELEGRAPH COMPANY, Complainant, against.
THE CITY OF LOUISVILLE, KENTUCKY, Defendant.

Replication.

The Replication of the Above-named Complainant to the Answer of the Above-named Defendant.

This replicant, saving and reserving to *himself* all and all manner of advantage of exception which may be had and taken to the manifold errors, uncertainties and insufficiencies of the answer of said defendant, for replication thereunto sayeth that it does and will ever maintain and prove its said bill to be true, certain and sufficient in the law to be answered unto by said defendant, and that the answer of said defendant is very uncertain, evasive and insufficient in the law to be replied unto by this replicant; without that, that any other matter or thing in the said answer contained material or effectual in the law to be replied unto, and not herein and hereby well and sufficiently replied unto, confessed, or avoided, traversed, or denied, is true; all which matters and things this replicant is ready to aver, maintain, and prove as this Honorable

Court shall direct, and humbly — as in in and by *his* said bill *he* has already prayed.

W. L. GRANBERY,
FAIRLEIGH, STRAUS & FAIRLEIGH,
Solicitors for Complainant.

117 And on another day of said term of said court, continued and held, to-wit, on March 31, 1909, the following proceedings were had:

No. 7194.

CUMBERLAND TELEPHONE & TELEGRAPH COMPANY
vs.
CITY OF LOUISVILLE.

This day came the complainant by David W. Fairleigh, its counsel, and came also the defendant, the City of Louisville, Ky., by Clayton B. Blakey, the City Attorney; and the Complainant tendered, and with leave of the Court filed, the affidavit of said David W. Fairleigh, and thereupon moved the Court for leave to withdraw its replication herein and file the amendment to its bill of complaint which was then tendered. The defendant objected to both of said motions, but the Court, upon consideration thereof, sustained the said motions, and said replication was withdrawn, and it is ordered, adjudged and decreed by the Court that said amended bill be, and it is, now filed.

By agreement of parties it is ordered that the allegations of said amended bill shall stand controverted, as though denied by an answer under oath, and the defendant not desiring to further answer, it is ordered that the complainant's replication heretofore filed and withdrawn, be now re-filed, so that this cause stands at issue.

And the complainant's motion for a preliminary injunction pendente lite, in accordance with the prayer of the bill, coming on to be heard, the complainant read as an affidavit the original bill and amended bill, the affidavits of George G. Hall, W. K. Boardman, Nos. 1 and 2 and H. Blair Smith. The complainant also read the following parts of the printed report of the Chicago Telephone Commission filed with the affidavit of H. Blair Smith, viz: the last nine lines on page 47, and the first thirteen lines on page 48; the last seven lines on page 49, and the first four lines on page 50, the following sentence on page 52, viz: "Revenue estimates are
118 based upon expenses and general knowledge of the requirements of the telephone users, and cannot be accurately estimated in advance;" and table No. 2, embracing the whole page 58. No other parts of said printed report were read by the complainant. The complainant also read the following part of the stenographic report of the proceedings before the Revision Committee of the Common Council of the City of Louisville, held on December 19th, 1908, filed with affidavit No. 1 of W. K. Boardman, viz: the address of Helm Bruce, Esquire, pages 33 to 40 both inclusive. No other parts of said stenographic report were read.

The defendant read upon the hearing of said motion its answer and the affidavits of F. W. Lyon, J. H. Heuser, Edward H. Hackett, Jack Marx, C. C. Fishback Co., Val. Blatz Co., Russell & Co., Ferncliff Dist. Co., Jacob Isaacs, M. J. Doll, C. Troxler, Ky. Clothing Co., L. P. Hyman, Edward H. Marcus, German Insurance Bank, Wm. Schuff Co., S. H. Harper, Eclipse Vinegar Works, Geo. Schuster, Jno. P. Morton & Co., Harbison & Gathright, Schoppenhorst Bros., International Hardware Co., American Tobacco Co., J. T. S. Brown & Sons., Sunnybrook Distillery Co., American Machine Co., W. J. Whitesides, Peaslee-Gaulbert Co., Brown-Forman & Co., R. E. Wathen & Co., Laib Co., Louisville Paper Co., Bernheim Distilling Co., Schlitz Brewing Co., Bodley & Baskin, George L. Marshall, Leon Abraham, Christ Klippel, Max Schimpeler, Ed. Linden, Jacob Hartshern, Fred Knauer, Simon N. Jones, Flack Bros., W. E. Winkler, J. M. Schoenbaechler, Geo. Aufenkamp, John C. Fisel, G. Ernst, E. G. Randolph, Geo. O. Stauber, S. M. Wilhite, R. A. Batman, H. N. Gifford, W. H. Crumb, George T. Wood, Charles Meriwether, Louis Summers, M. Victor, J. H. Hodges, Mrs. Sue M. Davis, Mrs. R. L. Brucker, Mrs. M. Riley, Mrs. T. Murphy, Evan S. Rees, Miss A. Black, Miss Mida Staebler, Wm. Ruby, C. F. Wimberly, Jos. Piazza, H. Bachman, Mrs. John Wilhelm, Graf-Webb Co., Longest Bros., White Mills Dist. Co., Frank Ziegler, Jos. Lehman, J. M. Allen, T. J. Jones, H. Steumpler, T. Story, Thos. Lanahan, Louis Seelbach. The defendant also read the following parts of the printed report of the Chicago Telephone Commission, filed with the affidavit of H. Blair Smith, viz: beginning at line 8 on page 740 and ending on line 20, and beginning in line 1 on page
119 94, and ending in line 26 on same page; and beginning on line 32 on page 109, and ending in line 34 on same page, and Table No. 6 on page 114 and Table No. 18 on page 118.

After hearing argument of counsel for the complainant and for the defendant, the said motion of the complainant for a preliminary injunction in accordance with the prayer of the bill was submitted for judgment thereon.

The Amended Bill above referred to is as follows:

120 Circuit Court of the United States for the Sixth Circuit and Western District of Kentucky.

No. 7194.

CUMBERLAND TELEPHONE & TELEGRAPH COMPANY, Complainant,
vs.
CITY OF LOUISVILLE, Defendant.

Amended Bill.

Amendment to the Original Bill of Complaint in the Above-entitled Cause, Made Pursuant to an Order of Court Dated March 31st, A. O. 1909.

The complainant, the Cumberland Telephone & Telegraph Company, amends the original bill herein as follows:

Insert after the words and figures "the sum of $1,700,045.26" in the sixth line of paragraph V of the original bill; on the seventeenth page thereof, the following words and figures, to-wit:

"and complainant's said telephone plant in the said City of "Louisville was then, and is now, fairly and reasonably worth the "sum of $1,700,045.26, and the fair and reasonable value of said "telephone plant was then, and is now, the sum of $1,700,045.26."

WM. L. GRANBERY,
FAIRLEIGH, STRAUS & FAIRLEIGH,
Counsel for Complainant.

121 And on April 2, 1909, the following proceedings were had:

No. 7194.

CUMBERLAND TELEPHONE & TELEGRAPH COMPANY, Complainant,
vs.
CITY OF LOUISVILLE, Defendant.

The complainant, came by its counsel of record, and the defendant also came by its counsel, and the complainant moved the Court to refer the cause to a Master, and there being no objection thereto by the defendant, upon consideration thereof, it is ordered, adjudged and decreed by the Court that this cause (including the pleadings, exhibits and issues therein) be, and the same is, referred to Henry Burnett, Esq., who is hereby appointed the Special Master of the Court for that purpose, and who will, under and pursuant to the equity rules and any agreements that the parties may make, promptly proceed to take such testimony as may be offered by the parties upon the issues herein involved. He will particularly take testimony thereon and report his conclusions upon the following matters, namely:

1. The cost to the complainant of its plant and property in the City of Louisville, Kentucky, and in doing this he will state generally the basis of his estimate thereof.

122 2. The fair valuation of the plant and property of the complainant employed in its business in said city of March 6th, 1909, and also its value at the date upon which he may file his report herein. In doing this he will state generally the basis of his estimates.

3. The gross earnings and the net earnings of the complainant upon its plant and property employed in its business in said city for the years 1905, 1906, 1907 and 1908, stating separately as to each of said years, and giving the percentage of net income in each year; and whether said percentage is inclusive or exclusive of any allowance for depreciation of property and plant or claims for damages for personal or other injuries.

4th. The said Special Master is directed to make an estimate upon the testimony and state his conclusions therefrom as to what would be the reasonably probable gross, and the reasonably probable net income of the complainant from its said plant and property employed in its business in said city for the current year and the year 1910, if the rates of telephone charges fixed by the ordinance enacted by the legislative body of defendant, and approved by the Mayor March 6th, 1909, should be put into operation and effect.

5th. He will ascertain and report from the testimony what would be a fair amount or proportion of annual income to be set aside as a substantial provision and allowance for depreciation of complainant's plant and property employed in its business in said city, and the basis of his estimates thereof.

6th. He will ascertain and report whether the reasonably probable income from complainant's plant and property employed in its business in said city will, within the next few years, amount to a fair annual return upon the reasonable value thereof if the provisions of the ordinance approved March 6th, 1909, are put into operation.

7th. He will, from the testimony, ascertain and report whether the average net income or return from reasonably safe investments in business enterprises in said city, approximately re-

123 sembling that of the complainant, is above or below 6 per cent, upon the reasonable value of the plant or property from which said income is derived.

8th. He will further ascertain and report from the testimony whether the reasonably probable net income of complainant from its plant and property employed in its business in said city, after making all proper allowance for cost of operation, claims for damages, repairs and depreciation, would, during the years 1909 and 1910, come up to or exceed the said average income upon such other business enterprises if said ordinance should be put in operation, and he will state in his report the results of his estimates and the basis thereof.

9th. He will also, from the testimony, report his conclusions and the basis thereof as to the reasonably probable extension and increase of the complainant's business in said city within the present

and next succeeding year, and the reasonably probable extent and effect thereof, both upon its gross and upon its net income.

10th. He will also ascertain and report as to any particular advantages, if any, for the steady and reliable earning of income the complainant may have in said city, and also as to any peculiar disadvantages or risks, if any, which it encounters, or may encounter, therein which, with reasonable probability, may affect or offset such advantages, and the extent thereof; and,

11th. The Special Master will also report his conclusions upon such other facts as the developments of the case at the hearing before him may appear to be important to a determination of the issues made by the pleadings.

The said Special Master will hold meetings in the City of Louisville, Kentucky, and in the City of Nashville, Tennessee, and in such other place or places as he may determine to be needful, and he will rport in writing his findings and conclusions with all convenient speed.

124 And on another day of said term of said court, continued and held, to-wit, on June 15th, 1909, the following proceedings were had:

No. 7194.

CUMBERLAND TELEPHONE & TELEGRAPH COMPANY
vs.
CITY OF LOUISVILLE, KENTUCKY.

This day came the complainant by James F. Fairleigh, its counsel. Came also the defendant, the City of Louisville, by Clayton B. Blakey and Huston Quin, its counsel, and filed a notice, duly executed upon James F. Fairleigh, counsel for complainant.

And comes the defendant, City of Louisville, Kentucky, by its counsel, and moves the Court to dissolve the restraining order heretofore issued in this cause, and for grounds for its motion states that great and irreparable damage is being done to this defendant in permitting and allowing the said restraining order to be or to remain in force and effect, and in support of this motion files the affidavit of James F. Grinstead, Mayor of the defendant, City of Louisville, Kentucky.

It is ordered that said motion be set for hearing June 21st, 1909.

And on Tuesday, June 22, 1909, the following proceedings were had:

No. 7194.

CUMBERLAND TELEPHONE & TELEGRAPH COMPANY
vs.
CITY OF LOUISVILLE, KENTUCKY.

125 This day came the complainant by Fairleigh, Straus & Fairleigh, its counsel. Came also the defendant, the City of Louisville, Kentucky, by Clayton B. Blakey and Huston

Quin, its counsel. Came also A. Engelhard & Son Company by W. O. Harris, its counsel.

This cause coming on to be heard upon the motion of the defendant to dissolve the restraining order heretofore issued herein, as also upon the motion of A. Engelhard & Sons Company to file a bill of intervention herein, and said motions having been argued by counsel, and the Court not being sufficiently advised thereof, takes time.

And on June 29, 1909, the following proceedings were had:

No. 7194.

CUMBERLAND TELEPHONE & TELEGRAPH COMPANY
vs.
CITY OF LOUISVILLE, KENTUCKY.

The Court being now sufficiently advised of the motion made on the 15th inst. to dissolve and set aside the temporary restraining order entered herein on the 8th day of March, 1909, is of opinion that said motion should be, and accordingly it is, overruled. The restraining oder by its terms was to continue in force until the Court should determine the questions arising upon the motion for an injunction pendente lite. The Court has not as yet had time and opportunity to determine those matters, and, besides, it had assumed from what had occurred in the case and at the bar that by the time the questions connected with the temporary injunction could be finally settled, the whole case could be better heard upon full presentation of all the testimony and the report of the Master, and it was thought that this would be more desirable than its settlement upon ex parte affidavits. Moreover, the Court particularly desired the guidance of the Circuit Court of Appeals, as it might be afforded by its decision of the case pending there of the same complainant against the City of Owensboro.

126 And on June 30, 1909, the following proceedings were had:

No. 7194.

CUMBERLAND TELEPHONE & TELEGRAPH COMPANY
vs.
CITY OF LOUISVILLE, KENTUCKY.

This day came the complainant by Fairleigh, Straus & Fairleigh, its counsel. Came the defendant, City of Louisville, by Clayton B. Blakey and Huston Quin, its counsel, and without waiving its objection to the granting of the restraining order herein, or its objections to the granting of the temporary injunction, but still insisting that said restraining order should be set aside, and solely because of the fact that said restraining order is allowed to remain in force over the objection of this defendant, now moves the Court for an order requiring complainant to pay into court and impound all sums re-

ceived by it from the operation of its telephone system in the City of Louisville in excess of the rates established by the ordinance as set out in the Bill of Complaint and the answer herein, the same to be held by a receiver or some one to be appointed by this Court until the further order of this Court; and to modify said restraining order to that extent, and in support of said motion, filed the affidavits of James F. Grinstead and Clayton B. Blakey herein.

It is ordered by the Court that said motion be set for hearing July 9th, 1909.

127 And on another day of said term of said court, continued and held, to-wit, on July 9th, 1909, the following proceedings were had:

No. 7194

CUMBERLAND TELEPHONE & TELEGRAPH COMPANY, Complainant,
vs.
CITY OF LOUISVILLE, Defendant.

This day came the complainant by Fairleigh, Straus & Fairleigh, its counsel. Came also the defendant by Clayton B. Blakey, its counsel, and filed the affidavit of H. Blair Smith herein.

This cause coming on to be heard upon the defendant's motion, heretofore entered herein, to require the complainant to pay into court and impound all sums received by it from the operation of its telephone system in the City of Louisville in excess of the rates established by the ordinance as set out in the bill of complaint and the answer herein, and to modify the restraining order to that extent, and having been argued by counsel, and the Court not being sufficiently advised thereof takes time.

128 And at another term of our said Court held for its October Term, 1910, continued and held, to-wit, on November 17th, 1910, the following proceedings were had:

No. 7194.

CUMBERLAND TELEPHONE & TELEGRAPH COMPANY, Complainant,
vs.
CITY OF LOUISVILLE, Defendant.

This day came Henry Burnett, the Special Master herein, and returned into court his report in writing, accompanied by the testimony taken and 594 exhibits.

It is ordered that said report, said te-timony and each of said exhibits be filed, and pursuant to Equity Rule 83 it is ordered that said report do lie over for thirty days, and within that time all parties in interest may file exceptions thereto. The action is set for hearing on January 4th, 1911, upon all exceptions which may be filed in due season to said report.

It is further ordered that said Special Master shall, within two

weeks, file a statement of the particulars of his claim for compensation for his services in the execution of the order of reference herein and for any expenses incurred by him in doing said work, and if there shall be any objections to said claim they shall be filed in writing within two weeks after the filing of the statement of the Special Master. If any objections thereto are filed, they will also be set for hearing on January 4th, 1911.

Report of Special Master, above referred to, is as follows:

129 United States Circuit Court, Sixth Circuit, Western District of Kentucky.

CUMBERLAND TELEPHONE & TELEGRAPH COMPANY, Complainant,
vs.
CITY of LOUISVILLE, Defendant.

Report and Findings of the Special Master.

As Special Master herein, I respectfully present this, my Report and Findings, as directed by the orders of this Honorable Court, made and entered on the Second day of April, 1909, in the above styled case.

The evidence taken and produced before me on behalf of Complainant is contained in the depositions of the following witnesses: H. Blair Smith, James E. Caldwell, E. D. Green, George Wilkinson, J. E. Jagoe, Leland Hume, H. Blair Smith and E. M. Fisher. The Joint Report of Wilkinson and Farnham.

On behalf of Defendant, the evidence consisted of the depositions of the following: Wm. H. Crumb, H. N. Gifford, Hardy Burton, John H. Brand, J. E. Settle, Isaac Hilliard, H. B. Warren, S. D. Levings, W. C. Polk, report of D. C. Jackson, Norton E.
130 Westlake, Cainsey R. Johnston, James T. Daniels, J. W. Hart, Reuben G. Trail, Howard P. Yeager, Alice C. Everett, T. D. Webb, George M. Welsh and Robert Frewin.

The depositions of William Kavanaugh, H. W. Ritterhoff and Charles M. Peale were not considered by me. Exceptions were filed to these depositions by Complainant upon the ground that the witnesses refused to answer questions on cross-examination. I sustained the exceptions, and Defendant entered its exceptions to my ruling.

I considered the reports of the accountants, George Wilkinson and E. W. Farnham, rather as briefs on their respective sides, than as evidence.

I am directed to find:

I.

"The Cost to Complainant of its plant and property in the City of Louisville, Kentucky, and in doing this, he will state generally the basis of his estimate thereof."

In 1899, the Ohio Valley Telegraph & Telephone Company owned and operated a telephone plant in the City of Louisville, New Albany and Jeffersonville, Indiana, and in seven small towns in Kentucky,

and also a series of toll lines, all connected with the Louisville Exchange. Its capital stock was 5,494 shares of $100.00 each, amounting at par to $549,400.00.

Complainant acquired all of these exchanges and all the property of the Ohio Valley Company in the following manner:

In the month of June, 1899, it purchased 702 shares of the capital stock of the Ohio Valley Company, and paid therefor $140.00 per share $98,280.00

131 Subsequently it purchased 2,855 shares at $141.00 per share $402,555.00

There were left, of the total issue of the capital stock of the Ohio Valley Company, 1,937 shares, and these were acquired by complainant by exchanging an equal number of its own shares of stock for the 1,937 shares of the Ohio Valley Company.

It is urged that these purchases of the Ohio Valley Company's stock fixed the market value thereof in June, 1899, at $141.00 per share. Based upon that assumption, Complainant insists that the value of its 1,937 shares which it exchanged at par for the Ohio Valley Company's shares, should have the added value of $41.00 per share, to-wit 79,979.91

That is to say, Complainant contends that it has actually paid out for 1,937 shares of the Ohio Valley Company's stock in exchange, the equivalent of $193,700.00, and in addition thereto, the approximate premium thereon, amounting to 79,979.91

I am unable to accept this specious reasoning. The evidence shows that prior to 1900, and during each of the years succeeding, up to 1908 inclusive, the Complainant Company sold its shares of capital stock in various large amounts, but the price at which such stock was sold was invariably at par.

I find, therefore, that the 1,937 shares of capital stock of Complainant Company were exchanged for an equal number of shares of the Ohio Valley Company, and that the amount expressed in dollars thus expended was 193,700.00

It thus appears that the total paid out by

132 Complainant Company for all of the capital stock of the Ohio Valley Company was $694,535.00

The Ohio Valley Company, at the time of these purchases, owned and operated, besides the Louisville Exchange, and in connection therewith, nine smaller exchanges and a number of toll lines leading out of Louisville, all connected with the Louisville Exchange. The construction cost of these toll lines was ascertained by the Joint Report of Wilkinson & Farnham to have been 125,406.80

If we deduct this amount from the total cost of the entire capital stock of the Ohio Valley Company, we find that the actual cost of all the exchanges of the Ohio Valley Telephone Company was..... 569,128.20

In arriving at the cost of the Louisville Exchange, it appears that an arbitrary basis of 80.4 per cent of the total cost of all the exchanges was fixed by Complainant.

Without determining the absolute correctness of this calculation, I accept it, and I find that the cost of the Louisville plant on this basis, as of the first of January, 1900, was..... 457,579.07

The cost of the real estate in Louisville, which was acquired from the Ohio Valley Company, and which was necessary for the proper conduct of its business, as of date January 1, 1900, was..... 108,034.50

Total $565,613.57

It may elucidate and strengthen the correctness of the above findings, by calling attention to the fact that the books of the Ohio Valley Company show,
133 as of December 31, 1899, that the total construction of all its exchanges cost that company $638,196.74
Deducting the cost of toll lines..... 125,406.80

We have $512,789.94

This being the book cost of the entire plant as of December 31, 1899, as shown by the books of the Ohio Valley Company.

These figures do not include the real estate, to-wit 108,034.50

Total $620,824.44

If we were to apply the same process to the above figures as to those on the preceding page, we would find the total book cost of the plant or exchange in Louisville 412,283.11

This last amount being 80.4 per cent of $512,789.94.

Add cost of real estate..... 108,034.44

We have a total cost on this basis of..... $520,317.55

It is insisted by Complainant that to the book cost of the Ohio Valley Company's plant, as it appears on Complainant's books, to-wit..... 638,196.74

There should be added..... 135,505.70

The basis of this claim is that during the period of 1890 to 1899 inclusive, the Ohio Valley Company had, from its earnings credited annually to its Construction Account, in the aggregate..... 135,505.70

It is urged that this aggregate amount was charged off from Construction ostensibly to cover depreciation of plant during the period named, but that depreciation had been completely guarded
134 against annually by an expenditure of an average amount of nearly ten per cent of the book cost of the plant during the years from 1890 to 1899 inclusive, and that therefore it was unnecessary and improvident to credit the Construction Account with this sum of $135,505.70.

It is impossible at this time—at least from this record—to ascertain the reasons or motives of the Ohio Valley Company's management in making these entries of credits. It is not probable that the entries would have been made, unless the reasons therefor were of a compelling nature. No officer of the Ohio Valley Company has testified about the matter, except Capt. Gifford, Treasurer of the Company, and he says the credits were made to Construction to cover depreciation. If that be true, and there is no contradiction in the record, then I find that the credit must remain and should not be disturbed.

I find that the cost of the Ohio Valley's plant in Louisville, not including toll lines nor real estate, was $457,579.07

The Joint Report of the two experts shows that, according to the books of the Complainant Company, the additions to the Louisville plant or exchange from 1900 to 1908, both inclusive, amounted to..... 1,023,545.34

Which would make a total of..... ...$1,481,124.41

I have been embarrassed by the conflict in the evidence as to the correctness or propriety of charging items of cost to what the accountants call the Construction Account.
135 The principal witness of Complainant as to these questions was Mr. Blair Smith, the company's auditor. The witness did not, and of necessity could not, testify from personal knowledge as to a great many items of such cost as to which he was interrogated. His answers to very many of such inquiries were that bills or vouchers, showing certain cost of materials and labor, were sent to him at the Nashville office, accompanied by a memorandum or notation made by a clerk in the Louisville office, and that acting upon the verity of such notations, he entered the several amounts as a proper charge to the Construction Account.

It is not clear to my mind that this is the best evidence of the correctness of such charges. I have not felt justified in rejecting such evidence, but I have carefully considered all the evidence produced which tended to discredit any and all such entries.

The great mass of the evidence, and the hundreds of detailed matters touching the correctness of charges that constitute the Con-

struction Account, forbid any attempt to treat them singly. In fairness to both parties to this litigation, I am forced to treat these matters in a general way, and to arrive at what I consider a fair and equitable estimate of what I believe to be erroneous charges to this account.

I have decided on this plan of estimating the amount of erroneous charges to the Construction Account for two reasons:

First: The evidence on the point fails in many instances to disclose the amount of what are alleged to be erroneous charges, but merely discloses what is said to be an incorrect theory.

Second: In the case of City of Knoxville vs. Knoxville Water Company, 212 U. S., 16, we find the following:

136 "The jurisdiction which is invoked here ought, as has been said, to be exercised only in clearest cases. If a company of this kind chooses to decline to observe an ordinance of this nature and prefers rather to go into court with the claim that the ordinance is unconstitutional, it must be prepared to show to the satisfaction of the court that the ordinance would necessarily be so confiscatory in its effect as to violate the Constitution of the United States."

With the foregoing reasons as my guides, I have examined with great care certain phases of the evidence in respect of the cost of the Louisville Exchange.

Many vouchers were produced at the hearing, covering the wages of men employed in and near Louisville in connection with the aerial work, including toll lines. These vouchers show that certain wages and salaries had been expended on the aerial lines, and also on underground lines connected with the Louisville Exchange. A small proportion of these outlays was charged to Maintenance or Reconstruction, while the bulk of the outlays is charged to Construction.

The evidence offered by Complainant is that the wages and salaries were used in construction, because they are charged to that account. No witness was introduced who pretended to have personal knowledge as to any of these items.

It may be proper to mention in this connection that Complainant generally kept three accounts to take care of the above referred to three departments, to-wit: Maintenance, Reconstruction and Construction.

The evidence tends to show that in nearly every instance, the wages of the employes shown in the vouchers we are considering, were charged almost wholly to Construction, and no evidence of the correctness of such charges was offered, except that the vouchers bore a notation to that effect.

137 It is inconceivable that so little of these wages was properly chargeable to Maintenance or Reconstruction from 1900 to 1908. The aggregate amount of these vouchers was not shown in evidence.

The evidence shows that Complainant kept a Supply Department, from which it issued, on requisition, all kinds of general supplies, other than switchboard sections and other large parts. Materials

of all kinds are purchased by Complainant at wholesale (Smiths' Depo., p. 255), and stored in a warehouse for use of the Louisville Exchange and adjacent exchanges. The Complainant uniformly charged on all supplies furnished to the Louisville Exchange a premium of ten per cent over and above original cost.

One witness, Mr. Warren, testifies that from 1900 to 1908, both inclusive, the supplies thus furnished, according to the books of Complainant, amounted to $518,000.00. I do not find this statement of Mr. Warren to be altogether accurate, but it is fair to assume that it is an approximation.

If, therefore, this ten per cent added charge on supplies be improper and unfair to the exchange, the amount of such an overcharge would be in the neighborhood of $50,000.00.

Vouchers from the Supply Department were called for but not produced by the company's auditor, the reason being given that he had no control over the Supply Department. (Smith's Deposition P. 320.)

The evidence shows that the vouchers for supplies were sent into the Nashville office from the Louisville office, accompanied by a notation as to how the amounts were to be charged—whether to Maintenance, Reconstruction or Construction. But the evidence is most unsatisfactory as to whether the supplies were accurately distributed in the books of account. Vouchers from the Supply
138 Department showed totals only, and the amounts were entered on the books in accordance with the notations of the Supply Department clerks.

Mr. Smith, on page 256 of this deposition, says as to the added charge of ten per cent for supplies, that it was to cover freight, drayage, rentals, etc.

I find that this charge on all supplies furnished is at least a burden on the business in Louisville, and should not be allowed. The company in the first instance must have paid freight and drayage on all supplies furnished. The company doubtless received the usual trade discount for cash. As to how the freight and drayage were charged, or the cash discount credited, the record is silent. I do not doubt that proper and correct entries were made on the company's books as to the rent of the supplies warehouse. This is doubtless charged to expense of supplies.

The amount of this ten per cent added charge, like the items of wages, is a matter of conjecture, but it is obviously a substantial amount, extending from 1900 to 1908, both inclusive. At the argument, counsel for Complainant admitted that the items of drayage, freight, rental, etc., are charged primarily to Supply Expense, but that ultimately they are charged to the operation of the exchange.

I find, therefore, that this added charge of ten per cent on the cost of supplies furnished to the Louisville Exchange, must be disallowed. The aggregate amount of such added charge is not, under the evidence, susceptible of definite ascertainment, and must necessarily be estimated.

Again, it appears from the evidence that for several years all the apparatus for installing a subscriber's station, including labor, were

charged to construction, and that in addition thereto an arbitrary charge of $10.00 for each instrument installed was made to construction. (Smith's Deposition, p. 307.)

139 Finally, say in 1907—The evidence is very indefinite—both plans were abandoned. The explanation given by Mr. Smith, the Auditor, and by Mr. Caldwell, President of the Complainant, as to the correctness of this ten dollar charge on each instrument gained, is unsatisfactory. They say that if the company installed one thousand instruments in a given month, and took out two hundred instruments, the company has obviously gained eight hundred instruments. On the number of instruments thus gained, the company entered a charge to Construction of $10.00 for each instrument, making a total of $8,000.00. I find that this method of charges ought not to be sanctioned.

There is a sharply defined difference in the evidence as to the cost of the conduit system in Louisville, somewhat due to the varying opinions as to the sizes of the wires used in the cables, and consequently the amount of copper contained, as well as the mode of construction.

The witnesses who testified as to the conduit system seemed to be equally expert, but they differ so widely, and they appear to be so convinced of the correctness of their opinions, that I am unable to reconcile them.

There are many individual items charged to Construction which are challenged by the Defendant. The largest one is an item of $26,000.00 charged to Construction on account of five sections of switchboard, which Defendant says were shipped away from Louisville after having been installed in the main exchange. Mr. Smith says he has an impression that some parts of the main switchboard were removed from Louisville. At the argument, Complainant contended that these five sections were removed to the West Exchange in Louisville. To rebut this, it is contended by Defendant that vouchers were exhibited by the company's Auditor, which show that the five sections of switchboard in the West Exchange was only $17,000, and that amount was paid by Complainant in addi-

140 tion to the disputed item of $26,000.00, and that both amounts appear as parts of Construction Account.

I have gone over this evidence carefully, and while the facts brought out in evidence are not satisfying, yet, as the expert accountants who examined the books make no mention of this alleged discrepancy, I am disposed not to disturb the account as to the two items last above mentioned.

Again, the evidence shows that there are many toll lines leading out of Louisville. These lines are devoted to what are commonly called "long distance messages." No separate account is kept showing the cost of operation of the toll lines. (Smith's Deposition, p. 201.) The maintenance and reconstruction of the toll lines, and in some, if not in every instance, original cost of additions to the Toll Department, were charged to Construction, Louisville Exchange. (Smith's Deposition, pp. 258, 259.)

In January, 1900, and in December, 1901, toll switchboards and

keyboard equipment, etc., were purchased for the Toll Department, and the cost was all charged to Construction Account of the Exchange. (Smith's Deposition, pp. 260, 266.)

Mr. Smith, Auditor, and Mr. Caldwell, President of Complainant, state that because of the toll lines and their easy accessibility to the Louisville subscribers, the value of the service to the subscribers is greatly enhanced.

I have considered the practice of the Complainant to charge to Construction Account additions to the toll equipment in the several exchanges in Louisville, and further, that the maintenance and reconstruction of toll lines were charged to the Louisville Exchange. The amounts of the erroneous charges to Construction Account from which we must find the cost of the Louisville Plant or Exchange, is necessarily problematical, and under the evidence in this
141 record, it is not susceptible of definite ascertainment. I am compelled, therefore, to make an estimate of the proper amount to be deducted from Construction Account, having due regard to the interests of both parties to this controversy, and I am of the opinion that a fair and most conservative estimate of what has been charged to the Construction Account under a mistaken theory is, at the very best, $100,000.00, which must be deducted from $1,481,124.41.

I find, therefore, that the cost of the Louisville Exchange, including toll lines, but excluding real estate, is $1,506,531.21

II.

"The fair valuation of the plant and property of the Complainant employed in its business in said city as of March 6, 1909, and also its value at the date upon which he may file his report herein. In doing this he will state generally the basis of his estimates."

Witnesses who testified as to the value of Complainant's plant were H. Blair Smith, Auditor of the company; J. E. Jagoe, Assistant Superintendent of Complainant's plant, and the witnesses who testified on this subject on behalf of the Defendant were W. C. Polk, Wm. H. Crumb, S. D. Levings, and in addition to these, Complainant and Defendant referred frequently to the units of valuation of such properties as adopted by Prof. Jackson.

The disagreements between these various witnesses are startling. The valuations of the plant by these witnesses are as follows:

142

Smith's total	$1,688,511.94
Jagoe's total	1,793,540.30
Polk's total	1,085,637.00
Crumb's total	975,000.00
Levings' total	1,000,000.00
Prof. Jackson's total, estimated according to the units adopted by him	1,779,413.18

Messrs. Polk, Crumb and Levings are experts introduced by the Defendant. Messrs. Smith and Jagoe are officials of the Complainant Company.

However truthful these witnesses may be (and I do not question their honesty of purpose), they are all more or less biased consciously or unconsciously. It is impossible for me to reconcile these totals one with the other. It may be true that Crumb's information as to the physical plant in Louisville was, on cross-examination, shown to be defective. This may be true as to the testimony of Levings. Mr. Polk shows in his deposition that while he may have fallen into some errors as to the quantities that constitute the Louisville Exchange, yet his experience in building plants in different parts of the country, and particularly his experience in building the Home Telephone Company's plant in the City of Louisville, entitles his testimony to consideration.

Mr. Smith speaks of and argues from the book cost of the plant, and his totals closely approximate the book cost as testified to by him.

Mr. Jagoe has gone into great detail and gives items, quantities and costs, and it is obvious that he is also largely influenced by the book cost of the Louisville Exchange. In addition to that he has added very frankly large amounts which he describes as "cost of supervision" and "overhead charges." For instance, in speaking of the value of the underground cable, he adds as "overhead charges" and "supervision," $57,505.27. In speaking of the value of
143 the aerial cable system, he adds as "supervision" and "overhead charges," $89,563.98. In speaking of the value of 4,960 miles of wire and the stringing of said wire, being No. 10 and No. 14, he adds for "overhead charges" and "supervision," about $10,000.00. And in speaking of the switchboards, he values same at $309,000.00, but says that of this amount there are due to "supervision" and "overhead charges" $21,462.39, or, in other words, seven per cent. On page 64 of Mr. Jagoe's deposition he is asked what supervision is necessary. Answer: "General expenses and engineering and supervision of the officers of the company." He further admits that these general expenses are every year charged to the expense of the company.

On pages 64 and 65, he says in substance, that the salaries of said officers, which is to say, totals of General Expenses, are prorated each year among the different accounts, to-wit, Maintenance, Reconstruction and Construction, in certain proportions named by him.

In order to show further the differences in opinions of the expert witnesses, it appears that Mr. Jagoe values the aerial cables at	$431,953.35
Underground cables at	288,942.50
Making a total of	720,895.85
Polk values these two items at	384,440.00
Showing a difference of	$336,455.85

Each witness undertakes to sustain his totals by elaborate details.

As stated above, the value of the plant as found by Mr. Jagoe, when reduced by the items of "overhead charges" and "supervision," amount to just a
144 little less than the figures given by Mr. Smith.

Mr. Jagoe's figures reduced as above indicated would be $1,625,008.66
Which is about 63,000.00
less than Mr. Smith's.

Again, Mr. Jagoe and Mr. Polk approximately agree in their estimate of the number of duct feet in the conduit system. Mr. Jagoe says there are in conduit feet 438,803
Mr. Polk says there are in conduit feet 436,890

The difference between the witnesses as to the cost of reproduction is so large, that I find myself unwilling to adopt the figures of either. Both of these witnesses are in the highest degree competent to pass upon this question, and my endeavor has been to reconcile their statements, if possible. Being unable to do so, I have concluded, so far as the value of the conduit system is concerned, to fix the cost of reproducing the conduit system at $.294 per duct foot, this being an average cost fixed by Messrs. Jagoe and Polk.

I have adopted Mr. Jagoe's estimate of the number of duct feet, and upon that basis, the cost of reproducing the 438,803 duct feet, at $.294 per duct foot, with $7,500.00 added as the cost of iron pipe found by Mr. Polk, would be $1,132,821.70
Instead of the amount as fixed by Mr. Jagoe 170,382.81

Making a difference of $37,561.11
Which amount should be taken from Mr. Jagoe's total, leaving as his estimate of the value of the plant $1,587,447.55

These figures include a large amount of what the witnesses denominate "surplus equipment." This surplus is found in the
145 aerial system, in the conduit system and in the exchange switchboards.

The evidence shows, and so I find, that it is not prudent or wise for a telephone plant like the one in Louisville, to be constructed merely to meet the immediate demands of the public; that such a plant should be built with an eye to the future, and that there should be a surplus equipment in every department sufficient to meet the demands of a period of several years, so that the wants of the new subscribers may be supplied on short notice. The evidence shows that there are more poles in the county outside of Louisville connected with the exchange or intended for the Louisville Exchange, than the present business of Complainant demands, but, as stated above, I am unwilling to condemn or to eliminate from the company's plant this surplus equipment.

Another matter was insisted upon at the argument and is referred to in the testimony that requires mention: It is stated that the blue prints of the Complainant show one or more "proposed" aerial lines, and that such lines have not been constructed, but are embraced in the estimate of the value of plant as if they actually existed. The evidence on this point is conflicting, and I have concluded not to disturb this item, although I am constrained to say that the evidence for Complainant on the question is not as clear and convincing as it might have been.

It is frankly stated by Mr. Jagoe that in all the construction, maintenance and reconstruction of the plant, "overhead charges" and "supervision" have played a part in swelling the totals. To what extent this bookkeeping device has been resorted to the evidence fails to show, except in the few concrete instances mentioned by this witness, as stated above.

I have discussed the above details of Mr. Jagoe's estimates
146 of the value of the plant in order to show that even his figures are not convincing.

I have found that the cost of the plant was, excluding toll lines and real estate.....$1,381,124.41

It does not appear in evidence that in this total there is included "overhead charges" or "supervision" to any great extent.

If I am correct as to the original cost, then it is not possible that the value of the plant at this date is in excess of the cost.

The witnesses are asked "what kind of depreciation has occurred in the plant," and in this way it was sought to obtain its true value. The witnesses for Complainant all agree that the plant has been kept up in excellent condition, and on account of the care that has been exercised in respect of the maintenance and reconstruction, the value of the plant is approximately equal to its cost price. Witnesses for the Defendant, however, state that the depreciation from the cost price has been about twenty or twenty-five per cent.

The plant in Louisville was begun and finished about the year 1890, and has therefore been in operation for about twenty years. The evidence shows that a great many of the parts of the exchange or plant will become useless in one year, and as to these parts, the testimony is that they have been maintained or reconstructed. Other parts of the plant will last a number of years, varying according to the character of material. All these parts, however, have been well cared for, and for all practical purposes, the Louisville Exchange in all its parts, performs well the functions of a new plant, and is nearly equal physically to a new plant.

But in spite of all this, it is a matter of common knowledge that poles and wires and instruments and switchboards and all the
147 apparatus connected with a telephone system, under the incorrigible law of nature, begin to depreciate the very day they are installed; and this depreciation continues from day to day and from month to month until the parts require replacement. Under the evidence poles will become worn out on an average in about ten years, and it is reasonable to suppose at this date there are

not many poles in the system that were in use in 1890—new poles having taken their place from time to time as the exigencies of the service demanded.

The evidence shows that the underground or conduit system will last unimpaired indefinitely, as some of the witnesses put it, more than fifty years. The conduit system was installed by the Ohio Valley Company some years before 1900, and it has required very little expense for maintenance or reconstruction since it was acquired by Complainant. About fifteen per cent has been added since 1899.

The estimates of the witnesses as to present value are irreconcilable. It may be conceded that the opportunities of some of the witnesses for accurate knowledge on the subject are superior to those of others. This assumption is undoubtedly true. I would not be fair in assuming that either of the witnesses is guilty of knowingly making misleading statements.

Convinced as I am that my findings as to the cost of the plant is correct, I am, for the reasons stated, persuaded that the value of the plant as of March 6th, 1909, all features of depreciation considered, ought to be and is.....$1,381,124.41
Less depreciation of ten per cent..... 138,112.44

Leaves $1,243,011.97

This does not embrace real estate nor toll lines nor working capital, if any should be allowed.

148 The value of plant, after considering depreciation, I find to be.....$1,243,011.97
Value of toll lines and equipment..... 125,406.80
Less depreciation of ten per cent..... 12,540.68

Net value $112,866.12

I find therefore that the total value of the exchange, including the toll lines, but excluding real estate, as of March 6, 1909.....$1,355,878.09

There is some evidence—though vague and unsatisfactory—(See Smith's Deposition, p. —) that some additions to construction of toll lines have been made since 1900, but the only special line mentioned is one from Louisville to Nashville. This entire line cannot be considered as a part of the Louisville Exchange construction. Its cost is said to have been $40,000.00, but all of this cannot be charged to Louisville toll lines. Half of it at least must belong to Nashville, and there are other exchanges tapped by it between the termini, such as Bowling Green, Elizabethtown, Franklin and Edgefield.

I see no reason to doubt that the value of the plant as of the First of November, 1910, is not of much less value than I have found it to be as of date March 6, 1909.

If Complainant in the past twenty months has maintained and reconstructed its plant as carefully and as elaborately as it did during 1905, 1906, 1907 and 1908, the plant ought to be worth approximately as much now as it was on March 6, 1909.

149 III.

"The gross earnings and the net earnings of the Complainant upon its plant and property employed in its business in said City for the years 1905, 1906, 1907, and 1908, stating separately as to each of said years, and giving the percentage of net income in each year, and whether said percentage is inclusive or exclusive of any allowance for depreciation of property and plant or claims for damages for personal or other injuries."

Operating Expenses of the Complainant in Conducting its Business in the City of Louisville During 1905, 1906, 1907 *and* 1908, *According to Complainant's Books.*

	1905.	1906.	1907.	1908.
1. General Expenses (pro rated)	$11,205.34	$11,270.15	$11,226.76	$9,531.29
2. General Expenses (Direct)	29,271.49	35,948.37	34,826.91	32,545.46
Total	$40,476.83	$47,218.52	$46,053.67	$42,076.75
3. Operating Expenses	84,264.54	80,738.06	79,661.04	75,440.28
4. Maintenance	49,819.14	52,796.93	65,616.31	54,705.91
5. Reconstruction	41,051.02	40,626.07	41,895.10	31,450.07
6. Instrument Expense	11,559.76	12,518.70	13,372.49	13,722.52

Total Operating Expenses.

Year 1905	$227,171.29
Year 1906	$233,898.28
Year 1907	$246,598.61
Year 1908	$217,395.53

The classified gross earnings of Complainant for the years 1905 to 1908, both inclusive, as they appear on its books, are as follows:

	1905.	1906.	1907.	1908.
1. Exchange Service	$264,675.13	$280,076.12	$297,501.14	$307,431.55
2. Proposition of Toll Earnings	6,539.92	7,064.91	8,030.15	7,632.11
3. From Telegraph Companies	983.88	1,018.12	939.48	761.79

4. From American Telegraph & Telephone Company.	$2,865.29	$3,427.09	$3,864.17	$3,272.37
5. Private Line Rentals	1,342.01	1,079.92	1,153.91	.....
6. Pole Service and Attachments	953.11	1,096.28	1,177.75	1,229.99
7. List Advertisements	751.83	2,497.25	2,984.22	3,151.59
8. Telegraph Drops	215.49	976.40	2,110.61	2,130.55
9. Messenger Fees	862.02	812.40	769.15	658.30
10. Removals and Miscellaneous	1,001.12	680.53	3,278.70	2,682.97
Gross Total	$280,189.80	$298,729.02	$321,809.28	$328,951.52
Deduct bad debts	10,366.42	4,230.58	2,050.77	3,113.22

Total Gross Earnings of Complainant as Placed to the Credit of Louisville Exchange.

Year 1905	$269,823.38
Year 1906	$294,498.44
Year 1907	$319,758.51
Year 1908	$325,838.30

In 1908 "Private Rentals were reported from the Exchange and included in $307,431.85 'Exchange Service.'"

In the above list of classified gross earnings of Complainant the first item which was called to my attention is No. 2, "Proportion of Toll Earnings." There is in the record much evidence which was directed to the Toll Line operations of Complainant Company in the City of Louisville. The object of this testimony was to determine whether or not the Louisville Exchange receives its proper proportion of the Toll Earnings which originated in Louisville. The amount of such earnings which is allotted to the Louisville Exchange is fifteen per cent of the total of outgoing messages. The salaries of toll line clerks and operators, as well as wages of those engaged in the maintenance and repair of toll lines, are charged to Expense Account and Construction Account respectively, of the Louisville Exchange. (Smith's Deposition, p. 420.)

151 The Exchange in Louisville is operated as a whole, and the toll lines are embraced in the operation. There are no pole lines leading out of Louisville which carry toll lines exclusively. (Smith's Deposition, p. 536.) Hence it is that the maintenance and repairs of all pole lines leading out of Louisville, whether such lines carry toll lines or not, are charged to the Louisville Exchange. It appears further that the equipment of the Toll Department, such as switchboards and toll trunks, have been charged to Construction Account of the Louisville Exchange. (Smith's Deposition, pp. 258, 259, 265, 266 and 270.)

The last items mentioned, equipment of Toll Lines Department, are probably included in the total cost of toll lines of the Ohio Valley Company as reported by the accountants. This amount was a little more than $125,000.00. But be that as it may, the evidence shows that the salaries of employés who perform duties in the Toll Department, as well as the wages and salaries of laborers and others who are engaged in maintaining and reconstructing the toll lines, which bear toll wires in connection with exchange wires, are all charged to and paid by the Louisville Exchange.

In accordance with what is alleged to be a general custom among telephone companies which operate toll lines in connection with an exchange, the Complainant allots to the Louisville Exchange fifteen per cent of the toll revenues which originate in the City of Louisville, and pays over the remaining eighty-five per cent to the general company for its general purposes. I have been very much perplexed by this state of affairs, as disclosed in the evidence. Custom of trade among merchants has generally received the sanction of the courts. The reason of this is obvious, because merchants trade with each other at arm's length, and what is generally done under such circumstances ought to be and is generally upheld by the courts. But the custom here testified to is a very different

152 thing from the custom of merchants. The parent company manages and controls its subsidiary department as it deems best. The subsidiary department occupies no position of independence, and, in fact, does not and cannot raise a protest. And when it appears, as in this record, that the Louisville Exchange is required to pay all, or nearly all, of the operating expense of the Toll Line Department and in return is given compensation that is

utterly insufficient to pay the expenses it is required to pay, such a custom does not and ought not to appeal to the judicial mind.

Mr. Caldwell and Mr. Smith emphasize the fact that the toll line connections are arranged for the convenience of the subscribers, so that at a moment's notice any subscriber in Louisville may connect with the Long Distance Department, and that this accessibility is an important factor in determining what are reasonable or unreasonable rates to be charged the subscribers.

This argument would be plausible if the Toll Service and its conveniences were furnished by a stranger company, in which case the fair and reasonable distribution of the revenues and the proper allotment of the cost of operation would be regulated and controlled by a solemn contract between independent parties. But Complainant is the owner of the toll lines. It operates them and is entitled to receive and does receive the revenue. It is also the owner of the Louisville Exchange. The question then is whether or not the division of toll line revenues, as set out above, is fair and reasonable under existing conditions.

The Toll Department and all its apparatus and employés are located in the Main Exchange Building of Complainant. No part of the rent nor taxes nor insurance on this building, nor any part of the insurance on the toll switchboards and equipment are charged to the Toll Department, but all of same are charged to and paid by the Louisville Exchange out of its earnings. The salaries
153 of toll clerks and messengers are also paid by the Exchange. Nor is any part of the salaries of the Private Branch Exchange Operators paid by the Toll Department, but these also are all charged to the Exchange.

It is shown by Mr. Warren on pages 506 and 507 that a claim for personal injuries, amounting to $1,500.00, was paid in 1905 to a toll operator who was injured while engaged in the Toll Department, and that this amount was charged to and paid by the Louisville Exchange.

I find that for the years 1905, 1906, 1907 and 1908 the Louisville Exchange has been charged with and paid out as salaries for toll operators, toll chief and telegraph operators, toll clerks and messengers, the following amounts:

1905	$11,661.80
1906	13,126.89
1907	13,126.97
1908	9,680.10

For the same years the fifteen per cent of the earnings of the Toll Department has been credited or paid to the Louisville Exchange as follows:

1905	$6,539.92
1906	7,064.91
1907	8,030.15
1908	7,632.11

These items standing alone show a large loss to the Louisville Exchange by reason of the Toll Department. In addition to the above, I find that the Complainant charges up against the Louisville Exchange the rent of all its exchanges, and in addition thereto requires the Exchange to pay the taxes and insurance and repairs on said structures.

It is vigorously insisted by the City, and with much plausibility, that the Toll Department should be charged with its propor-
154 tion of the general expenses of the Exchange, with printing, stationery, with legal expenses, with advertising, incidentals (operating), traveling expenses and incidentals (repairs), but in view of my findings as to the Toll Department, I will not disturb the last named accounts.

There is another branch of this question that requires notice. It appears that the maintenance repairs and maintenance reconstruction of toll lines and the toll equipment are paid by the Louisville Exchange. What the cost of the labor and materials for these purposes amounts to, I have been unable to ascertain from the record. That it is a substantial sum may be assumed.

The mode of conducting a great business like the one I am considering ought not to be lightly or inconsiderately interfered with, but as to the matters now under consideration, the evidence is of such a character that one is forced to the conclusion that the toll line of revenues ought not to be segregated from the exchange revenues.

If the toll business ought to be treated as claimed by Complainant, that is, as a separate and distinct department of Complainant's business, then in fairness it ought to be required to pay all the expenses of its operation, and the Exchange ought to be fairly compensated for its services in aid of the toll line business; but very nearly the entire burden of conducting the toll business has been imposed on the Exchange.

The proper relation of the Toll Department to the Louisville Exchange is a most important factor in determining the revenue belonging to the Exchange, as well as arriving at the proper cost of operating the Exchange. The officers of Complainant, and their witness, Wilkinson, in their testimony, have assumed the
155 correctness of the methods of conducting the toll business as above outlined. From what has been said, it is obvious that the Exchange in Louisville would be more remunerative if the Toll Department were not in existence, unless there be merit in the contention that the existence of the toll lines has a direct tendency to attract and increase the number of subscribers. I am not disposed to attach importance to this last suggestion.

It is further true that the Toll Department could not be as profitably conducted, unless it were intimately connected as it is with an exchange. The Complainant owns and controls both departments. Complainant has introduced testimony which shows that the Toll Department, as it is operated, is very profitable, while the Exchange is unremunerative. This condition, as appears from the evidence, is brought about, as I have shown, by the arbitrary allotment of

all operating expenses of the Toll Department to the Exchange, and by setting aside only fifteen per cent of its revenue to the Exchange, and by passing eighty-five per cent thereof to the general surplus or reserve fund of Complainant.

While there are some employés of Complainant whose duties are confined to the Toll Department in Louisville, there are many others whose duties are divided between the exchange operations and those of the Toll Department. As already stated, the two departments are located in the same building, and the business of each is intimately and almost inseparably connected with that of the other.

The Exchange is required to pay the total rent of the main building in Louisville where the Toll Department has its headquarters; and, in addition, is required to pay the taxes and insurance and incidental expenses of maintaining the building. I do not find any fault with the requirement that the Exchange should be charged with a fair rental of the various exchange buildings. The
156 evidence shows that the Louisville Exchanges during the years 1905, 1906, 1907 and 1908 were required to pay an average of 8.0675 per cent of the book value of the main exchange as rent. This rent, while somewhat in excess of what similar real estate ordinarily pays in Louisville, might not be deemed exorbitant. But in addition to the above, Complainant requires the exchange to bear all the cost of taxes, insurance and maintenance. The rent, taxes and insurance charged to the Exchange aggregate an amount equal to 9.91 per cent of the book value of the real estate for each of the four years named.

If the rent and taxes were paid by Complainant out of its general fund, the average rent on the book value of the main exchange would be 6.227 per cent, which is slightly in excess of the customary rental values in Louisville for the years named.

Under the system of management of its properties in Louisville, Complainant treats the Toll Department as an independent entity, separate from the Exchange. It also treats its real estate in Louisville (all of which is a necessary adjunct) as a separate and independent department. The practical result of this system or method is that the net revenue arising from the operations of the Toll Department, the Exchange and the Real Estate Department, amounts in the aggregate to a considerable sum and is most profitable and remunerative to Complainant.

It appears from Complainant's books that under the existing methods, while the Toll Department and Real Estate Department yield a handsome net revenue, the Exchange in Louisville is not earning a fair annual return on the cost of the plant.

It is clearly inequitable that the Exchange be charged with the taxes or the insurance on the buildings of Complainant; and it is equally clear that the Exchange should not be charged with the cost of operating and conducting the Toll Department.

157 There is evidence in the record which tends to show that the cost of operating the Toll Department and the taxes and insurance on the buildings belonging to Complainant, ought to be

shared by the Toll Department and the Exchange in proportion to the revenue received by each, and this percentage is figured out to be 16¼ per cent to be paid by the Toll Department and the remainder by the Exchange. But I am not disposed to accept this tentative solution of the problem.

The Toll Department, which handles long distance messages, is so intimately connected with the Exchange and its operations that it is difficult to segregate them; the operators are largely engaged in handling both local and long distance business; the pole lines leading out of the Exchange carry both toll lines and exchange lines; the maintenance of these pole lines is borne by the Exchange, and nearly all of the cost of operating the toll business is borne by the Exchange; the Toll Department occupies a part of the Main Exchange Building, yet it pays no rent nor insurance nor taxes nor cost of repairs or maintenance. In addition, Mr. Smith, the Auditor of Complainant, pages, 258, 265 and 266, frankly states that the cost of construction or reconstruction of the toll switchboard was paid for by the Exchange and charged to Construction Account of Exchange.

I fail to see any just reason for separating the earnings of the Toll Department from the earnings of the Exchange. If all the toll earnings be given to the Exchange and the expense of toll operations and the taxes and insurance be paid out of Exchange earnings, the result will not affect the net cash receipts of Complainant.

I have given this matter much thought and consideration, and I am satisfied that the arbitrary division of the toll revenues at Louisville between the Complainant and the Exchange, under
158 all the existing conditions above enumerated, is unjust and inequitable and should not be approved.

It is, perhaps, not unnatural in this controversy that Complainant should, by all plausible means, undertake to increase its Expense Account and decrease its Revenue Account. This effort on its part involves no moral problem, but is purely and simply a question of business propriety. It is more strictly a matter of bookkeeping.

Therefore, if the various expense items above enumerated growing out of the Toll business are allowed to stand, as they appear on the books of Complainant, as charges against the Exchange, the Exchange in return should be credited with the net toll revenues for the four years of 1905, 1906, 1907 and 1908.

The Joint Report of the accountants shows that, according to the books of Complainant, the total gross earnings of Complainant, as placed to the credit of the Louisville Exchange, were as follows:

1905	$269,823.38
1906	294,498.44
1907	319,758.51
1908	325,838.30

The above amounts include fifteen per cent of the toll earnings which are set out supra. In their separate reports, the accountants differ as to the net toll receipts at Louisville for each of the years

under consideration. I have attempted to reconcile these differences, but the effort has been unsatisfactory, chiefly because the accountants have pursued different methods of analysis. For instance, the city's accountants have considered and embraced the incoming toll messages as well as the outgoing, and have surcharged the accounts in a few instances, and thus they show that the Toll Department's receipts were greater each year than appear on Complainant's books.

159 The accountant for Complainant accepts the Complainant's books as correct. In order to avoid sundry technicalities, I give Complainant the benefit of the doubt, and I have accepted these accounts as they appear on its books.

The net Toll receipts, after deducting fifteen per cent, which were credited to the Exchange or Complainant's books, were as follows:

1905	$37,059.53
1906	40,034.58
1907	45,504.16
1908	43,248.70

With these amounts added to the total gross earnings of Complainant, as shown above, it appears that the total gross earnings were as follows:

1905	$306,882.91
1906	334,533.02
1907	365,262.67
1908	369,087.00

Having ascertained the gross earnings of Complainant in Louisville, it becomes necessary to determine the amount of Operating Expenses, in order to ascertain the net earnings, and thus establish the percentage of such earnings for the years 1905, 1906, 1907 and 1908.

The Joint Report shows that the Operating Expenses for each year, according to the books of Complainant, were classified as follows:

First: General Expenses (prorated).
Second: General Expenses (direct).
Third: Operating Expenses.
Fourth: Maintenance.
Fifth: Reconstruction.

160 General Expenses consist of the pro rata proportion of Executive Management Expenses at Complainant's principal office at Nashville, which include general officers' salaries and those of their assistants, and salaries and wages of clerical force, rent, light and heat at principal offices, traveling expenses of officers and incidental expenses.

The Joint Report shows the amount of such prorated general expense for each year as they appear on Complainant's books, as follows:

1905	$11,205.34
1906	11,270.15
1907	11,226.76
1908	9,531.29

The accountants employed by the city find fault with these totals and insist that some of the items which are embraced in the totals of General Expenses—prorated—should have been charged to the Toll Department; and that some of them should be charged to the Supply Department, and some to Expense of Real Estate.

As to the objection first stated, my conclusion as to the proper disposition of the Toll earnings logically places the expenses of that Department as a proper charge against the Exchange earnings.

Those items which are claimed to be chargeable to the Supply Department amount, on an average to $830.45 for each of the four years above named. There is much reason for criticizing the operations of the Supply Department, as has been shown heretofore in this Report. But as the elucidation of this alleged error is difficult, and by no means satisfactory, and as the amount in dispute is not large, I have not felt justified in sustaining the point raised.

161 I find, therefore, the item "Prorate of General Office Expenses" correct, as stated supra.

The next item of General Expenses—direct—and pro rata of General Account, which includes postage, printing and stationery, directory expenses, taxes and legal expenses, as claimed by Complainant, amount to the following:

1905	$29,271.49
1906	35,948.37
1907	34,826.91
1908	32,545.46

For reasons already assigned, I find that the taxes charged to the Exchange for the years 1905, 1906, 1907 and 1908 should be disallowed. The rent charged to the Exchange is, under the evidence, at a reasonable and customary rate; but it, in addition thereto, the taxes and insurance are added, the charge against the Exchange becomes excessive. I speak now of the Main Exchange only. I do not make any change in the accounts relative to the other three exchanges.

The taxes which I find should be deducted from the General Expense Account are as follows:

1905	$1,118.97
1906	1,059.91
1907	1,077.72
1908	1,032.15

Thus I find the General Expenses of the Louisville Exchange for the four years were as follows:

1905	$29,271.49
	1,118.97
	$28,152.52

162

1906	$35,948.37
	1,059.91
	$34,888.46
1907	$34,826.91
	1,077.72
	$33,749.19
1908	$32,545.46
	1,032.46
	$31,513.00

The accountants in the case agree as to the total of the next item, to-wit, Operating Expenses, but they differ as to its proper distribution.

The totals of this item for the four years are as follows:

1905	$84,264.54
1906	80,738.06
1907	79,661.04
1908	75,440.28

The city insists that the Toll Department should be charged with its proportion of these totals, to-wit:

1905	$16,517.88
1906	18,247.44
1907	17,630.18
1908	14,533.13
Total	$66,960.63

These charges against the Exchange should clearly be made against the Toll Department, if the latter be treated as an independent department, as I have shown *supra*. But, as I have already disposed of this question, it is unnecessary to go critically into any investigation of the correctness of these figures.

163 In regular order, the next items of expense are Maintenance repairs. "The charges under this heading are for the current repairs, mending breaks, tightening wires, rectifying 'trouble,' and generally maintaining the property in first-class running order." (Wilkinson's Separate Report, p. 44.) "These expenses include salaries and wages of foremen, linemen, electricians and troublemen, materials for repairs of plant, and for replacement of parts which

wear out in less than a year; traveling expenses and keep of teams, repairs to wagons and vehicles, coal, conduit and roof rent, fire insurance on plant, payments for damages to persons and property and miscellaneous expenses incident to maintaining the telephone plant in good working condition."

The accountants for Complainant and Defendant respectively, differ as to what should be a proper distribution of these maintenance expenses. For instance, a certain proportion of the traveling expenses of the officers and employés; a certain proportion of the insurance on the Main Exchange, and a personal injury compromise claim, and a certain proportion of incidentals, it is insisted, should be charged to the Toll Department.

These items, for the four years stated, amount in the aggregate, as follows:

1905	$2,267.95
1906	867.13
1907	1,148.36
1908	630.44
Total	$4,913.88

But, for reasons stated *supra*, these items must stand, as the revenue from the Toll Department is credited to the Exchange.

The other objections I disallow, so that the maintenance for the four years must stand as follows:

164

1905	$49,819.14
1906	52,796.93
1907	65,614.31
1908	54,705.91

The next item of expense to be considered is entitled Maintenance Reconstruction. This is a subdivision of Maintenance. (See Wilkinson's reply to Farnham, p. 10.) The items making up this account are mainly salaries and wages, materials and traveling expenses. Why this separate account should have been kept I cannot understand from the evidence. The witnesses on behalf of Complainant admit that the two accounts, Maintenance and Maintenance Reconstruction, are practically one and the same. Mr. Caldwell says the distinction between them is shadowy. Indeed, prior to 1905, no separate Reconstruction Account was kept by Complainant. From 1905 to 1907, inclusive, such an account was kept, but in 1908 was again discontinued and was merged into the Maintenance Account.

The amount of this account, Maintenance Reconstruction, for the four years is as follows:

1905	$41,051.02
1906	40,626.07
1907	41,895.10
1908	31,450.07

The account for 1908 is estimated.

I see no reason to disallow these items.

The next item, "Instrument Expense," seems to be agreed to by both accountants, and this amounts to the following:

1905	$11,559.76
1906	12,518.70
1907	13,372.49
1908	13,722.52

165 I therefore find that the total Operating Expenses of Complainant for the four years, including the accounts last above considered, were as follows:

1905	$226,052.32
1906	232,838.37
1907	245,520.89
1908	216,363.07

If the operating expenses of Complainant be deducted from the gross revenues as I have found them, the net income for each year will be found as follows:

1905.	Gross revenues	$306,882.91
	Operating expenses	225,052.32
	Net income	$80,830.59
1906.	Gross revenues	$334,533.02
	Operating expenses	232,838.37
	Net income	$101,694.65
1907.	Gross revenues	$365,262.67
	Operating expenses	245,520.89
	Net income	$119,741.78
1908.	Gross revenues	$369,087.00
	Operating expenses	216,363.07
	Net income	$152,723.93

On page 22 of this Report, I have placed the value of Complainant's plant, as of March 6, 1909, including toll lines, after deducting ten per cent as a proper allowance for depreciation, at $1,355,878.09

This does not include real estate or working capital.

In order to ascertain the percentage of the net earnings for each of the four years, it is necessary to ascertain what the value
166 of Complainant's plant was at the end of each year from 1905 to 1908, inclusive.

It appears from the Joint Report, page 3, that the total amount expended for Construction Account of the plant, stated by years, was as follows, according to Complainant's books:

1905	$60,691.21
1906	89,125.15
1907	20,770.42
1908, taken out	4,351.83

At the end of the years last named, the value of Complainant's plant, including Toll Department, was:

1905	$1,355,878.09
Deduct Construction Account for 1906 and 1907	109,895.57
Value of plant at the end of 1905	$1,245,982.52
1906	$1,355,878.09
Deducting amount expended in 1907 for Construction	20,770.42
Value of plant at the end of 1906	$1,335,107.67
1907, Value of plant at the end of year	$1,355,878.09
1908	$1,355,878.09
Amount of error in Construction Account taken out	4,351.83
Value of plant at end of 1908	$1,351,526.26

I have found, in answer to Interrogatory No. 5 (see page 53) that a proper allowance for depreciation will be seven per cent of the value of the plant for each of the years, 1905, 1906, 1907 and 1908, and for subsequent years.

167 In order, therefore, to make my finding as to the net profit and the percentages thereof, I must show under this division the amount of such depreciation found and how it will affect the net earnings.

The value of the plant has been found supra as of the years 1905, 1906, 1907 and 1908, and the seven per cent depreciation allowed for each of said years is found as follows:

1905	$86,818.77
1906	93,457.53
1907	94,914.66
1908	94,606.83

The amount of depreciation allowed for the four years gives an annual average of $92,449.45

The amount actually expended by Complainant for Maintenance and Reconstruction for each of said years is as follows:

1905	$90,870.36
1906	93,423.00
1907	107,511.41
1908	86,155.98

These amounts show an annual average outlay for Maintenance and Reconstruction of $94,490.19

The average annual excess of expenditures over allowance for depreciation is 2,050.74

An analysis of the above figures leads me to believe that in a period of ten or fifteen years the allowance of seven per cent for depreciation will be ample. An expenditure for maintenance in one year of an amount in excess of seven per cent will probably be followed in the next year by a requirement of a less amount.

But in ascertaining the percentage of net earnings to the
168 value of the plant, it is proper to deduct from the Net Earnings as found above, the average excess of the Maintenance Expense over the average allowance for depreciation.

The Net Earnings were as follows:

1905	$80,830.59
Deduct excess of expenditures as above	2,050.74
Leaving Net Earnigs	78,779.85
1906, Net Earnings	$101,694.65
Deduct excess of expenditures over depreciation	2,050.74
Leaves Net Earnings	$99,643.91
1907, Net Earnings	$119,741.78
Deduct excess of expenditures over depreciation allowance	2,050.74
Net Earnings	$117,691.04
1908, Net Earnings	$152,723.93
Deduct excess of expenditures over depreciation allowance	2,050.74
Net Earnings	$150,673.19

The percentage of Net Earnings to the value of Complainant's plant, for the four years, was as follows:

1905	6.32 per cent
1906	7.46 per cent
1907	8.68 per cent
1908	11.14 per cent

The above percentages are inclusive of allowance for depreciation of property and plant and claims for damages for personal or other injuries.

IV.

169 "The said Special Master is directed to make an estimate upon the testimony, and state his conclusions therefrom as to what would be the reasonably probable gross and the reasonably probable net income of the Complainant from its said plant and property employed in its business in said city for the current year, and the year 1910, if the rates of telephone charges fixed by the ordinance enacted by the legislative body of Defendant and approved by the Mayor on March 6, 1909, should be put into operation and effect."

The accountants, in their Joint Report, agree that if the ordinance rates be put into operation, the loss in revenue to Complainant annually would probably be $49,721.76. From what subsequently appears in their Joint Report, this loss is based upon the hypothesis that this loss will result if there should not be an increase or decrease in the number of subscribers.

The accountants then agree on the following statement:

"Against this probable loss of $49,721.76 a year, will probably be an increase in gross earnings in respect of the natural growth of the business and the increased number of subscribers due to the lowering of rates upon the enforcement of the ordinance. What this increase will amount to, we cannot definitely determine."

It must be borne in mind that the practical effect of the ordinance rates has not been tried. Complainant comes into a Court of Equity and seeks by injunction, to prevent the operation of the proposed rates, upon the ground that their enforcement would be confiscatory of its property.

In Knoxville vs. Water Works, 212 U. S., 16, the Court says:

"It must be prepared to show to the satisfaction of the Court that the ordinance would necessarily be so confiscatory in its
170 effect as to violate the Constitution of the United States."

In their separate reports, the two accountants widely differ as to what will be the net results, if the rate ordinance be put in operation. The accountant of Complainant very adroitly argues, and furnishes figures in support of his contention, that the net loss to Complainant, if the ordinance rates be adopted, would be, in 1910 (1911) $18,852.97, and that this net loss would probably decrease annually thereafter.

The accountant of the city does not go into detail as to calculations to the same extent as does Complainant's accountant, but states that the net increase in earnings would be:

In 1910 (1911)	$14,972.40
And would be in 1911 (1912)	21,441.82

The reasoning of both accountants on this subject is speculative and hypothetical. Both admit that the lowering of rates will produce an increase in the number of subscribers, and consequently in gross earnings. They also agree that an increase in the number of subscribers will entail an increase in Operating Expenses. One

says this increase in expenses will be nominal; the other says it will be substantial.

It is impossible to foresee whether the expected increase in subscribers will be in respect of business phones or residence phones. This uncertainty must necessarily affect the expected gross revenue. And, to a certain extent, this uncertainty will affect the operating expenses, and consequently the net revenue.

Complainant's accountant shows from the books that the operating expenses vary in a sort of ratio to the number of subscribers. He says in 1906 there were 5,956 subscribers, and the operating expenses were $80,738.06. In 1908, he says, there were 5,158 subscribers—800 less than in 1906—and the operating expenses
171 that year were $75,440.28. He argues, therefore, that a loss of about 800 subscribers shows a decrease in operating expenses of about $5,300.00. This calculation shows an annual saving in expenses of about $6.50 for each subscriber lost.

The statement of this contention shows it is an unreliable basis of calculation. No account is taken of the other Operating Expenses, and they would have to be analyzed before the above figures could be safely relied upon.

Again, Complainant's accountant assumes that many subscribers who are not content with party lines, will take a private line, and that this probable condition would result in little net increase of revenue.

The views of the two accountants are irreconcilable as to the net results of a lowering of rates. But they do agree that the primary result of the lowering of rates would be an increase in the number of subscribers, and that the operating expenses would thereby be increased, but to what extent there is uncertainty.

It is obvious that the increase in the number of subscribers is deemed desirable by Complainant. The evidence throughout this record shows that Complainant's efforts are mainly directed to this end, and I am persuaded that every such increase must be remunerative to Complainant. After a certain increase in the number of subscribers is reached—say one hundred—it becomes necessary, in the proper conduct of the business, to add two additional operators to the company's force; in addition, a small annual percentage of other expenses becomes necessary, such as additional wiring and maintenance. These items must be considered. Complainant's accountant produces a computation showing that if the ordinance rates be enforced, it is fair to estimate that there will be a natural
172 increase of 483 subscribers the first year, which would probably require 800 stations; and that the taking on of the 483 new subscribers would be at a net loss to Complainant for the year 1910 (1911) of $1,294.00. I cannot accept this result as reasonably probable.

The suggestions of Defendant's accountant on this subject are not satisfactory. Neither accountant seems to have considered all the essential elements of this extremely hypothetical question. For instance, Complainant insists that new wiring would be a necessary expense of putting on the new subscribers. This item appears to

have been heretofore charged uniformly to Construction Account. The charge for Maintenance or Maintenance Reconstruction for the first year would be nominal, and after the second year it would probably be a negligible quantity, in view of the reasonable expectancy that the increase in new subscribers would be continuous.

Defendant, on the other hand, suggests that the salaries and wages of additional operators and Main Office clerks would be merely nominal, as compared with the gross revenue to be received from the new subscribers.

Without discussing this question further, I find that if the ordinance rates be enforced, there will be an increase in the number of telephone subscribers; but the number of such new subscribers is problematical. The new subscribers will probably be of two classes:

(*a*) Those secured as the result of the natural growth and extension of business;

(*b*) Those who may be induced to become subscribers as the direct result of a lowering of the rates.

It appears in evidence that many persons cancelled their subscriptions in 1908 when the rates were raised. It is reasonable to expect very many of these to renew their subscriptions.

It is not possible for me to do more than to express my
173 opinion as to how large will be the increase in the number of new subscribers, in case the ordinance rates shall be enforced, nor as to whether the new subscribers will require business phones or residence phones. All the witnesses who speak of this subject express the opinion that there would be a substantial increase in the company's business. But only two witnesses went further and hazarded a guess as to the probable number or as to the probable financial results.

I am of the opinion that the first year after the new rates shall be in force, say 1911, the net decrease to the company in revenue will probably amount to $30,000.00 below what the Net Earnings have been found to be under present rates in 1908.

In 1912, I am of the opinion that the gain to the company will probably be large and continuous, and that it will probably overcome the decrease in net revenue entirely. In other words, I believe that in 1912, the net income of Complainant under the ordinance rates would be equal, if not greater, than those for 1908, as given supra under present rates.

In the above findings I have assumed that the net earnings of the company have remained in 1910 as I have found them to be in 1908. But it is not unreasonable to suppose that they were greater in 1910 than they were in 1908 or 1909.

But adopting the net earnings of 1908, as I have found them, under the present ordinance.....	$150,673.19
And deducting what will be the probable loss in 1911 if the ordinance rates be enforced as stated above...	30,000.00
The net earnings of the company for the year 1911 under the ordinance rates will probably be..	$120,673.19

If the value of the plant be assumed to
174 be in 1911.....$1,400,000.00
The net earnings as shown without considering any increase, would yield to the Complainant net..8.60 per cent on the then value of the plant.

V.

"He will ascertain and report from the testimony what would be a fair amount or proportion of annual income to set aside as a substantial provision and allowance for depreciation of Complainant's plant and property employed in its business in said city and the basis of his estimate thereof."

The evidence as to depreciation presents a diversity of views as to what proportion of the annual income of Complainant should be set aside as a provision and allowance to cover depreciation of plant and property employed in Louisville by Complainant.

The general officers of Complainant say that the annual allowance for depreciation should be ten per cent of the value of plant and property. Mr. Smith, the Auditor of the Complainant, fixes seven and a half per cent as the proper amount, and complainant's accountant says seven per cent will be sufficient. They all admit that the annual outlay for Maintenance and reconstruction must be deducted from the Depreciation Fund.

In taking up this question, it is a noteworthy fact that no amount has ever been set aside for depreciation by Complainant. The reason alleged is that the earnings of the company have not been sufficient to provide such an outlay. It is insisted by Complainant that in those years when its earnings were not sufficiently large to enable it to set aside a fund to cover depreciation, the deficit
175 should be taken care of out of the earnings of subsequent years. This deficit, it is claimed, represents incomplete depreciation.

Before discussing the actual figures as disclosed by the evidence, I may say that this claim of Complainant is disposed of by the Circuit Court of the United States in Knoxville vs. Water Company, 212 U. S., 13, 14, where the Court says:

"Before coming to the question of profit at all, the company is entitled to earn a sufficient sum annually to provide not only for current repairs, but for making good the depreciation and replacing the parts of the property when they come to the end of their life. The company is not bound to see its property gradually waste without making provision out of earnings for its replacement."

On page 14 the Court says further:

"If, however, a company fails to perform this plain duty and to exact sufficient returns to keep the investment unimpaired, whether this is the result of unwarranted dividends upon over issue of securities, or of omission to exact proper prices for the output, the fault is its own.

When, therefore, a public regulation of its prices comes under question, the true value of the property then employed for the purpose of earning a return cannot be enhanced by a consideration

of the errors in management which have been committed in the past."

While this record does not show that unwarranted dividends have been paid out of earnings, it is claimed by Complainant that the company failed to earn a sufficient amount to cover the annual depreciation of its plant and property in 1905, 1906, 1907 and 1908, and therefore the Court must allow it to apply, out of future earnings, a sum equal to the deficits of former years, as compensation for the incomplete depreciation. In other words, Complainant contends that in 1905, 1906, 1907 and 1908 its earnings at the then existing rates were sufficient to take care of all operating expenses, taxes and insurance, maintenance and reconstruction, but not enough to cover the incomplete depreciation of plant; that the depreciation is not always annual, but, in a long period of
176 time, the plant will require rebuilding or replacement, and it is necessary to begin and lay aside a fund each year, which fund, at the end of a period, will provide the amount necessary to overcome depreciation.

I have considered all of the evidence in the record, and I am satisfied that a fund to cover depreciation of plant is necessary, and this fund should come out of earnings. It has been shown that some parts of the plant begin to depreciate the moment they are put into use, while other parts last unimpaired for years. The poles will last, on an average, ten years or longer. The wires are shorter lived. The conduit system is of long life—fifty years and longer. The switchboards, under the evidence, last many years. They are composed of separate parts or sections, and by replacing an impaired part of section, the life of the switchboard is extended indefinitely. The only hazard in respect of switchboards is the discovery and introduction of a better pattern. The evidence shows that the switchboards in Louisville are of the best and most approved type as to efficiency and lasting qualities. Thus it is obvious that the percentage of depreciation of the various parts of the plant and property is not subject to a general law or rule. To establish an average is beyond my power, as the evidence does not aid me in this regard.

I will now direct attention to what the Complainant has actually done with reference to depreciation since 1905.

Its books show, as appears in the Joint Report of the accountants, that in 1905, 1906, 1907 and 1908, Complainant expended in repairs or Maintenance and Reconstruction in Louisville, not including real estate	$ 377,960.55
This gives an average per year of	94,490.14
On the value of the plant, as I have found it, as of March 6, 1909, to-wit	1,355,878.09
177 The above expenditure is, each year, on an average	7.046 per cent
In addition to this expenditure, it is insisted by Complainant, that for the four years supra, there remains an "unexpended portion of Reconstruction Reserve to be charged against future earnings"	$301,640.45

This amount is an average per year of.....	75,410.11
This claim each year is an average of.....	5.62 per cent
These two amounts added together make.....	$679,601.00
Or an annual percentage for depreciation of over.....	12 per cent

The statement of the above figures are startling, when the evidence discloses that the Home Telephone plant in Louisville, which is, in many respects, similar to Complainant's plant, was built anew for about $1,000,000.00. Witnesses for Complainant all testify in substance that the company's plant in Louisville is in nearly perfect condition in all respects.

It may be mentioned in passing, that during January, February, and to the 6th of March, 1909, Complainant spent only $191.65 for Maintenance and Reconstruction. This fact may fairly be accounted for by assuming that no greater outlay was required for such purpose.

I think it is reasonable and fair to assume that the amounts actually expended by Complainant during 1905, 1906, 1907 and 1908, and to March 6, 1909—made, as they were, when this or similar litigation was not contemplated—indicate more clearly than opinions of witnesses what expenditures were necessary to properly repair, maintain and reconstruct the plant. The plant was acquired in 1899, and Complainant took care of and maintained the plant up to 1905 just as it has done since that time.

178 In that part of the report where the cost of the plant was considered, reference was made to a questionable entry in the books of the Ohio Valley Company. It appeared that that company paid dividends on its capital stock, maintained and reconstructed its plant from year to year out of exchange earnings during a period of eight or nine years. At the end of each fiscal year the Ohio Valley Company wrote off from its "Construction" Account, and passed to "Depreciation" an amount aggregating $135,505.70.

Complainant attacks these bookkeeping entries vigorously, and in its Construction Account, it has reversed the entries made by the Ohio Valley Company supra, and that aggregate item of $135,505.70 appears as an integral part of the cost of Complainant's plant immediately after it was purchased from the Ohio Valley Company in 1899.

As to the correctness of this addition of $135,505.70 to Construction Account, and therefore to the Cost Account of the plant, its expert accountant, Mr. Wilkinson, on page 13 of his report, says: "No such charge for depreciation was called for at all. The amount actually expended by the Ohio Valley Telephone Company upon the up-keep of its telephone plant, was ample to provide for all reconstruction."

This argument, when applied to the claim of Complainant for an additional allowance out of earnings for "incomplete depreciation" over and above the annual outlay for Maintenance and Reconstruction, is conclusive. In further support of the justness of my position, I may refer again to the testimony of Complainant's witnesses, who say that the physical condition of the plant is first-class

in every respect. (Wilkinson's Report, p. 26.) (Smith & Caldwell.)

Again, the claim for depreciation is made on supplies, amounting to an average of $37,711.79 for the years 1905, 1906,
179 1907 and 1908, and it is also claimed that this Depreciation Fund should be based on the cash working capital used by Complainant amounting on an average for each of the four years to $28,597.45.

The claim to this extent ought not to be allowed.

I wish to say further, that the claim for an annual depreciation of seven per cent on the conduit system and the switchboards, is, in my opinion, not sustained by the evidence. If the value of the conduit system and of the switchboards and of supplies and of cash, be taken from the total value of the plant, it will appear that the amount actually expended each year for Maintenance and Reconstruction is substantially more than seven and a half per cent claimed by the company's officers as proper.

I do not intend by the foregoing to hold that there is no depreciation as to the conduit system and as to the switchboards. All I intend is that the depreciation as to these items ought not to be on a basis of seven and a half per cent per annum.

In view of the foregoing, I find that the fair and reasonable amount or proportion of annual income of Complainant that should be set aside as a substantial provision and allowance for depreciation of Complainant's plant and property employed in its business in Louisville, and including everything except cash working capital and supplies, would be an amount equal to seven per cent of the value of the plant, as above limited, and that the amount expended annually for Maintenance and Reconstruction of the plant should be deducted from the seven per cent fund.

180 VI.

"He will ascertain and report whether the reasonable probable increase from Complainant's plant and property employed in its business in said city will, within the next few years, amount to a fair annual return upon the reasonable value thereof if the provisions of the ordinance approved March 6, 1909, are put into operation."

I have heretofore found the value of Complainant's plant, the gross and net earnings for 1905, 1906, 1907 and 1908, and the total operating expenses for each of said years, and the percentage of net earnings to the reasonable value of Complainant's plant. I have found what will be a proper allowance each year for depreciation of plant, and I have found what will be the probable net loss to Complainant the first year and second year, should the ordinance rates be enforced; and, basing my calculation on what I find to be the net earnings of 1908, and assuming that the earnings are the same in 1909 and 1910 as they were in 1908, and assuming further that the probable value of the plant in 1911 will be increased from $1,351,878.09 to $1,400,000.00, I find that the probable net income of Complainant

For 1911 will be.....$ 120,373.19
Which would be.....8.60 per cent
of the then value of the plant.

I have found that in 1912 it is probable that the net earnings of the plant under ordinance rates will be equal to the net earnings in 1908 under operation of the present rates. The net earnings would then be ten per cent on a valuation of $1,500,000.00.

My reasons for so finding are, that the increase in the num-
181 ber of subscribers in 1911 and 1912, should the ordinance rates be enforced, will be large, and that the increase in net earnings thereby will more than offset the loss of earnings that will be caused by the lowering of rates.

I answer the sixth question, therefore, by saying that in my opinion the reasonably probable income from Complainant's plant and property employed in its business in said city will, within the next few years, amount to a fair annual return upon the reasonable value thereof, if the provisions of the ordinance approved March 6, 1909, are put into operation.

VII.

"He will, from the testimony, ascertain and report whether the average net income or return from reasonably safe investments in business enterprises in said city approximately resembling that of Complainant, is above or below six per cent upon the reasonable value of the plant or property from which said income is derived."

The evidence adduced in this question shows that there is only one telephone company doing business in the City of Louisville besides Complainant, that is the Home Telephone Company. Its stock and bonds were mainly given to the contractors who built the plant. Some of the bonds and some of the stock were sold to the public. The company has paid four dividends of one per cent each within a given period of eighteen months. It has paid no dividends recently. Its stock has no market value, and its five per cent bonds in the latter part of 1909 were offered at $69.75, but there were few purchasers.

The Louisville Gas Company pays five per cent dividends on its capital stock, and its shares sell at about $95.00. It earns about seven per cent on the money invested.

182 The Kentucky Heating Company pays three per cent dividends on its common stock and five per cent on its preferred stock. Its common stock, in 1909, was worth, on the market, about $64.00, and its preferred stock $90.00.

The Louisville Lighting Company paid four per cent dividends for four or five years.

The Louisville Traction Company pays four per cent dividends on its common stock, and its market value, in 1909, was $94.00 and its highest price was $147.00. It earns a fraction under five per cent on its common stock.

The Bank of Kentucky pays eight per cent dividends and usually adds to its surplus fund every year.

The Union National Bank pays ten per cent dividends and adds to its surplus fund every year.

In 1909 the Fidelity Trust Company paid twelve per cent dividend.

It may be permissible to classify all public utility companies—such as traction companies, water companies, gas companies and lighting companies—with telephone companies. It is doubtful whether banks should be placed in such a class. But certainly manufacturing and industrial companies are not in the same class with telephone companies.

But, it is insisted that unusual risks and hazards attend the telephone business, and that on account of these hazards, a greater return on the money invested should be permitted by the rate-regulating powers. It is urged that new capital must be continually put into this business, so that its lines and operations may be commensurate with the growth of the cities where they are located; that otherwise, the business must come to a standstill, and new companies will enter the field and take the new business offered and perhaps the
183 old business. It is urged that eight per cent or perhaps ten per cent on the money invested would, therefore, be a fair return.

For the reasons given in my answers to former questions, I find that the average net income, or return, from reasonably safe investments in business enterprises in Louisville approximately resembling that of Complainant, is below six per cent upon the reasonable value of the plant or property from which said income is derived.

If banks should be included in the same class with telephone companies, then I find that the net average income of all such companies is above six per cent per annum in Louisville.

VIII.

"He will further ascertain and report from the testimony whether the reasonably probable net income of Complainant from its plant and property employed in its business in said city, after making all proper allowances for cost of operation, claims for damages, repairs and depreciation, would, during the years 1909 and 1910, come up to or exceed the said average income upon such other business enterprises if said ordinance should be put into operation, and he will state in his report the results of his estimates and the basis thereof."

For the reasons contained in my report supra, I find from the testimony that the reasonably probable net income of Complainant from its plant and property employed in its business in Louisville, after making all proper allowances for cost of operation, claims for damages, repairs and depreciations, would, during the years 1911 and 1912, exceed the average net income upon such other business enterprises if the ordinance of March 6, 1909, should be put into operation.

184 My answer to the seventh question supra contains the basis of my answer to the eighth question.

IX.

"He will also, from the testimony, report his conclusions and the basis thereof as to the reasonably probable extension and increase of the Complainant's business in said city within the present and next succeeding year, and the reasonably probable extent and effect thereof both upon its gross and upon its net income."

The evidence shows that the Complainant Company has thus far constructed its plant with a view to and with the expectation of a substantial increase in the number of subscribers. This policy, under the evidence, I find is wise and prudent, and ought to be approved. The business centers are not apt to be changed. They are generally stable and practically permanent. On the other hand, the residence centers frequently change, and this necessitates a change in telephone lines, and a prudent company will construct its plant so as to be prepared for such changes.

Complainant has laid its conduit system and erected its pole lines and properly equipped same so as to be in a position to take care of more than two thousand new subscribers without delay. The existence of such surplus plant has been criticised by Defendant's expert—not as to the fact of said surplus, but only as to its extent. But I am of the opinion that such surplus as is shown and as stated above, is not unwise or improper.

Should the ordinance rates be enforced, the wisdom of Complainant's foresight in providing its surplus plant will be amply justified.

I do not doubt that by the lowering of the company's rates, independently of the natural growth of its plant, the number of
185 subscribers will be largely increased, and such increase will begin immediately after the lower rates are put into operation. There is no evidence as to whether the number of subscribers has increased naturally or decreased since March 6, 1909. I assume that there has not been any substantial decrease. I have already stated that I think an increase in the number of subscribers will be remunerative to Complainant. The fact that surplus plant already exists sufficient to take care of more than two thousand new subscribers, removes any doubt on this subject that may have existed. The probable extent of such increase in the number of subscribers, as well as the increase in net earnings to be caused thereby, is problematical. But, considering the statements of all the witnesses, I am of the opinion that if the lower rates should be enforced in 1911, that by the end of 1912, the probable loss in revenue of about $49,000.00, would not only be wiped out, but a substantial increase in net earnings would result, without a corresponding increase in expenditure.

The main increase in subscribers may naturally be expected in the residential sections of the city, as well as in the suburban districts, where much of the surplus pole lines already exist. In the business sections, I take it, there will be smaller increases. If my hypothesis be justified by the actual results, that is, that the main increase will be in the residence 'phones, the evidence shows that there will be a less frequent use of such new instruments than there would be of new 'phones in business houses, and consequently the extra help as

to operators would probably not be as large as if the main increase in subscribers were in business houses.

I am, by no means, satisfied from the evidence, that the increase in the number of subscribers will, on an average, increase the cost of operation per telephone or station. In other words, if the company now has nine thousand subscribers, and two thousand additional subscribers be taken on, I do not believe that the cost per
186 station for eleven thousand subscribers will be as great as it is for nine thousand subscribers.

I find, under all the evidence, that the necessary result of an increase in the number of subscribers will be an increase in the gross revenues of Complainant in the next two years; and further, that the net revenues will also be increased, and that this ratio of increase will be continuous.

X.

"He will also ascertain and report as to any peculiar advantages, if any, for the steady and reliable earning of income the Complainant may have in said city, and also as to any peculiar disadvantages or risks, if any, which it encounters or may encounter therein, which with reasonable probability may affect or offset such advantages, and the extent thereof."

In answering this question, I will state that as to the advantages or disadvantages of Complainant for steady and reliable earning of income, there is not much evidence in the record on either side of the question.

The company's plant is well located. It is in excellent physical condition, and it is a remunerative business. If we compare it with the Home Telephone Company as to its earning power, it is obvious that it occupies much the superior position in this: It has extensive toll lines that connect with similar lines extending over the entire United States. Connection with these long distance lines may be had promptly by subscribers, and this, I consider, a most valuable asset, and in my opinion it will in the future, as in the past, materially aid Complainant in its efforts to secure new subscribers.

I find in the evidence no peculiar disadvantages that now affect the earning power of Complainant, or that are likely to do so in the future.

187 **XI.**

"The special master will also report his conclusions upon such other facts as the development of the case at the hearings before him may appear to be important to a determination of the issues made by the pleadings."

I may say in conclusion, that the expert witnesses in this case have testified as to the value of this plant in such a way as to confuse a Solomon. Men who, by their knowledge and experience, are equally qualified to express valuable opinions as to what it would cost to reproduce a plant similar in all respects to Complainant's plant, differ in their estimates as much as between $600,000 and $700,000. But on cross-examination as to the cost of construction,

they fail to sustain their opinions by such evidence as a court would ordinarily allow to go to a jury. Several hundred thousand dollars of construction work on Complainant's plant is rested solely upon the Auditor's statement that vouchers representing in the aggregate these large sums were approved by him and were entered on the company's books as proper charges against construction, while he admits at the same time that these book entries, and the distribution of the sums they represented were based solely upon a notation on the vouchers made by some unknown foreman or gang boss to the effect that the work had been done—that it had cost the amount stated in the vouchers, and that the work was for Construction account. The witness did not have personal knowledge of a single feature of any of such vouchers.

The Construction Account, for a number of years, consisting largely of items similar to those just above referred to, contains a very large amount of charges in the aggregate. I was impressed by the idea that it would not be surprising if errors as to the proper distribution of these vouchers had occurred by reason of the carelessness or ignorance of the agents of Complainant who made notations on the vouchers. I have carefully considered the evidence to the effect that the totals of these vouchers were actually paid, and for that reason I have not disturbed the accounts as they appear in the company's books.

188

I have ignored the Supplies Account and the working cash capital in making my estimate of the value of the plant, as well as in making a proper allowance for depreciation. The supplies are bought and paid for by Complainant, and when needed by the Louisville or neighboring exchanges, they are retailed to them, and the exchanges pay the Complainant the cost price and an additional ten per cent, and also pay the ordinary expenses of the Supply Department. The cash working capital is furnished by Complainant, and the exchange reimburses Complainant for all the money it uses. The evidence does not show whether interest is charged against the exchange or not.

There is no evidence in the record tending to show that the plant in Louisville is subject to any disadvantages that do not equally apply to all the other plants of Complainant extending over several States. The trend of the testimony is that very small net earnings are derived from the operation of the Louisville plant, while the Complainant pays regular dividends on its stock every six months, and its stock commands a premium of between forty and fifty per cent in the market. No satisfactory explanation of these conditions is offered.

The service rendered by Complainant is good, and the physical condition of its plant is excellent.

I have not seriously considered the testimony offered touching the operations of plants outside of Louisville, because the conditions were obviously different, and the rates there charged and the cost of operation were not necessarily nor directly pertinent to the inquiries I was engaged in.

Respectfully submitted,

HENRY BURNETT,
Special Master.

189 And on another day of said term of said Court, continued and held, to-wit, on November 25th, 1910, the following proceedings were had:

No. 7194.

CUMBERLAND TELEPHONE & TELEGRAPH COMPANY, Complainant,
vs.
CITY OF LOUISVILLE, Defendant.

This day came Henry Burnett, Special Master, and filed his report as to expenses and allowances herein.

The Report above referred to is as follows:

190 United States Circuit Court, Sixth Circuit and Western District of Kentucky.

CUMBERLAND TELEPHONE & TELEGRAPH COMPANY, Complainant,
vs.
CITY OF LOUISVILLE, Defendant.

Report of Special Master as to Expenses and Allowance.

Henry Burnett, Special Master herein, respectfully reports that since his appointment in April, 1909, he has incurred expenses necessary for the proper execution of the order of Court as follows:

Traveling expenses, three trips to Nashville Tenn., and one trip to New York City	$168.90
Telegrams—August, 1909	3.25
Stenographic report of arguments of counsel (Clarence Walker's bill attached)	126.00
Stenographer's bill, transcribing report of Special Master and two copies for Solicitors, (Joseph Longstreet's bill attached)	48.00
	$346.15

Shortly after his appointment the taking of depositions began and continued from time to time for seven or eight months, and they consist of about 2,500 pages of expert testimony, replete with figures and computations.

He was not present at taking of all the depositions, but he was frequently required to rule on the admissibility of testimony, exceptions to depositions and as to the mode of adducing the evidence, and as to various other matters.

191 He attended in Nashville three times and in New York City once, and frequently in Louisville.

After the testimony was completed he began the reading and abstracting of the evidence, and he has analyzed the joint report of the expert accountants and the separate reports of same experts,

and compared same with the theories and computations of other expert accountants. He undertook to reconcile the wide differences in theories and calculations presented by the various expert witnesses. He studied the distribution of expenses and earnings as found in the books of account of complainant, and as favored by expert accountants, and attempted to reconcile the conflicting theories.

This required more than seven months of steady, laborious work.

That the actual preparation of the report, already filed, required more than two months of time and involved much labor and thought.

In view of the importance and magnitude of the interests involved in this litigation, and considering the labor performed—both mental and physical and the time consumed—he asks the Court to allow him, in addition to his expenses, Eight thousand dollars ($8,000.00)

Respectfully submitted,

HENRY BURNETT.
Special Master.

192 And on another day of said term of said court, continued and held, to-wit, on December 7th, 1910, the following proceedings were had:

No. 7194.

CUMBERLAND TELEPHONE & TELEGRAPH COMPANY, Complainant,
vs.
CITY OF LOUISVILLE, Defendant.

This day came the complainant by Alex. P. Humphrey, W. L. Granbery and W. Pratt Dale, its counsel, and filed exceptions to the report of the Special Master as to expenses and allowances herein.

The exceptions above referred to are as follows:

193 Circuit Court of the United States, Sixth Circuit, Western District of Kentucky.

CUMBERLAND TELEPHONE & TELEGRAPH COMPANY, Complainant,
vs.
CITY OF LOUISVILLE, Defendant.

Exceptions of Complainant to Special Master's Report.

Complainant excepts to the report of the Special Master as to expenses and allowances for the following reasons:

Plaintiff excepts to the Court allowing the Master the amount of compensation claimed by him, to-wit, $8,000.00, because it is excessive.

This exception is filed so that the matter may not pass beyond the control of the Court until exceptions to the report have been filed and the case considered by the Court on the report and exceptions and record.

After the Court has heard the cause and considered the report and exceptions, complainant will make no objection to the Court fixing whatever compensation may be deemed proper by the Court.

Respectfully submitted,

ALEX. P. HUMPHREY,
W. L. GRANBERY,
W. PRATT DALE,
Solicitors for Complainant.

194 And on another day of said term of said court, continued and held, to-wit, on December 10th, 1910, the following proceedings were had:

No. 7194.

CUMBERLAND TELEPHONE & TELEGRAPH COMPANY, Complainant,
vs.
CITY OF LOUISVILLE, Defendant.

This day came Henry Burnett, Special Master, and filed a supplemental report and findings, together with one exhibit.

The Supplemental Report and findings above referred to are as follows:

195 United States Circuit Court, Sixth Circuit, Western District of Kentucky.

CUMBERLAND TELEPHONE & TELEGRAPH COMPANY, Complainant,
vs.
CITY OF LOUISVILLE, Defendant.

Supplemental Report and Findings of the Special Master.

Since filing my report herein on November 17, 1910, my attention has been called to some matters that are deemed important, which I desire now to submit as a Supplemental Report.

Complainant began its testimony in this cause by introducing as a witness Mr. H. Blair Smith, Auditor of Complainant; and at the conclusion of his direct examination, counsel for defendant moved "the Master for an order permitting defendant, through its accountants, to examine said books, records and accounts of complainant, and for an order directing and requiring complainant to make a full and complete exhibit, and show all its books and records to defendant's accountants."

This motion was objected to by complainant, and the objections were sustained and the motion was disallowed.

Thereafter, at a conference between the Special Master and counsel representing both litigants, complainant's counsel submitted two propositions: One was, that the Special Master should select an expert accountant who should examine the books and records of the complainant company and make a report directly to the Special

Master, and that this report should be treated as evidence in
196 the cause by both parties.

The alternative proposition was, that each party to the litigation should select an accountant, and that the two accountants thus selected should make a joint examination of the books and records of the complainant company, and should make a joint report to the Special Master upon all matters that they could agree upon, and as to all matters they could not agree upon, that each was to file a separate report.

The defendant's counsel agreed to the latter proposition. It was then stated by the Special Master in the presence of counsel for both parties, that whatever these accountants should jointly agree upon, should be accepted as final by the Master, and no proof should be permitted to vary or contradict such joint findings. As I understood it, this statement was accepted by both parties.

Thereupon, complainant selected Mr. George Wilkinson as its accountant, and defendant selected the Mutual Audit Company as its accountant. During the progress of the work of these joint accountants in examining the books and records of complainant, a conference was held in Nashville, Tenn., where the records were kept, at which were present counsel representing both litigants, representatives of both accountants, and the Special Master. This conference was held on June 7, 1909, and in this conference the Special Master stated:

"Here are two auditors, by agreement of parties, allowed access to the books of the Complainant Company; and it is agreed that these auditors, after a thorough examination of all the papers connected with the case, shall make a joint report, so far as they may be able to agree, upon any and every proposition. That report, so far as it is the joint report of the two auditors, must be accepted by both litigants, by the Special Master, and by the Court, as true; and I take it that no proof ought to be allowed from any extraneous source as to the correctness of that joint report.

"Now, as to such matters as these two auditors are unable to agree upon, the Court's order is, that each auditor shall then, as to such matters, make a separate report to the Master, and that separate report should contain the reasons in detail of each auditor for his findings. As to these separate reports, if there be any, certainly each party to the litigation would be not only permitted, but it would be their duty, to produce other testimony, if accessible, so as to enable the Special Master and the Court to decide which of these Special Reports is true."

197 Then the order was further extended, directing the accountants to file with the Special Master their working papers and memoranda, and that same should be arranged in an orderly and systematic way with any remarks or indices that they may see fit, so as to identify the papers hereafter.

Further, the accountants were directed to submit, one to the other, the results of their examination, and to state frankly in their reports their reasons, one to the other, for any position that they might take, in order that the report, when made, shall be, if possible, the

joint result of the labors of the accountants; and that when they came to make a separate report, if such should be the case, that each accountant should fully state in his separate report his reasons for disagreement, and, furthermore his reasons in support of his said report. The accountants were further directed to file with the Special Master a statement that they had not withheld any working papers, memoranda, data or figures obtained by them in their investigation.

I append hereto a typewritten copy of my directions to the expert accountants, which is made a part hereof, marked Exhibit No. 1.

Thereafter the accountants did submit to me a joint report, and each submitted a separate report, all of which have been filed by me as a part of my original report herein.

When the evidence was nearly completed, at a conference before me, at which counsel for both parties to this action were present, after considerable argument, I made the following statement:

"It was my distinct understanding when that agreement was made, that whatever the two experts reported jointly should be accepted as a finality by the Commissioner. Now, I have not seen the report; I have not read a line of any of this testimony, neither have I read either of the reports. If their report on the proposition as to the cost of the Ohio Valley Company, or whatever name it was, appears by the books to be so and so, and they appear to leave that matter open, then I would take it that neither party would be bound by that sort of a report. That is the same question that is up here about these depositions. But wherever they report a fact, ascertained by a physical examination of the vouchers, papers and books of the Company, I have always understood it, and so stated to counsel several times, that that would relieve the Commissioner of any investigation as to those points agreed upon by the accountants.

* * * I have not read the report. I don't know how they
198 have worded it. I don't know how they have expressed it. I do not know a single point they have agreed upon. I I don't know anything about it."

Counsel for Complainant then stated:

"Of course, I don't ask your Honor to rule now on questions that may arise as to whether they have reported certain facts or whether they have not. Of course, that is the chance I will have to take in preparing my rebuttal proof, as to whether this joint report does cover certain things or not; but the ruling that I wanted is, what your Honor has indicated, that that was the agreement, and that is the one that is to be enforced."

Upon an examination of the joint report, I find that the expert accountants agreed, and so reported, what the books of the complainant showed as to the cost of complainant's plant, and as to the expenditures for construction, as to the gross earnings and as to operating expenses. The report specifically states as to the foregoing matters as follows:

"The foregoing joint report shows the money charged as the cost of the plant at Louisville, the gross amount credited to the Louisville

Exchange as earnings, and the operating expenses charged as appertaining thereto, as recorded on the books of the Cumberland Telephone & Telegraph Company. It is not an agreement that the said accounts are properly distributed or charged as we believe they should be, therefore the right is reserved by each of the undersigned to make such individual report and statement relative thereto as each may feel justified in doing."

The only fact reported by the accountants, to which both agreed, was, as to what would be the probable loss in earnings the first year after the ordinance rates should be put into operation. Their finding was that such loss would be $49,721.76. This fact I adopted in my report, and my calculations are all based thereon.

In accepting the above figures as true, I was not unmindful of the fact that complainant, in its Bill of Complaint, on page 16, made the following charge:

"If the rates prescribed by said ordinance are put into effect, it will result in a decrease in your orator's revenue, based upon the present rates and present subscribers located within the corporate limits of the City of Louisville, amounting to $33,504.00."

Neither was I unmindful of the statement occurring in the deposition of Mr. H. Blair Smith, Auditor of complainant com-
199 pany wherein he stated that such loss would amount to $39,192.00.

(See Smith's deposition, p. 44.)

Saving and excepting the above loss in revenue to be caused by the enforcement of the ordinance rates, I do not consider that the joint report found any fact, except as to what the books of complainant showed. Of course, such a finding ought not to be binding on either party as an ultimate fact.

It is stated in my original report that the depositions of H. W. Ritterhoff and Charles H. Peale were not considered by me. This was an error. Exceptions were filed to the deposition of William Kavanaugh by complainant, and those exceptions were sustained by me, but these exceptions did not tend to the depositions of Ritterhoff and Peale.

I desire further to state that the complainant filed exceptions to the depositions of Charles Meriwether, S. M. Wilhite and Chas. E. Archer, and I sustained said exceptions and suppressed those depositions. The reasons for my ruling are given in a paper hereto attached as part hereof.

I desire further to state that a stipulation was filed in this case by the parties, showing what rates the Louisville Home Telephone Company was authorized to charge for telephone service in the City of Louisville during the years 1907 and 1908, and this stipulation is filed with the papers in the case and returned by me to the office of the Clerk.

The original deposition- of W. C. Polk, W. H. Kessler, Charles E. Archer, Charles Meriwether, S. M. Wilhite, Charles Meriwether recalled, and James F. Grinstead, have been mislaid, and by agreement of counsel on both sides, a carbon copy of the above named depositions is herewith returned; and it is further agreed by counsel

that said copies of the depositions may be read and considered as the depositions of said witnesses.

A written stipulation by counsel on both sides of this controversy, that a copy of D. C. Jackson's report to the Massachusetts
200 Highway Commission might be filed and read on the hearing of this case, is among the papers returned by me to the Clerk's office, and same was considered by me so far as I deemed it relevant.

All of which is

Respectfully submitted,

HENRY BURNETT,
Special Master.

201 "EXHIBIT NO. 1."

No. 7194.

CUMBERLAND TELEPHONE & TELEGRAPH COMPANY
vs.
CITY OF LOUISVILLE.

Pending in the United States Circuit Court at Louisville.

To the Mutual Audit Company and Wilkinson, Reckitt, Williams & Company, accountants selected respectively by the defendant and the plaintiff in the above entitled cause to make an investigation of the books and accounts of the plaintiff Company with reference to its Louisville Exchange:

First. You are directed to agree, if possible, upon the scope of the investigation and the points to be covered in your report. If, at any time, you are unable to agree upon any one or more points to be covered by your report, you will submit the matter, in writing, to the Master Commissioner, each giving the reasons for and against such point or points.

Second. After your investigation shall have been concluded, you will make a joint report, as far as you can do so, and each accountant shall submit to the other, in writing, the proposed report with respect to such points as they differ on, and the other accountant shall have the right to state in writing his reasons for not concurring therein, and the joint report, together with the separate report of each accountant, together with the reply, or objections thereto, by the other, shall be properly identified by both accountants, and the same transmitted, under one cover, to the Master Commissioner.

Third. All working papers, memoranda and other mate-
202 rial, figures, or facts gathered by the accountants during the investigation, shall be properly marked for identification, properly indexed and signed by both accountants, and shall be sealed and delivered, by express or otherwise, to the Master Commissioner at the same time that your report is submitted.

And neither accountant, nor any of their assistants, shall be permitted to withdraw any working papers, memoranda, data, figures or other information obtained by them in this investigation, and each accountant and their assistants shall make oath in due form that they have not withheld, kept, or have in their possession or keeping, or withdrawn or taken from the office of the plaintiff Company, any fact, figure, memoranda of any kind, but that all such working papers, memoranda, etc., have been duly filed with the Master Commissioner.

The above instructions are issued on this, the — day of June, 1909.

203 And on December 17th, 1910, the following proceedings were had:

No. 7194.

CUMBERLAND TELEPHONE & TELEGRAPH COMPANY, Complainant,
vs.
CITY OF LOUISVILLE, Defendant.

This day came the complainant, the Cumberland Telephone & Telegraph Company, by Humphrey & Humphrey, W. Pratt Dale and William L. Granbery, its counsel, and filed exceptions to the report of the Special Master filed November 17, 1910.

Came also the defendant, the City of Louisville, by C. B. Blakey, its counsel, and filed exceptions to the report and findings of the Special Master, filed November 17th, 1910.

204 CUMBERLAND TELEPHONE & TELEGRAPH CO.
vs.
CITY OF LOUISVILLE.

Exceptions of the Complainant to the Report of the Special Master. Filed Nov. 17, 1910.

The Master was directed to report:

I.

"The cost to Complainant of its plant and property in the City of Louisville, Kentucky, and in doing this he will state generally the basis of his estimate thereof."

The Master reported that the Complainant acquired the properties of the Ohio Valley Telephone Company in 1899, and that this acquisition was made in the following manner:

Complainant purchased in June, 1899, 702 shares of the capital stock of the Ohio Valley Company at $140.00 per share, and 2,855 shares at $141.00 per share, making a total paid for 3,557 shares of $500,855.00. This is correct, and not excepted to.

There were left outstanding 1,937 shares of the Ohio Valley Telephone Company's stock which was acquired by Complainant issuing a like number of its own shares to the holders of the shares of the Ohio Valley Company. The Master reports that this additional 1,937 shares only cost Complainant the par value of its stock, to-wit: $193,700.00, whereas Complainant insists that this stock cost it $79,417.00 additional.

205 "A."

Complainant excepts to the disallowance of this item of $79,417.00, premium on 1,937 shares of the Ohio Valley Telephone Company's stock, for the following reasons:

Complainant's stock was selling in the open market at about $141.00 per share (a share in Complainant company and in the Ohio Valley Company each being $100.00 par value). See deposition of Caldwell, pages 579 and 580.

It is insisted by Complainant that since its shares were selling for a premium of $41.00 in the open market, and it purchased a large number of shares of the Ohio Valley Company at a premium of $41.00 per share, that in determining the cost to Complainant of the shares acquired by exchanging a like number of its own shares, this premium of $41.00 per share must be allowed, since it is apparent that if Complainant had sold 1,937 shares of its own stock it would have received $79,417.00 more than its par value, and if it had purchased for cash the 1,937 shares of the Ohio Valley Company's stock it would have paid therefor $79,417.00 more than its par value.

Again, if Complainant acquired 1,937 shares of Ohio Valley Company's stock at par, it received property which was worth $79,417.00 more in the open markets of the country than was paid for it, and it gave for these 1,937 shares property that was worth $79,417.00 more than its par value.

The Master refers to the issuance by Complainant of its stock from a period back of 1900 to 1908 at par. In other words, his statement is that all the stock sold by Complainant from a period back of 1900 to 1908 was upon a par basis. In this matter the Master is only partially correct.

206 It is true that the new issues of stock during all that period have been issued to existing stockholders pro rata at par (see first deposition of H. Blair Smith, p. 377), but this was not in any sense determinative or indicative of the real value, or market value, of Complainant's stock. Under well settled principles of law, corporations, in all increases of capital stock, are required to issue such increases to its existing stockholders pro rata. This is a right existing shareholders have to acquire their proportion of each new increase of stock. It is a right attaching to the ownership of stock, and such stockholders have the right to take and pay for their pro rata shares of new issues of stock.

It thus appears that the Master, conceding that the Ohio Valley Company's stock was worth in the open markets of the country a premium of $41.00 per share, holds that because of the manner in which Complainant acquired 1,937 shares, its value decreased $41.00

per share, or a total of $79,417.00, when any other purchaser would have paid therefor a premium of $79,417.00; and Complainant itself could immediately, after acquiring these shares, have sold them for a premium of $79,417.00.

So that we insist that the Master was in error in not allowing this item of $79,417.00 as a part of the purchase price of the property of the Ohio Valley Telephone Company.

"B."

The Master assumes, and treats, the entire properties of the Ohio Valley Telephone Company as worth on January 1, 1900, the exact amount Complainant paid for its shares of stock in June preceding, less the premium of $79,417.00 on the 1,937 shares as above stated. Complainant excepts to this finding of the Master for the following reasons:

It is well settled that the market value of the share capital
207 of a corporation does not necessarily represent the value of the corporate assets. The stock simply represents the equity of the shareholders in the corporate assets. Creditors have a first claim upon the assets, and it is only after paying creditors that the shareholders are entitled to any part of such assets. Therefore, where the shares have a market value, the value of the corporate assets is to be measured by the market value of the shares, plus the indebtedness of the company, and this principle has been entirely overlooked by the Master in ascertaining the cost to Complainant of the property of the Ohio Valley Telephone Company.

As found by the Master, the shares of stock of the Ohio Valley Telephone Company were acquired by Complainant in June, 1899, and as soon as this stock was acquired new officers of the Ohio Valley Company were elected, and the property operated as an independent corporation until January 1, 1900, when it was consolidated with the Cumberland Telephone & Telegraph Company—both being Kentucky corporations—and the consolidating company, under the name of the Cumberland Telephone & Telegraph Company, took over the assets of the two consolidating companies, and assumed all their liabilities. (Charter of the company, exhibit to the original bill.)

From June, 1899, when the new management of the Ohio Valley Company took charge, until January 1, 1900, when the consolidation took place, all of the earnings of the Ohio Valley Company, and a large amount of borrowed money, was used in building up the properties of the Ohio Valley Telephone Company, so that on January 1, 1900, the situation was wholly different from that of June preceding, and the value of the assets of the Ohio Valley Company on January 1, 1900, was greater than in June preceding.

Eliminating every disputed item in the accounts, the following were the liabilities of the Ohio Valley Telephone Company in
208 June, 1899, when the new management took charge, and those subsequently incurred prior to January 1, 1900:

Liabilities.

In June, 1899, the Ohio Valley Company had outstanding bonds (H. Blair Smith's first dep., p. 85.)	$16,000.00
Taxes accrued and unpaid (H. Blair Smith's first dep., p. 103.)	4,000.00
Interest accrued and unpaid (H. Blair Smith's first dep., p. 103.)	7,770.00
Switchboard royalty accrued and unpaid (H. Blair Smith's first dep., p. 103.)	2,404.59
Bills payable, January 1, 1900 (H. Blair Smith's first dep., p. 105.)	221.005.09
Miscellaneous accounts payable (H. Blair Smith's first dep., p. 129.)	63,755.16
Special account December 31, 1899 (H. Blair Smith's first dep., p. 103.)	38,875.16
Or a total liability of	$353,810.00

As against these liabilities the Ohio Valley Telephone Company had acquired real estate and current assets, as follows:

Assets.

Real estate (H. Blair Smith's first dep., p. 145.)	$115,765.46
Accounts receivable (H. Blair Smith's first dep., p. 147.)	9,198.01
Supplies on hand (H. Blair Smith's first dep., p. 147.)	37,299.59
L. K. Webb, Auditor (H. Blair Smith's first dep., p. 147.)	30,215.18
209 Cash on hand (H. Blair Smith's first dep., p. 147.)	$288.81
Or a total of	$192,767.05
Excess of liabilities	161,042.95

This excess of liabilities, of course, was money expended in developing the properties of the Ohio Valley Telephone Company, and was the added cost above the market value of its shares of stock.

If, therefore, we add the amount paid for the shares of stock, including the premium of $11.00 on the 1,937 shares, we have a total cost of the property of the Ohio Valley Telephone Company, on January 1, 1900, of $935,014.95, exclusive of real estate.

These assets and liabilities are not only given by the company's Auditor, Mr. H. Blair Smith, but are set forth in the report of the Mutual Audit Company, on behalf of the City of Louisville, in exhibit one.

This, it will be recalled, is the total cost of the plants, exchanges and toll lines, excluding real estate, of the Ohio Valley Telephone Company as of January 1, 1900, when this property was taken over by the Complainant. It only remains to determine how this cost should be separated so as to ascertain the cost of the exchange in the City of Louisville.

The Ohio Valley Company owned and operated nine exchanges, including the one in the City of Louisville, and also had toll lines connecting these exchanges.

The Master has ascertained (which we accept) that the toll lines cost Complainant $125,106.80

This item deducted from the entire cost of the
210 exchange and toll lines of the Ohio Valley Company, as of that date, leaves the cost of exchange properties $809,608.15

It is conceded by the Master that 80.4 per cent of the exchange properties of the Ohio Valley Telephone Company was in the Louisville Exchange, and there is no dispute anywhere in the record as to this fact. Therefore, in order to ascertain the cost to Complainant of the Ohio Valley exchange in the City of Louisville on January 1, 1900, excluding the real estate and toll lines, we have 80.4 per cent of $809,608.15, or.. 650,924.95

The cost of real estate in Louisville as found by the Master (and everyone agrees that it is correct) is..... 108,034.50

Making a total cost of the Louisville Exchange and real estate of $758,959.45

(*a*) Complainant, on January 1, 1900, took over the Louisville Exchange, exclusive of real estate and toll lines, at a cost value of $678,354.69

Exhibit 2 of H. Blair Smith's first deposition.

Mr. Smith testifies that this was, in his opinion, the actual cost to the Complainant company of the Louisville Exchange, as of January 1, 1900.

H. Blair Smith's first dep., p. 22.

Mr. Caldwell, the President of the company, also testifies that the purpose of the company was to take over the Louisville Exchange and put it on the books at exactly what it had cost, and was worth, and this was done... 678,354.69

Caldwell's first dep., p. 580.

211 (*b*) Wilkinson, Complainant's expert accountant, examined the books of the Ohio Valley Company, and states the cost to the Complainant of the Louisville Exchange, exclusive of real estate, on January 1, 1900, to be.....$678,354.69

See report of Wilkinson, pp. 5 to 16.

In other words, Mr. Wilkinson sustains the company's books, and testimony of Mr. Smith, the company's Auditor, and Mr. Caldwell, the company's President.

The Mutual Audit Company experts made no examination of the books of the Ohio Valley Company.

Dep. of Warren, p. 363.

(*c*) The Mutual Audit Company, the expert for the city, reaches the conclusion that the exchange cost the company, on January 1, 1900, exclusive of real estate and toll lines..... 487,900.86

Report of Mutual Audit Co., exhibit No. 4.

This conclusion cannot be accepted, since it is manifestly erroneous and full of the most glaring errors:

They disallow the premium on the 1,937 shares of stock purchased by an exchange of a like number of Complainant's shares, $79,417.00. They prorate a part of the premium paid for the remainder of the stock of the Ohio Valley Company on the real estate in Louisville, amounting to $21,233.25, when it clearly appears that the main exchange building was purchased by the Ohio Valley Telephone Company on June 3, 1899, for $100,000.00 and this purchase was a separate transaction, and after the sale of stock.

See Caldwell's dep., pp. 581 and 626½.

212 When the sale and purchase of the Ohio Valley Company's stock took place, the only real estate owned by the company was $15,765.46. Of this, $8,034.50 was located in Louisville. The remainder, $7,730.96, in New Albany. (Wilkinson's report, p. 9.) The Master had found the total real estate in Louisville to have been on that date $108,034.50. Thus verifying the statement that the only real estate owned by the Ohio Valley Company in Louisville at the time the stock was sold, was $8,034.50. Supplies on hand are allowed a bonus on the stock value of $6,850.37. Of course supplies were not entitled to any part of the premium paid for stock, since they are staple articles that carry their own cost value. This makes manifest errors in the figures of the Mutual Audit Company of more than $100,000.00.

Mutual Audit Co.'s exhibit 3-A.

It therefore appears that the Master fixes the cost of the Louisville Exchange, exclusive of real estate and toll lines, as of January 1, 1900, at (p. 6) $457,579.07

This is less than any witness places the cost, and it cannot be ascertained from the record how such a conclusion was arrived at.

a. The President of the Complainant says that it cost, and was worth 678,354.69

b. The Auditor of Complainant says it cost the sum of .. 678,354.69

c. Wilkinson, the expert accountant, says it cost Complainant 678,354.69

d. The Mutual Audit Company's report of cost is not to be accepted.

An analysis of the evidence shows, as above set out on pp. 74-75, that the exchange cost on January 1, 1900, was at least the sum of 650,924.95

213 Complainant, therefore, insists that the Master is in error in fixing the cost of the Louisville Exchange, exclusive of real estate and toll lines, at only $457,579.07, and insists that the cost is shown to be $678,354.69, and certainly not less than the sum of .. 650,924.95

"C."

Whatever may be found to have been the cost of the Louisville Exchange as of January 1, 1900, exclusive of real estate and toll lines, there is no dispute but that there was added as additional construction to December 31, 1905, the sum of $1,023,545.24. From this amount the Master deducts $100,000.00, and to this part of the report Complainant excepts.

There should have been no deduction by the Master, because there is no evidence showing that any amount was erroneously charged to construction.

Notwithstanding the many criticisms of the Master as to this added construction, his disallowance of $100,000.00 is based upon the following, as far as can be ascertained from his report:

1st The "wages of men employed in and near Louisville in connection with aerial work, including toll lines."

2nd. The small amount of wages charged to maintenance or reconstruction.

3rd. The addition of 10% to invoice price of materials, to cover freight, drayage, rentals, etc. This the Master estimates to be at least $50,000.00.

4th. The charge of $10.00 per station on each station gained to cover the cost of labor and material in making such installation.

5th. The cost of toll line equipment, and maintenance and reconstruction of toll lines.

After discussing each of these five objections to the added construction since January 1, 1900, the Master deducts the sum of $100,000.00 (page 15).

214 An examination of the record will show that as to each of these five subjects the Master was in error in deducting anything from this added construction account.

Under this heading of the Court's instructions, the Master is only undertaking to report the cost of the exchange to December 31, 1908.

In doing this he confuses construction with maintenance and reconstruction. Whether maintenance and reconstruction of toll lines was charged to maintenance and reconstruction of exchange, or vice versa, is wholly immaterial under this heading, when the sole inquiry is the cost to Complainant of its exchange property in Louisville.

The first criticism of the Master, as above stated, relates to wages of men employed in connection with aerial work, including toll lines. On page 10 of his report he states:

"Many vouchers were produced at the hearing, covering the wages of men employed in and near Louisville in connection with the aerial work, including toll lines. These vouchers show that certain wages and salaries had been expended on the aerial lines, and also on the underground lines connected with the Louisville exchange. A small proportion of these outlays was charged to maintenance or reconstruction, while the bulk of the outlays is charged to construction."

And on page 10 of his report, he says:

"The evidence tends to show that in nearly every instance the wages of employés shown in the vouchers we are considering were charged almost wholly to construction, and no evidence of the correctness of such charges was offered except that the vouchers bore a notation to that effect.

It is inconceivable that so little of these wages was properly chargeable to maintenance or reconstruction from 1900 to 1908. The aggregate amount of these vouchers was not shown in evidence."

It is confidently asserted that in these statements the Master is clearly in error, and for the following reasons:

215 The only pay-roll vouchers to which the slightest criticism has been offered (except those where errors were found and eliminated by the accountants for both parties) were for the years 1900 and 1901. These pay-rolls were investigated in the cross-examination of Complainant's Auditor.

First dep. of H. Blair Smith, pp. 196 to 255.

While the examination showed that no just or fair exception could be taken to them, other facts in the record show conclusively that they were reasonable, fair and just.

It will be recalled that in 1900 the company gained 1,352 new subscribers, and in 1901 gained 2,007 new subscribers.

Exhibit No. 3, H. Blair Smith's first dep.

During the same years there was added to construction in 1900, $166,775.23, and in 1901, $178,549.14.

Joint Report of Accountants, p. 3.

During the year 1900, Complainant expended on maintenance and reconstruction, $50,180.03, and during 1901, $68,417.50.

Dep. of Warren, p. 404.

First dep. of Smith, pp. 398, 399 and 402.

It is also shown in the proof that, for the year 1901, there was expended on wages for maintenance, $31,230.94.

H. Blair Smith's first dep., pp. 252 and 240.

The joint accountants report the amount added to construction for each of the years 1900 to 1908, inclusive.

The Mutual Audit Company reports the amount expended on construction for each of these years, and also reports the amount expended on maintenance and reconstruction, and nowhere is there any criticism of any of these pay-rolls.

The expert accountants, on examining these construction vouchers from January 1, 1900, to December 31, 1908, found items
216 aggregating $2,852.39, which had been charged to construction improperly, and these were eliminated.

Joint Report of Accountants, p. 2.

Aside from these items aggregating $2,852.39, the accountants for both parties reported that the construction added for these years was $1,023,545.34, and it is entirely reasonable to assume that if these pay-rolls had been improper in any respect these accountants, or some of them, would certainly have called attention to the fact. The gain in subscribers, and the amounts expended in maintenance and reconstruction, precludes any just criticism of the amounts added to construction for those two years.

"D."

The Master criticises the evidence of Complainant in undertaking to sustain this construction account. He states that no witness was introduced who pretended to have personal knowledge as to any of these items. This statement of the Master is excepted to by the Complainant for the following reasons:

It appears that Complainant has, since before 1900 to the present time, operated a system of telephone exchanges and telephone toll lines; that its auditing department is located in Nashville, Tennessee; that it has local managers at its various exchanges, and other employés necessary to conduct the business of each exchange; that it has records showing the cost and operation of each exchange; and, also, separate accounts of the cost of toll lines.

See Smith's first dep., p. 504.

See Caldwell's first dep., p. 598.

Whenever construction work is done at an exchange, or whenever any expense is incurred at an exchange, a voucher is made
217 showing what account it properly belongs to—whether to construction, operating or maintenance. These vouchers are then approved by the manager and sent to the Auditor at Nashville.

After he has audited them they go to the Assistant General Manager for his examination and approval. When they get back to the Auditor, with the approval of the Assistant General Manager, they are then distributed in the books of the Complainant, showing to what account they are chargeable.

H. Blair Smith's first dep., p. 153.
Leland Hume's dep., p. 105.

It has never been contended, or assumed, that the Auditor has personal knowledge of whether the work has been done, or whether the expense has been incurred, other than what he sees from the vouchers themselves. The local manager, or foreman, or other employé, who incurs the expense in the first instance, vouches for it. The Assistant General Manager, while the matter is fresh and the facts easily ascertainable, examines, and if found correct, approves the expenditure. It then goes to the Auditor, not to be approved by him, but to be entered on his books and preserved for safe keeping.

It would be impossible for Complainant to go back ten years and find the employés who incurred the expenditures and who vouched for their accuracy at the time, and it would be equally impossible for the Assistant General Manager to carry in his mind records showing expenditures at even the Louisville Exchange for a period of ten years, not considering the more than 500 other exchanges, and a system of toll lines radiating in every direction from Louisville, Ky., to New Orleans, La.

The only possible means that Plaintiff had to show the amount expended on construction, and the expense incurred at the Louisville Exchange for the years 1900 to 1908, inclusive, was to exhibit its books and sustain its books by exhibiting the original
218 vouchers covering the entire period of time. If there is any other known way of showng the cost of construction of a property, or showing the expenses of operation, it has not been suggested by any one in this record.

The Master criticises what he calls the small amount of wages charged to maintenance or reconstruction of the Lounsville Exchange during the nine years under consideration. The experts for the city have shown the amount expended by Complainant on maintenance and reconstruction of the Louisville Exchange for each of the years involved, excepting 1902, as follows:

1900	$50,180.03
1901	68,417.50
1903	51,630.75
1904	66,456.72

See dep. of Warren, p. 404, and
First dep. of Smith, pp. 398, 399 and 402.

The accountants' joint report shows that for the years 1905 to 1908, inclusive, Complainant expended on maintenance and reconstruction of the Louisville Exchange, the following:

1905	$90,870.36
1906	93,423.00
1907	107,511.41
1908	86,155.98

Joint report of accountants, p. 5.
Master's report, p. 41.

Thus, in the eight years involved there has been expended in maintenance and reconstruction of the Louisville Exchange the sum of $614,645.75, or an average of $76,830.72 per year.

It must be remembered that the amount expended in the latter years was necessarily larger for the reason that there was very much more construction which was required to be kept up. In other words, taking 1900, there was only added to construction
219 that year the sum of $166,775.23, which, on the Master's basis, made the entire cost of the exchange at the end of 1900, only $624,354.30. (The Master found the cost of the exchange on January 1 to have been $457,579.07, and adding the construction for that year, gives $624,354.30 as the cost to the end of 1900.) And in like manner, the cost of the exchange to the end of 1901, was $624,354.30, plus the construction added in 1901 ($178,549.14), or $802,903.44. On our basis the result is: Cost of exchange January 1, 1900, $678,354.69, plus construction added during 1900, $166,775.23, gives $845,129.92; and in like manner for 1901, $1,023,679.06. Thus showing that the amount expended on maintenance and reconstruction for those two years was in proportion to all subsequent years.

There is no criticism in the record that a sufficient amount has not been expended to maintain the plant. Therefore, it is unjust to the Complainant for the Master to criticise the amount of wages paid out for construction or to intimate that part of the wages paid for maintenance has been charged to construction.

There is no doubt, and no question, but what Complainant has paid out for the years involved, $1,023,545.34, and in addition to that, it has expended for maintenance of the Louisville plant the sum of $614,645.75, exclusive of 1902 (the amount for that year not appearing in the record.) So that if any part of this $1,023,545.34 is improperly charged to construction, the amount expended by Complainant in maintaining the property would have to be increased by just that amount. In other words, there is no question but that this money has been expended by Complainant, and if it has not been expended on construction, it has been expended on maintenance.

But we submit that the Master has no right to criticise, or throw suspicion or doubt upon the construction account when it appears that these vouchers were regularly made up, regularly ap-
220 proved, and regularly entered upon the books of the company from time to time during that period of nine years, and when the Auditor testifies that they are properly distributed and properly credited, and the Assistant General Manager testifies that he approved them as the expense was incurred, and there is, on the

contrary, nothing except that for some months, in the particular vouchers examined, it did not appear that much of the wages was charged to construction, and in other months large amounts of wages were charged to construction. It is submitted that the Master does not point out any evidence upon which he bases his criticism.

There is another, and conclusive, reason why this construction account must be allowed to stand as reported. The order of the Court, in referring this case to the Master, states that "he will, under and pursuant to the equity rules and under agreements that the parties may make, proceed to take testimony, etc." The supplemental report of the Master shows that it was agreed by Complainant and Defendant, that whatever the accountants reported jointly, should be accepted as true, and no other evidence permitted to vary or contradict the same. The accountants reported jointly that $1,023,545.34, after correcting all mistakes, had been added to construction from January 1, 1900, to December 31, 1908. The Master should accept this finding as well as the litigants.

"E."

Complainant excepts to the report of the Master in disallowing 10 per cent to be added to the invoice price of materials to cover freight, drayage, rentals, etc.

The proof in the case with respect to this item is as follows:

The company maintains at Louisville, Ky., a warehouse in which it stores material purchased in large quantities, and when
221 material is drawn from this warehouse for the use of any of the exchanges or toll lines in that territory, the actual cost of the material, plus not exceeding ten per cent, is charged to the exchange, or toll line, to which the material goes, and "supplies" and "supply expense account" are credited with a like amount. This amount (not exceeding 10 per cent at any time) is for the purpose of paying rent, insurance, clerk hire, drayage, freight and other items of expense incurred by Complainant in purchasing, storing and distributing materials to the various exchanges and toll lines as needed. This is not a profit in any sense to Complainant. It is the actual cost to Complainant of handling the supplies from the person from whom they are bought to the time they are delivered to the exchange or toll line employés.

It is true that in the first instance the expense of handling these materials is charged in the general accounts to "supply expense," and then, when the material is issued, "supply expense account" is credited with this not exceeding 10 per cent for handling, etc., and the exchange or toll line to which the supplies are issued is charged with a like amount.

The Master refers to the fact that he presumes that the company gets the usual trade discount for cash. Whatever trade discount the company gets reduces the invoice price of the supplies, and the records show that the actual cost to the company of the supplies, plus not exceeding 10 per cent, is all that is charged against the exchange or toll line receiving these supplies.

See dep. of H. Blair Smith, pp. 255 and 256.

There is no difference in the method Complainant pursues in handling supplies and in the method pursued by merchants. When a merchant buys goods, he must, in addition, pay the freight to get his goods to his store; he must pay his insurance, his house rent, his clerk hire, and other incidental expenses preparatory to
222 offering his goods for sale. He, of necessity, must add this additional expense to the cost of the goods before he begins to talk about profits, and it is only when he has added this additional expense to the invoice price of his goods that he can ascertain the real cost to him; and then on top of this must be added whatever profit he expects to make on the goods, and until he adds this he is not making any profit and could not afford to sell the goods at these prices, because it would result in his selling the goods at actual cost to himself.

This is precisely what this record shows the Complainant does. It adds not one cent of profit to the supplies.

Complainant therefore submits that the Master is in error in finding that a profit of at least $50,000.00 has been made on the supplies furnished to the Louisville Exchange from 1900 to 1908, inclusive.

"F."

Complainant excepts to the action of the Master in discrediting and declining to accept the statement of Complainant that it has charged to construction $10.00 per station on each station gained in the Louisville Exchange to cover the cost of labor and material in making such installation.

The evidence upon this point is as follows:

It requires material, apparatus and labor to equip each subscriber so that he may connect with the general exchange and be connected with other patrons of the exchange. It has been ascertained by experience that it cost Complainant, on the average, at least $10.00 to install a subscriber's instrument, counting the material used from the pole in the street to the telephone instrument, thence to the ground, which covers everything in the subscriber's place of business or residence except the telephone instrument itself.

223 That this charge is reasonable and proper is shown from the following testimony:

Complainant's valuation of the telephone instrument is $6.80.
Jagoe's dep., p. 67.

Mr. Polk in his deposition says that the instrument is worth:

Wall set	$6.50
Desk set	7.50

Polk's first dep., p. 110.

It must be remembered that the Company only charges $10.00 for installation, which covers everything except the instrument. Mr. Polk, in his second deposition, p. 145, states that it will cost about $25.00 to equip and install an instrument in a subscriber's residence or place of business. In this is included the wall set

at $6.50, or the desk set at $7.50. Deducting the larger amount, $7.50, leaves a charge of $17.50, which Mr. Polk says is necessary in order to install the subscriber's instrument. As above shown, the Company only adds $10.00 instead of $17.50 as testified to by the expert telephone engineer for the city.

When a subscriber discontinues his service, and the telephone instrument is taken out of his house, that is all that can be recovered or saved from the expense of installation. The wire and labor of installing the instrument is lost; and in the first instance this entire expense of installing the instrument is necessarily chargeable to construction because it is a part of the exchange plant and equipment, but when the telephone is removed the whole amount must be deducted from construction because that much of the construction has been lost and is no longer in existence. In order to facilitate the bookkeeping of the Company, for some period of time in the nine years under consideration, the practice of

224 Complainant was to, in the first instance charge all the expense and material and labor of installing a subscriber's instrument to expense of conducting the business of that exchange, and in like manner to charge to the expense of conducting that exchange the expense of removing the telephone instrument when it was given up by the subscriber. At the end of the month the net amount of increase in subscribers was charged to construction account at $10.00 per subscriber, and a like amount credited to the expense of conducting the business of that exchange. In other words, in the first instance each new subscriber had his instrument installed and the expense of doing it was charged, not to construction, but to expense of the exchange, and at the end of the month, assuming that he still had his instrument, the expense of conducting the business was credited with $10.00—in other words, reduced by $10.00—and construction charged with $10.00, or, in other words, increasing construction $10.00.

See 1st dep. of H. Blair Smith, pp. 309-10, 329 and 368.

There is no difference whatever in this method of keeping the accounts and in charging to construction the expense of labor and material of installing each new subscriber, and deducting from construction the amount so charged when such subscriber discontinues his service. This $10.00 charge did not inflate the construction account. It was simply one method, and a convenient method, of keeping the records of the Complainant so as to show the real facts, and was not intended, and did not in any degree, inflate the construction account.

"G."

The Master, on page 13 of his report, speaks of the difference between the witnesses as to the cost of the conduit system in Louisville.

We except to the language of the Master for the reason that these witnesses he refers to are speaking of the cost of repro-

225 duction, and are not speaking in any respect of the cost to Complainant of its underground system. The Master is

merely undertaking to ascertain the cost to Complainant of its Louisville Exchange, and not what it would cost some one else to build the plant, or what it is worth. On this branch of the case the Master is reporting solely on the cost to Complainant of its plant in Louisville.

"H."

The Master speaks, on page 14 of his report, of the method pursued in operating, maintaining and reconstructing toll lines. Complainant excepts to this part of the report for the reason that the Master has confused the expense of conducting the business with the question he is then discussing, namely, the cost to Complainant of its plant.

This discussion, with respect to the maintenance, reconstruction and operation of toll lines properly belongs under another heading, namely, profits, or receipts and disbursements, and has nothing whatever to do with the cost of the property.

"I."

Complainant excepts to the language of the Master, on page 14, in which he undertakes to deduct from the book cost of Complainant's exchange a part of $100,000.00 because of amounts expended on maintenance and reconstruction of toll lines.

It is immaterial how much Complainant expended in maintenance or reconstruction of toll lines and charged to the maintenance or reconstruction of the Louisville Exchange. It would not have any effect whatever upon the cost to the Complainant of the Louisville Exchange, and this is the enquiry in this part of the report.

226 "J."

Complainant excepts to all the language of the Master under this head of book value which relates to the cost of toll lines and toll line equipment and submits that the Master is in error for the following reasons:

It is not a fact that Complainant charges the cost of construction of any part of the toll lines to the Louisville Exchange. It is testified to by the Auditor of the Company, and not disputed by any one, that the cost of toll lines is charged to the construction of toll lines and not to exchanges.

H. Blair Smith's first dep., pp. 169 and 504.

The President says that toll line and exchange construction are kept separate.

Caldwell's first dep., p. 598.

Again, it is shown that there are only 80 circuits, or 160 wires, used for all toll purposes coming into or going out of the City of Louisville, and a part of these are used for the purpose of giving Louisville subscribers free service to the adjoining little exchanges in different parts of Jefferson County, Kentucky.

First dep. of H. Blair Smith, p. 537.

"K."

It is true that the toll equipment in the Louisville Exchange Main Building is charged against the Louisville Exchange Construction Account, and it should properly be so, and Complainant excepts to the report of the Master in declining to allow this.

It is shown in the record that this toll equipment is installed for the purpose of affording facilities to each subscriber to have connection with and use the toll lines from their individual stations. That is to say, the equipment is so arranged that the
227 subscriber may, from his office or his residence, both send and receive toll line messages at exactly the same rate he would pay for his long distance message if he went to the central office of the Complainant, and there received or sent his toll message. In order to enable subscribers to do this it was necessary to install this toll equipment in the central exchange at Louisville, but it was a part of the Louisville Exchange equipment and put there for the purpose of serving the Louisville subscribers; and in fixing the Louisville subscribers' rates for exchange service, this was taken into consideration, and a price placed upon the use of the exchange service which would pay for a proper part of this added expense of equipment and operating the toll department in such manner as to afford this easy access of the subscriber to the toll line from his office or place of business.

First dep. of Caldwell, p. 599.

The Master, in his report, on page 60, says:

"The company's plant is well located, it is in excellent physical condition, and it is a remunerative business. If we compare it with the Home Telephone Company as to its earning power, it is obvious that it occupies much the superior position in this: It has extensive toll lines that connect with similar lines extending over the entire United States. Connection with these long distance lines may be had promptly by the subscribers, and this I consider a most valuable asset, and in my opinion, it will in the future, as in the past, materially aid the Complainant in its efforts to obtain new subscribers."

This finding of the Master with respect to the added value to exchange subscribers by reason of the fact that they have immediate connection with, and access to, the toll line system is in thorough accord with the testimony of the witnesses for Complainant in this record, and it fully and thoroughly sustains the testimony of the President of the Company, who says that this was an added value to the exchange subscribers, and it can only be given to them
228 by means of this toll line equipment in the main exchange which was put there solely for the purpose of affording the exchange subscribers easy access to the toll lines from their individual stations.

"L."

Complainant excepts to the report of the Master in adding toll of the entire toll line system of the Ohio Valley Telephone Company on January 1st, 1900.

This toll line construction is what the experts report was the cost of the entire toll line system of the Ohio Valley Telephone Company on January 1st, 1900.

Mutual Audit Company's exhibit No. 1.

Wilkinson's report, p. 10.

This, then, was the cost of the toll line construction on January 1st, 1900, but the Master is dealing in his report with the situation in March, 1909. On the bottom of page 22 of the Master's report he states that there is some evidence, though vague and unsatisfactory, that some additions to construction of toll lines has been made since 1900.

The President of the Company testifies that whenever any one in the City of Louisville uses toll lines to any other point in Complainant's system, it uses Complainant's toll lines, and he states that the entire system of Complainant is saturated with its own toll lines.

Caldwell's first dep., p. 587.

The annual reports of the Company on file in the case show that for the year 1908 the gross toll line receipts of the Company were more than $1,500,000.00. With the annual report for 1908 is filed a map showing the toll lines radiating in every direction from every important commercial center in the entire system of Complainant—from the Ohio River straight through to the Gulf of Mexico.

229 It is inconceivable that the Master should assume that the entire toll structure was in existence on January 1st, 1900, and was only worth $125,000.00.

Again, if the Master assumes that the entire value of the toll lines is to be added as a part of the Louisville Exchange, then what would become of more than 500 exchanges if it should be attempted to get the value of these exchanges separately or together. If the entire $125,000.00 of toll line value is placed in the Louisville Exchange, then no other exchange of the Complainant would be chargeable with any part of the toll line construction. If the entire toll line construction should be prorated with the Louisville and the other exchanges in Complainant's system it might be argued that this would be proper treatment, but certainly the toll line value in 1900 should not be used for 1908.

The evidence is clear that the toll line construction is kept separate and distinct from exchange construction, and its cost or value does not appear in this record for the reason that Your Honor directed the Master to ascertain the cost and value of the Louisville Exchange, and not the cost and value of the Louisville Exchange plus the toll line system of Complainant.

"M."

Complainant excepts to the criticism of the Master as to the refusal of the Auditor of the Company to produce the supply vouchers from the Supply Department.

Mr. Smith was asked, in his cross-examination, by the attorney for the City, to produce the vouchers from the Supply Department. He stated in reply that he had no control whatever of the Supply

Department, and that he would have to refer the matter to
230 the counsel for the Company, who was not then present at the taking of the deposition. The matter seems to have been overlooked, and nothing further said about it.

H. Blair Smith's first dep., p. 330.

If the matter had been called to the attention of counsel for the Complainant, it, no doubt, would have received proper consideration; but it was open to the counsel for the Defendant to have summoned any one connected with the Supply Department and to have interrogated them with respect to any matters desired.

At any rate, it is respectfully submitted that it is hardly fair to Complainant to be criticised on what was apparently an oversight or a failure on the part of counsel for Defendant to pursue the enquiry further.

It also appears that the Mutual Audit Company's experts visited the Supply Department and had full opportunity to investigate the vouchers as much as was desired, and stated that they were not investigated for the reason that it would have taken several months to have done so.

H. B. Warren's dep., p. 380.

It also appears that the Auditor of the Company took the accountants for the Mutual Audit Company to the Supply Department and had explained to them the working of that department.

H. B. Warren's dep., p. 571.

"N."

The Master was directed to report the cost to Complainant of its plant and property in Louisville. The Master, no doubt by oversight, failed to report the real estate and improvements of Complainant used in its Louisville Exchange, and to this failure on the part of the Master, Complainant excepts.

231 The real estate owned and used by Complainant is stated in the deposition of the Auditor of Complainant to have cost to December 31, 1908 ..... $160,841.42

Smith's exhibit No. 21.

The Mutual Audit Company reports the cost of the real estate to December 31, 1908 ..... 160,841.42

Warren's dep., p. 493.

Mutual Audit Co.'s report, ex. 11-B.

Wilkinson states the cost of real estate to December 31, 1908, to be 160,841.42

Added in 1909 ..... 1,350.00

Total March 6, 1909 ..... $162,191.42

Wilkinson's report, pp. 20 and 28.

As has heretofore been stated, it was agreed between the counsel representing Complainant and Defendant, and approved by the Master, that whatever the accountants jointly agreed to and reported should be accepted by all parties, and no evidence permitted to vary or contradict it.

The examination of the accountants "involved a close inquiry in all matters relating to the business of the Complainant in the City of Louisville, including the books, accounts, vouchers, pay-rolls, agents' reports and other original sources of information, kept at the principal office of the Complainant in the City of Nashville, Tennessee," and they reported that the plant had cost Complainant to March 9, 1909.... 1,702,391.68

This was not what the books of the Complainant showed the plant to have cost, but was what these accountants agreed the books should have shown after errors had been eliminated.

232 The books of the company showed the cost of the plant to have been $1,700,045.26
First dep. of Smith, Ex. No. 2.

These accountants, having agreed upon the records of Complainant, showing the cost of the Louisville plant, excluding toll lines and real estate, should, under the agreement, be accepted, and that the cost was, as stated 1,702,391.68

Summary.

Complainant, for the foregoing reasons, insists that the Master was in error in reporting the cost to Complainant of its plant and property in the City of Louisville, as of January 1, 1900, as only..... $457,759.07
And on December 31, 1908 ..... 1,381,124.41
And real estate of only 108,034.50
The Master should have found and reported that Complainant's plant cost it, as of January 1, 1900.. $678,354.69
And added construction to January 1, 1909 ..... 1,023,545.34

Making the total cost to Complainant of its plant in Louisville, Kentucky, as of January 1, 1909 .....$1,701,900.03

And construction added from January 1, 1909 to March 9, 1909 ..... 491.65

Wilkinson's report, p. 19.
Warren's dep., p. 411.
Mutual Audit Co.'s report, ex. 4.

Making the total cost of plant to March 9, 1909..$1,702,391.68
And the total cost of real estate 162,191.42

Total "cost of plant and property," March 9, 1909..$1,864,583.10

233 II.

"A fair valuation of the plant and property of the Complainant employed in its business in said city as of March 6, 1909; also its value at the date upon which he may file his report herein. In doing this he will state generally the basis of his estimates."

The Master reports that on March 9, 1909, the plant was worth $1,243,011.97
That the toll lines and (toll) equipment was worth 112,866.12
Master's report, pp. 21 and 22.

The Master made no report with respect to the value of the real estate.
Complainant excepts to this report of the Master in reporting the value of the plant March 9, 1909, to have been only $1,243,011.97. He should have reported the value, exclusive of real estate and toll lines, to have been at least $1,702,391.68

Complainant's evidence on this branch of the case is the depositions of:
James E. Caldwell, President of the Complainant.
H. Blair Smith, Auditor of the Complainant.
Leland Hume, General Manager of the Complainant.
J. E. Jagoe, Assistant Superintendent of plant of Complainant, and
Stipulation with respect to units of value used by Prof. D. C. Jackson.
Defendant's evidence is the depositions of:
W. C. Polk, a telephone engineer.
Wm. H. Crumb, a telephone engineer, and
S. D. Levings, editor of a telephone Journal.

234 "A."

Evidence for Complainant.

All of these witnesses exclude real estate and toll lines, in fixing the value of the exchange plant.

James E. Caldwell.

This witness is the President of Complainant, and has been actively engaged in the telephone business with Complainant since 1885. Until about four years ago he was both President and General Manager, and since that time its President.
Caldwell's first dep., p. 575.

Its properties, except such as have been acquired by purchase or consolidation, have been built under his direction and supervision.
Caldwell's first dep., p. 575.

He states that the Louisville plant has been built with a view of being "permanent and of the very best character;" also "with reference to the growth of a city the size of Louisville, and importance of Louisville, giving evidence of its future."

Caldwell's first dep., p. 588.

He states that the plant in Louisville is worth, excluding real estate.....$1,702,391.68

Caldwell's first dep., p. 595.

Leland Hume.

This witness has been engaged in the telephone business with Complainant for twenty-five years. He has been its Treasurer, Secretary, Local Manager at Memphis Exchange, for ten years Assistant General Manager, and for the past four years General Manager.

Dep. of Hume, p. 101.

235 Most of Complainant's properties have been built under his direction and supervision.

The annual report of Complainant for 1909, filed in this record, shows that Complainant had on December 31, 1908, five hundred and twenty-seven exchanges, and a comprehensive system of toll lines throughout its territory, from the Ohio River to the Gulf of Mexico.

This witness has been familiar with the Louisville plant since June, 1899. It has been extended and developed with the greatest care and economy.

Dep. of Hume, p. 104.

He has supervised and approved all vouchers for constructing and operating this plant since before January 1, 1900.

Dep. of Hume, p. 105.

He examined the figures presented by Mr. Jagoe, Assistant Superintendent of Plant, as they were made up from time to time, and which will hereinafter be referred to more particularly, and he states that these figures are very conservative, and that it would be difficult for practical men to reproduce the plant at the figures given.

Dep. of Hume, p. 106.

He, of all men, has the best right to state its present value, and he does so, and says it is worth excluding real estate.....$1,793,540.30

H. Blair Smith.

This witness is now, and has been for more than ten years, the Auditor of the Complainant. He has devoted his time to auditing the cost of constructing toll lines and exchanges. During all that time he has been engaged in examining vouchers for operating,

maintaining and reconstructing toll lines and exchanges;
236 during that long period of time he, of necessity, has acquired very large experience and knowledge of Complainant's properties, their cost and value; and while he is only an Auditor, and not engaged in the actual construction or operation of telephone plants, yet his large experience in handling telephone accounts, and especially of the Complainant company, entitles him to have an opinion of the value of this plant, and that opinion is entitled to weight.

He states that the Complainant's plant in Louisville is worth, and cannot be reproduced for less than....$1,700,045.36

Smith's first dep., p. 31.

J. E. Jagoe.

This witness states that he is Assistant Superintendent of Plant of Complainant, and reports directly to the General Manager, who is the acting Superintendent of Plant.

Jagoe's dep., p. 2.

He made a study of the Louisville plant from the middle of January to a few days before his deposition was given on March 18, 1910.

Jagoe's dep., p. 3.

He gives in great detail the exact quantities of material in the plant, and gives the value of each item in like detail.

His valuation of the plant, excluding real estate, office furniture and fixtures, working capital, supplies on hand, teams and tools, was $1,793,540.30.

Dep. of Jagoe, p. 31.

This is the only witness in the record who undertakes to give exact quantities of material in the plant and does not rely upon estimates, as do all the witnesses for the Defendant.

237 His deposition shows that he has made a careful and accurate inventory of the plant in Louisville. He states certain things which ought to be recognized without any evidence. Among other things, he says that the number and size of the poles actually in use in an exchange must be known before a proper valuation can be placed thereon.

Jagoe's dep., pp. 11 and 12.

The cable used must be ascertained before valuation can be had, because different sizes of cable vary very greatly in price, and until the exact lengths and sizes of cable are ascertained it is impossible to place a valuation thereon.

Jagoe's dep. pp. 17-19.

And finally this witness says: "There is an individuality about every plant that you cannot separate from it. There are conditions

in every city that are different from the conditions in every other city, and one of the biggest features that often escapes attention is the class of service given. We can serve ten thousand subscribers of one class for one-third of the construction expense that we can serve ten thousand subscribers of another class; and then it is possible to give connection to subscribers at one price and then, by increasing the efficiency of the service, or the reliability of the service, to add fifty per cent to the construction value."

Jagoe's dep., pp. 22-23.

He says that there is a difference in the cost of telephone plants in the same city; it does not convey any intelligent idea of the value of one plant to talk about the value of the other plant; that the cost of one has no bearing upon the cost of the other, no more so than it would be proper to say that the ability of every lawyer is the same; that no man, expert or otherwise, has a right to undertake to value a telephone plant as large as Complainant's plant
238 in Louisville without accurate knowledge and a thorough investigation of it.

Jagoe's dep., p. 26.

He says "that a plant can be built in Louisville to serve ten thousand subscribers for $1,100,000.00, but that it would depend upon the character of material used and the work done—the character of the material and stability of the plant and the class of service that the plant would be equipped to give."

Jagoe's dep., p. 27.

The plant was valued by him as of March 18, 1910.

Jagoe's dep., p. 22.

There has been no addition to the plant since March 9, 1909, and that it is worth slightly less in March, 1910, than it was in March, 1909.

Jagoe's dep., p. 13.

In arriving at a classification of the materials used in this property, he used the classification adopted and in use in all of the large telephone companies in America.

Jagoe's dep., p. 13.

The value or cost of erecting different kinds of material in this plant was arrived at by actual experience. In speaking of the method pursued in getting the value of the cable in the plant, he says that a part of the cable work has been done in Louisville since he has been with Complainant, and that certain parts of those cables have been replaced and that "the cost of doing all work in Louisville during the past two years that I have had supervision of, has been used in assembling the units which we are using in this estimate."

Jagoe's dep., p. 53.

With respect to fixing the value on the poles, he says:

"I know what it cost our company during the past four
239 years to purchase and erect similar poles, and that is the amount I have given, and besides that, it seems to be the consensus of opinion among all companies, for when we buy or sell a half interest in poles to friendly companies, where we go into a joint pole agreement, the average price paid for the past two years on forty-foot poles has been $22.50 per pole, and that does not include the cross arms, simply the bare pole with the guys."

Jagoe's dep., pp. 57-58.

The valuation placed by Mr. Jagoe on forty-foot poles in Louisville, including the cross-arms, etc., is $23.92 each.

Jagoe's dep., p. 31.

The inventory value of the plant by the witness is full, complete and is in the greatest detail, both as to quantities and the units of value used in arriving at a total valuation.

The Master seems to have been impressed with this witness, and would no doubt have accepted his valuation, but that this witness includes as a part of his total valuation the expenses of organization, cost of engineering, supervison, freight and other expenses necessary to be incurred by any one in building so large a property. The Master does not think any such item of expense should be allowed in valuing the property. It is sufficient for the present to state that all these items of expense are universally recognized as proper; no plant can build itself; there must be an organization; there must be engineering plans, foremen, interest on capital while the plant is building; expense of tools and teams which wear out during the time of construction, claims for damages, legal expenses, securing rights-of-way, tree trimming privileges and numerous other known items of expense, as well as certain, but unknown, contingencies.

On page 19 of his report, the Master says:

"It is frankly stated by Mr. Jagoe that in all the construction, maintenance and reconstruction of the plant 'overhead charges' and
'supervision' have played a part in swelling the totals. To
240 what extent this bookkeeping device has been resorted to, the evidence fails to show, except in the few concrete instances mentioned by this witness as above stated."

The Master is here confused again.

There is no question of maintenance or reconstruction involved in this inquiry. The only question the Master is undertaking in this branch of his report to deal with is "the present value of the plant."

The cost of the plant is placed on its books without any allowance for supervision, engineering services, rights-of-way, interest on money, or overhead charges. There is no proof to the contrary.

Hume's dep., pp. 126-7.

Wilkinson's report, p. 20.

The Master has, in the former part of his report, dealt with the question of cost to Complainant of its plant, and is now dealing with the question of what the plant is worth, or, as is sometimes stated, the cost of reproduction.

For the present, it is sufficient to state that the Master is in error in declining to allow, under this inquiry, any overhead charges to be added to the actual cost of the material and the labor of placing it in position. This question will, however, receive consideration in another part of these exceptions.

An examination of the deposition of Leland Hume, General Manager, fully sustains all that Mr. Jagoe says with respect to the necessity of knowledge of the particular plant, its individuality and other matters relating to the ascertainment of value. No witness in this record testifies to the contrary.

Prof. D. C. Jackson.

Prof. Jackson is a member of the Society of American In-
241 stitute of Electrical Engineers, the American Society of Mechanical Engineers, and the American Society of Civil Engineers, formerly professor of Electrical Engineering of the University of Wisconsin, and later professor of Electrical Engineering in the Massachusetts Institute of Technology of Boston; he was the Chairman of the Telephone Commission appointed by the City of Chicago in 1907, to investigate the telephone conditions in that city, to prepare an estimate of the value of the telephone plant, to determine what it would cost to build an adequate plant, what the expense of conducting such a plant would be, and what rates would be reasonable and fair for the city to impose upon the operating company. He was continuously engaged in this work from January 8 to April 4, 1907.

Report of City Council Committee, exhibit to Crumb's dep., p. 9.

During 1908 and 1909 he was engaged under the employment and direction of the Massachusetts Highway Commission in preparing an inventory and valuation of the entire properties of the New England Telephone Company in the State of Massachusetts.

In order to value the plant of the New England Company in Massachusetts, after having ascertained quantities of material throughout the State, embraced in the various plants, it became necessary for him to ascertain units of cost for the various kinds and classes of material in the plants. He did this, and if his units of value are applied to the classes and quantities of material actually ascertained to exist in the Louisville plant by Mr. Jagoe, and excluding everything that Mr. Jagoe excludes, and only including what Mr. Jagoe includes, the valuation of the Louisville plant will be found to be, as stated by the Master on p. 16 of his report, $1,779,413.18.

A careful comparison of the value of the Louisville plant
242 between Mr. Jagoe and Prof. Jackson is developed in the deposition of Mr. Jagoe. Therein Mr. Jagoe points out that

in some instances his units of value are higher than Prof. Jackson's and in other instances Prof. Jackson's units of value are higher than Mr. Jagoe's. This comes about because of the dissimilar conditions under which the Louisville and Massachusetts plants are erected. As illustrative of this point, Mr. Jagoe gives the total value of the poles in the Louisville plant at $331,769.40, or $23.92 each.

Jagoe's dep., p. 31.

Applying Prof. Jackson's unit of value, he has a valuation of only $190,379.62.

Jagoe's dep., p. 20.

This is accounted for by Mr. Jagoe as follows:

"Prof. Jackson's unit of cost includes every pole in Massachusetts, including the twenty-five-foot pole out in the country routes. After we leave the city, the average pole is possibly about 25 or 26 feet, and the cost of them is about $6.50 each. Mr. Jackson used, of course, these poles, as well as the city poles, in his estimates."

Jagoe's dep., p. 20.

The poles in the City of Louisville are forty-foot poles, and this makes a great deal of difference in the cost. The cost of the pole itself and the cost of erecting the pole is always in a much larger proportion than the lengths. A fifty-foot pole would possibly cost five times as much as a twenty-five-foot pole.

Jagoe's dep., p. 11.

The valuation of the Louisville plant, using Prof. Jackson's units of value, is not a mere estimate, but is the application of actual units of cost to actual known quantities of material; and this valuation, using Prof. Jackson's units, is entitled to great respect.

His valuation of the plant is..... $1,779,413.18

No one of Complainant's witnesses includes real estate, or working capital.

243 "B."

Evidence of the Defendant.

All the Defendant's witnesses exclude toll lines and real estate, in fixing the value of the exchange plant.

W. H. Crumb.

Mr. Crumb is a telephone engineer and a contractor for erecting telephone properties.

In direct examination he states that he had made a "very careful inspection of the plant," but on cross-examination shows that he had not even made superficial examination of the plant in Louisville.

Crumb's dep., p. 12.

He attaches an affidavit as an exhibit to his deposition in which he states that the Louisville plant could be duplicated for one million dollars new, and in his cross-examination shows that he made this affidavit without the slightest knowledge of the plant.

Crumb's dep., pp. 145 to 151.

After giving this affidavit, he made two additional visits to the City of Louisville, but they were shown to have been so limited in time, and his investigation and examination of the plant so meager, that his testimony is an insult to the intelligence of the Court. It was discredited by the Master.

W. C. Polk.

Mr. Polk gave two depositions. His first one was given in January, 1910, following the deposition of Mr. Crumb given in October, 1909. Mr. Polk has been a telephone engineer for fifteen years.

Polk's first dep., p. 84.

244 He was chief engineer of the construction company that built the Louisville Home Telephone Company's plant in Louisville in 1901 and 1902.

Polk's first dep., pp. 86-7.

The knowledge acquired by him in 1901 and 1902 does not entitle him to speak as of March 9, 1909, when plant was changed and added to. He states:

"In the first place government statistics are four or five years behind, and the telephone business is developing so rapidly that statistics four or five years old do not apply."

Polk's second dep., p. 61.

The only inspection of Complainant's plant made by Mr. Polk was "a casual examination the last couple of days, in a general way."

Polk's first dep., p. 91.

This is his entire knowledge of the plant except what he saw while building the Home Company's plant in 1901-2, with the exception of an examination of some blue-prints attached to the deposition of Mr. Crumb, showing existing and proposed cable routes in Complainant's Louisville plant, which were incomplete, and delivered to Mr. Crumb with the statement that they were incomplete.

Crumb's dep., p. 28.

He also stated that he made no physical examination of the property, but did examine these incomplete blue prints of the cable system, and obtained his quantities of cable therefrom.

Polk's first dep., p. 126.

He says:

"As I understood my employment, all I prepared for was to place

a valuation on the plant, and not to make a report on its physical condition."

Polk's first dep., p. 130.

245 And again:

"I stated that I had made no specific examination so far as to determine the present value from a depreciated standpoint, but taking what I know of a going concern, as a general proposition, and the way they are kept up, and knowing the general character of the Cumberland, and the way they are doing work, I consider 20% as a reasonable amount, exclusive of real estate."

Polk's second dep., p. 49.

From this meager date and information, he gives a total valuation of the Louisville plant of.....$1,052,800.00

This, however, does not include real estate or any overhead charges of any kind, such as supervision, interest and other items.

Polk's first dep., p. 139.

After the deposition of Mr. Jagoe had been taken and filed, and after Mr. Polk had examined it, he gave another deposition, in which he begins with an admission of errors in his calculations given in his first deposition, and undertakes to explain how these errors were made. They were all, however, against Complainant.

He next attributes an improper motive to Mr. Jagoe in classifying the materials in the Louisville plant.

Polk's second dep., pp. 3 and 13.

On cross-examination he is forced to withdraw his statements when it is shown that his criticisms of Mr. Jagoe are unjust and unfair, and that he was acting upon misinformation.

Polk's second dep., pp. 76 and 87.

Mr. Polk, after correcting admitted errors, increases his former estimate of value from $1,052,800.00 to $1,195,737.00

Polk's second dep., p. 51.

246 This change in valuation seems to have escaped the attention of the Master.

When it is pointed out in the deposition of Mr. Jagoe that by actual count the number of poles in the Louisville Exchange is 13,870 (Jagoe's deposition, pp. 9 and 31), Mr. Polk still insists upon estimating only 11,000 poles to be in the Louisville plant, although he has not undertaken to count them, but says that this ought to be a sufficient number of poles to take care of the subscribers in the Louisville plant.

Polk's second dep., p. 25.

He admits that he is using the price of cable at the date of his deposition under instructions of the City Attorney, although cable as late as 1907 was twenty per cent higher than at the present time,

and does not use the average price over a period of years because he says he was instructed by the City Attorney to use present prices.

Polk's second dep., p. 83.

He says on page 13 of his second deposition that Mr. Jagoe had overstated the price of the large items of cable, and had understated the price of the small items of cable, but has to admit on page 88 that the facts were just the reverse, and that in the smallest quantities of cable the price fixed by Mr. Jagoe was higher than his prices, and on the largest quantities of cable Mr. Jagoe had fixed a price less than he had fixed.

It appears in the record that a telephone property is never a finished or completed plant. That as the city grows and subscribers increase, additional and new construction must be added year by year, and that of necessity a telephone plant must, after the initial installation, be added to by "piece meal" construction. In speaking of this "piece meal" construction, which he admits is necessary, he is asked this question:

247 "Q. Is it fair to a company that has invested its money in a plant, kept up with the growth of the city, and taken care of the business by piece-meal construction, to say that it can only have a return on what it would cost to build the plant over new again?

A. No, sir; I don't think that is fair.

Q. That is an unjust and unfair thing?

A. Yes, sir.

Polk's second dep., p. 111.

Both Mr. Polk and Mr. Crumb place a much smaller valuation upon the various switchboards used by Complainant in its Louisville plant than do the witnesses for Complainant. Their idea is that other switchboards built by other manufacturers are intended to serve the same purpose, and that, in their opinion, these switchboards built by other concerns named by them should be used.

It also appears in the record that Complainant purchases its switchboards from the Western Electric Company, because it believes that they are the best, have the longest life, and are more satisfactory in a telephone plant.

Jagoe's dep., p. 28.

There is no controversy in this case as to what the cost of the Western Electric Company's switchboards are, and Complainant's witnesses base their value upon the Western Electric Company's switchboard, which accounts for a considerable item of difference between their values and those of the city's witnesses, Messrs. Crumb and Polk.

Complainant's officers have been engaged in the business for a quarter of a century; they have had largely more experience than either Mr. Crumb or Mr. Polk, exercising their own good judgment and spending the money of their stockholders, they have thought it best to purchase the Western Electric Company's switchboards. It cannot be possible that this valuation is to be reduced because

248 some person has the opinion and idea that another switchboard costing less money is just as good.

Mr. Jagoe states that a telephone plant serving ten thousand subscribers in the City of Louisville can be built for $1,100,000, but it would not be the plant that Complainant has in that city.

Jagoe's dep., p. 27.

In this connection he states: "A telephone plant is not different from any other property, real estate, or any other kind of property. You can build a four-room house for a couple of hundred dollars, or you can build it for a couple of thousand dollars. The telephone plant is similar to any other property in that way. The better you make the plant the more expensive it is, and one peculiar condition is that you can get service up to a certain point very cheaply to everybody, but you add to the efficiency, if you add 5 per cent to the efficiency, you will add more than 5 per cent to the cost, for the last 10 per cent of efficiency of your service will amount to 50 per cent of the cost of your plant."

Jagoe's dep., p. 88.

Nowhere in the record does any witness undertake to contradict or explain away this statement. Mr. Polk admits that he has not sufficient knowledge of Complainant's plant in the City of Louisville to be able to determine or express an opinion upon its condition.

He is asked the following questions:

"Q. Did you intend to say, or do you now say anything about its present value?

A. I do not, only in an offhand way; I made a statement this morning that as a general average a concern going for several years, moderately maintained, will run down 20%.

Q. Don't you think it will be better to say that you have no knowledge of the present condition of the plant and of the relative
249 value compared with the replacement value?

A. I didn't say I had any knowldege. I had not made investigation.

Q. Then you don't wish to have any opinion stated in your deposition as to the present actual value of the Complainant company's plant in this suit?

A. No, sir; not as a specific proposition."

Polk's second dep., pp. 67-8.

Mr. Polk, having it pointed out by the witness that Complainant did use No. 10 iron wire in its Louisville plant, declined to allow any in his estimate, and insisted upon using the cheaper wire, No. 14.

Polk's second dep., p. 61.
Jagoe's dep., p. 29.
Green's dep., p. 30.

Mr. Polk, on page 51 of his second deposition, says that he estimates the value of private branch exchanges and sub-station equipment, etc., at $128,775.00, or an average of $13.70 per station, and on page 145 states that the cost per station is about $25.00, thus making a clear error against the Complainant of more than $106,000.00.

An examination of the deposition of Mr. Jagoe, in which he points out the exact quantities and qualities of cable, and points out the specific and direct errors made by Mr. Polk in his first deposition, in estimating quality and quantity of cable in Complainant's plant, was submitted to Mr. Polk, and, in his second deposition, while admitting errors on his part, and admitting the correctness of what Mr. Jagoe had stated, yet declined to change his valuation based upon an incomplete knowledge of what quantity and quality of cable was actually in the plant. This is not a minor difference between them.

Mr. Jagoe shows that the company actually had in use in
250 the Louisville plant one hundred and twelve private branch exchanges.

Jagoe's dep., p. 65.

Mr. Polk admits that he only estimated seventy-five, and declines to correct his statement, although he admits that he has no knowledge of the actual number in the plant.

Polk's second dep., p. 45.

The Master, in comparing the difference in value of cable between Mr. Jagoe and Mr. Polk, pp. 17 and 18, uses the values given by Mr. Polk in his first deposition, which in his second deposition Mr. Polk admits to be erroneous and undertakes to partially correct.

Polk's second dep., p. 51.

In this way, the Master has inadvertently made an error of more than $46,000 against Complainant.

S. D. Levings.

This witness was a clerk in an engineer's office in the City of Chicago until shortly before his deposition was given in New York, at which time he was the editor of a telephone journal. He shows very clearly that he has no knowledge of Complainant's plant in Louisville, and his attempted estimate of valuation of Complainant's plant is not worthy of serious consideration.

It thus appears that the only two witnesses introduced by defendant to testify as to the value of Complainant's plant in Louisville were not familiar with the property, made no examination of it with a view of ascertaining its value, and are testifying from their general knowledge of telephone conditions throughout the country, and are paid expert witnesses.

Their interest on behalf of their clients was certainly as great as the interest of Complainant's officers and employes on its side.

251 The general experience in the telephone business of Messrs. Polk and Crumb is far less than that of Complainant's officers. If Messrs. Polk and Crumb may testify as to the value of the plant because of their experience in the telephone business generally, and if their opinion of value is to be treated seriously, what is to be

said of the opinion of Complainant's President, General Manager, Auditor and Superintendent of Plant?

It must also be remembered that the testimony of Messrs. Polk and Crumb shows that their experience generally has been with companies building exchanges for sale, and the experience of Complainant's officers has been with building exchanges to operate.

The standing of Messrs. Polk and Crumb, however high it may be for ability or integrity, is not superior to that of the Complainant's officers, who have for twenty-five years received the confidence and trust of a board of directors; men who have successfully managed a great property for more than a quarter of a century; surely their opinion and their judgment and their testimony is of as great weight as that of Messrs. Polk and Crumb, assuming that they all had equal means of knowledge. But when it is remembered that Messrs. Polk and Crumb do not pretend, or assume to have the knowledge that Complainant's officers and witnesses have, it is readily seen that any discrepancy in the testimony is easily reconcilable upon the theory that Complainant's witnesses testify from actual knowledge and facts, while Messrs. Crumb and Polk testify from theories and general conditions, as they understand them, throughout the country, without reference to any knowledge of the particular plant about which they are undertaking to testify.

It thus appears that Complainant's witnesses have superior knowledge and experience, and no greater interest as witnesses.

Mr. Hume, in his deposition on page 124, quotes with ap-
252 proval the following extract from a pamphlet which is entitled "Valuation of Public Service Corporations," by W. H. Williams, and appears to have been a paper read by him for discussion by joint session of American Economic Association and American Political Science Association, Chamber of Commerce, New York, December 30, 1909, where it is said:

"The cost of reproduction is a matter of individual opinion; no engineer in estimating on the several important items of construction work for the year will come within ten per cent. of the total aggregate cost. Many of the more important items are frequently underestimated from twenty-five to fifty per cent. If experienced engineers, knowing the local conditions, cannot estimate the exact cost, how can those without special knowledge be expected to do so. A very good illustration of this may be had by contrasting the original estimates with the ultimate cost of post offices and other public buildings. An especially good illustration, and one known to all readers of the daily press, is that of the Panama Canal. The original estimate of the cost of engineering and construction work was $139,705,200, but the present estimate is $297,766,000, and it is probable this cost will be greatly exceeded."

It, therefore, appears that according to the Complainant's President, General Manager, Auditor, Assistant Superintendent of Plant, and Prof. Jackson, this plant was worth on March 9, 1909, more than $1,700,000, and that the evidence introduced by the Defendant consists of depositions from two telephone engineers, who have no superior experience in the telephone business, nor the necessary

knowledge of Complainant's plant in Louisville to entitle their opinion to serious consideration. They only purport to speak as expert witnesses without a knowledge of the actual facts and conditions. Therefore, it is insisted that the Master was in error in placing a valuation on Complainant's plant as of March 9, 1909,

of.....$1,243,011.97

253 He should have found and reported that Complainant's plant was, on March 9, 1909, exclusive of real estate and toll lines, worth at least the sum of..$1,702,391.63

"C."

Complainant excepts to the statement of the Master on page 19 of his report in which he declines to allow any "overhead charges" in estimating the present value of Complainant's plant.

The Master says on page 19 of his report:

"It is frankly stated by Mr. Jagoe that in all the construction, maintenance and reconstruction of plant, overhead charges and supervision have played a part in swelling the totals. To what extent this bookkeeping device has been resorted to the evidence fails to show except in the few concrete instances mentioned by this witness as above stated."

It has heretofore been shown that there are no overhead charges of any kind upon the books of Complainant.

Hume's dep., pp. 126-7.
Wilkinson's report, p. 20.

However, in this connection, the Master is considering only value, not cost. Therefore, if any such charges had been entered upon its books, it would not be pertinent to the present inquiry, viz: The present value of the plant.

Under this head, the Master is considering a property that has been erected under a proper organization, after proper engineering plans had been prepared, after a franchise, or permission of the city authorities had been obtained, after a legal organization had been perfected, after sufficient securities had been sold to provide funds with which to erect the plant, its supervision during the progress of its construction, the tools and teams necessary to use in its

254 construction, but which really wear out by the time the plant is constructed; attorneys' fees, claims for damages, tree trimming privileges, insurance, interest on money, and various other items of expense which are necessarily incurred in the building of the plant, and over and beyond all this, the advertising, canvassing and other means adopted to secure patronage so as to have an established going business.

It is the value of a plant which has incurred all these expenses that the Master is now considering.

No witness in the record intimates that it is not proper to include these items of expense in arriving at the present value of the plant. Mr. Polk, the main expert telephone engineer on behalf of the Defendant, allows in his amended estimate for overhead charges the sum of.....$90,000.00

Polk's second dep., p. 51.

The Chicago Commission, composed of three telephone engineers, after a careful study from January 7 to April 3, allowed overhead charges of about 20 per cent of the cost of the plant.

Report of Council Committee, p. 56.

In this report the Commission allows:

Supervision and engineering	$700,000.00
Interest and insurance	600,000.00
Brokerage in selling securities	1,877,333.00
Or a total of	$3,177,333.00
The total value of the plant, including these items and real estate, is	$18,773,333.00

The estimate furnished this Commission by the Manufacturers' Telephone Company in estimating the cost of construction of a plant they proposed to erect, provided overhead charges as follows:

255 Supervision and engineering	$690,000.00
Interest and insurance	550,000.00
Brokerage	687,300.00
	$1,837,300.00
Total cost of plant, including real estate and foregoing items	$14,983,300.00

Mr. Jagoe, in his valuation of plant, allowed less than 15 per cent overhead charges, and excluded from his valuation teams and tools, working capital, supplies and furniture and fixtures, and if these items had been included and deducted from the overhead charges allowed by Mr. Jagoe, it would have reduced the overhead charges to considerably less than 10 per cent.

That all these items of expense are necessary in estimating and valuing a going plant is so self-evident that we submit that the Master was in error even though there was no proof sustaining these items in the report, and for these reasons Complainant excepts to the Master's report in disallowing any of these items of expense.

"D."

Complainant excepts to the report of the Master in not allowing as a part of the present value of the plant the expense of securing business, franchise value, right-of-way, tree trimming privileges, tools and teams, supplies, office furniture and fixtures, and working capital.

Mr. Polk, in his second deposition, admits that all of these items of value are right and proper.

Polk's second dep., p. 116.

The Chicago Commission concedes and allows these items in fixing the valuation of the Chicago plant.

256 The Manufacturers' Telephone Company, in their estimate, both original and amended, allow these items.

It is apparent that a plant cannot be operated, maintained and reconstructed without having on hand supplies. It cannot be maintained, constructed or reconstructed without the use of tools and teams, office furniture and fixtures. It cannot do business until it has procured the consent of the municipality. It cannot serve patrons until it has secured patrons, and necessarily the expense of securing patronage is a part of the cost of the plant, and is entitled to be capitalized. No property can be operated without having on hand a working capital.

All of these items the Master disallows, and Complainant excepts to this part of his report, and insists that he should have allowed all of these items in arriving at the value of the plant.

"E."

Complainant excepts to the report of the Master in ascertaining the value of Complainant's toll lines to have been on March, 9, 1909, only $112,866.12.

Master's Report, p. 22.

The accountants ascertained that the cost of the toll lines, purchased by Complainant from the Ohio Valley Telephone Company in June, 1899, was $125,000, and the Master assumes this to be the value of all toll lines on March 9, 1909, less 10 per cent depreciation.

Complainant owns and operates five hundred and seventeen exchanges all connected together with a system of toll lines.

Smith's first dep., pp. 2 and 3.

The cost of building toll lines and exchanges is kept separate and distinct.

Smith's first dep., p. 9.
Caldwell's first dep., p. 598.

257 The Master has erroneously assumed that no toll lines have been built since January 1, 1900, and that the toll lines in existence on that date have depreciated in value 10 per cent.

There is no evidence of the value of Complainant's toll line system in the record for the reason that the Master was not directed by the Court to ascertain such valuation, and, therefore, no proof was introduced upon this point.

The master, on page 22 of his report, says:

"There is some evidence—though vague and unsatisfactory—that some additions to construction of toll lines have been made since 1900, but the only special line mentioned is one from Louisville to Nashville. This entire line cannot be considered as a part of the Louisville exchange construction. Its cost is said to have been $40,000—but all this cannot be charged to Louisville toll lines. Half of it, at least, must belong to Nashville, and there are other exchanges tapped by it between the termini, such as Bowling Green, Elizabethtown, Franklin and Edgefield."

The discussion with respect to the toll line from Nashville to Louisville was incidental entirely to another question which had arisen, and was not in connection with the construction of Complainant's plant in Louisville.

Smith's first dep., p. 507.

Notwithstanding the fact that the Master insists that the toll line between Louisville & Nashville belongs to all the exchanges between these two cities, yet, after ascertaining the value of the toll lines owned by the Ohio Valley Company on January 1, 1900, the Master, instead of prorating this value among the nine exchanges owned and operated by the Ohio Valley Company at that time, has allotted to the Louisville Exchange the entire value of the toll line system of the Ohio Valley Telephone Company.

That this is improper treatment is so manifest that no proof is necessary to overthrow it, and Complainant excepts to the
258 action of the Master in respect to his method of ascertaining toll line value, and its apportionment to the Louisville Exchange.

"F."

Complainant excepts to the report of the Master in that it fails to report the value of the real estate and improvements thereon, which constitute a part of the Louisville Exchange.

This real estate has cost to March 9, 1909, the sum of $162,191.42. Its value is equal to its cost.

Dep. of Burton.

Dep. of Brand.

The Master should, therefore, have reported the value of Complainant's real estate and improvements thereon, which constitutes a part of the Louisville Exchange, and having failed to do so, Complainant excepts.

"G."

Complainant excepts to the report of the Master in not allowing anything for "Supplies" and "Working Capital."

It is apparent that these things are necessary in order to conduct a business. There must be supplies on hand to care for the plant from day to day; there must be some money on hand to handle the business. All these things are recognized and allowed by the different experts. Mr. Polk says that he thinks that supplies and furniture and fixtures should be allowed to the extent of $20,000.00, and that there should be from $10,000.00 to $20,000.00 for working capital.

Polk's second dep., p. 49.

The Chicago Commission allowed in a plant costing $18,773,-
333.00 including real estate, tools and supplies, furniture and
259 fixtures, supervision and engineering, interest and insurance, bank balance and brokerage, the following amounts:

Tools and supplies	$250,000.00
Bank balance	300,000.00
Or a total of	$550,000.00

Chicago Committee's report, p. 56.
Wilkinson's report, pp. 54-5.

Complainant, therefore, excepts to the report of the Master in not including any of these items in his estimate of the value of the property.

Summary.

Complainant insists upon a valuation of its plant, excluding toll lines and real estate, as of March 9, 1909, of	$1,702,391.68
Real estate and improvements	162,191.42
Total	$1,864,583.10

The foregoing figures do not include franchise, going business, interest, working capital and supplies.

That all of these items are proper to be included in the valuation of the plant is apparent, but Complainant is content with the values above set out, and allows all these omitted items to off-set deterioration in the plant, or any lessening of its value below that of a newly constructed plant.

Therefore, Complainant insists that the Master is in error, and should have reported the present value of Complainant's plant and property in the City of Louisville, as of January 9, 1909, and the date of filing his report to be:

Exchange plant	$1,702,391.68
Real estate	162,191.42
Total	$1,864,583.10

260

III.

"The gross earnings and the net earnings of Complainant upon its plant and property employed in its business in said city for the years 1905, 1906, 1907 and 1908, stating separately as to each of said years, and giving the percentage of net income each year, and whether said percentage is inclusive or exclusive of any allowance for depreciation of plant, or claim for damages for personal or other injuries."

"A."

The Master reports Complainant's gross earnings as set out on pages 23 and 24 of his report.

The Master states on pages 23 and 24 of his report what he

says are the classified gross earnings of Complainant for the years 1905 to 1908, as found by the accountants:

1905	$269,823.38
1906	294,498.44
1907	319,758.51
1908	325,838.30

This includes all exchange earnings, 15 per cent on tolls, toll earnings from American Telephone & Telegraph Company, private line rentals, pole service and attachments, list advertisements, telegraph drops, messenger fees, removals and miscellaneous.

"B."

The Master refusing to accept the joint report of the accountants as to what the gross earnings really were for the respective years has undertaken to rearrange the earnings upon a basis of his own, which is not reported by any of the accountants, nor testified to by any of the witnesses, and the first of these items to be noticed is:

261 Complainant excepts to the report of the Master on page 24, in which he declines to allow 15 per cent of the toll earnings to be credited to the exchange as a proper allowance to the exchange for the service performed by it in handling the toll business.

The records show, without controversy, that Complainant owns and operates a system of exchanges and toll lines throughout a territory one thousand miles long and four hundred miles wide.

Smith's first dep., p. 3.

At these five hundred and seventeen exchanges, exchange service is given to local subscribers, and toll or long distance service is given through the exchange to these local subscribers and to the public generally, for a compensation graduated according to distance and the time of the conversation.

It is shown in the record without dispute that the construction of toll lines and exchanges, and receipts from exchanges and toll lines can be and are kept separate and distinct, but that it is impossible to separate the operating expense of the exchange from the operating expenses of the toll lines.

Caldwell's first dep., pp. 600-601.
Hume's dep., p. 121.
Smith's first dep., p. 542.

It is stated by two of Defendant's witnesses that this separation of expense can be done. One of them, Mr. Polk, gives no way in which it can be done.

Polk's first dep., p. 118.

Mr Crumb in his deposition, after stating it can be done, when asked to explain how, shows conclusively that it is impossible.

Crumb's dep., pp. 63-4.

The record shows that it is the universal custom among
262 telephone companies throughout the system to contract with each other for this service, and fifteen per cent is the maximum amount allowed the exchange for handling the toll business.

Hume's dep., p. 121.
Caldwell's first dep., pp. 600-1.
Smith's first dep., p. 557.

It also appears that in more than a hundred cases Complainant has contracts, some of which provide that Complainant shall at some of its exchanges handle the toll business of other companies for a compensation of fifteen per cent of the out-going toll messages, and that many other companies handle Complainant's toll business through their exchanges for the same compensation.

Smith's first dep., p. 557.

There is no evidence in the record to the contrary, and no instance is cited in which a higher compensation has ever been allowed to an exchange by a long distance company for performing this service.

The Master, on page 25 of his report states:

"Custom of trade among merchants has generally received the sanction of the courts. The reason of this is obvious, because merchants trade with each other at arms' length, and what is generally done under such circumstances ought to be, and is generally upheld by the courts, but the custom here testified to is a very different thing from the custom of merchants. The parent company manages and controls its subsidiary departments as it deems best. The subsidiary department occupies no position of independence, and, in fact, does not and cannot raise a protest."

The Master overlooks the entire testimony with respect to other companies dealing with Complainant on this basis, and Complainant dealing with other companies on this basis. The Master assumes, through inadvertence, no doubt, that the only contracts referred to in the record are contracts between Complainant dealing with
263 itself, with respect to its toll and exchange departments.

This, however, is not a fact. Complainant, of course, makes no contracts between its toll and exchange departments. It operates its entire system of exchanges and toll lines as one property; it carries in its general books the construction, receipts and disbursements of each of its five hundred and seventeen exchanges, and its system of toll lines; but for the purpose of ascertaining the earnings of each exchange, and the earnings of the toll lines, it becomes necessary for Complainant to separate the exchange earnings and the toll line earnings, both gross and net. There is no difficulty in separating its gross earnings. That is kept separate and distinct, but when it becomes necessary to separate the expenses between the exchange and the toll lines entering that exchange, the problem is most difficult. It has been attempted to separate accurately the expense of doing both kinds of business at the same place, but it has been found to be impossible.

Caldwell's first dep., p. 602.

Therefore, in order to ascertain the net earnings of an exchange, it must separate on its own books the earnings and expenses of the two kinds of business on precisely the same basis that it is willing to and does contract with other companies, and the basis upon which other companies are willing to and do contract with Complainant. It is for this reason that evidence has been introduced to show the universal custom of telephone companies dealing with each other at arms' length, independent, and each seeking every proper and just advantage.

These companies deal with each other on the basis of the owner of the toll lines paying to the owner of the exchange fifteen per cent of the out-going messages as compensation for the exchange service in handling the toll business, including necessary central office equipment, rent, operating services, accounting and collecting; and the owners of the exchanges are willing to and do handle the
264 toll business of the long distance companies for a compensation of fifteen per cent of the toll earnings originating at their exchange.

It is also to be noted that no one in this record criticises this basis except the Mutual Audit Company. Neither Mr. Polk, Mr. Leverings nor Mr. Crumb criticises this compensation to the exchange by the toll lines.

On page 39 of Wilkinson's report he states:

"Rate of Connecting Companies."

"We find that the Complainant does business with a great many other telephone companies, whose toll lines connect with the Complainant's exchanges, at various points throughout the State of Kentucky, excepting Louisville.

19 companies or individuals receive from the Complainants a commission of 15% (or less) on original messages.
14 companies or individuals agree to interchange service without charge.
2 companies receive 15% with a small added charge for extra facilities furnished.

35 in all.

We submit for your consideration the suggestion that the foregoing facts establish that the 15% commission allowed to the Louisville exchange for the terminal facilities and recording furnished, is a sufficient remnueration for the service rendered.

In this connection, it is proper to bear in mind that the plant and property owned by the Complainant in the City of Louisville, includes the switchboard and other exchange equipment used in affording terminal facilities for long distance traffic."

The separate report of the Mutual Audit Company was prepared by Mr. Farnham, its General Manager, and Mr. Warren, one of its employés.

Warren's dep., p. 576.

Neither of these witnesses have ever had any experience in
265 the telephone business. Mr. Farnham is not even an expert accountant. He has been a locomotive engineer, a telegraph operator, a train dispatcher, engaged in construction work, electrician, detective, express business, and general manager of some railroad companies, but has never been either a telephone man or an expert accountant.

Fisher's dep., p. 179.

Mr. Warren testifies that he never examined telephone accounts, and has been a bookkeeper throughout his career, being only thirty-two years of age.

Warren's dep., pp. 353-566.

So far as this record shows, fifteen per cent commission to the exchange for operating and handling of long distance calls from the toll lines is the correct and proper compensation for the service rendered.

It is also shown, and not in any way disputed, that it is an added value to the exchange subscribers to be able to be put into communication with the toll lines so as to receive, or send, long distance calls from their particular station in their residence or business house, and this advantage and benefit is taken into consideration in fixing the exchange subscriber's rates.

Caldwell's first dep., p. 599.

The Master, on page 60 of his report says:

"Connection with these long distance lines may be had promptly by subscribers, and this, I consider a most valuable asset, and in my opinion, it will in the future, as in the past, materially aid Complainant in its efforts to secure new subscribers."

If Complainant owned no toll lines, it would, as the Master states, be willing and anxious to make a contract with a long distance company to connect with it and handle its toll business, in order
266 that its subscribers might have this added facility, and would, in fixing subscribers' rates, take into consideration this added advantage, which had been contracted for with the long distance company.

The Master, on page 26 of his report states:

"Mr. Caldwell and Mr. Smith emphasize the fact that the toll line connections are arranged for the convenience of the subscribers, so that at a moment's notice any subscriber in Louisville may connect with the Long Distance Department, and that this accessibility is an important factor in determining what are reasonable or unreasonable rates to be charged the subscribers.

This argument would be plausible if the toll service and its convenience were furnished by a stranger company, in which case the fair and reasonable distribution of the revenues and the proper allotment of the cost of operation would be regulated and controlled by a solemn contract between independent parties. But Complainant is the owner of the toll lines. It operates them and is entitled to receive, and does receive the revenue. It is also the owner of the

Louisville exchange. The question then is whether or not the division of toll line revenues, as set out above, is fair and reasonable under existing conditions."

The Master, stating that fifteen per cent of the out-going tolls does not appeal to him as being a reasonable division, proceeds to allot to the exchange one hundred per cent of the tolls, thus taking the entire revenue of the toll lines and treating it as a part of the exchange revenue.

It is submitted that if fifteen per cent is not sufficient compensation to the exchange, one hundred per cent is certainly too much compensation.

The Master, no doubt, was influenced in his conclusion by assuming that the fifteen per cent commission was largely less than it really is.

On page 27 he states that the fifteen per cent of the earnings of the toll department has been credited or paid to the Louisville Exchange as follows:

267

1905	$6,539.92
1906	7,064.91
1907	8,030.15
1908	7,632.11

The correct amount is:

1905	$10,482.72
1906	12,280.80
1907	14,774.08
1908	13,693.33

See report of Master, pp. 23 and 24, where the proportion of tolls earned includes items 2, 4, 8 and 9, making the totals above set out.

For the foregoing reasons, Complainant excepts to the report of the Master in declining to accept fifteen per cent of the toll earnings as a proper compensation to the exchange for handling the toll business for the long distance lines.

"C."

Complainant excepts to that part of the report of the Master in which he states that the exchange plant is charged with the expense of maintenance and reconstruction of toll lines.

The Master states, on page 28 of his report:

"There is another branch of this question that requires notice. It appears that the maintenance, repairs and maintenance, reconstruction of toll lines and toll equipment are paid by the Louisville exchange. What the cost of the labor and material for this purpose amounts to I have been unable to ascertain from the record. That it is a substantial sum may be assumed."

It is not shown anywhere in the record that the cost of maintaining and reconstructing toll lines is charged to the Louisville Exchange. In this the Master is in error. The most that can possibly

be claimed is that where a break or accident happens to a
268 pole route in the Louisville Exchange plant which carries toll lines as well as exchange subscribers' lines, that the employé of the company who repairs the break in the subscribers' lines also repairs the break in toll wires. It is only such small items as this, if any, that can be shown to have been charged to the Louisville Exchange.

But even though the entire toll lines inside the Louisville Exchange area were maintained and reconstructed and charged to the Louisville Exchange, the amount would be too insignificant to affect any result or call for special attention and treatment.

It is shown in the record that there are only eighty toll circuits entering the Louisville Exchange, and a part of these are used to give free service to the exchange subscribers of the Louisville plant to the various small exchanges in metropolitan Louisville.

Smith's first dep., pp. 40 and 537.

It is also shown that every toll circuit entering Louisville comes in on exchange subscribers' pole routes.

Smith's first dep., p. 536.

These pole routes would have to be maintained whether they carry toll circuits on them or not, and the proportionate amount of the maintenance to be apportioned to toll circuits in comparison with exchange subscribers' circuits is shown as follows:

The proportion of circuits to the number of telephones installed in the Louisville Exchange is sixty-two per cent.

Jagoe's dep., p. 24.

The number of telephones in use in the exchange is 9,395.

Jagoe's dep., p. 8.

It thus appears that 62 per cent of 9,395 gives 5,824, the number of exchange circuits in use in the exchange. Assuming that the entire eighty toll line circuits were used exclusively for toll
269 line business, and no part of them were used in giving free service to the Louisville subscribers to the small adjoining exchanges, it would result that less one and one-half per cent of the circuits in the Louisville Exchange are toll circuits. And thus it is that, assuming they are maintained in the Louisville Exchange area, and charged to the Louisville Exchange Expense Account, the amount is so inconsiderable as to be of no practical use or value in this case. One and one-half per cent of the entire maintenance and reconstruction expense of the Louisville Exchange, covering switchboards, instruments, poles, wires and all apparatus and material of every kind is for 1908, $1,292.32, but of course the entire amount of maintenance and reconstruction expended in 1908 was not expended on either poles or wires. Even if fifty per cent of the maintenance and reconstruction for 1908 was incurred on account of poles and wires in the Louisville plant, then the amount to be borne by the toll circuits, assuming all of them to have been used exclusively for long distance business, would amount to less than $646.16.

It is, therefore, submitted that the criticism of the Master in this respect is quite immaterial.

"D."

Complainant excepts to the report of the Master in the method by which he reduces the rent of the real estate and improvements owned by Complainant in Louisville.

It has been the practice of the Complainant to carry upon its books its real estate in a separate account. It added no part of the cost or value of its real estate to the plant account. It required the exchange to pay a revenue of not exceeding eight per cent upon the actual cost, but the buildings on the real estate were maintained out of this not exceeding eight per cent, and the exchange paid the insurance and taxes.

This was done as a convenience to Complainant in keep-
270 ing its accounts. It is not unfair to its patrons, since Complainant is entitled to a net revenue of at least eight per cent (less the repairs on real estate improvements), as compensation for furnishing the real estate and improvements for the use of the plant. Another reason for this is that Complainant does not charge any depreciation against any part of the real estate and improvements in ascertaining depreciation on the plant, and for this reason it is necessary to keep separate the real estate department from the remainder of the plant; but the criticism of this treatment of the real estate only involves a small amount.

In 1908 the exchange paid as rent for the real estate and buildings	$13,800.00
Wilkinson's report, p. 48.	
Complainant paid out of this sum for repairs on the buildings	2,092.48
Wilkinson's report, p. 49.	
Making a net rental of	$11,707.52
The cost and value of the real estate to December 31, 1908, is	$160,841.42

Which gives Complainant a net return on its real estate in Louisville for 1908 of only 7.28 per cent.

However, if no rent is to be charged against the plant for the real estate, then the plant value must be increased by the value of the real estate, and in this way the amount for 1908 upon which a net return must be earned is increased by	160,841.42
If Complainant is allowed to earn net only 6 per cent on the value of its plant, the difference is only	2,056.62
It is thus seen that the Complainant's treatment of real estate can only increase the expenses of the exchange, on a basis of a 6 per cent net return	2,056.62

271 "E."

Complainant excepts to the following language from the Master's report on page 29:

"It is further true that the toll department could not be as profitably conducted unless it were intimately connected as it is with an exchange. The Complainant owns and controls both departments. Complainant has introduced testimony which shows that the toll department as it is operated is very profitable, while the exchange is unremunerative. This condition, as appears from the evidence, is brought about, as I have shown, by the arbitrary allotment of all operating expenses of the toll department to the exchange, and by setting aside only fifteen per cent of its revenue to the exchange, and by passing eighty-five per cent thereof to the general surplus or reserve fund of Complainant."

The Master is entirely in error in this statement. No proof was introduced showing whether the toll department was remunerative or unremunerative. The toll department was not under inquiry, and no proof was offered by either party to show the result of the operation of the toll lines, nor did the Master request any such proof.

The Master assumes that eighty-five per cent of the toll line receipts are net profits, and are passed to the reserve account of Complainant. Complainant excepts to this statement. Such matters were not gone into in the evidence because there was no inquiry directed to this part of the Complainant's business by the Court in the Order of Reference.

There is no evidence in the record that the toll department could not be as profitably conducted if it were independent of the exchange, and the statement that its intimate connection with the exchange is responsible for its prosperity is a conclusion of the Master without evidence to support it.

"F."

Complainant excepts to that part of the report of the Master on page 31 where he states:

272 "I fail to see any just reason for separating the earnings of the toll department from the earnings of the exchange. If all the toll earnings be given to the exchange, and the expenses of toll operations and taxes and insurance be paid out of exchange earnings, the result will not affect the net cash receipts of Complainant."

In this statement the Master again assumes that the only expense connected with the toll department is that performed by the exchanges for which they receive fifteen per cent commission.

This assumption leaves out of view entirely the expense of maintenance, reconstruction and other expenses in connection with the operation of a toll line system. It ignores the many items of expense which of necessity must be incurred in keeping toll lines free from obstructions, keeping insulation in proper condition so that the lines may be used by Complainant's patrons. It leaves out of view the enormous expense of erecting these pole lines throughout

the entire area of Complainant's territory, the taxes, damages, various other items of expense in constructing, maintaining and reconstructing the toll line system.

"G."

Complainant excepts to the report of the Master in stating that its books show operating expenses as set out on page 23 of his report.

The Master sets out on page 23 of his report what he says is the operating expenses of the Complainant for the years 1905 to 1908 inclusive, "according to Complainant's books."

In this the Master is in error. These are the operating expenses of Complainant as corrected and classified in the joint report of the accountants, and are not what the books of Complainant show, but are essentially different.

Joint Report, p. 5.

273 The joint report of the accountants shows operating expenses as follows:

1905	$227,171.29
1906	233,898.28
1907	246,598.61
1908	217,395.53

The books of Complainant show operating expenses as follows:

1905	$240,263.39
1906	247,130.03
1907	260,126.33
1908	227,495.66

There is a difference between the operating expenses as shown on Complainant's books and the amount reported in the joint report of the accountants as follows:

1905	$13,092.10
1906	13,231.75
1907	13,527.72
1908	10,100.13

A part of the difference in each of these years is accounted for as follows:

Complainant in keeping its books charges up all exchange earnings under the head of "Revenue." This is done because these charges are placed upon its books before it is known whether all these accounts can be collected. Thereafter, when it is ascertained that any accounts are uncollectible, they are charged as expenses, which offsets a like amount of revenue. This is done because it is more convenient in keeping the books to do it this way.

The accountants, in making up their joint report, knowing what revenue had been collected, stated the net revenue that had
274 been collected by Complainant, and, therefore, did not charge uncollectible accounts as an expense. The result to Com-

plainant is the same, and its books at the end of any given period would show larger gross earnings and larger expenses by the exact amount of uncollectible accounts, but the one would offset the other. The accountants have eliminated bad debts, both from the earnings and expenses, thus leaving earnings and expenses without being encumbered with uncollectible accounts.

So that, as stated, a part of the difference in expenses between the books of Complainant and the joint report of accountants, as above set out, is as follows:

	Bad Debts.	Net Difference.
1905	$1,679.39	$11,412.71
1906	1,519.41	11,712.34
1907	2,344.94	11,182.78
1908	3,707.34	6,392.79

Smith's first dep., Exhibit 1.

Substantially all the remainder of this difference is accounted for in the following way:

During the time the Mutual Audit Company were examining the books of Complainant they had in their employ at Nashville, Tenn., but not in the office of Complainant, where they were engaged in their work, a man by the name of Settle, who had been for many years local cashier of Complainant at its Louisville Exchange. It was developed that he was a defaulter and he was discharged about September, 1908.

Dep. of Settle, pp. 303-5.

This witness occupied a desk in Complainant's office of its Main Exchange Building in Louisville on the first floor. He undertakes to give with great accuracy, during all of the time he was so employed, the exact amount of time various of Complainant's
275 employés spent in the Louisville Exchange, and the time spent by them elsewhere. He undertakes to give the time spent by the Superintendent of the Louisville Division in his office, although the Superintendent's office was on the next floor, and was entered by a door not connected with the floor on which Settle had his desk.

Dep. of Settle, pp. 272, et seq.

The Mutual Audit Company, having in its employ this young man Settle, undertook to deduct from the Louisville Expense Accounts a part of the wages and salaries of the men named by Settle in proportion that the time Settle said they were in the Louisville Exchange compared with the time he said they were in other places.

It thus appears that these deductions were made from the expenses as entered upon the books of Complainant, and as shown by the original payrolls, alone upon the statement of a man who had proven unworthy of confidence, and who had been discharged from Complainant's service.

As soon as these facts were developed in the evidence, proof was introduced by Complainant to show, not only that these deductions from its expenses were unjust, but that it was a physical impossibility for Mr. Settle to have any such knowledge as he claimed to possess, and upon which deductions of several thousand dollars per annum had been made from the expenses of conducting Complainant's Louisville Exchange.

Mr. Hume, the General Manager of the company, makes the following explanation:

"The exchange, in addition to being under the general supervision of a district superintendent, has its local manager, its general foreman of plant or construction, its chief electrician, its chief operator, and the employés that work in these respective departments, and what is there is what would be found in the same size exchange, approximately the same size exchanges as at Nashville and Memphis, no more and no less. As to Mr. Settle's charge
276 that there were men there who were giving one-fourth of their time or any other material part of their time to outside matters, he has made the charge without personal knowledge and without fact. The matter that he has gotten on his mind in a twisted manner is simply this, that in the development of the business around what we term the metropolitan district of Louisville, we have put in a number of small switching exchanges in various sections of the country, both in Kentucky and in Indiana, within a radius of twenty or twenty-five miles of the City of Louisville itself, and at each of these small exchanges, we have employés to take care of the exchange and to give the service from the switchboard. In other words, at each of those switchboards, we have exactly the force we would be compelled to have and that would be found in other small exchanges, even though they might be a hundred miles from any large exchange, but, on account of the fact that to all those exchanges and from all those exchanges there are certain subscribers who have arranged for Louisville service, and the further fact that all the subscribers of Louisville are given access to all these special subscribers in all these exchanges referred to, and given . service without any charge whatever in the way of tolls or additional monthly rate in their exchange, in the interest of their exchange, in the interest of the Louisville service, we allow the manager and the other supervising officers of the Louisville exchange to do whatever may be necessary in the way of supervising, in watching over the service, at these smaller exchanges, but whenever it comes to any actual work, the employment of any of our linemen or troublemen or electrical men or plant men or material shipped to Louisville for the use of Louisville, every item and every minute of time employed by such employés is reported and the proper credit given on the Louisville account and proper charge made against these smaller exchanges that are not in every respect and, in fact, a part and parcel of the Louisville plant."

Hume's Dep., pp. 116-118.

Mr. Hume then shows how impossible it is for Mr. Settle to have been able to determine what portion of time any of these employés spent in or outside the Louisville Exchange.

Hume's dep., pp. 118-9.

277 Notwithstanding these facts, the accountants who are merely bookkeepers and did not know anything about the reasons actuating Complainant's officers in charging up the expenses of the Louisville Exchange as they did, have seen fit to deduct several thousand dollars each year from the expenses of the exchange which properly belonged thereto.

However, under the agreement heretofore referred to, if Complainant is bound by the joint report of the accountants, then the total expenses for the four years are as follows:

1905	$227,171.29
1906	233,898.28
1907	246,598.61
1908	217,395.53

"H."

Complainant excepts to the report of the Master on pages 35 and 36 where he deducts from the General Expense Account taxes paid on the Main Exchange Building, and charged as an expense against the exchange.

It has heretofore been shown under the head "D," page 134, how real estate is treated by Complainant.

However, the amount deducted by the Master is small and not material in the final result.

"I."

Complainant excepts to the statement of the Master on page 36 of his report, in which he states that certain expenses should be deducted as chargeable to toll department in the event the toll department is separated from the exchange.

He says:

"These charges against the exchange should clearly be made against the toll department, if the latter be treated as an independent department as I have shown supra. But, as I have already
278 disposed of this question, it is unnecessary to go critically into an investigation of the correctness of these figures."

The Master is giving the figures presented by the Mutual Audit Company upon some kind of a theory that the expenses of the toll business and the exchange business should be divided and prorated on the basis of revenue derived from each.

This is purely a theory which has no evidence to support it, and it is manifestly erroneous. It assumes that the toll department is equally as profitable as the exchange department; it leaves out of view any question of what the total toll expenses of conducting the toll department may have been; expenses are then prorated on the

basis of toll earnings; it presumes to prorate expenses on one business because expenses on another business have been ascertained.

However, if these expenses are to be charged against the toll department and taken out of exchange expenses, then the toll receipts should not be credited to the exchange earnings. The result would not be substantially different from that obtained by charging the expenses to the exchange and crediting the exchange with 15 per cent. of the toll line earnings, as Complainant has done in its accounts. The difference between the two amounts is not very material.

The total toll expense, as claimed by the Mutual Audit Company is:

1905	$23,536.25
1906	24,671.90
1907	24,478.86
1908	20,239.65

Report of Mutual Audit Co., Ex. 9.

The amount added to exchange earnings, by allowing the exchange 15 per cent. of toll earnings, is:

279	1905	$10,182.72
	1906	12,280.80
1907		14,674.08
1908		13,693.33

Master's report, pp. 23, 24. (Items 2-4-8 and 9.)

The difference is all that can be claimed by any one to have been added to exchange expenses above what is admitted by all to have been exchange expense.

This difference is:

1905	$13,053.53
1906	12,280.80
1907	9,804.78
1908	6,546.32

"J."

Complainant excepts to the method by which the Master applies depreciation of plant in arriving at a basis of net earnings for each of the four years 1905 to 1908, inclusive.

On page 37 the Master states:

"In regular order, the next items of expense are maintenance repairs. The charges under this heading are for the current repairs, mending breaks, tightening wires, rectifying trouble, and generally maintaining the property in first-class running order."

On page 38 he says:

"The next item of expense to be considered is entitled Maintenance Reconstruction. This is a subdivision of Maintenance. The items making up this account are mainly salaries and wages, mate-

rials and traveling expenses. Why this separate account should have been kept I cannot understand from the evidence. The witnesses on behalf of Complainant admit that the two accounts, Maintenance and Maintenance Reconstruction, are practically one and the same. Mr. Caldwell says the distinction between them is shadowy."

280 Both maintenance repairs and maintenance reconstruction are a part of the expense of conducting the business. Maintenance repairs is, as stated by the Master, making current repairs. In other words, maintaining the property in an operating condition, but no part of maintenance repairs adds anything to the value of the plant, nor, indeed, does it rebuild any part of the plant.

On the other hand, maintenance reconstruction is not simply taking care of ordinary breaks or ordinary repairs so as to keep the plant in an operating condition, but it is a renewing, or a rebuilding of parts of the plant. It is the substitution of new construction for old construction.

It is wholly immaterial to the owner of the plant whether these two items be kept separate or not. Both are items of expense in operating the plant. Both items must be treated as expense of conducting the business precisely as operating expenses, insurance and taxes, and various other expenses necessarily incurred in operating a plant. It is only important to separate maintenance repairs from maintenance reconstruction when it is desired to ascertain the amount of reserve for depreciation. Before it can be determined what depreciattion is to be set aside, it is necessary to first ascertain how much depreciation has been taken care of during the particular year under inquiry. If the plant has been partially rebuilt, to this extent depreciation has already been taken care of, and nothing is to be set aside for that part of the depreciation, and it is for this reason alone that maintenance repairs must be separated from maintenance reconstruction.

A simple illustrattion of the difference between maintenance repairs and maintenance reconstruction is given by one of the witnesses:

"If you will let me use the illustration, I will take a suit of clothes. During the time that suit of clothes is kept or worn,

281 it is often brushed, sometimes cleaned by a cleaner, and it is giving good service, but there does come a time, notwithstanding the very best treatment that can be given that suit of clothes by a careful man, the most careful care a man can take of it, that it has to be cast aside, but, up to the day it is cast aside, it is giving, as far as wearing is concerned, one hundred per cent. service. Now, during that time, using the suit of clothes in connection with the telephone plant, the plant is being maintained by a percentage or sum of money set apart from time to time as may be necessary to do that, but there comes a time necessarily when that thing actually and in fact goes out of commission and out of service, and must be taken out of the plant. Then comes in the question of falling back on this account which has been set apart for depreciation or de facto replacement of the property."

Dep. of Hume, p. 110.

Maintenance repairs and maintenance reconstruction do run into each other. They run into each other because the line of demarcation between what is repairs and what is a replacement or reconstruction is vague and shadowy, and, as stated by Mr. Caldwell:

"It is a hazy line in there that requires very careful auditing to determine just where it should properly belong."

Caldwell's second dep., p. 22.

It is plain that, where a new pole route is substituted for an old pole route, this is replacement, or "maintenance reconstruction"; it is a renewal of that part of the plant which has served its life; and, on the contrary, where wires become so slack that the service is impaired, and employés take the slack out of that wire, and tighten it up, this is current repairs, or "maintenance repairs," because no part of the plant has been renewed, but the same wire has been put into an operating condition. If all reconstruction and all repairs were as plain and simple as these two illustrations of renewal of the pole route and tightening up of the wires, there would be no difficulty; but as these two extremes approach each other, the
282 line of demarcation between what is maintenance repairs and maintenance reconstruction becomes vague and shadowy, and it was in this sense that Mr. Caldwell said that "the line between the two required very careful auditing to determine to which item such expenses should be charged."

But, as heretofore stated, it is of not the slightest concern to the owner of the property to determine whether any particular item of expense shall be charged to maintenance repairs, or to maintenance reconstruction, because both are expenses of conducting the business, and must come out of the gross receipts before there can be any talk of profit. It is important, as stated before, only in connection with the inquiry as to what amount of depreciation has been cared for in an order to determine what amount of uncared for depreciation shall be added to the other expenses, before ascertaining net profits.

At this point it beomes necessary to except to the report of the Master with respect to his treatment of

Depreciation.

On pages 40 and 41 of the report, the Master says:

"I have found, in answer to interrogatory No. 5, that a proper allowance for depreciation will be seven per cent of the value of the plant for each of the years 1905, 1906, 1907, and 1908, and for subsequent years.

In order, therefore, to make my findings as to the net profit and the percentages thereof, I must show under this division, the amount of such depreciation found, and how it will affect the net earnings."

The Master then gives what he says is seven per cent on the value of the plant as found by him for each of the years in question, and states that the average amount of depreciation allowed for the four years is, per annum, $92,449.45.

The Master then states, on page 41:

283 The amount actually expended by Complainant for maintenance and reconstruction for each of said years on an average is $94,490.19.

The Master then proceeds to find that "the average annual excess of expenditures over allowance for depreciation is $2,050.74."

The Master then proceeds, on pages 41-42:

"An analysis of the above figures leads me to believe that in a period of ten or fifteen years, the allowance of seven per cent for depreciation will be ample. An expenditure for maintenance in one year of an amount in excess of seven per cent will probably be followed in the next year by a requirement of a less amount.

But in ascertaining the percentage of net earnings to the value of the plant, it is proper to deduct from the net earnings as found above, the average excess of the maintenance expense over the average allowance for depreciation."

Upon this basis, the Master proceeds to figure the per cent of net earnings to the value of Complainant's plant as found by him for the four years involved.

Master's report, p. 42.

"K."

The Master, after allowing seven per cent for depreciation, has included, as a part thereof, maintenance repairs. This is clearly erroneous.

Depreciation is not repairing or maintaining the property or plant in an operating condition. Depreciation is intended to care for silent decay, changes in the art brought about by the evolution in the business, changes required in shifting parts of the plant, owing to the municipal authorities, orders, and unknown but certain disasters which come in a cycle of time.

There is another expense of operating a telephone plant

284 which is not connected with in any way the depreciation of the plant, and that is maintaining the property in an operating condition, and called "current repairs," "operating maintenance," "maintenance repairs," or merely "maintenance."

Depreciation does include reconstruction. It embraces reconstruction; and, in addition, embraces evolutions in the art requiring the replacement of parts of the plant that have not worn out, but are replaced because of newer and better apparatus and appliances; and, also, as stated, shifting of plant on account of the necessities of the city, and unknown disasters, or losses, that always come within a cycle of time, and must be provided for out of earnings.

There is no confusion in the record among the witnesses as to "maintenance" and "depreciation."

Mr. Caldwell, Complainant's President, states:

"Depreciation covers—in other words, when I am considering depreciation and when I am discussing it, it covers quite a wide field. Not only is contemplated the wear and tear that is not observable, or that does not require immediate attention, but it also contemplates

the changes in the art, the evolution that has gone on and is going on continuously, and the unknown dangers and hazards that are likely to come up and are sure to arise in some form, not at stated intervals, and not perhaps frequently, but will arise in some form or other and call for extraordinary expenditures. That, I say, is the field that I have before me when I am considering the question of depreciation, and the necessity to provide therefor is imperative. As to how it may be treated, or how it may be kept, it is a subject that will vary and has varied with different people in different lines of business, but whether it is reckoned within the accounts or not, does not alter the fact that the force is working its way all the time, and that it will have to be reckoned with inevitably. In other words, it is a force that is not dependent upon the whims or idiosyncrasies or opinions of individuals. They are entirely above and beyond any such influences."

Caldwell's second dep., p. 13.

285 And again, in reply to a question by the Master, he explains the difference betwen depreciation and maintenance as follows:

"If a brick—if something should fall off of this house, a brick or something, and break our route in two there, men would go there to repair that. The cost of doing that would be Incidental Repairs, and it would go into Maintenance, but it would not be that class of expenditure which would be counted as a thing to perpetuate and renew the property. Now, then, all that class of expenses, if it had gone into Maintenance, would have to be taken out, and excluded before you made up the amount that would represent what you term the equivalent of seven and a half per cent. (Depreciation.)"

Caldwell's second dep., p. 21.

Mr. Crumb, one of the city's expert engineers, says:

"Assuming there are ten thousand telephones and operating, general and maintenance expense of $150,000, there should be added to those expenses the sum of money based upon the actual cash investment in the plant sufficient to cover the depreciation. Taking the actual cash investment in the plant at approximately one million dollars, and figuring depreciation at seven per cent, would be $70,000, which should be added to the $150,000, making $220,000, which it would be necessary for the telephone company to earn to cover the actual cost of operation, maintenance, general expense and depreciation."

Crumb's dep., p. 80.

Mr. Levings states that:

"In figuring the expenses of operating a telephone plant, you must allow for depreciation, operating, maintenance, and general."

Levings' dep., p. 38.

Mr. Polk says that:

"In operating a telephone plant, you must allow for general ex-

penses, operating expenses, maintenance expenses, and, in addition, depreciation."

He speaks of maintenance as "maintenance operating," in-
286 stead of "maintenance repair," as some of the other witnesses call it.

Polk's second dep., p. 70.

In the statement of the estimated expenses as found by the Chicago Commission in 1907, it is shown under what classification telephone expenses should be grouped, and they are as follows:

Operation, maintenance, general, depreciation and interest.

The commission includes under maintenance the following:

Switchboard repairs, etc., line and telephone repairs, cable repairs, conduit repairs, pole line repairs, line wire repairs, telephone and private branch exchange inspections, out orders, plant changes, etc., care of buildings, etc.

After allowing all of these expenses under the head of maintenance, the commission over and beyond this, allows for depreciation and interest.

Report of Committee to Chicago Council, p. 58.

It thus appears that the treatment by the Master of depreciation is erroneous, and his findings as to any return for each of the four years from 1905 to 1908, inclusive, is based upon an erroneous conclusion to which Complainant excepts.

"L."

Complainant excepts to the report of the Master in finding net earnings for the years 1905 to 1908, inclusive, as shown on page 42 of his report, and also the percentage of net earnings to the value of Complainant's plant for same years and that the above percentages are inclusive of allowances for depreciation of property and plant.

First Basis.

This basis is upon the assumption that the Master
287 allows seven per cent per annum of the value of the plant as proper amount for depreciation.

The Master states in his report, on page 41 that seven per cent depreciation per annum upon the value of the plant, excluding real estate, is reasonable, and that he allows this amount.

But when he comes to apply this depreciation he does so in an improper manner.

The Master finds on page 39 of his report the balance of revenue over expenses to be:

1905	$80,830.59
1906	101,694.65
1907	119,741.78
1908	152,723.93

The Master finds, on page 41, the amount which he allows for depreciation to be:

1905	$86,818.77
1906	93,457.53
1907	94,914.66
1908	94,606.83

There was actually expended on reconstruction in

1905	$41,051.02
1906	40,626.07
1907	41,895.10
1908	31,450.07

The amount actually expended on reconstruction each year should be deducted from the amount allowed by the Master for depreciation in order to arrive at the balance, or the reserve for unexpended depreciation.

Deducting the amount actually expended on reconstruction from the total allowance by the Master for depreciation gives a balance of

288

1905	$45,767.75
1906	52,831.46
1907	53,019.56
1908	63,156.76

This balance of the reserve for depreciation as allowed by the Master should be deducted from the revenue as found by the Master in order to arrive at net earnings. This balance deducted from earnings as found by the Master leaves net earnings of:

1905	$35,062.84
1906	48,863.19
1907	66,722.22
1908	89,567.17

But this amount must be further reduced, because the Master has included the entire toll receipts as a part of the exchange earnings. As has heretofore been shown under "I" (p. 142), the most extravagant claim by any one in the record as to the expenses for the toll department for the respective years, are:

1905	$23,536.25
1906	24,671.90
1907	24,478.86
1908	20,239.65

Mutual Audit Company's Exhibit No. 9.

Total toll earnings:

1905	$47,542.25
1906	52,315.38
1907	60,278.24
1908	56,942.03

(These toll learnings are arrived at by adding the toll receipts as shown on page 33 of the Master's report, and the fifteen per cent of toll business allotted to the exchange on page 23-4 of the Master's report, consisting of items 2, 4, 8 and 9.)

289 If from the total gross toll earnings there be deducted total gross toll expenses, the result will be the net toll earnings which the Master has included in the net exchange earnings. The net toll earnings are:

1905	$24,006.00
1906	27,643.48
1907	35,799.38
1908	36,702.38

In order to correctly ascertain the net earnings of the exchange on this basis, it becomes necessary to deduct the net toll earnings from the Master's net exchange earnings, as the Master includes gross toll earnings in exchange earnings, and gross toll expenses in exchange expenses, so that if only net toll earnings be deducted from net exchange earnings, as found by the Master, we thus eliminate toll earnings and toll expenses.

The net exchange profits, on the Master's basis, are:

1905	$31,011.45
1906	48,897.72
1907	54,125.47
1908	98,018.02

Deducting therefrom the net toll earnings for the respective years, the result is:

1905, net exchange earnings	$7,005.45
1906, net exchange earnings	21,254.24
1907, net exchange earnings	18,326.09
1908, net exchange earnings	61,315.64

It will be recalled that the Master deducted $100,000 from the construction account for the years 1900 to 1908, inclusive, because he said that it was improperly charged to construction. If this $100,000 is to be deducted from construction, then, a part at least, must be added to the expenses of conducting the business during that period, because a part at least, according to

290 the Master's report, of this $100,000 was expended, and the only controversy is as to whether it was expended in operating the exchange, or in adding to the construction account. However, since the Master leaves it uncertain how much of the $100,000 is expense, no part of it will be added to exchange expense.

If there be deducted the loss which would be sustained under the rates prescribed in the ordinance of	$19,721.76
The result is, for 1908, a net profit of only	11,593.88

Second Basis.

This second basis is upon the assumption that Complainant is entitled to no amount for depreciation, beyond the amount actually expended in each year for depreciation.

The Master finds the net earnings to be for:

1905	$80,830.59
1906	101,694.65
1907	119,741.78
1908	152,723.93

In order to correctly ascertain the net earnings of the exchange on this basis, it becomes necessary to deduct the net toll earnings from the Master's net exchange earnings, as the Master includes gross toll earnings in exchange earnings, and gross toll expenses in exchange expenses, so that if only net toll earnings be deducted from net exchange earnings, as found by the Master we thus eliminate toll earnings and toll expenses. Eliminating net toll earnings, the result is:

1905, exchange earnings	$56,824.59
1906, exchange earnings	74,051.17
1907, exchange earnings	83,942.40
1908, exchange earnings	116,021.55

It will be recalled that the Master, on page 21 of his report, has deducted ten per cent of the value of the plant for depre-
291 ciation, *i. e.*, from January 1, 1900, to December 31, 1908, he says the plant depreciated $138,112.44.

It is apparent that this loss must be considered a part of the expenses of conducting the business. If Complainant had a property which had cost $1,381,124.41, and it depreciated in nine years $138,112.44, if the depreciated value is to be accepted as the present value, then the depreciation, or loss in value of the plant, must be added to the expense of conducting the business.

It is also apparent that this $138,112.44 ought not be prorated in the expense evenly over the nine years, for the reason that there was very much more property to depreciate in 1908 than there was in 1900.

On the Master's basis, the property was worth on January 1, 1900, $457,579.07.

Master's report, p. 8.

There was only added to construction that year $166,775.23.

Joint report of accountants, p. 3.

So that at the end of the year 1900, on the Master's theory the property had cost only $624,354.30; whereas, at the end of 1908, the Master finds the property had cost $1,381,124.41. It thus appears that this $138,112.44, should not be pro rated evenly over the nine years, but a much larger proportion should be pro

rated on the last four years than on the former years. However, if it be prorated evenly over all the years, the result is a total annual deduction of $15,345.82, the one-ninth of $138,112.44.

This deducted from the net earnings as above, leaves real net earnings on the Master's basis of:

1905	$41,478.77
1906	58,705.35
1907	68,596.58
1908	100,675.73

292 If there be deducted the loss which would be sustained under the rates prescribed in the ordinance of $49,721.76

The result is, for 1908, a net profit of only 50,953.97

Third Basis.

This third basis is upon the assumption that the Master should have allowed the 15 per cent of toll receipts to the exchange as sufficient compensation for its service to the toll lines.

The amount of net earnings as reported by the Master, on page 39, is:

1905	$80,830.59
1906	101,694.65
1907	119,741.78
1908	152,723.93

Included in these net earnings are the total toll earnings.
See Master's report, p. 33.

These toll earnings, over and above the fifteen per cent allowed the exchange, amount to:

1905	$37,059.53
1906	40,034.58
1907	45,504.16
1908	43,248.70

If this should be deducted from the net exchange earnings, as found by the Master, the result is:

1905 net earnings	$43,771.06
1906 net earnings	61,660.07
1907 net earnings	74,237.62
1908 net earnings	109,475.23

There must also be deducted a proportionate amount of the depreciation deducted by the Master from the construction account, as shown on page 21 of his report, of $138,112.44.

293 As has heretofore been pointed out, it is not fair to deduct only the one-ninth part of this depreciation from each of the last four years under consideration. A much larger amount

than an equal pro rate should be allowed as heretofore shown. However, if the total depreciation of $138,112.44 is pro rated evenly over the entire nine years, the result is for each year $15,345.82.

If this item be deducted from the Master's net earnings for each of said years, it reduces the Master's net earnings to:

1905	$28,425.24
1906	46,314.25
1907	58,891.80
1908	94,129.41

If there be deducted the loss which would be sustained under the rates prescribed in the ordinance of..... $49,721.76
The result is, for 1908, a net profit of only..... 44,407.65

Mutual Audit Company's Basis.

It will be recalled that the Mutual Audit Company, the accountants selected by the Defendant, made a separate report to the Master and in this report they find the net earnings for the years in controversy to be as follows:

1905	$101,010.80
1906	118,737.95
1907	130,012.58
1908	151,612.74

Mutual Audit Company's Exhibit No. 15.

These net earnings are arrived at by eliminating what is called toll expenses and toll revenue. There is also eliminated for each of the years the exact amount spent by Complainant on reconstruction, and nowhere is this expense charged in the operation of the exchange for the respective years. They simply deduct the amount expended on reconstruction, stating that this amount should
294 be charged against reserve, but no where do they create a reserve to which this reconstruction can be charged.

Mutual Audit Company's report, p. 27.

The amount of reconstruction for each year, as found by the Master on page 23 of his report, is as follows:

1905	$41,051.02
1906	40,626.07
1907	41,895.10
1908	31,450.07

Deducting these amounts from the net revenue as reported by the Mutual Audit Company leaves net revenue on this basis of:

1905	$59,959.78
1906	78,111.88
1907	88,117.48
1908	120,162.67

The Master has stated that the plant has depreciated in the nine years $138,112.44.

Master's report, p. 21.

If only one-ninth of this amount be deducted for each of the years, which, as above shown, is manifestly unfair, it will result in a further reduction of net earnings of $15,345.82 for each of the years. Deducting this amount leaves net earnings on the Mutual Audit Company's basis for each of the years as follows:

1905	$44,613.96
1906	62,766.06
1907	72,771.66
1908	104,816.85

The Mutual Audit Company, in arriving at this result, has deducted expenses which they insist should have been charged against other exchanges, as explained in "G" (p. 137). If these amounts, erroneously deducted by the Mutual Audit Company, be
295 added in expenses for the respective years, it would result in the net earnings, as given above, on the Mutual Audit Company's basis, being further reduced, as follows:

1905	$11,412.71
1906	11,712.34
1907	11,182.78
1908	6,392.72

This, deducted from the net earnings as above shown, leaves the net earnings on the Mutual Audit Company's basis:

1905	$33,201.25
1906	51,053.72
1907	61,588.88
1908	98,424.13

If there be deducted the loss which would be sustained under the rates prescribed in the ordinance of	$49,721.76
The result is, for 1908, a net profit of only	$48,702.37
The Master finds the value of the plant, exclusive of toll lines and real estate, to be	$1,243,011.97

Master's report, p. 21.

The net earnings on the report of the Master are:

First basis, 1908	$11,593.88
Second basis, 1908	50,953.97
Third basis, 1908	44,407.65
Mutual Audit Co.'s basis, 1908	48,702.37

Summary.

Gross earnings:

The Master, following the joint report of the accountants, reported gross earnings:

1905	$269,823.38
1906	294,498.44
1907	319,758.51
1908	325,838.20

This includes the 15 per cent of tolls.

296 Gross expense:

The Master reports gross expenses, as shown in the joint report of the accountants:

1905	$227,171.29
1906	233,898.28
1907	246,598.61
1908	217,395.53

Unless Complainant is bound by the joint report of the accountants, these gross expenses must be increased, as shown in "G" (p. 137), as follows:

1905	$11,412.71
1906	11,712.34
1907	10,886.81
1908	6,392.79

The real gross expenses, which the Master should have reported, will be, after adding these omitted items last above set out, the following:

1905	$238,584.00
1906	245,610.62
1907	257,485.42
1908	223,788.32

The Master should, therefore, have reported the balance of revenue, after deducting expenses, as follows:

1905	$31,239.38
1906	48,887.82
1907	62,273.09
1908	102,049.98

The foregoing does not include any allowance for depreciation, except the actual amount expended for each of the years on reconstruction. It is only important to show that for the year 1908 the amount expended was only $31,450.07

Master's report, p. 38.

297 *Rates Prescribed by Ordinance.*

If the rates prescribed in the ordinance had been in effect in 1908, the net profit would have to be reduced by . $49,721.76
Leaving a balance of revenue over expenses for the year 1908 of 52,328.22

From this amount there must be deducted incomplete depreciation of whatever amount may be allowed.
If the depreciation be allowed as found by the Master on page 41 of his report, amounting to $94,606.83
The reserve for, or the incomplete depreciation, will be reduced by 31,450.07
Leaving a reserve for depreciation of 63,156.76
Or a net loss under the ordinance rates of 10,828.54

Complainant excepts to the report of the Master, because he did not so report.

IV.

"The Special Master is directed to make an estimate upon the testimony, and state his conclusions therefrom as to what would be the reasonably probable gross and the reasonably probable net income of Complainant from its said plant and property employed in its business in said city for the current year and the year 1910 if the rates of telephone charges fixed by the ordinance enacted by legislative body of Defendant, and approved by the Mayor on March 6, 1909, should be put into operation and effect."

The Master states, on page 43 of his report, that the joint report of the accountants agreed that if the ordinance rates be put into operation, the loss in net revenue to Complainant would amount to $49,721.76.

Joint report of accountants, pp. 5 and 6.

298 "A."

Compainant excepts to the statement of the Master on page 47 of his report as follows: "I am of the opinion that the first year after the new rates shall be in force, say 1911, the net decrease to the company in revenue will probably amount to $30,000 below what the net earnings have been found to be under present rates in 1908."

The joint report of the accountants, as has heretofore been shown and as reported by the Master, states that the loss in revenue under the ordinance rates will amount to $49,721.76 per annum. The record shows beyond any controversy whatever that there will be no decrease in expenses in operating the exchange if the rates prescribed in the ordinance be put into effect.

It is also shown in the record, and without any contradiction, that any increases in patronage will entail at least a corresponding increase in expenses, and also in capital accout, *i. e.*, new subscribers obtained will necessitate new construction to serve them. In this respect the telephone is different inherently from all other known

kinds of business. A water company, gas company, street railway and other like public service companies obtain additional patronage without a corresponding increase in expenses and capital account. They may obtain new patrons without the necessity of increasing their facilities. A new patron enters a street car and pays his fare. This does not entail upon the company the necessity of increasing its equipment, and does not increase its expenses appreciably. The gas company may obtain a new patron and he is served by the existing facilities and appliances, and so with the water company and other public service companies, excepting the telephone company.

Each new subscriber of the telephone company must have
299 his own wires leading from his place of business or residence to the exchange. He must have his separate and distinct instrument, which must be installed for his use; his wires at the switchboard must be connected in such way that he may have access to all other subscribers, and all other subscribers may have access to him, which means that increased patronage calls for increased facilities, which brings at least a corresponding increase in operating, maintenance and other expenses.

This principle is recognized by the Supreme Court of the United States in La. R. R. Com. vs. Cumberland Tel. Co., 212 U. S., p. 426. The Court says:

"We say this because the evidence shows that in the case of telephone companies the general result of a reduction of rates in some other kinds of business does not follow, namely, that there would be an increased demand, which could be supplied at a proportionately less cost than the original business. Such, it is admitted, would be the case generally in regard to water companies, gas companies, railroad companies, and perhaps some others, where the rate is a reasonable one. For example, it is said that it would cost no more, or certainly scarcely an appreciable amount more, to haul a train of two cars both filled than it would to haul the same train with both cars half filled, and if the reduction in rates should result in filling the cars where previously they had not been half filled, there might be an increased carriage at a cost very little more than before, and probably an increased profit. So, in the case of a water company, the reduced rate might result in furnishing more water to consumers already existing, and the increased cost of furnishing the same would be infinite-simal, where there was a supply sufficiently large to fill the demand. So, also, in furnishing gas at reduced rates, the reduction in the rate would very probably result in increased consumption, not only in increased demands from more consumers, but also an increased consumption by consumers already existing, and the increased cost of furnishing the gas would be nothing like in proportion to the increase in consumption. In

these cases increased profits might be the result of decreased
300 rates. But with telephone companies, as shown by the testimony of the president of the Complainant, the reduction in toll rates does not bring an increased demand, except upon the condition of corresponding increase in expenses."

The evidence in the record with respect to the future in operating on the schedule of rates prescribed in the ordinance is as follows:

James E. Caldwell, President of Complainant.

This witness states, in reply to an inquiry as to the policy pursued with respect to rates by himself and associates as compared with the policy pursued by the former owners and managers of the Louisville property:

"The former owners had two rates. They had one business rate, that is to say, they had a rate for private or direct telephones, and a rate for private or direct residence purposes. We endeavored to make a variety of rates which would meet the requirements and wishes of every phase of the community. Our effort was to put the service within reach of everyone in the community. We adopted schedules of rates that were not only a modification of the direct or private business service and the private or direct resident service, but public stations, party-line stations, measured service, and, in the greatest variety, and extending this service not only to the suburbs but well out into the country around Louisville, extending toll line facilities in every direction out of Louisville, so as to offer that community the very greatest sort of value, and expansiveness in the telephone service, we extended it to farmers, market gardeners, dairymen, summer residences, etc., and we endeavored to reach every class and kind of business and individual."

Caldwell's first dep., pp. 596-7.

Again, he says that any decrease in earnings will not decrease expenses; and in reply to an inquiry as to what would be the result to the Complainant if there should be an increase in subscribers owing to the reduced rates, he says:

301 "Well, if you increase your subscribers you would be compelled to increase your facilities and your capital account. You would be compelled to increase your operating force to take care of the greater number of calls that would go over the system; you would have to encounter certainly a shifting of customers from one class of rates to another, which expense you would be certain to meet, but you do not know what it would be. The growth that would take place in that, you could not tell whether it would be on the maximum or the minimum, or in what direction in the city it would be found; it would all be a matter of speculation so that to forecast the future on that is a matter of speculation and doubt."

Caldwell's first dep., p. 606.

And again, he says:

"My opinion is that we would have to provide a considerable additional capital outlay; that we would get little or no additional gross revenue, certainly we would not get more than would be off-set by the additional expense. My deliberate opinion is, it would be a very losing and disastrous experiment."

Caldwell's first dep., p. 608.

Leland Hume, General Manager.

Mr. Hume states that no man who had any practical experience, or any reasonable information about the business, would be willing to say that if the rates prescribed in the ordinance should be put into effect, that it would result in an increase in patronage without at least a corresponding increase in expense. He says such a statement is not a fact, and could not be. On the contrary, he says that an increase in the number of subscribers would entail an increase in the expense of conducting the business, that it would not decrease expenses in any way per subscriber; that an increase in patronage would bring about a proportionate increase in the cost of operating the telephone per subscriber, and that it would be impossible for it to decrease expenses.

Hume's dep., pp. 171-2.

302 He further states:

"When we purchased the Ohio Valley Telephone Company we found what we considered a very small development of the telephone business in Louisville; we promptly set about to provide facilities that would enable us to take on business very rapidly, believing that by providing the facilities that we could then secure the business, and we set about it with the best traffic men that we could procure, men who had established themselves as good traffic men, and solicited business. The rates that the Ohio Valley Telephone Company had formerly charged were not increased, notwithstanding the fact that we proposed to add largely to the exchange if we could, but as the business did not respond except very slowly, we retained those rates, but at the same time added a schedule of rates that were considered very attractive, offering various kinds of service, including the metered service, and measured service, and pay station service, following plans that had been successful in other large cities. Those rates brought about some increase in business, but nothing phenomenal, or nothing that we thought was in accord with what should be accomplished, and as a consequence, we have, from time to time, put out schedules of rates with attractive features, and we have offered, at Louisville, all the features that were attractive and that were taken hold of by other communities, and I can state that we have never conducted our business in any place where more study has been given to the question of placing before the public various types of service and plans for service than has been done by us in the city of Louisville."

Hume's dep., pp. 172, 173.

H. Blair Smith, Auditor.

Mr. Smith states that a reduction in rates would not decrease the expenses.

Smith's first dep., p. 43.

These witnesses not only have a very large experience in the telephone business, but have an intimate knowledge and experience with the operation of the Louisville plant.

Turning to the evidence of the Defendant, we have the same result.

303 *W. H. Crumb.*

Mr. Crumb is a telephone engineer. He states, "Based upon the flat rate basis of charging for telephone service, in my opinion, there is a slight increase in producing telephone service in a given locality in large quantities over what it costs to produce telephone service in moderate quantities, but I believe the cost is often considerably overestimated, and, in fact, very generally overestimated by telephone people; that the cost is not so great as is usually believed to be."

Crumb's dep., p. 90.

This simply means that in Mr. Crumb's opinion there would be a slight increase per subscriber in expenses as the number of subscribers increases.

W. C. Polk.

Mr. Polk is also a telephone engineer. He states that as the number of subscribers increases the cost of the plant must also increase.

Polk's second dep., p. 105.

He also states that the effect of putting into force the rates prescribed in the ordinance would result in an increase in the number of subscribers, and that this would result in an increased capital account, and that it would result in an increase in all expenses of conducting the business; that a reduction in rates would not reduce the expenses at all, but that an increase in patronage would increase the expenses per station to a certain point.

Polk's second dep., pp. 118-19.

Mr. Polk also says, when asked in regard to the reasonableness of the rates prescribed in the ordinance, that he would not be willing to invest his money in a plant only costing $1,300,000, including real estate, if it was to be operated on the rates prescribed in
304 the ordinance; and that it would be a risk he would not care to take if his money was involved to any large extent; he might be willing "to take a gamble" for a small amount.

Polk's second dep., pp. 118-121.

In the report of the Committee to the City Council of Chicago, September 3, 1907, it is said on page 12:

"The average person does not understand why it costs more per telephone to supply telephone service in a large city than in a small city. The assertion of this principle to many seems a paradox. It is regarded as contrary to the ordinary principle of business—that

is, that the unit cost becomes less as the volume of business done increases. It is but natural to think that the wholesale principle ought to apply in the telephone business as in other lines. This idea prevails because the ordinary individual does not understand the peculiar features of the telephone business, and does not look beyond the telephone on the wall or on the desk. He does not take into consideration that the real business of a telephone is to furnish service, transmit messages, and not merely to rent instruments. This prevailing idea has been constantly brought home to the members of the committee by having their attention called by people thus uninformed to the lower rates existing in other cities; cities between which and Chicago there can be no common basis of comparison. Attention is called to some of the reasons for this exception to that rule of business, so well established."

There is attached as an exhibit to the deposition of Mr. Caldwell a pamphlet giving the reasons why increased patronage entails a proportionate increase in expenses.

Caldwell's first dep., p. 619.

This pamphlet was handed to Mr. Crumb, and he was requested to read it.

Crumb's dep., p. 111.

After reading it, he stated that he did not have anything to say specific in reply thereto other than what had been said generally in his deposition.

Crumb's dep., p. 188.

305 But as has heretofore been shown, Mr. Crumb said nothing in his deposition contrary to this known fact in the telephone business, but sustains what is therein said.

There is but one suggestion to the contrary in this entire record, and that is the separate report of the Mutual Audit Company, the so-called experts employed on behalf of the Defendant. In this report it is claimed that a lowering of the rates would result in an increased patronage, and that this would result in increased profit.

Mutual Audit Company's report, p. 29.

Mr. Farnham, who wrote this report (Warren's dep., p. 576), is not a telephone engineer, has never had any experience in the telephone business, and does not appear to know anything about the business (Fisher's dep., p. 179). On the contrary, it appears that when he was first employed he went to see Mr. Crumb, a telephone engineer, to ascertain along what lines his investigation of Complainant's books should be made.

Crumb's dep., p. 174.

Mr. Wilkinson, the expert for Complainant, gave his deposition, and full opportunity was given to test any statements made in his report, but Mr. Farnham did not give his deposition, and no opportunity was given Complainant to cross-examine him and test either his accuracy or his means of knowledge.

In view of the undisputed evidence in this record by all the witnesses qualified to speak, if the rates prescribed in the ordinance of Defendant should be put into effect, it would result in the immediate reduction in gross revenue of nearly $50,000; it would not result in any decrease in expenses, and it would certainly result in a large increase to the capital account, if new subscribers were obtained, and these new subscribers would entail at least a corresponding increase in expenses.

306 The Master seems to have relied upon theories of bookkeepers to the exclusion of practical telephone men, testifying on behalf of Complainant and Defendant. It is not to be expected that bookkeepers will be able to forecast the future as to telephone rates, and the only people who have a right to hazard an opinion upon such a subject are those who have had actual experience in the business, or show themselves to have made a study of the matter.

A reading of the reasoning of the Master upon this branch of the case clearly discloses that he has not considered the statement of any witness in the record except the bookkeepers of the Mutual Audit Company, neither of whom appears to have had any experience whatever in the telephone business, or the experience of examining the accounts of a telephone company.

The Master agrees that the joint report gives the annual loss in revenue under the ordinance rates as $19,721.76.

Master's report, p. 43.

On page 47 of his report, he says:

"I am of the opinion that the first year after the new rates shall be enforced, say 1911, the net decrease to the company in revenue will probably amount to $30,000.00 below what the net earnings have been found to be under present rates in 1908."

To bring about this result it is clear that the revenue of the exchange operating under the ordinance rates must increase enough after they are put into effect to add the difference between $19,721.76 and $30,000.00 to net revenue. The loss to be thus recouped is $19,721.76

The greatest amount of net exchange revenue for 1908 under the various bases (p. 160) is $50,953.97. The net revenue to be recouped, $19,721.76, is 38.7 per cent of this amount.

307 The Master reports the cost of the exchange plant, exclusive of real estate and toll lines as $1,381,121.41

Master's report, p. 21.

It is submitted that under the evidence, to gain 38.7 per cent in net exchange revenue it will require at least an addition of 38.7 per cent to exchange plant. That is, new capital must be added to the extent of $35,495.14

So that, at the end of the first year, the exchange plant alone, excluding real estate, will have cost at least $1,916,619.55
And not, as the Master estimates on page 48 of his report, viz.: 1,400,000.00

On an earnings basis it is also shown that the Master is in error.

The value of exchange plant with toll lines added is estimated by the Master to be at the end of the first year $1,400,000.00
And the present value of the same plant he gives on page 22 as 1,355,878.09

Making the new capital to be added the first year.... $44,121.91

Which, he says, will produce $19,721.76 net revenue. That is, the new capital will produce 44.7 per cent net revenue annually, while the ordinance rates are said to be only reasonable rates, and only capable of producing a fair return upon the capital invested.

Again, the number of telephones in use in the exchange is (Jagoe's dep., p 8)..... 9,395

The revenue of the exchange is derived from the
308 exchange telephones, and to increase the net revenue 38.7 per cent, it will be necessary to add 38.7 per cent to the present number. This will require a gain of..... 3,636

Making the total number at the end of 1911..... 13,031

For these reasons, Complainant excepts and insists that:

The Master should have reported that the reduction in revenue under the rates prescribed in the ordinance would have been $19,721.76; and that a reduction in the rates would not have in any way decreased expenses. Also, that a decrease in rates would probably result in increased patronage, which would necessitate an increase in cost of construction, and at least a corresponding increase in expenses.

V.

"He will ascertain and report from the testimony what would be a fair amount of proportion of annual income to set aside as a substantial provision and allowance for depreciation of Complainant's plant and property employed in its business in said city, and the basis of his estimate thereof."

The Master states, in concluding on this subject, page 53:

"In view of the foregoing, I find that the fair and reasonable amount or proportion of annual income of Complainant that should be set aside as substantial provision and allowance for depreciation of Complainant's plant and property employed in its business in Louisville, and including everything except cash, working capital and supplies, would be an amount equal to seven per cent of the value of the plant, as above limited, and that the amount expended

annually for maintenance and reconstruction of the plant should be deducted from the seven per cent fund."

Complainant excepts to the report of the Master in that he
309 states that while seven per cent is a proper amount to set aside for depreciation, there should be deducted from this all amounts expended annually for maintenance and reconstruction.

The basis upon which Complainant insists upon depreciation, and, so far as this record shows, the only basis that any witness adopts is to set aside a fund equal to whatever per cent of the cost of the plant is thought to be proper by the respective witnesses as a depreciation fund. Whatever amounts are expended during the year for rebuilding or reconstructing any parts of the plant are deducted from this per cent, whatever it may be, and the remainder is the unexpended depreciation fund, or what is sometimes called a reserve or a fund to take care of incomplete depreciation.

It is not proper treatment to charge against this depreciation fund any of the expenses incurred for maintenance of plant. When a plant is being maintained in an operating condition, it is having nothing added to the value of the plant, it is not a rebuilding or a substitution of new material for old material in the plant, it is simply keeping the plant in an operating condition, such as tightening up wires and other things necessary to keep the plant in a high state of efficiency from an operating standpoint. When wires are tightened, nothing additional is being added to the plant, and new wire is not substituted for the old wire, but the old wire is simply tightened up so that it can be used in operating the plant.

A homely illustration may be used. A vehicle is maintained in running condition by being washed and greased, but this is not depreciation—it is not substituting any new part of the vehicle for a part which has served its life, worn out and must be renewed. It is simply keeping the vehicle in an operating condition, and so it is when a bolt or nut becomes loosened, and is tightened up. This expense is ordinary repair, or maintenance repair; but when
310 a wheel breaks down and a new one is substituted, this is replacing a part of the vehicle with a new part, and this new part replaced is a charge to reconstruction or depreciation.

So that Complainant insists that the Master is in error in assuming that maintenance is included in the seven per cent allowance for depreciation.

Mr. Polk, in his second deposition, in speaking upon this subject, states that there are two kinds of maintenance—one is called "maintenance of operation," and the other "maintenance of plant."

Polk's second dep., p. 71.

And on page 70, he states, in figuring the expense of conducting a telephone exchange, that he would allow $10,000 to $15,000, "say $15,000," for maintenance.

And then, on page 71, he says that he would allow 5 per cent of the physical value of the plant for depreciation, and that he would not charge maintenance to this depreciation account.

The Master quoted from the decision of the Supreme Court in Knoxville vs. Waterworks, 212 U. S., p. 14, where it is said:

"Before coming to the question of profit at all, the company is entitled to earn a sufficient sum annually to provide not only for current repairs, but for making good the depreciation, and replacing the parts of the property when they come to the end of their life."

Notwithstanding the fact that the Master quotes this language, he still insists that current repairs must be included in depreciation, while Complainant insists that the language of the Court is as plain as can be written, that current repairs and depreciation are wholly separate and distinct things.

Complainant, therefore, insists that the Master has erroneously included current repairs, or maintenance, in depreciation.

Probably the best analysis of the way depreciation of a tele-
311 phone plant is ascertained is shown in the report of the committee to the Chicago Council, where the Telephone Commission states what the depreciation per annum on the different items of a plant will be, in their judgment, in the City of Chicago, on page 118.

The commission first ascertained what they believed to be the life of each particular item composing the entire telephone plant. They gave the life of underground conduit as being fifty years; underground cable, twenty years; poles, including cross-arms, ten years; subscribers' station instruments, ten years; private branch exchange switchboards, eight years; fireproof buildings, forty years; teams, tools, furniture, etc., four years, and so on throughout the entire list of every item of material entering into a telephone plant.

Having ascertained the life in years of each particular part of the material in the plant, they next ascertained the original cost of each particular part, and then ascertained the per cent to depreciation. In this way they ascertained that underground conduit only depreciates .89 per cent of its original cost per annum; they ascertained that underground cable will depreciate only 3.72 per cent of its value per annum; that aerial cable will depreciate 5.38 per cent of its original value per annum; that subscribers' station instruments will depreciate 8.73 per cent of its original cost per annum; and that teams, tools, furniture, etc., will depreciate 23.92 per cent of their cost per annum. And so on with the other items composing the plant. In this way they arrived at how much each item in the plant will depreciate per annum, and by taking the average per annum, based upon the value in dollars of each, the commission ascertained that a telephone plant will depreciate 8.03 per cent of the original cost per annum; and, therefore, the commission sets aside 8.03 per cent of the original cost of the plant per annum for depreciation. This includes everything connected with the plant except supplies and working capital, but does include the fireproof buildings.

312 The basis insisted upon by Complainant is that seven and one-half per cent of the original cost of the plant should be set aside each year for the depreciation fund, and that this seven and one-half per cent of the original cost of the plant must be taken out of gross earnings before there can be any net profits, but in reaching the cost of the plant there is excluded working capital, sup-

plies and material on hand, and real estate and buildings, which leaves the bare plant, and it is only seven and one-half per cent of the bare plant that is considered by Complainant in determining the depreciation fund.

In view of the fact that a telephone plant is deteriorating all the time, and in view of the fact that after the plant has been in existence some years, that different parts of the plant require renewing each year, the process of reconstruction or caring for depreciation is going on continuously, and whatever amount is expended in replacing any part of the plant that has worn out or reached the end of its life, either through decay, wear and tear, or the invention of something which takes the place of that part of the plant, is charged on the books as "reconstruction," and this amount is deducted from the seven and one-half per cent depreciation fund, because it is pro tanto taking care of depreciation, leaving the difference between seven and one-half per cent of the cost of the bare plant, and the amount actually expended during that year in construction, as the balance to be set aside out of earnings to take care of incomplete depreciation. This incomplete depreciation may arise from several causes, and it does not come evenly year in and year out, but does come in a cycle of time. A telephone plant may escape the necessity for the incomplete depreciation for a number of years, inventions of apparatus or new methods of making cables, or new subscribers' station equipment, or other parts of the plant, are not discovered with regularity, but at intervals of time; disasters, which experience has taught owners and operators of telephone plants, are certain to come in one form
313 or another in a cycle of time. When these inventions or disasters do come, then it is not merely seven and one-half per cent of the original cost of the plant that is needed to replace part of the plant, but it is often many times seven and one-half per cent.

And so it is that not only in the telephone business, but in every business where material, machinery, apparatus and appliances are being used, this risk and expense of the business must be taken into consideration, and provided against in order to prevent disaster to the enterprise.

Complainant does not contend that any part of the gross earnings of one year should be set apart to care for incomplete depreciation occurring in preceding years. It only asks that each particular year shall bear its proportion of the annual contribution to this depreciation fund. Complainant does not ask that the expenses of 1908 be burdened with any part of the depreciation which will occur in 1909. But does ask that 1908 be required to bear its proportion of the annual contribution to the depreciation fund.

The fact that Complainant has not in the past set aside as a sacred trust fund a part of its gross receipts from its Louisville plant to care for incomplete depreciation, when the time comes for such expenditure to be made, does not affect the principle it contends for—that is, that each year should be burdened with its proportionate amount, as a contribution to this fund.

In the process of its business Complainant may be compelled to

provide this fund for incomplete depreciation from its other properties, from its reserve accounts, from its surplus, from borrowed money, or from the sale of securities. Whether this fund be provided in one way or another does not concern any one else than Complainant and its shareholders.

This record shows that since 1902 this Complainant has had
314 active and untiring competition to meet, in operating its plant in Louisville.

So that the theory that Complainant ought to exact from its patrons a sufficient amount each year to pay all of its operating expenses, all of its current repairs, and provide a sufficient depreciation fund to care for the property when the time comes for its renewal, and over and above all these expenses, to yield to Complainant a fair and adequate return upon its investment is an ideal condition, that can only be approximated according to conditions over which Complainant neither has nor can have control.

The laws under which it is created expressly forbid that it shall either consolidate with or purchase its rival in business. The law demands that Complainant shall to the end exist under conditions which render it utterly impossible for it to obtain a fair reward for the service it renders. It is not a theory, but a condition that confronts it in the conduct of its business in the City of Louisville, and this record abundantly shows it.

The Master, on page 50 of his report, after stating that he is satisfied that a fund to cover depreciation of plant is necessary, and that this fund should come out of earnings, states that because different parts of the plant last longer than other parts, and because the percentage of depreciation on different parts of the plant and property is not subject to a general law or rules, states:

"To establish an average is beyond my power, as the evidence does not aid me in this regard."

Complainant excepts to this part of the report of the Master, and insists that the record does show what amount is necessary and proper within a reasonable degree of accuracy that is necessary to be set aside for the depreciation fund.

Complainant's President, who has been engaged in the business for twenty-five consecutive years, says that:

315 "It will not be found very far from ten per cent. It might be something under that, and it might be something more, but between seven and a half per cent and ten per cent is, in all likelihood, the amount that will be found necessary, and these estimates will necessarily vary, and will be varied from time to time as experience is gained."

Caldwell's first dep., p. 604.

Mr. Hume, the General Manager of Complainant, who has devoted at least twenty-five consecutive years to the telephone business, over an area one thousand miles long and four hundred miles wide, comprising a system of exchanges and toll lines, says that "the proper depreciation is from seven to seven and one-half per cent of the cost of the plant."

Hume's dep., p. 109.

He states:

"Well, that is a matter and a feature of the business that has called for the closest study and attention on the part of the best operating men and the best engineers that could be gotten hold of. I mean, that question of depreciation as applied to telephone properties generally. The same general condition that govern one in reaching conclusions at one place, enter into consideration at another, but the same results are seldom found, because the conditions confronting a plant in one city are, for the most part, so radically different from the conditions that confront the same kind of a plant in a different city. In the Cumberland Telephone & Telegraph Company's system that has been markedly true, because our lines run from up in Indiana and Illinois clear on through to the gulf coast country, but speaking of our experience in Louisville, a ten-year term, and during that time a great deal of the property having been put there as brand new property, you can only judge by your experience generally and by the condition of the plant you had ten years ago, and the relative condition of property that has been put in during that time, these succeeding nine, eight or six years and on down to the present, but taking all of that into account, I am sure that the percentage we are working on is as small as we could dare take with any degree of safety, that is seven or seven and one-half per cent."

316 Mr. Crumb, a telephone engineer, introduced as a witness for Defendant, states that seven per cent of the cost of the plant is proper for depreciation, and this does not include maintenance repairs.

Crumb's dep., p. 80.

Mr. Levings, another witness introduced on behalf of Defendant, states that telephone engineers differ as to the amount of depreciation that should be set aside—that the per cent of the cost of the plant ranges from twelve to fifteen per cent, and when asked to explain what he means by this, says:

"I mean by that expression that there are two ways of considering what is commonly termed depreciation. These two ways are subjects of argument among all engineers, and one way of arriving at a depreciation figure includes certain expenses which other engineers include as maintenance charges. When such a procedure is followed, the depreciation charge naturally is increased over that which is used by an engineer who does not include this disputed maintenance charge. Therefore, I say that some engineers calculate their depreciation with this disputed factor, while I do not."

Levings' dep., p. 56.

Mr. Levings thinks that in Louisville a depreciation charge of five per cent per annum on the cost of the plant would be sufficient.

Levings' dep., p. 37.

Mr. Polk, a telephone engineer, was a witness for the Defendant, and says:

"I would set aside (for) the depreciation account practically five

per cent. of the physical material—physical value. I have set aside fifty thousand dollars a year, and any renewals made I would charge against that account."

Polk's second dep., p. 71.

He further states that it is at last a mere matter of each man's individual opinion of what is sufficient; that engineers differ;
317 that the man who has best knowledge of what is necessary is the general manager of the company.

Polk's second dep., p. 73.

H. Blair Smith, Auditor of Complainant, who has been such for more than ten years, who has of necessity a ripe experience in determining the life of telephone properties, and who, of necessity, has an intimate acquaintance with the cost and method of operating the Louisville plant for the past ten years, states that from his experience in the telephone business, he believes that a depreciation of seven and one-half per cent on the cost of the plant is justifiable.

Smith's first dep., p. 45.

He also states the difference between depreciation and maintenance to be:

"Maintenance is simply the repair of the property.

Yes, repairing troubles, replacing lines that are blown down, adjusting instruments and replacing light repairs like cords on telephones, and cords of switchboards, resoldering connections, replacing micas and fuses that are burned out and things of that kind.

Maintenance is simply the keeping in repair of the property; and reconstruction is caused on account of depreciation, and is a replacement of the property which is no longer serviceable or must be discarded on account of having become useless, because of newer inventions."

He further states that:

"Depreciation is the natural wear and tear that occurs to everything that is exposed, everything except the ground. Depreciation in telephony is the depreciation, or rather the antiquation of the plant, as well as its decay."

Smith's first dep., pp. 44-5.

This witness also sets out in great detail the different things that are included under each heading of expense. These headings of expense show clearly the difference between maintenance and maintenance reconstruction, and it is made clear that this is a difference between the two accounts.

Smith's first dep., pp. 15-17.

318 There is no evidence in this record which in the slightest degree contradicts or varies what has hereinabove been shown to have been said upon this subject.

The Master, on page 51 of his report, says:

"It may be mentioned in passing that during January, February

and to the 6th of March, 1909, Complainant spent only $491.65 for maintenance and reconstruction. This fact may fairly be accounted for by assuming that no great outlay was required for such purpose."

In this the Master has, by inadvertence, misstated the fact. It clearly appears that the item of $491.65 was not for maintenance or reconstruction, but was construction.

Warren's dep., p. 411.
Wilkinson's report, p. 19.

Complainant tendered to the Master the financial operation of the Louisville plant for the whole year 1909, and offered to go into the experience of Complainant with the plant during that year, but the Master stated:

"Right now I am not able to say whether that would be important or not. When we get through with the proof, if we want it, I will take it myself. I will just order that myself."

Counsel for Complainant:

"I merely make the tender so it cannot be said later that we did not bring these things down to date."

The Master:

"I think we had better defer that for the present."

Hume's dep., p. 154.

For these reasons, Complainant insists that while the Master correctly reported that seven per cent per annum of the bare cost of the plant was a proper amount to allow for depreciation, his application of the depreciation fund is entirely erroneous, and to his method of the treatment of the depreciation fund Complainant excepts.

319 VI.

"He will ascertain and report whether the reasonably probable increase from Complainant's plant and property employed in its business in said city will, within the next few years, amount to a fair annual return upon the reasonable value thereof if the provisions of the ordinance approved March 6, 1909, are put into operation."

The Master states that, after having as heretofore stated, found the value of Complainant's plant, the gross and net earnings for 1905, 1906, 1907 and 1908, the percentage of net earnings to the reasonable value of the plant, and a proper allowance each year for depreciation of plant, and probable net loss to Complainant the first and second year, should the ordinance rates be enforced, and basing his calculations upon all these things, and further assuming that the probable value of the plant in 1911 will only be increased less than $50,000, the probable net income of Complainant for 1911 will be at the rate of 8.60 per cent of the then value of the property.

He further finds that in 1912 the net return will probably be ten per cent upon this same value, which he assumes he has found for the year 1910.

The Master states:

"My reasons for so finding are that the increase in the number of subscribers in 1911 and 1912, should the ordinance rates be enforced, will be large, and that the increase in net earnings thereby will more than off-set the loss of earnings that will be caused by the lowering of rates."

Master's report, pp. 54, 55.

Complainant excepts to this finding of the Master, because it is based upon an erroneous assumption of facts, and fails to
320 take into consideration the inherent and essential features of the telephone business.

As has heretofore been pointed out in these exceptions, the Master has proceeded upon a fundamentally erroneous theory of the telephone business. He has failed to take into consideration the fact that as the subscribers increase, the cost of the plant increases correspondingly.

Caldwell's first dep., pp. 606-7-9.
Polk's second dep., pp. 105-111.

Mr. Caldwell says:

"Well, if you increase your subscribers you would be compelled to increase your facilities, and your capital account. You would be compelled to increase your operating force to take care of the greater number of calls that would go over the system; you would have to encounter certainly a shifting of customers from one class of rates to another, which expense you would be certain to meet, but you do not know what it would be. The growth that would take place in that, you could not tell whether it would be on the maximum or the minimum, or in what direction in the city it would be found; it would all be a matter of speculation, so that to forecast the future on that, is a matter of speculation and doubt."

Caldwell's first dep., p. 606.

The Master has failed to take into consideration the fact that as the number of subscribers increase, the expense of conducting the business per subscriber increases.

Hume's dep., pp. 171-2.
Polk's second dep., pp. 118-19.

As was tersely stated by the Chicago Commission:

"It is a tradition in telephone circles that the service per telephone costs more as the number of telephones connected with the plant increases, as the number of telephones increases, each sub-
321 scriber has the opportunity to call upon more people by telephone, and the law of averages would indicate that the number of calls per day from each telephone should increase, thus making the service more expensive to the operating company, provided the service is flat rate service and unnecessary use of the telephone is not deterred by a measured rate charge. This condition seems to have worked out in practice, according to the statements

of telephone companies at Cleveland, Indianapolis, and elsewhere, and flat rate service seems to increase in cost per telephone as the number of telephones attached to a system increases."

Rport of Committee to City Council, p. 74.

There is one witness in the record who has had actual experience in dealing with telephone rates in the City of Louisville, whose testimony is of more service in solving this problem than the theories and opinions of witnesses who have not had experience, however skilled they may be.

Mr. Caldwell, the Complainant's President, says:

"We have tried and experimented with every conceivable class and kind of rates and every theory of rating that those that were best qualified to talk on the subject have suggested, we have tried, and our experience there was that every one of them proved disastrous, disappointing and a failure. In other words, we had poorer results, until this last series of rates which we inaugurated some two years ago—they show a betterment of conditions, the others all showed worse, so that it was not a matter of theory, but it has been a matter of actual experience with us in the City of Louisville."

Caldwell's first dep., p. 607.

Experience gained in operating a plant under certain rates is the only safe guide to follow in forecasting the future upon different rates.

La. R. R. Com. vs. Telephone Co., 212 U. S., 426.

Mr. Polk states that it is a mere gamble as to whether the rates prescribed in the ordinance are remunerative even in a plant only costing $1,300,000, including real estate.

Polk's second dep., pp. 117-18.

322 If, therefore, the value of the plant be added to so as to make its value $1,500,000, and the increased patronage entails a greater expense per subscriber, it is manifest that the net profit would be less on a plant costing $1,400,000 (as the Master assumes it will be—Report, p. 54) than a plant costing $1,300,000.

For these reasons Complainant excepts to this part of the Master's report, and insists that it is based upon an incorrect theory of the telephone business.

The Master should have reported that the certain result of enforcing the rates prescribed in the ordinance would spell disaster, and the more rapid the growth of the exchange the sooner would disaster overtake it.

VII.

"He will, from the testimony, ascertain and report whether the average net income or return from reasonably safe investments in business enterprises in said city, approximately resembling that

of Complainant, is above or below six per cent upon the reasonable value of the plant or property from which said income is derived."

The Master reports that Louisville Home Telephone Company five per cent bonds are selling on a basis of $69.75; the Louisville Gas Company's five per cent dividend-paying stock sells for $95.00 a share; Kentucky Heating Company's five per cent preferred stock sells at $90.00; Louisville Traction Company's four per cent dividend stock at $94.00; Bank of Kentucky pays eight per cent, and usually adds to its surplus fund annually; the Union National Bank pays ten per cent dividends, and adds to its surplus account; the Fidelity Trust Company in 1909 paid twelve per cent.

The Master then states:

323 "It may be permissible to classify all public utility companies—such as traction companies, water companies, gas companies, and lighting companies—with telephone companies. It is doubtful whether banks should be placed in such a class, but certainly manufacturing and industrial companies are not in the same class with telephone companies."

Master's report, p. 56.

Complainant excepts to the statement of the Master in stating that the owner of a telephone property is not entitled to the same rate of return on the value of its plant that is received by banks, manufacturing and industrial concerns.

It is apparent from the evidence that there are no greater risks in banks, industrial or manufacturing concerns than is in the telephone business, and it appears from the Master's report on this branch of the case that while a five per cent dividend paying stock of a gas company sells for $95.00, and a traction stock paying a four per cent dividend sells for $94.00, a five per cent telephone bond only sells for $69.75.

The Master further states on pages 56, 57:

"But it is insisted that unusual risks and hazards attend the telephone business, and that on account of these hazards a greater return on the money invested should be permitted by the rate-regulating powers. It is urged that new capital must be continually put into this business, so that its lines and operations may be commensurate with the growth of the cities where they are located; that otherwise, the business must come to a standstill, and new companies will enter the field and take the new business offered and perhaps the old business. It is urged that eight per cent or perhaps ten per cent on the money invested would, therefore, be a fair return."

The Master then finds that the average net income or return from reasonably safe investments in business enterprises in Louisville approximately resembling that of Complainant, is below six per cent

324 upon the reasonable value of the plant or property; and that if banks be included with telephone companies, the net average income is a little above six per cent.

Complainant excepts to this part of the report of the Master, and

insists that he should have reported that a telephone investment is entitled to ten per cent net return upon the actual investment.

It is shown in the record that as a telephone plant increases its patrons it must increase its capital account, and in order to increase its capital account it must sell its securities, and in order to sell its securities it must show an earning power sufficient to attract new capital to the business.

Mr. Caldwell states a telephone property is successfully financed as follows:

"By an increase from time to time, of its capital stock, has been found the only practical way. Where bond issues have been resorted to, one issue clouds and interferes with subsequent issues, but where additional shares of stock are made and they all stand on the same basis, as they do stand on the same basis, the one issue does not take precedence over or destroy the standing of the next issue, but on the contrary they rather have a tendency to aid each other, and hence that has been found to be the most practicable and satisfactory, and, I may say, the only practical way to finance a telephone system."

Caldwell's dep., p. 609.

He further states that there must be additional capital invested in the business from time to time to meet the growth of the business.

"The growth is continued and continuing; it is no let up, but on the contrary continues to grow, and unless the company meets this growth, its usefulness becomes impaired or lessened, and it at once is on the down grade instead of the up grade. It must go forward continuously, it must meet the public requirements, and to do this it must have continuously additional capital."

325 When asked what effect the earnings have upon its ability to increase its capital account, he states:

"The whole question comes right there. Unless the company is on a profitable basis, and is doing a business that is profitable, it has no credit, and it is necessary for it to have credit. Therefore, in order to attract new capital, it must present sufficiently attractive profits to cause people to put their investments in the telephone business rather than in some other line of business, and, of course, unless it can show a profit in its business, it cannot possibly influence or attract capital to it. That is the key to the whole financial problem."

And he states that the net profit on a telephone property ought to be an actual cash return on its investment of ten per cent.

Caldwell's dep., p. 610

Mr. Polk thoroughly sustains all that Mr. Caldwell says upon this subject. He states that the construction account must be increased year by year; that to get new capital a sufficient return must be shown to attract new investors, and that a telephone property is entitled to at least ten per cent net profit.

Polk's second dep., pp. 111-113

The Chicago committee recommended, and the Council approved, a net return to the Chicago Telephone Company of ten per cent.

Report of Committee to Council, p. 29.

Mr. Levings says that he does not know any one who has money to invest in a telephone plant that will not promise at least eight per cent profit. He is then asked this question.

"Do you regard 8 per cent as a fairly reasonable profit for a man to make on his telephone investment

A. I should say so."

Levings' dep., p. 47.

A committee of the New Orleans Board of Trade, in investigating telephone conditions in that city, recommended that the
326 company be permitted to earn a net return of ten per cent on its investment, and quoted with approval the following taken from the telephone report of the Merchants' Association of New York having under consideration what constituted a reasonable margin of profit for a telephone company. The report says:

"The telephone business demands a continuous accession of fresh capital to satisfactorily serve the public. Having in view the importance to the public of constant improvement and expansion and the greatest possible efficiency of telephone service, as well as the necessity of offering an attractive investment to new capital to provide for such expansion, it is the opinion of this committee that to provide a fair return on capital actually and necessarily invested and a proper allowance for contingencies, 10 per cent margin above operating outlays is a reasonable and proper margin in the telephone business. In the various movements hitherto made for the limitation by law of telephone profits, wherever the permissible percentage of profit has been dealt with, this margin has been accepted as a proper one. It has also been specified by law in the case of some other public service corporations."

Report of Telephone Conditions in New Orleans, p. 77.

Mr. Polk, in his second deposition, states that a telephone company is entitled to a greater return than a steam or street railroad. He states:

"Corporations have different ways of figuring. Street railways, steam railroads, figure five per cent as a safe return. Of course, a concern like a telephone company, I should consider as more than a fixed railroad, because the nature of its business fluctuates, and there are more risks than would be on a trunk line of railroad, and I would say it would have a higher return than a trunk line railroad."

He then says:

"I said I do not think it should be less than 10 per cent."

Polk's second dep., p. 113.

Complainant, therefore, excepts to the report of the Master
327 on this branch of the case, and insists that he should have reported: That Complainant is entitled to earn per annum ten per cent net upon its plant in the City of Louisville.

VIII.

"He will further ascertain and report from the testimony whether the reasonably probable net income of Complainant from its plant and property employed in its business in said city, after making all proper allowances for cost of operation, claims for damages, repairs and depreciation, would, during the years 1909 and 1910, come up to or exceed the said average income upon such other business enterprises if said ordinance should be put into operation, and he will state in his report the results of his estimates and the basis thereof."

The Master states under this heading that his answer to the seventh question is the basis of his answer to this question.

Therefore, Complainant excepts to the report of the Master under this heading for the reasons stated in its exceptions to the Master's report under the seventh heading.

IX.

"He will also, from the testimony, report his conclusions and the basis thereof as to the reasonably probable extension and increase of the Complainant's business in said city within the present and next succeeding year, and the reasonably probable extent and effect thereof, both upon its gross and upon its net income."

The Master, under this heading, states:

"The evidence shows that the Complainant company has thus far constructed its plant with a view to and with the expecta-
328 tion of a substantial increase in the number of subscribers. This policy, under the evidence, I find is wise and prudent, and ought to be approved. The business centers are not apt to be changed. They are generally stable and practically permanent. On the other hand, the residence centers frequently change, and this necessitates a change in telephone lines, and a prudent company will construct its plant so as to be prepared for such changes."

Master's report, p. 58.

The Master also states that Complainant has laid its conduit system and erected its pole lines and equipped the same so as to be in a position to take care of two thousand new subscribers without delay, and this the Master commends as being wise and proper, but adds: "Should the ordinance rates be enforced, the wisdom of Complainant's foresight in providing its surplus plant will be amply justified."

The Master then states that a lowering of Complainant's rates, independently of the natural growth of the plant, will largely increase the number of subscribers, and that such increase will begin immediately after the lower rates are put into effect.

The Master then adds: "The probable extent of such increase in the numbers of subscribers, as well as the increase in net earnings to be caused thereby, is problematical. But considering the statement of the witnesses I am of the opinion that if the lower rates should be enforced in 1911, that by the end of 1912 the probable loss in revenue of about $49,000.00 would not only be wiped out,

but a substantial increase in net earnings would result, without a corresponding increase in expenditures."

Master's report, p. 59.

Complainant excepts to this part of the report of the Master, because the evidence shows that surplus facilities are necessary in every plant, and there must be at all times kept a surplus of facilities to take care of new patrons, and because the Master assumes that increased patronage will not increase expenses and capital account.

329 In reply to a question as to whether or not it is necessary and proper that new business be anticipated, and facilities provided prior to the offering of new business, Mr. Caldwell says:

"Yes, for the reason that it requires quite a length of time to provide additional facilities on an exchange and the customers could not be expected to wait so long a time for the service; hence, it is not only necessary but it is practiced in all companies which expect to meet the public requirements, to keep a certain surplus reserve of facilities always on hand, and as they are used up, to provide others, so that they will be able to meet the demands promptly, and any other method would leave the service open to very grave criticism and reflection, for the old customers have an interest in having new ones connected, have an interest quite as important as the new customer, for every new customer gives an additional value and opportunity to all the old subscribers.

Q. What would be the result, practically, if the company should not provide facilities for future growth before such new business was offered, but should wait until the new business was offered before undertaking to provide the facilities necessary to serve the new patrons?

A. Well, as it would often require a year in which to provide additional facilities, it is quite plain what a disappointment it would be and how far short a company would fall of meeting the public requirements, for the customers usually desire the service at once, and certainly could not be expected to wait longer than a very few days. They rather expect to have the facilities supplied to them within twenty-four or thirty-six hours, and they have been accustomed to that so long, that it is now recognized as a fixed condition. If, therefore, conditions should arise that would make delay in providing service longer than this, the company would be considered as wholly inadequate, and indeed, open to the criticism of being a rather poor affair."

Caldwell's first dep., pp. 593-4.

There is no witness in this record who contradicts or varies this statement in the slightest degree; indeed, the statement itself is so entirely reasonable and self-evident that we apprehend no intelligent witness could deny it.

If, however, this surplus of facilities should be used in sup-

330 plying the additional patrons to be obtained under the ordinance rates, Complainant would have to provide additional surplus facilities to accommodate the new subscribers to be obtained on the normal growth of the city, unless it be assumed that Louisville

is to stop growing and become a finished city, which no one will admit.

The evidence is that there must be at all times a surplus of facilities.

But the Master assumes that the Complainant will find this new patronage at the exact points where the surplus facilities are, and at the same time he says that the new business to be expected will naturally be in the residential sections of the city, as well as in the suburban districts, and that in the business districts there will be smaller increases.

Master's report, p. 59.

The Master overlooks the evidence on this subject. Mr. Polk states that the surplus cable that he is speaking of exists in the conduits, which, of course, are in the central business portion of the city and not in the suburban or residential sections.

Polk's second dep., p. 137.

But in another place, says the cable system covers the entire city.

Polk's second dep., p. 140.

Just what he does mean is left in doubt. But Mr. Caldwell says there is no such surplus cable facilities, and adds:

"We carry and aim to carry a certain excess service to take care of customers, as they would come in the ordinary growth, and I do know that we have some surplus here. It might be that we would have that amount of surplus in some conduit space. We might have it in buildings. We might have adequate space in our buildings, and as I say, in the conduits, but to say that we have that as a
331 complete equipment, ready to take on those customers, that would not be true."

Caldwell's second dep., p. 11.

Mr. Polk was asked to state what would be the additional expense per subscriber if Complainant obtained eight thousand more subscribers at the points where the cables are; and he said, twenty to twenty-five dollars per station; "that is, if the subscribers are right where they can be served so that it would take nothing but the drop to make the installation."

Polk's second dep., p. 140.

What the witness means by the "drop" is the drop wire from the pole or cable to the residence, or business man's house, interior wiring, instrument and the labor and expense of installing it.

But Mr. Polk did not mean to say that this was all the capital that the company would have to expend in obtaining additional subscribers.

Thereafter, in reply to an inquiry as to what new capital would be required to install eight thousand additional subscribers, he states:

"The question, the way it was put to me, as I understand it, was, assuming that there would be no expense except that of running the drop and installing the telephone at the subscriber's station, what

would it cost per station to add eight thousand telephones, and I stated, assuming that those were to be the only expenses, it would cost about $25.00 per line.

Q. What other costs would there be in connection with installing 8,000 new subscribers here in Louisville?

A. The cost would be increased in the switchboards, increased in the trunking facilities between the offices—if 8,000 additional subscribers were added, of course, it would be unreasonable to assume there would be no expense at the outer end; there would have to be a certain number of additional cross-arms put on, a certain number of additional insulators, and a certain amount of aerial
332 wire strung; so the assumption, of course, is an impossible condition that wouldn't exist."

Polk's second dep., p. 145.

And he again states:

"At the present time the switchboard is valued at $203,000, approximately; 10,000 line equipment would make the present average cost of switchboard for one line twenty dollars and a fraction. In order to place 8,000 more subscribers to the system, they would have to have at least 4,000 additional switchboard capacity average, and as these switchboards grow, being of a multiple character, the cost per line will increase; so it is reasonable to assume that these 4,000 additional lines would cost at least $22.00 per average. That would make an additional expense of 22x4,000, which would be $88,000 for switchboards alone. Also, for the expense at the outer end: stringing what additional aerial wire might be necessary, putting on additional cross-arms, and insulators, we will say, $5.00 a station, 8,000 would make an additional of $40,000 expense. I figure that this would probably be a reasonable additional expense assuming that the cable facilities were ample."

Polk's second dep., p. 146.

So that adding the $25.00 per station, as above stated, amounting to $200,000, to the $40,000 and the $88,000, makes the additional construction account expense $328,000.

But the Master also says that the additional subscribers would come largely from the residential and suburban section of the city. Of course, this means more expense in equipping and serving these patrons than would be the expense of equipping and serving a like number of patrons in the business districts of the city, because it means longer wires, further distances for troublemen and other employés to go to repair telephones and wires, and other expenses necessarily entailed in operating the plant.

Caldwell's first dep., p. 597.

This would also mean that the growth of the plant would be
333 upon the cheap rates, and not upon the high rates—that is to say, the growth would be largely upon the residence rates and not upon the business rates. The great reduction in the rate ordinance comes on the business rate, and not on the residence rate. On the business rate it is $2.00, and on the residence rate it is only

$0.50 per month. It is shown that there are 730 patrons in Louisville paying the maximum business rate of $7.50 (which the ordinance reduces to $5.50 per month), and there are 875 now paying the maximum residence rate of $3.50 (which the ordinance reduces to $3.00 per month).

Smith's first dep., p. 39.

The immediate effect of putting into effect the ordinance rates would be a reduction of $2.00 a month on each of the 730 business telephones, amounting to $17,520.00 per annum, and the reduction in the residence rate would only amount to $5,250.00 per annum; so that in order to overcome the loss in business telephones of $17,520.00 per annum an enormous number of residence telephones would have to be installed at even the maximum residence rate of $3.00; and if we assume that the residence rate of $3.00 only yields a fair profit to Complainant, then Complainant could not install enough residence telephones to offset the loss in revenue from the business telephones, because there could not be anything more than a fair profit on the residence telephones at $3.00 per month, regardless of the number installed.

It must be remembered that Complainant's witnesses say that the ordinance rates are unreasonable, and the chief witness for the defendant, Mr. Polk, states that it would be a mere gamble as to whether the Complainant could receive a return on the ordinance rates, assuming no more subscribers to the exchange than at present exist, and assuming the plant to cost only $1,300,000.00, including real estate.

Polk's second dep., pp. 120-1.

334 It is respectfully submitted that no one has the right to hazard an opinion as to what the result would be to Complainant if the rates prescribed in the ordinance should be enforced, so far as forecasting where and what classes of patrons it would receive. There is but one safe rule to follow, and that is the experience of the past, and this rule has received the sanction of the Supreme Court of the United States, as above stated, in La. R. R. Com. vs. Telephone Co., 212 U. S., p. 426.

The Master should have reported that there was no reasonable method by which the future could be forecasted if the ordinance rates should be adopted.

The Master states, on page 59 of his report:

"I am by no means satisfied from the evidence that the increase in the number of subscribers will, on an average, increase the cost of operation per telephone or station. In other words, if the company now has nine thousand subscribers, and two thousand additional subscribers be taken on, I do not believe that the cost per station for eleven thousand will be as great as it is for nine thousand subscribers."

Complainant excepts to this statement of the Master because:

(1) The Master disregards the entire evidence of all the witnesses to the effect that increased patronage entails increased expenses.

Caldwell's first dep., pp. 607-8.
Hume's dep., pp. 171-2.
Smith's dep., p. 43.
Crumb's dep., p. 90.
Polk's second dep., pp. 118-119.
Committee's report to City Council, p. 12.
Pamphlet attached as Exhibit to dep. of Caldwell referred to in Caldwell's first dep., pp. 616-9.

(2) The Master entirely overlooks the uncontradicted evidence in the record to the effect that so soon as the present facilities are used, additional facilities must at once be installed so as to at all
335 times have a surplus on hand to care for new patrons in the business.

Caldwell's first dep., p. 592-4.

(3) The Master also overlooks the fact in forecasting the future that it is problematical as to where new patronage is coming from. Even where a plant is built brand new, by the time the plant is put into operation, conditions are so changed that the company finds itself in the attitude of having surplus facilities in one part of the city, and the immediate necessity of adding additional facilities in another part of the city.

Polk's second dep., pp. 106-7.
Caldwell's first dep., p. 592.

(4) The Master overlooks the fact that it is shown in the record that during the taking of this proof, the paramount necessity of supplying additional cable in certain sections of the city confronted the Complainant.

Caldwell's second dep., p. 11.

Mr. Caldwell is asked to state what would be the effect upon the Complainant's business in the event the ordinance rates should be put into effect, and he states:

"My opinion is that we would have to provide a considerable additional capital outlay; that we would get little or no additional gross revenue, certainly we would not get more than would be off-set by the additional expense. My deliberate opinion is it would be a very losing and disastrous experiment."

Caldwell's first dep., p. 608.

Mr. Polk says it would be a mere gamble.

Polk's second dep., pp. 120-1.

For these reasons it is insisted by Complainant that the Master should have reported that, if the ordinance rates be adopted:

(1) The future of Complainant's plant in Louisville is too uncertain to forecast; and

(2) Complainant's business would be destroyed.

336 X.

"He will also ascertain and report as to any peculiar conditions, if any, of the steady and reliable income the Complainant may have in said city, and also as to any peculiar disadvantages or risks, if any, which it encounters, or may encounter therein, which, with reasonable probability, may affect or offset such advantages, and the extent thereof."

The Master states:

"I find in the evidence no peculiar disadvantages that now affect the earning power of Complainant, or that are likely to do so in the future."

Master's report, p. 60.

The Complainant excepts to this statement of the Master and insists that he should have reported that the active competition which Complainant has, during the past four years, and now encounters, is a very serious disadvantage to Complainant, in causing Complainant to be unable to earn a proper amount upon the value of its Louisville plant.

In the report of the Board of Trade of New Orleans relative to telephone conditions in New Orleans, Louisiana, on page 41, it is said:

"Taken as a whole, the telephone business in this country has not been anything like a complete success. There have been innumerable failures, large and small. Competition has been very keen, and not always honest; in many instances, promoters have swindled the public in telephone ventures; distrust has been created; the financial interests of the country have lacked confidence in the business; and, notwithstanding the fact that the telephone is a public utility, savings banks, trust companies and other like institutions do not invest money or trust funds in telephone securities—one of the reasons for this being that the assets could not be turned
337 to any other use than that for which they were originally intended.

"This brings home the fact that the appliances, plant and structures of a telephone company are of a very unstable nature. The property is essentially perishable, easily damaged, and deteriorates very rapidly. The industry has not yet reached a point of stability, and costly appliances are frequently being superseded by other inventions, and have to be discarded long before they are worn out; radical changes are continually being made in construction methods and in equipment, and all these things have contributed to make the telephone business, taken as a whole, an extremely hazardous one. If a telephone company should cease to do business, it would not be able to salvage more than about 20 per cent of the original cost of construction."

In speaking of the results of competition in the telephone business, this report states, on page 98:

"Competition does undoubtedly improve the service; both companies strive to please their patrons and are courteous and attentive.

Prices are reduced, often to wholly inadequate figures, and the rival companies try, by selling a public utility below cost, to force one another from the field. Thus far, the public appears to be getting the best of it; but from the start the utility of the telephone as a public service is impaired and after the first years, when it is clear that the business is not giving financial returns, fresh capital is impossible to obtain, the very maintenance charges cannot be met, extension is impossible, and 're-organization' ensues. As the struggle has progressed, the service has been getting worse and worse, and the public is made to feel the disadvantages of competition."

In speaking of the effect of competition in exchange telephone service, Mr. Caldwell, Complainant's President, says:

"It produces great dissatisfaction, so that no telephone company is looked upon as agreeable and satisfying by people that are in such a situation, and the various ordinances which have been passed and experimented with by the city authorities have in a very large measure been the outgrowth of that state of affairs, and an effort to try to cure the difficulty, but the difficulty is inherent in the
338 fact that there is competition in a business and that competition is destructive to the business instead of beneficial."

Caldwell's dep., p. 620.

He also states that the expenses are greater under competitive conditions, because the business does not flow in a normal way—"The community, telephonically speaking, does not act in a normal way"—and that this produces abnormal expenses and abnormal conditions.

Caldwell's dep., p. 621.

For these reasons Complainant excepts to this part of the Master's report, and insists that he should have reported:

That competition in the telephone business creates peculiar disadvantages, which must exist so long as competition exists, and that this disadvantage is now being encountered by Complainant.

XI.

"The Special Master will also report his conclusions upon such other facts as the development of the case at the hearings before him may appear to be important to a determination of the issues made by the pleadings."

The Master speaks of the large difference between the witnesses who have testified as to the value of Complainant's plant in Louisville.

While this is true, the Master fails to state that this difference is brought about by a lack of knowledge of the facts by some of the witnesses.

Complainant excepts to this part of the Master's report and insists that he should have reported that there is no substantial difference between any of the witnesses who speak with a due knowledge of facts.

339 Complainant's President, General Manager, Auditor and Assistant Superintendent of Plant do not differ materially as to their estimate of the value of Complainant's plant.

Messrs. Crumb and Levings, two of Defendant's witnesses, show in their evidence on cross-examination that they have not a sufficient knowledge of the Louisville plant to entitle them to express an opinion upon its value. Mr. Polk, the other witness of the Defendant, does not differ materially from Complainant's witnesses whenever he is speaking of matters concerning which he has adequate knowledge.

The differences between Mr. Polk and Mr. Jagoe as to the value of the plant are shown not to be material differences whenever they speak of matters concerning which Mr. Polk has an equal means of knowing the facts.

The most material difference between them is as to the value of the underground conduits. The difference between them on switchboards and other apparatus is with respect to different types of apparatus used for the same purpose. Complainant believes that it is better and safer to purchase its equipment from the Western Electric Company, and Mr. Polk thinks that other equipment, costing much less money, should be used in constructing the plant in Louisville. This difference comes about from the experience of Mr. Polk in building telephone plants. His experience is in building, and not in operating telephone plants; and Complainant's witnesses speak with a knowledge of building and operating plants. Its experience in operating plants has taught its officers to rely upon the Western Electric Company's apparatus. While it is more expensive to purchase, it is believed by them to be more durable and to furnish a more reliable service.

The difference between Mr. Polk and Mr. Jagoe as to cable comes about from the fact that Mr. Polk merely estimates that the plant contains certain quantities and size of cables, whereas Mr.
340 Jagoe gives actual quantities and sizes of cables, and if Mr. Polk's units of value be applied to Mr. Jagoe's statement of quantities and quality of cable, the difference is not material.

Mr. Polk estimates the poles in the plant to be 11,000. Mr. Jagoe states the number of poles to be, by actual count, 13,870. Mr. Jagoe gives the value of these poles, together with the appliances thereon, and the labor of setting them, at what it has actually cost Complainant during the past two years to erect similar poles in Louisville, and also the price that other companies pay in purchasing a half-interest in similar poles. Mr. Polk estimates what, in his opinion, that class of poles should be purchased, equipped and erected for.

For these reasons, the Master should have accepted what the witnesses said who have a knowledge of the facts, and not the statement of witnesses who are shown not to have had a sufficient knowledge of the facts to enable them to place a value upon the plant.

The Master states that several hundred thousand dollars of construction work on Complainant's plant is rested solely upon the Auditor's statement that vouchers representing in the aggregate these

large sums, were approved by him and were entered on the company's books as proper charges against construction.

Complainant excepts to this part of the Master's report because it appears in what has heretofore been said in reference to the cost of Complainant's plant, that the local Manager, and then the Assistant General Manager, while the facts were fresh and errors easily detected, scrutinized these vouchers, and approved them before they were sent to the Auditor to be entered upon the books and records of Complainant.

Hume's dep., p. 105.

The Master refers to the fact that these vouchers bore the
341 notation of some unknown foreman, or gang boss, to the effect that the work had been done and that it was for construction account, and further refers to the fact that the Auditor did not have personal knowledge of a single feature of any such vouchers.

Complainant excepts to this part of the Master's report, because there is no other known way in which construction account can be ascertained. The foreman or gang boss is selected because of his ability to know how to do work, and what work has been done. His notation at the time that the work has been done, and on what account, is the best method by which such facts can be ascertained, and when the local Manager, and then the Assistant General Manager, under whose direction such work has been done, examines and approves the notation of the foreman or gang boss, there is no just ground for criticising the method of keeping such records and accounts.

The Master refers to the fact that the construction account for a number of years consisted "largely of items similar to those just above referred to," and amounts to a large sum in the aggregate. He then states that he is impressed by the idea that it would not be surprising if errors "as to the proper distribution of these vouchers had occurred by reason of the carelessness or ignorance of the agents of Complainant who made notations on the vouchers."

Complainant excepts to this part of the Master's report, because it appears that accountants representing the Complainant and the Defendant had full and free access to all of Complainant's books, records and vouchers; that they examined the construction account, and did eliminate all errors they found and reported the result to the Master. If there were other errors they were not discovered by the accountants representing either Complainant or Defendant; they were not discovered by Complainant's Auditor, and, while it may be true, as the Master states, that there are other errors,
342 yet Complainant insists that the Master cannot assume that any such errors exist which could affect appreciably the result reported by Complainant's Auditor and the expert accountants representing the Complainant and Defendant, and as shown to have been entered upon Complainant's books from time to time as the work was done and the cost thereof ascertained.

The Master states that he has ignored the Supplies Account and the working cash capital in making his estimate of the value of the plant.

He states that supplies are bought and paid for by Complainant and retailed to the exchanges as needed, and the exchanges pay Complainant the cost price and an additional 10 per cent, and also the ordinary expenses of the Supply Department.

Complainant excepts to this part of the Master's report, because it has been shown heretofore under the heading "Cost of Plant," that supplies have been charged against the exchange at the exact cost to Complainant; that the 10 per cent added was not a profit, but additional cost beyond that paid to the manufacturers, and represented the expense of purchasing, handling and delivering supplies to the various exchanges. The interest on the amount of supplies necessary to conduct the Louisville plant has not anywhere been charged either to construction or expense of the Louisville plant.

The Master states:

"The cash working capital is furnished by the Complainant, and the exchange reimburses the Complainant for all the money it uses. The evidence does not show whether interest is charged against the exchange or not."

There is no evidence that any of the expenses of conducting the Louisville Exchange includes interest for working capital. It
343 is true as stated by the Master that the exchange reimburses Complainant for whatever money it furnishes, but Complainant submits that the money Complainant furnishes to the exchange upon which it is operated is a part of the capital employed in the business and should be treated as a part of the Construction Account, or a part of the capital necessary to operate a telephone exchange.

The Master states there is no evidence in the record tending to show that the plant in Louisville is subject to any disadvantages that do not equally apply to all other plants of Complainant extending over several States.

Complainant excepts to the report of the Master, because it does appear in the record that Complainant has encountered active competition in its business in Louisville; that such competition does prevent normal conditions, telephonically speaking, and that it does actually increase expenses.

It is not shown in the record that Complainant has opposition in its 516 additional exchanges, but it does appear that in the City of New Orleans it does not have competition, and for these reasons Complainant excepts to this statement in the Master's report.

The Master refers to the fact that Complainant pays regular dividends upon its stock, which commands a premium in the market, and that "no satisfactory explanation of these conditions is offered."

From the Annual Report of Complainant for the year ending December 31, 1908, which is in evidence in this case, it will be seen that Complainant has outstanding only $19,680,150.00 of stock upon which it pays dividends, and that it has invested in plant $24,381,297.64

344 That it has invested in real estate and buildings $790,163.23
Material on hand 640,861.40
Stocks and bonds 435,599.04
Cash 457,546.49

Or a total value of $26,705,467.80

It appears in the record that Complainant has a comprehensive system of toll lines uniting its 517 exchanges, and from all these sources it derives a sufficient amount to pay a dividend upon stock of $19,680,150.00
And five per cent bonds of 1,000,000.00

For the foregoing reasons, and others to be assigned on hearing, Complainant excepts to the report of the Special Master, and respectfully prays that his findings be disapproved.

Respectfully submitted,

HUMPHREY & HUMPHREY,
W. PRATT DALE,
WILLIAM L. GRANBERY,
Solicitors for Complainant.

345 United States Circuit Court, Sixth Circuit, Western District of Kentucky.

CUMBERLAND TELEPHONE & TELEGRAPH COMPANY, Complainant,
vs.
THE CITY OF LOUISVILLE, Defendant.

Exceptions to the Report and Findings of the Special Master.

And now comes defendant, City of Louisville, and excepts to the report of Henry Burnett, Esq., the Special Master, filed in this cause on the 17th day of November, 1910, and for cause of exception shows:

First. That the Master, in the trial of the cause on the motion of the complainant, and over the objections and exceptions of this defendant, suppressed the depositions of William Kavanaugh, Charles Meriwether and S. M. Wilhite and held the testimony of said witnesses irrelevant and incompetent; when in fact the Master should have overruled the motion of the complainant to suppress said depositions and should have considered said depositions on the hearing of this cause; said witness Kavanaugh having testified to the value and the cost of constructing the telephone plant of the Kansas City Home Telephone Company and the earnings and expenses of said company, the dividends paid by said Company, and the rates charged by said Company, all of which facts were pertinent and relevant on the trial of this cause; and said Charles Meriwether and S. M. Wilhite having testified as to the earnings and expenses of the Louisville Home

Telephone Company, a telephone company doing business in
346 the City of Louisville, Kentucky, which facts were pertinent and relevant on the trial of this cause.

(See Supplemental Report of Master filed Dec. 10th, 1910.)

Second. That the Master in his said report stated and certified that the complainant was entitled to charge as a part of its operating expenses for operating its plant in the City of Louisville an item denominated "instrument expense," amounting to the following sums for each of the following years:

1905	$11,559.76
1906	12,518.70
1907	13,372.49
1908	13,722.52

whereas the Master ought to have found that the complainant was only entitled to charge as part of its operating expenses the following sums for each of said years representing said instrument expense, to-wit:

1905	$4,000.00
1906	4,000.00
1907	4,000.00
1908	4,000.00

it having been shown in the deposition of W. H. Crumb (page 60) and the deposition of W. C. Polk (page 111), and the deposition of H. Blair Smith (pages 324 and 511), that about ten thousand of these instruments are used by the complainant in its Louisville exchange; that said instruments last about eight years; that they cost about $2.00 per instrument; and that said instruments, or instruments equally as good or better, can be purchased in the open market; and, therefore, the complainant was permitted to charge and was allowed as part of its operating expenses for instrument expense about 65 per cent on the value of the instruments, whereas it should not be permitted to charge nor allowed over 20 per cent
347 thereon.

Third. The Master in said report stated and certified on page 43 of his report that the amounts expended by the complainant in connection with the general expense account for operating its telephone system in the City of Louisville were as follows:

$28,152.52 for the year 1905;
$34,888.46 for the year 1906;
$33,749.19 for the year 1907;
$31,513.00 for the year 1908,

whereas the Master ought to have found that the amounts expended under the head of general expense account in operating complainant's telephone system in the City of Louisville were as follows:

$27,319.78 for the year 1905;
$34,078.84 for the year 1906;
$32,911.33 for the year 1907;
$30,710.06 for the year 1908,

the difference being made up of the following items, to-wit:

$832.74 for the year 1905;
$809.62 for the year 1906;
$837.86 for the year 1907;
$802.94 for the year 1908,

which last named items represent the taxes paid by the complainant on its exchange building and real estate in the City of Louisville, other than on its main exchange. The Master having reported on pages 35, 36, 37 and 42 that the complainant treats the real estate which it owns in the City of Louisville as an outside operation and charges against the earnings of the Louisville exchange rent of over 8 per cent on the said real estate, and charges against the Louisville exchange taxes on said real estate and buildings; and that if the taxes were paid by the complainant out of said rent, and not charged against the Louisville exchange, then the complainant would receive over 6 per cent income on the value of its real estate and buildings, which percentage the Master finds to be in excess of what own-
ers of similar real estate usually derive from the use of similar
348 property in the City of Louisville. (See also the deposition of H. B. Warren, pages 491 to 498 and 534 to 536, together with Exhibit No. 8 filed with H. B. Warren's deposition).

Fourth. That the Master has in said report stated and certified that the amounts expended by complainant in the way of maintenance and charged up as a part of the expense of operating its telephone plant in the City of Louisville were as follows:

1905	$49,819.14
1906	52,796.93
1907	65,616.31
1908	54,705.91

whereas the Master ought to have found that the amounts expended by the complainant in the way of maintenance, and the amounts complainant was entitled to as a part of the expenses of operating its telephone plant in the City of Louisville were as follows:

1905	$48,674.49
1906	51,475.63
1907	64,408.96
1908	53,397.61

the difference being the following items:

1905	1,144.65
1906	1,321.30
1907	1,207.35
1908	1,308.30

which last mentioned items represent the insurance paid by the complainant on its buildings in the City of Louisville and charged up as a part of the operating expenses of the Louisville exchange; the Master having found in his third finding of fact (pages 35, 36, 37 and 42) that the complainant treats its buildings in the City of Louisville as an outside operation and charges against the Louisville exchange a rental equal to 8 per cent of the value of said
349 real estate, and also charges against the Louisville exchange as expenses the insurance which it pays on its said buildings; whereas, the said complainant is only entitled to charge against the Louisville exchange the rent which it does charge and should be required to pay out of its said rent the insurance on said buildings. (See also H. B. Warren's deposition, pages 491 to 498 and 534 to 536, and also Exhibit No. 8 filed by said H. B. Warren with his deposition.)

Fifth. That the Master has in said report stated and certified that the total amounts expended by the complainant in operating its plant in the City of Louisville were as follows:

1905	$226,052.32
1906	232,838.37
1907	245,520.89
1908	216,363.07

whereas the Master ought to have found that the total amounts expended by the said complainant in operating its said plant in the City of Louisville were as follows:

1905	$206,615.17
1906	212,288.75
1907	224,203.29
1908	194,559.31

the difference being made up of the items specifically referred to and excepted to in the second, third and fourth exceptions hereof, which are as follows:

Excess instrument.	Expense.	Taxes.	Insurance.	Total.
1905	$7,559.76	$832.74	$1,144.65	$9,537.15
1906	8,518.70	809.62	1,321.30	10,649.62
1907	9,372.49	837.86	1,207.35	11,417.70
1908	9,772.52	802.94	1,308.30	11,883.76

and also the following items:

For each of the years 1905, 1906, 1907 and 1908, the amounts charged up against the Louisville exchange as part of the
350 operating expenses of said exchange, as shown by Mr. Warren's deposition (pages 523, 524 and 525), included the sum representing what the earnings would have been on telephones furnished by the complainant to its patrons in the City of Louisville

free of charge had those patrons paid the regular rates for such services. This item, according to Exhibit No. 6 filed with the deposition of H. Blair Smith, Auditor of the complainant, amounts for each of the years in question as follows:

1905, 1906, 1907 and 1908..... $9,900.00

The finding of fact on the subject of total amount expended by the complainant in operating its plant in the City of Louisville, therefore, should have been the amount represented by the difference between the amounts found by the Master on page 47 of his report as the total operating expenses, and the items mentioned in exceptions second, third and fourth hereof, plus $9,900.00, above referred to, which difference represents the total expenses incurred by the complainant in operating its plant in the City of Louisville, and for the respective years in question is as follows:

1905	$206,615.17
1906	212,288.75
1907	224,203.29
1908	194,559.31

Sixth. That the Master has in said report stated and certified that had the ordinance rates been in effect in 1908, then the amount received by the complainant during the year 1908 would have been $49,721.36 less than the amount actually received by the complainant; whereas, the Master ought to have found that the complainant would have earned and received during the year 1908, had the rates fixed by the ordinance of March 6, 1909, been in force, and had all the subscribers to complainant's telephone service been charged at the rates fixed by the ordinance, $5,793.00 in excess of what complainant did earn and receive under the rates which
351 it charged to subscribers during the year 1908. H. B. Warren in his deposition (page 559), showing that the Accountants reached the said figures ($49,721.36) by making a calculation based on what each subscriber to the complainant's telephone service would have been required to pay had the ordinance rates been in force, eliminating from such calculation all subscribers to the complainant's telephone service who were charged less than the ordinance rates. For instance, where a telephone subscriber had a direct business telephone line and was, during the year 1908, required to pay only $4.00 per month, the Accountants in said calculation did not take into consideration the fact that under the ordinance rates such subscriber could be and should be required to pay $5.50 per month. The said $49,721.36 was, therefore, arrived at on a false basis and on an erroneous calculation.

Seventh. That the Master in said report stated and certified that the complainant's net earnings, should the ordinance rates be in force during the year 1911, would probably amount to $30,000.00 below what the net earnings were under the rates charged in 1908; whereas the Master ought to have found that the said net earnings

for the year 1911 under the ordinance rates would probably amount to $30,000.00 in excess of what the net earnings were found to be under the rates in effect during the year 1908. (See Warren's deposition, pages 539 to 552, inclusive, and also Exhibits 14, 15, 15*a* and 16, filed by said Warren with his deposition, and also Exhibit No. 6 filed by H. Blair Smith with his deposition.)

Respectfully submitted,

C. B. BLAKEY,
Solicitor for Defendant.

352 And on another day of said term of said court, continued and held, to-wit, on January 4th, 1911, the following proceedings were had:

No. 7194.

CUMBERLAND TELEPHONE & TELEGRAPH COMPANY, Complainant,
vs.
THE CITY OF LOUISVILLE, Defendant.

This day came the complainant by Humphrey & Humphrey, William L. Granbery and W. Pratt Dale, its counsel. Came also the defendant by Clayton B. Blakey and Huston Quin, its counsel.

This cause coming on to be heard upon the exceptions of complainant and defendant to the report of the Special Master, filed herein, the same were argued in part, and there not being time to conclude same to-day, time is given until to-morrow.

And on January 5th, 1911, the following proceedings were had:

No. 7194.

CUMBERLAND TELEPHONE & TELEGRAPH COMPANY, Complainant,
vs.
THE CITY OF LOUISVILLE, Defendant.

This day came the parties by their respective counsel. The arguments of counsel upon the exceptions to the report of the Special Master having been concluded, and the Court not being fully advised thereof, takes time.

353 And on another day of said term of said court, continued and held, to-wit, on January 17th, 1911, the following proceedings were had:

No. 7194.

CUMBERLAND TELEPHONE & TELEGRAPH COMPANY, Complainant,
vs.
THE CITY OF LOUISVILLE, Defendant.

In this cause complainant asks leave of the Court for permission to withdraw its exceptions to the allowance asked for by the Master

and the complainant is accordingly allowed to withdraw its exceptions to the Master's compensation.

It is therefore ordered, adjudged and decreed by the Court that said exceptions be, and they are hereby, withdrawn.

354 And on January 24, 1911, the following proceedings were had:

No. 7194.

CUMBERLAND TELEPHONE & TELEGRAPH COMPANY, Complainant,
vs.
THE CITY OF LOUISVILLE, Defendant.

The Special Master, Henry Burnett, having filed herein his claim for allowance on account of his services and expenses incurred as such Special Master, and it appearing that complainant's exceptions thereto have been withdrawn, and none having been filed by the defendant, and the Court being advised, it is now ordered that Henry Burnett, Special Master herein, be, and he is, allowed Eight thousand, three hundred and fifty and 15/100 Dollars in full of his services and expenses incurred herein.

It is further ordered that complainant, Cumberland Telephone & Telegraph Company, within ten days, do pay to the Special Master the above named sum and same shall constitute a part of the costs of this action, to be taxed as such, and this order shall in no wise affect the ultimate disposition of the case by the Court as to costs, or otherwise.

The Special Master is directed to file with the Clerk of this court his receipt for said amount when paid.

And on March 17th, 1911, the following proceedings were had:

No. 7194.

CUMBERLAND TELEPHONE & TELEGRAPH COMPANY, Complainant,
vs.
THE CITY OF LOUISVILLE, Defendant.

This day came Henry Burnett, Special Master, and filed his receipt for $8,350.15, same being in satisfaction of the allowance to the Special Master for services and for expenses herein.

355 And at another term of said Court held for its March Term, continued and held, to-wit, on April 6th, 1911, the following proceedings were had:

No. 7194.

CUMBERLAND TELEPHONE & TELEGRAPH COMPANY, Complainant,
vs.
CITY OF LOUISVILLE, Defendant.

This case having been heard and submitted on the Master's report and the exceptions thereto, now came on for final hearing, and is now submitted in chief; and upon the final hearing the following records and parts of records were read by the respective parties, to-wit:

On behalf of the Complainant:

1. The original Bill of Complaint and the exhibits filed therewith, being the charter of the Cumberland Telephone & Telegraph Company and other documents;
2. The Amended Bill of Complaint;
3. The Replication;
4. The exceptions filed by the Complainant to the various reports of the Master;
5. The deposition of H. Blair Smith and exceptions numbered 1 to 22, with the exceptions of Exhibits Nos. 7, 8 and 22;
6. The first deposition of James E. Caldwell, together with eight exhibits, one being a printed pamphlet entitled "Why do telephone companies charge more for service in large exchanges than in small exchanges;" one being Exhibit No. 3 showing the number of subscribers in Jeffersonville and New Albany paying the Louisville rate; also Exhibits Nos. 4, 5 and 6, being the annual reports of the telephone company for the years 1906, 1907 and 1908; also Exhibit No. 7, being the report of the American Telephone Company for
356 the year 1908; also Exhibit No. 8, being a circular issued by Goulding Marr.
7. The deposition of J. E. Jagoe.
8. The deposition of Leland Hume;
9. The deposition of E. M. Fisher;
10. The deposition of George Wilkinson and Exhibits Nos. 1, 2 and 3 filed with said deposition, being the joint report of the accountants and the two separate reports of Wilkinson.
11. The deposition of O. D. Green.
12. The second deposition of H. Blair Smith and one exhibit, being the report of the Committee on Gas, Oil and Electric Light to the City Council of Chicago;
13. The second deposition of James E. Caldwell and one exhibit filed therewith, being the annual report of the American Telephone & Telegraph Company for the year 1909.

On behalf of the Defendant:

1. The answer of the defendant and the exhibit filed therewith, marked Exhibit A;
2. The order made on the filing of the Amended Bill;
3. The deposition of W. H. Crumb and two exhibits, one being

his affidavit filed March 29, 1909, and also Exhibit No. 2, being the report of the Special Telephone Commission of Chicago, of April, 1907, but which is contained in the report of the Committee on Gas, Oil and Electricity to the Chicago Council, and it is agreed for this reason that it may be omitted, as it is included in the exhibit with H. Blair Smith's second deposition;

4. The deposition of H. N. Gifford.

5. The deposition of Hardy Burton;

6. The deposition of John H. Brand;

7. The deposition of J. E. Settle;

357 8. The deposition of Isaac Hilliard;

9. The deposition of H. B. Warren and 21 exhibits filed therewith, being numbered 1 to 21 inclusive;

10. The report of the Mutual Audit Company;

11. Two depositions of W. C. Polk;

12. Two depositions of W. H. Casler;

13. The deposition of Charles E. Archer.

14. The deposition of Charles Meriwether;

15. The deposition of S. M. Wilhite;

16. The deposition of James F. Grinstead.

The Master sustained exceptions to the depositions of Archer, Meriwether and Wilhite and excluded them, and did not include them in making up his report and findings.

To this action defendant excepted.

17. The deposition of S. D. Levings;

18. The stipulation in regard to Prof. Jackson's report and Prof. Jackson's report on the valuation of the New England Telephone Company in Massachusetts.

19. The stipulation in regard to the rate charged by the Louisville Home Telephone Company.

20. The deposition of Norton E. Westlake;

21. The deposition of Howard P. Yeager;

22. The deposition of Alice C. Everett;

23. The deposition of Daniel Wagner;

24. The deposition of M. J. Doll;

25. The deposition of T. D. Webb, together with three exhibits attached thereto;

26. The deposition of J. W. Hart.

27. The deposition of Reuben G. Trail.

28. The deposition of Gansey R. Johnston;

29. The deposition of James D. Daniels.

30. The deposition of W. H. Ritterhoff.

31. The deposition of Charles M. Peake;

358 32. The deposition of George M. Welsh;

33. The deposition of Robert Frewin;

34. The deposition of W. J. Kavanaugh.

The Master sustained exceptions to the deposition of W. J. Kavanaugh, to which ruling the defendant excepted.

35. Exceptions to the Master's report.

Exceptions of the defendant to the ruling of the Master on the depositions of Archer, Meriwether and Kavanaugh; also certain

exceptions to certain portions of the deposition of James E. Caldwell and certain exhibits filed by said James E. Caldwell; certain portion of the deposition of T. D. Webb and the deposition of O. D. Green.

In addition to the foregoing, the following portions of the record were also read, to-wit:

1. The report of the Master filed herein November 17, 1910;
2. The first supplemental report filed herein November 25, 1910;
3. The second supplemental report filed herein December 10, 1910.
4. Stipulation in regard to certain exhibits, filed April 10, 1911.
5. All orders in the case.

359 The Complainant's depositions and exhibits are as follows:

In the United States Circuit Court for the Western District of Kentucky, at Louisville, Ky.

CUMBERLAND TELEPHONE & TELEGRAPH COMPANY
vs.
CITY OF LOUISVILLE.

Depositions of Sundry Witnesses Taken at Nashville, Tennessee, Beginning on April 14th, 1909, on Behalf of the Plaintiff in the Above Entitled Cause, in the Presence of Hon. Henry Burnett, Commissioner; Mr. W. L. Granbery, Counsel for the Plaintiff; Mr. Huston Quin, Counsel for the Defendant; and Buford Duke, Stenographer and Notary Public.

Caption, certificate and all foramilties waived.

By Mr. GRANBERY, for Plaintiff:

Before beginning the testimony in this case, I wish to state to opposing counsel that in giving facts from the records of the plaintiff company, I wish him to understand that all the records of the company are open to his inspection, to enable him to verify or explain any fact that may be presented by the witnesses in-
360 troduced to testify on behalf of plaintiff, and full opportunity will be afforded counsel to investigate these records to verify the correctness of the statements made, and to enable him to develop any fact or circumstance that, in his opinion, will in any way aid in the investigation we are now entering upon.

I also wish to state that the plaintiff company consents that the Commissioner in this cause may appoint one or more expert accountants to investigate the books and records of the company, with a view of ascertaining the correctness of any of the statements made by the Company's officials, with respect to its affairs in the City of Louisville, and to enable the Commissioner to ascertain any other facts that may be revealed by the records of the Company which will aid him in reporting upon the matters submitted to him by the Court; and I further agree that the expense incurred may be taxed as costs, and abide the result of the litigation.

I wish to state to the Commissioner that the plaintiff will
361 be pleased to have him ask any questions that may occur to him during the taking of the proof, and that he will request such proof to be made that may occur to him to be proper, and which will enable him to more intelligently report upon the facts submitted to him under the orders of the Court.

H. BLAIR SMITH, being first duly sworn, deposed and testified as follows:—

Direct examination.

By Mr. GRANBERY, for Plaintiff:

1. You are a citizen of Nashville, Tennessee, and Auditor of the Cumberland Telephone and Telegraph Company?

A. I am.

2. How long have you been connected with the Cumberland Telephone and Telegraph Company?

A. More than fifteen years.

3. How long have you been Auditor?

A. About ten years.

4. I will ask you to state whether or not during that time you have investigated the proper methods of classifying telephone expenses and telephone revenues, and investigated accounts relating to the proper keeping of accounts of telephone companies.

A. That has been the main work I have undertaken.

362 Q. Have you attended conventions, and corresponded with other experts in this line of work?

A. I have.

Q. Have you conferred with various experts over the country with a view of ascertaining the best methods?

A. I have.

Q. As the result of the experience and the information gathered, and conferences and attending conventions and other meetings, do you or not consider yourself an expert accountant with reference to telephone accounting?

A. I believe I am.

Q. Are you so considered?

A. Yes.

Q. How many employés are under you in your department?

A. Seventy or seventy-five.

Q. What are their duties?

A. The receiving, auditing and compiling of reports of the business transacted by the company; receiving and auditing and classifying the vouchers for expenditures, making financial reports, and supervising the disbursement of cash. We also employ seven traveling auditors; we have 517 exchanges and those exchanges handle practically the business of the company and these traveling auditors go to all these points, and we have it in view to make every one of those points at least once each year; sometimes it runs over a few months, but more often the exchanges are audited on the
363 average more than once a year. When a traveling auditor audits an exchange, he audits thoroughly the revenues,

checks up the pay-rolls, and in fact, he does all it is possible to do on the ground, to verify the correctness of the books, the expenses, etc., and the reports that have been sent to the general office.

Q. The questions I shall now ask you relate to the period covering the last three or four years. What is the system with reference to the company's affairs so far as your department is concerned, between the general office located at Nashville, Tenn., and the various offices at the 517 exchanges?

A. They all report to the general office, and the general office is the focal point where we get the reports and vouchers for all revenues and expenditures.

Q. What area does the plaintiff company conduct its affairs in?

A. The territory is about a thousand miles long, from north to south; and has a breadth of about four hundred miles.

Q. Covering what part of the country?

A. Covering the southern part of the State of Indiana, and the southeastern part of Illinois, the most of Kentucky and Tennessee, Mississippi and Louisiana.

Q. Does the company also operate toll lines as well as exchanges?

364 A. Yes.

Q. Are all these exchanges connected together with toll lines?

A. Yes, each one.

Q. Are reports received at your office monthly from all of these exchanges and other points where the company conducts its business?

A. Yes.

Q. What do these reports cover?

A. These reports cover the earnings from toll service, rental of instruments and miscellaneous earnings; and there is also a voucher sent in for each item disbursed.

Q. Who passes upon the correctness of the disbursements?

A. That is not entirely in the auditor's office. The final passing is in the auditor's office, but it starts with the granting of authority to incur the expense, the superintendent, the general manager or the president, or the department in fact which incurs the expense, is the first one to pass on it, to explain the expense and then submit the item to the auditor, where it is passed on finally.

Q. Is any expense of any kind incurred, which is not finally passed upon by the auditor and entered upon his records?

A. No.

Q. Is it part of his duties to see that all the receipts and
365 disbursements are entered upon the books of the auditing department?

A. It is.

Q. Is that done?

A. It is done, and in the best way that we know how to do it.

Q. I will ask you to file a statement showing the receipts and disbursements of the Louisville, Kentucky exchange by years, beginning with 1905, and ending with 1908, inclusive?

A. I will do so, and mark it Exhibit No. 1.

Q. Now, from this statement, it appears that the gross earnings for the years 1905, 1906, 1907 and 1908, were as follows: 1905, $278,170.73; 1906, $296,120.51; 1907, $3,116,981.51; 1908, $326,603.54. I will now ask you to state under the different headings from which this revenue or earnings were derived, and explain what is included under each?

A. Under the heading of Exchange service, we include the net rental from all instruments connected with the Louisville exchange, all pay station revenues, measured service revenues, commissions received from telegraph companies and the commissions received for operating lines of other companies; Proportion of Toils Earned by the Exchange, includes for the years 1905, 1906 and 1907, fifteen per cent of the company's toll business originating at Louisville,
366 and the toll stations connected with the Louisville exchange direct; also the telegraph commissions and deliveries and the operating commissions from other telephone companies; In 1908 the classification was changed so that the commissions received for operating done by other telephone companies and the commissions from the telegraph companies, was put into exchange service instead of toll line service. It is, nevertheless, included in the earnings of the Louisville exchange. Miscellaneous Revenue includes charges for moving telephone instruments, profits on sales of material if made, and other miscellaneous profits for work done for others. Advertising includes revenue received for the advertisements displayed on the company's quarterly directory.

Q. Why was the change made for the year 1908 with reference to putting revenue under different heads?

A. The American Telephone and Telegraph Company publishes a circular for the handling and classification of accounts, and their new auditor or comptroller rather, considered it was proper to put it that way, rather than to include it under the toll line head.

Q. The result, so far as showing the total receipts of the exchange, is the same?

A. Yes, sir.

Q. It is merely a matter of whether you include it under one or the other head?

A. It is merely a matter of classification.

367 Q. Now, what do you mean by earnings from exchange service?

A. I mean the earnings which we receive for connecting one subscriber to the Louisville exchange, and to all other subscribers having Louisville exchange service.

Q. Does that include subscribers who are paying a flat monthly rate, pay stations, that is, public pay stations where anyone is at liberty to use the telephone by dropping a coin in the box for the use of the service?

A. It does.

Q. Measured service which is, instead of renting a telephone on a flat monthly basis, you install a telephone and the party pays according to the amount of service he receives?

A. Yes.

Q. Does this also include all revenue received from telephones

outside of the corporate limits of the City of Louisville, but part of the exchange?

A. Yes.

Q. Does it include any part of the revenue received from other exchange located in Jefferson County or across the river in Southern Indiana?

A. It does not.

Q. Those exchanges are separate and distinct, so far as revenue is concerned?

A. Yes.

368 Q. Now, you say pro rate of the tolls earned by the Louisville Exchange. What do you mean by that.

A. That means this, that the toll lines connecting with all other exchanges of the territory, run into the Louisville switchboard.

Q. Now, just there, explain the difference between exchange service and the toll line service?

A. Exchange service is the revenue derived from service rendered subscribers to one exchange, in talking to subscribers of the same exchange. Toll line service is the toll line revenue that is derived from messages between one exchange and another exchange, or between toll stations connected with one exchange and toll stations connected with another exchange.

Q. Are there any such things as toll stations between any two points in the same exchange area?

A. Yes.

Q. Now, with reference to Louisville, are there any toll stations between two different points in the same Louisville exchange area, and if so, is the earnings from these toll stations treated as exchange earnings or toll earnings?

A. There are, and they are treated as toll earnings.

Q. Now, between what points are those toll stations in the Louisville exchange area?

A. Brooks, Ky., Fairmount, Fern Creek, Hubers, Mt. Washington, Newberg, Smyrna and South Park, and during the month

369 of March, the revenue from all those stations, no matter whether to Louisville or outside points, amounted to less than twenty dollars.

Q. Is that a fair average earning per month of those stations?

A. Yes.

Q. Why do you allow the Louisville exchange fifteen per cent of the tolls collected at Louisville, for toll service radiating throughout the entire system?

A. Because that is generally accepted, and we believe to be the fair percent that the exchange earns for handling the business.

Q. Now, the toll line construction is separate and distinct from the exchange construction, is it?

A. It is.

Q. Now what does the plaintiff company pay other companies for handling their toll messages at points where the plaintiff has a toll line but has no exchange?

A. About fifteen per cent. It averages fifteen per cent; not over that.

Q. What do other companies, having toll lines running into the plaintiff company's exchanges, pay the plaintiff company for handling their toll messages?

A. The general per cent is fifteen.

Q. Do you consider this a fair per cent?

A. I do.

370 Q. Now, you connect at Louisville, as well as at other points with the toll lines of the American Telephone and Telegraph Company do you not?

A. Yes, sir.

Q. What does the American Telephone and Telegraph Company pay the plaintiff company for handling its toll messages?

A. The average for the three months, December 1908, January and February 1909, averaged eight and two tenths per cent.

Q. Now, what account do you credit by that percentage received from the American Telephone and Telegraph Company *to*

A. Until 1908 we credited it to toll line revenue. In 1908 we credited it to exchange service revenue.

Q. So that for all the commissions received from the American Telephone and Telegraph Company for handling toll messages radiating from Louisville over their lines, the Louisville exchange was credited with the entire amount received by the plaintiff company for that service?

A. Not only from Louisville, but the check stations from Louisville. Louisville got credit for all of it.

Q. What do you mean by the check stations?

A. The toll stations.

Q. Now, if anyone from Louisville desired to talk over a toll line to any other part of the country, what lines would be employed and what company would get the toll for these conversations?

371 A. Different lines might be employed.

Q. If the plaintiff company had a toll line there it would use its toll line and take the entire charge?

A. Yes, sir.

Q. And wherever the point to be reached from Louisville was not in the plaintiff company's territory, but in some other company's territory where the plaintiff had no line, then the other company's line would be employed?

A. Yes.

Q. Now from Louisville to all points in Kentucky, Tennessee, Mississippi, Louisiana, Southern Indiana and Southern Illinois, whose lines are employed to give service from Louisville?

A. The Cumberland Telephone and Telegraph Company's almost exclusively.

Q. Now when the American Telephone and Telegraph Company's lines are used, it is to talk between Louisville and some point outside of the territory of the Cumberland Company?

A. Yes.

Q. And for the reason that the Cumberland Company has no line beyond the area in which it transacts its business?

A. Yes. In one instance, we talk over joint lines with the Central Union.

Q. That is another connecting company?

A. Yes.

Q. And there the messages are pro rated according to the mileage used by each company?

372 A. Yes.

Q. What is the basis of charges, as between exchange service and toll line service, generally speaking?

A. Generally speaking, exchange service is at a flat rate rental, and toll line is measured, the charges being according to the number of times the line is used and the period of time it is used.

Q. Generally speaking the rate for a toll message is one half of a cent per mile for three minutes of conversation?

A. Yes.

Q. And generally speaking, for exchange service, each subscriber or patron pays a flat rate for unlimited service, per month?

A. Yes.

Q. The exchange service and the toll line service are separate and distinct?

A. Yes.

Q. Do you have separate reports from the various offices for receipts from exchange and receipts from toll line service?

A. Yes.

Q. So that the figures given above for earnings of the Louisville exchange include all the earnings originating or earned by that exchange, including the compensation for all service rendered, for toll line business outside of the Louisville exchange area?

373 A. Yes, the toll line business going beyond the exchange area.

Q. Now for the same years exhibit No. 1 shows that the total expenses per year, were as follows: 1905, $240,263.39; 1906, $247,130.03; 1907, $260,123.33; 1908, $227,495.66. I will ask you to explain what is included under each heading of expense. For illustration, you have under the head of general expense, several items, and under operating expense, several items, and other headings the same. Please take each heading and explain what expense is included under each head or sub-division?

A. Under general expenses, the first item is proportion of general expenses. General office expenses, including the salaries of the president, general manager, treasurer, general counsel, auditor, engineer, chief electrician and other general employés having in charge the various departments of the whole company, and their office forces and office expenses. This general expense is apportioned to the various properties on the basis of operating and maintenance expenses. This is the principle upon which the apportionment is made to the Louisville exchange.

Postage, printing and stationery; this title explains the class of expenses charged to this account. It involves all postage purchased for the use of the Louisville exchange, the stationery and the books used there.

374 Directory; this account represents the cost of compiling, printing and distributing the telephone directory. The Louisville directory has in it directories covering New Albany,

Jefferson and other points, and Louisville is charged with its pro rata.

Taxes; This includes all taxes paid on account of the Louisville Exchange, whether to the State, to the County or to the City.

Legal Expenses; This includes fees paid to counsel for legal services affecting the Louisville exchange, but no part of the general counsel's salary, is charged to this account. It includes court costs and other expenses involved under the heading and growing out of the business of the Louisville exchange.

Uncollectable; This includes the uncollectable accounts charged off as worthless at the Louisville exchange.

Q. You include it first in your revenue as if you had collected every dollar of it?

A. We include the revenue as it is earned.

Q. And then charge as expenses that part of the revenue which cannot be collected?

A. Yes, sir. Then, Operating; Salaries and Wages, represents a proportion of the salary of the manager at Louisville, his office force, cashier's salary and his clerks engaged in Louisville business; Rent, light and heat account, and in this connection it would be proper to explain the following: first, the real estate owned by the com-
375 pany in the Louisville exchange is not included in the cost of plant as shown in Exhibit No. 1. The rental which the company would have to pay for the quarters occupied if leased from other parties, is estimated, and this rent is apportioned between the various items of expense on the basis of space occupied. The operating, rent, light and heat account, includes its proportion of this rental for the space which employés engaged in the operating department occupy. Also, the fuel, light, etc. used by them;

Advertising and canvassing account; this account includes the salaries of the traffic men, solicitors—in fact, those dealing with the public, receiving orders for installations and removals and investigating the service rendered by the operating force, together with advertising in the newspapers and periodicals in the Louisville exchange.

Incidental; this account is charged with laundry, ice, toilet supplies, electric current for fans and other small items pertaining to the exchange, which cannot be otherwise classified.

Maintenance; this is divided into two accounts, one known as current repair and the other as reconstruction; maintenance current repair, salaries and wages, includes the salaries of the foreman, linemen, trouble men, electricians or employés engaged in keeping in repair and operating condition the local properties of the com-
376 pany at Louisville; Rent, light and heat, includes its proportion of the rental paid for space occupied by these forces, together with their proportion of the heating and lighting. Material account, represents current for storage batteries and miscellaneous items such as cords and plugs and renewals of those parts whose normal life is less than a year.

Traveling account; this includes the cost of horses, vehicles and automobiles used for the purpose of repairing troubles, that is, keeping the plant in repair. Conduit, pole and roof rent; this represents

the amount paid for attachments or exchange wires to the poles or roofs belonging to others and rented by the company.

Insurance; this is the cost of insuring the property in the exchange against fire.

Damage and compensation; this includes cost of damages from injuries to employés and the public through fault of employés; also for operating damages, failure to deliver messages on time and incidental expenses in connection therewith, including attorneys' fees, court costs, etc. Legal, does not include the attorney's fees or court costs in case it is a damage case, as that is charged to compensation and damage account.

Incidental; this includes miscellaneous items connected with the current operating expenses which cannot be classified under the other headings.

377 Maintenance reconstruction, salaries and wages; this represents payments for services to employes engaged in reconstructing the properties of the exchange: Rent, light and heat; this includes the proportion of rent paid, light and heat used by the force engaged in reconstruction; Material; this represents the cost of material used for reconstruction purposes, that is, in case the life of the material is reckoned at exceeding one year. Traveling, represents the delivery and other traveling expenses necessary for the forces engaged in reconstruction work. Incidental, includes expenses of this class which cannot be properly charged to the other accounts.

Instrument rent: This company does not own the telephones and transmitters which are used by it. These are owned by the American Telephone and Telegraph Company, and for the use thereof and for expert engineering services and expert advice, the company pays to the American Telephone and Telegraph Company a rental of four and one half per cent on the gross receipts derived from the use of these instruments.

By the COMMISSIONER:

Q. Are those instruments maintained in condition by the plaintiff company?

A. The instruments are maintained, so far as current repairs can keep them in service, but if an instrument becomes unservicable, it is removed from the plant and shipped back, and the only

378 cost to us is the freight from the factory, and new ones are supplied on requisition.

Q. You spoke awhile ago of charging off uncollectable accounts. Is that an appreciable item?

A. For the year 1905, it amounted to $1,679.39; about one half of one per cent; for the year 1906, it was $1,519.41, about one half of one per cent; for 1907, it was $2,344.94, about seven-tenths of one per cent; for 1908, it was $3,707.34, about one per cent.

By Mr. GRANBERY, for Plaintiff:

Q. Those last two years were during the panic, were they?

A. Yes.

Q. How do those accounts become uncollectable?

A. Just from inability to collect them. We put in telephones for practically anyone who gives an order for it. The first payment is in advance, and the second payment will be at the end of the period, if they collect. He will give service for a month on credit, and then extend the time as far as twenty days. For the month and twenty days we are sometimes caught and cannot collect. At the end of that period, unless we have assurances that the account will be paid, the instrument will be removed.

By Mr. GRANBERY, for Plaintiff:

Q. I will ask you to state whether or not you regard this
379 contract with the American Bell Telephone Company by which you obtain the instruments as stated, rather than buying them and maintaining them, an advantageous contract for the company?

A. I do.

Q. I will ask you to state whether or not that same contract with the Chicago Telephone Company was carefully investigated and considered by the Commission appointed by the Chicago City Council and approved by that commission?

A. According to that report it was.

Q. I will ask you to state as a part of your deposition, the report of this commission with respect to the contract which is identical with the one the plaintiff company has with the American Bell Telephone Company?

A. I will, and it is as follows: "In our opinion the advantages derived from this contract by the Chicago Telephone Company are worth a very considerable sum of money. We are not prepared to make an exact estimate of its value without time for additional investigation."

And after referring to another contract, separate from this, the Commission says: "It is our opinion that the aforesaid two contracts which the Chicago Telephone Company has heretofore made, respectively with the American Bell Telephone Company and with the Western Electric Company are not harmful, but enable the Chicago Telephone Company to improve its service and purchase its supplies at a less expense than it otherwise could."

380 Q. Have these statements with reference to earnings and expenses been made up by you from your books and records?

A. They have been made up under my supervision.

Q. Were they taken from your books and records?

A. They were.

Q. Were they prepared under your direction, without any direction or control or suggestion from any of the other officers of the plaintiff company?

A. Yes sir.

Q. I will ask you whether or not your records show original reports, giving every item of receipts, and vouchers for every item of expense contained in Exhibit No. 1?

A. Yes.

Q. Will you offer them to the defendant's counsel for examination?

A. Yes.

Q. And ample opportunity to investigate them?

A. Yes.

Q. I will ask you to state whether or not there is any item of expense included in Exhibit No. 1 which in your opinion is improper or could have been avoided with the usual prudence and skill shown by business men in their own affairs?

A. There is no such item included therein.

Q. Now, as a result of the operations of the Louisville
381 exchange by the plaintiff company from 1905 to 1908, by years, shows a balance of revenue over expenses as follows; 1905, $37,907.34; 1906, $48,990.48; 1907, $56,855.18; 1908, $98,107.88. I will ask you to state how you explain the large increase in balance in 1908 over former years?

A. The principal cause of it is the reconstruction done during the year 1908 cost the company $19,535 against about forty or forty-four thousand dollars in years previous.

Q. In other words, the company expended about twenty-five thousand dollars less in 1908 on reconstruction than it did in the former years?

A. Yes.

Q. Exhibit No. 1 sets out the cost of the Louisville exchange year by year; in 1905 the cost of the exchange was $1,556,106.38; in 1906, $1,638,264.66; in 1907, $1,693,651.25; in 1908, $1,702,221.17. I will ask you to state how you arrive at the cost of the plant and what your records show in this regard?

A. The cost of the plant is arrived at by beginning with the cost of the plant purchased from the Ohio Valley Telephone Company, and month by month, and year by year, adding to that cost the actual construction done.

Q. You mean the actual additions added to the plant year by year?

A. The actual additions added to the plant year by year.
382 In case the property, or any part of it, was reconstructed, the cost of reconstructing in like manner, was charged to expense.

Q. And if, for instance a twenty-five foot pole was replaced with a fifty foot pole, the expense would be divided between new construction and re-construction in proportion that the cost of the twenty-five foot pole would bear to the fifty foot pole. Is that correct?

A. Yes.

Q. I will ask you to file a statement showing the actual cost of the Louisville plant when it was purchased by the plaintiff company from the Ohio Valley Telephone Company, and the amount added to that cost year by year down to and including the year 1908?

A. I will file a statement as Exhibit No. 2.

Q. Has it been compiled by you in your office, from your records?

A. Yes sir.

Q. What was the actual cost to the plaintiff company of the Louisville exchange when it was purchased from the Ohio Valley Telephone Company?

A. $687,354.69.

Q. What was the cost of the plant at the end of 1908?

A. $1,700,045.26.

Q. Now, the difference between those two amounts is the new construction and additions to that plant from time to time,
383 from the time of the purchase in 1899 to 1908?

A. To the close of 1908, yes.

Q. You have that statement classified so as to show the aerial construction and the equipment, and the underground construction, and the poles and office furniture and fixtures?

A. Yes.

Q. Now, I will ask you to state what is included under each heading?

A. Under the heading of aerial construction is included the cost of pole routes, open wire, cables, including cross-arms, guys, braces, supports, insulators, brackets, pins, etc. plus the cost of putting it in place and ready for service; equipment is the cost of central office apparatus, including switch-boards, route-boards, power plants, storage batteries, subscribers' station equipment, including the bells, backboards, extension bells, desk stands, booths, pay station apparatus, etc., and the labor and other expenses incident to putting the apparatus in condition and ready for service. Underground, represents the cost of underground conduits, manholes, repaving, and the cost of cables, bonding, which is the method of placing a copper wire alongside of the cable to take the stray currents of electricity which permeate the earth from the cable and which would eat holes in it, if it were not there; drawing cables into the duct, connecting them up; cable boxes and labor and expense in getting cables
384 into the service ready for use. Tools and teams, includes the cost of live stock, vehicles, automobiles, and tools used in the plant. Office furniture and fixtures, includes the cost of desks, chairs, etc., in the Louisville office.

Q. Please explain why your capital account increased year by year? Is this necessary; if so, why?

A. It is necessary, and it is a feature of the telephone business. Every new subscriber added to the plant practically requires a new pair of wires leading to his house from the central office. When instruments are given up, after having been once installed, some part of the wire remains on the pole, but it is very likely the use of that wire can not be needed until a subscriber in the same neighborhood installs the service. With most of the new installations it is necessary to furnish a new circuit and this increases cost of the plant and legitimately so.

Q. What about your switchboard?

A. When switchboards are installed, they have some margin of unused apparatus ready for service, but in time these socalled sections are filled up and then it is necessary to add an additional section. Each additional section costs considerably more than the

preceding section and the reason for this is that each section of the switchboard, while the operator on each section answers a certain number of calling subscribers, she must have before her
385 apparatus which will enable her to connect with any subscriber connected with the same exchange, and this same switchboard apparatus must be in each position and each position must necessarily be connected with every other position. The first position, you can see, would be comparatively simple; the second position would be just half as easy and the third position becomes even more complicated, and on the last position, in big exchanges like Louisville, the complication is great.

Q. Well, what has happened with reference to taking care of the increased patronage from 1899 to the present time in the Louisville exchange?

A. They have not only added sections to the main switch board, but we have built three other central offices in Louisville, known as South, East and West.

Q. Why was it necessary to build additional exchanges in the City of Louisville, rather than add to the one exchange to take care of the growth of the business?

A. It is impossible to build one switchboard big enough for this, and operate it at the same time. The reach of the operator is insufficient to make connections with such a switchboard.

Q. The expense of giving service to such a large number of people in one switchboard would be very much greater than giving it over three or four different boards?

A. The expense of building the board would be greater, and the expense of operating it would be more.

386 Q. Is this the approved method of caring for a large number of subscribers in large cities?

A. Yes.

Q. How many telephone exchanges has the Chicago Telephone Company in the City of Chicago, if you know?

A. I think it is seventeen.

Q. Do you know how many the City of New York has?

A. About thirty.

Q. How many has the plaintiff company in Nashville, Tenn.?

A. Three.

Q. How many in Memphis?

A. Two.

Q. In New Orleans?

A. Five.

Q. Louisville?

A. Four.

Q. So that is the approved method of developing a telephone exchange, is it?

A. Yes.

Q. Now, this capital account at the end of December 1908 appears to be less than at the end of 1907, or, over four thousand dollars less. How does this happen?

A. We lost a good many subscribers during that period and when-

ever a subscriber's station is discontinued, his apparatus is
387 credited to the plant and put into supply.

Q. Has there been a large increase in the number of subscribers in the Louisville exchange since 1899?

A. Yes.

Q. Please file a statement showing the increase in subscribers from the year 1899 to 1908, inclusive?

A. I will do so and mark it Exhibit No. 3.

Q. Exhibit 3 shows that the subscribers increased from 3536 in 1900 to 10,768 in 1908?

A. Yes.

Q. Now I observe that you also have on Exhibit No. 2, what you call the number of put ins and the number of take outs, and the net gain or loss year by year. What do you mean by that?

A. That represents the number of new subscribers secured during the year and we call those put ins; the number of subscribers lost during the year we term, take outs.

Q. So that the net gain or loss is the difference between the two, in one year?

A. Yes.

Q. So, it appears from 1900 to January 1st, 1909 you put in 27,004 telephones and you took out 20,883, making a net gain of 7,387 telephones?

A. Yes.

Q. That meant you had to handle about 48,000 telephones in order to make a net gain of 7,387?

388 A. Yes.

Q. Now that brings me to the question of whether it is possible to build a telephone plant with reference to future subscribers and the future needs of a community. Is that possible?

A. Not at the start; you must build it as the need develops.

Q. Is it possible to look into the future and determine how an exchange ought to be built?

A. No more than to determine the length of your life.

Q. Now, after you first lay out an exchange with reference to the then existing patronage, what happens as the years go by with reference to the construction of the plant?

A. The construction must be changed from time to time to take care of the drift of the population. That is the business center will change and the residence centers will change, and telephones that were in use in certain centers are given up, and the telephone population moves to another district and you must follow that and take down cables in the old districts and put them up in the new districts, or build new ones to them. There is a continuous shifting.

Q. Now it appears that there were a great number of put ins and take outs, year by year. Was that peculiar to Louisville or is it peculiar to the telephone business?

389 A. It is peculiar to the telephone business.

Q. I hand you what purports to be daily statements sent to the president by the local managers of the East Tennessee Telephone and Telegraph Company, and the plaintiff company, for the

month of February 1909, coming from Paducah, Ky., Louisville, Ky., New Orleans, La., Nashville, Tenn., Knoxville, Tenn., Chattanooga, Tenn., and Memphis, Tennessee. They are the larger exchanges of the territory that the plaintiff company transacts its business in, are they?

A. Yes.

Q. Now please explain what these reports are and what they show with reference to the question of put ins and take out?

A. These are daily reports which are sent to the president by the local managers, representing the number of instruments put in for each day of the month, and the number taken out. Also, the net gain or loss.

Q. As I understand, these reports close on the 22nd of the month?

A. The rental earnings reports close on the 22nd to enable the reports to get into Nashville on time.

Q. Now, take the 22nd of February, as to Memphis, and state the number of take outs and put in up to that time, for the month?

390 A. The Memphis report shows that from February 1st, through the 20th, there were 117 put ins and 52 take outs, a net gain of 65.

Q. Now, Chattanooga, Tenn.?

A. Chattanooga shows new put ins, 104, take outs, 69; net gain, 35.

Q. Knoxville, Tenn?

A. Knoxville shows 111 put ins, 61 take outs; net gain, 50.

Q. Paducah, Ky.?

A. 43 put ins, 30 take outs; net gain 13.

Q. Nashville, Tenn.?

A. Nashville shows new put ins 149, take outs 114, net gain 35.

Q. New Orleans, La.?

A. 207 put ins, 129 take outs; 78 net gain.

Q. Louisville, Ky.?

A. 103 put ins, 158 take outs; net loss, 55.

Q. Will you exhibit to the Commissioner and opposing counsel those daily reports from all those cities from which you have been reading, for their examination?

A. Yes.

Q. And if either desire them filed, you will file them as exhibits to your deposition?

A. Yes.

Q. I will ask you to state whether or not your familiarity with the Louisville exchange enables you to testify with respect

391 to its present value?

A. Yes.

Q. I will ask you to state whether or not in your opinion the Louisville plant is worth $1,700,045.36?

A. I consider it to be worth that.

Q. I will ask you to state whether or not in your opinion it can be reproduced for a less sum of money?

A. I do not think it can.

Q. Please explain the difference between the cost and the value of the existing plant in Louisville and a new plant that would be constructed without reference to the growth of the business year by year, as this plant has been constructed. What would be the difference between the two?

A. I consider that no two plants, for the same town would be constructed alike, if constructed at different periods. You must take into consideration at the time you construct the plant, the location of the premises to be served, and as the location of those premises shift, then your plant shifts.

Q. Does that capitalization include the value of any of the real estate owned by the plaintiff company in Louisville, and used in its business in Louisville?

A. No.

Q. What is the value of that real estate and the improvement thereon, if you know?

A. It is —.

392 Q. Is that the cost, or the present value?

A. That is the cost.

Q. Is it worth more or less than it cost?

A. I should say it was more valuable.

Q. Especially the central office of the main exchange that was purchased in 1900?

A. That would be my opinion.

Q. You think the main exchange property in the central part of the city has appreciated in value since it was purchased in 1900?

A. Yes.

Q. I will ask you to file a statement showing the construction accounts of the cost of the exchange of the plaintiff company at New Orleans, Memphis and Nashville, Tenn., and compare them with Louisville, Ky.?

A. I file said statement as Exhibit No. 4.

Q. Now, it appears that in New Orleans the cost per subscriber is $188.79; at Memphis, $142.48; Nashville, $170.72; Louisville, $176.04?

A. Yes.

Q. That is the actual cost of these plants built by the plaintiff company and now owned and operated by it?

A. That is correct.

Q. Is it possible to construct a telephone plant with reference to the number of subscribers that you expect to receive, upon opening the plant?

A. No, indeed.

393 Q. What is the practice, and what is necessary in this respect?

A. The practice is to construct it so that a considerable amount of new business can be taken without putting in new switchboards and new cables.

Q. Is this necessary in the business?

A. It is very necessary to the business.

Q. Why?

A. If a new station, or telephone, is ordered by a subscriber, he

expects to have it put in at once, and not wait until the manufacturing concern can make a different switchboard or wait until you can hang cables, splice it open and put it up ready for service. Unless additional facilities are provided in advance, certain and serious delays, and annoying delays, are caused subscribers.

Q. How far in advance must the telephone man look, with reference to future subscribers?

A. He must look at least five years in advance.

Q. How long would it require to obtain new equipment, and establish it ready for service?

A. I should say at least a year.

Q. I will ask you to state whether or not it is more economical to look ahead and prepare for future business as you have indicated, or to take care of the business as it is offered?

A. It is cheaper to construct it wholesale than it is retail.

394 Q. So that both from the standpoint of economy and convenience to the community, it is necessary that the plant be constructed with a view to the future and not to the present needs?

A. Absolutely so.

Q. Mr. Smith, I will ask you to file a statement giving the name of every person, as of January 1st, 1908, paying for exchange service in the City of Louisville or to the Louisville exchange, and a similar statement with reference to April 1st, 1909?

A. I will do so, marking those of January 1st, 1908, as Exhibit No. 5; and those of April 1st, 1909, as Exhibit No. 6.

Q. Now, do those statements show every person on the books of the company as of January 1st, 1908, and the amount they are paying?

A. I believe they do.

Q. And the same thing is true with reference to April 1st 1909?

A. Yes.

Q. Now then, the two lists will vary very greatly, will they not?

A. Yes, sir.

Q. Depending upon the change in the subscribers between those two periods?

A. Yes.

395 Q. How do you get reports from the various exchanges as to the revenues or monthly receipts?

A. The most economical method we have ever been able to devise for getting in accurate reports, are as follows:: The rates of the various subscribers are classified according to the amount paid. Our months run from the 23rd of one month to and including the 22nd of the following month; this we have found very convenient and practically necessary to enable us to get the reports in on time and to enable the local office to make them up while they are not otherwise necessarily, absolutely occupied. To get the earnings from exchange service for the month of January, we take the classification as of December 22nd, and we multiply the rate by the number of stations at such rate, and to the total of this we add the revenue for new put ins between December 23rd and January 22nd, but the rental included is up to January 31st. We also add the amount earned on account of rates increased and we deduct the revenue lost

through instruments removed and rates decreased. The reports sent in by the Louisville office show the classification according to rate, the number of stations at each rate, and the report itemizes the date of installations or removals or change, the call number, the name of the subscriber affected, and his rate and figured individually, the increase or decrease in earnings, because of the installation, removal or change.

396 Q. Do similar monthly reports come to your office from every exchange in the entire system from month to month?

A. Practically so, the big exchanges follow one system, which is a little more in detail than that required of the small offices.

Q. The same kind that come from the Louisville exchange come from all the larger exchanges in the system to you, do they?

A. Yes.

Q. I will ask you to file those monthly statements sent to you from the Louisville Exchange, showing the entire earnings of that exchange, month by month, from January 1908, down to and including March 1909, for rentals?

A. I will do so, marking it Exhibit No. 7.

Q. Those statements marked Exhibit No. 7 show the exchange receipts in detail. Now, do you receive any reports with reference to tolls, that is, long distance business from the Louisville office, month by month?

A. We do.

Q. Have you those detail reports for the same period?

A. Yes.

Q. Will you file them as Exhibits No. 8 to your deposition?

A. I will.

Q. I observe in some of those exhibits that the Southern Railway, for instance, paid directly to the general office. Why is that?

397 A. Some subscribers of ours, for convenience, provided they have instruments connected with different instruments, request the company to render them one bill for all the instruments. In such cases we do the billing from the Nashville office, but we include the earnings in those of the exchange where the instruments are located.

Q. For instance, the Southern Railway office is located at Washington, D. C. and they have agents who have telephone service at various exchanges throughout the system?

A. Yes, sir.

Q. And it requests, for their convenience to have the bill rendered them at Washington for the exchanges all over the system?

A. Yes, or they may confine it to any district.

Q. And you comply with the request, but credit the exchange with the revenue derived from the use of the instrument at that exchange?

A. Yes.

Q. Please give us the rates that were charged for exchange service in the City of Louisville by the Ohio Valley Telephone Company, and the average revenue per month that that company derived from exchange service prior to the time it was purchased by the Cumberland Company?

A. I file the rates charged by the Ohio Valley Telephone Co. as Exhibit No. 9.

398 Q. Have you the rates for the first half of 1899 before the Cumberland Company purchased the Ohio Valley Telephone Company?

A. Yes, the rates were the same then as for 1898.

Q. What were the rates for 1898?

A. That is also shown on Exhibit No. 9.

Q. Now, what was the average rate?

A. The average monthly rate for the year 1896 was $6.20; for 1897, $5.86.

Q. Now, can you file a statement showing the different rates, year by year, that the plaintiff company has charged for exchange service in Louisville since it purchased that plant?

A. I file said statement as Exhibit No. 10.

Q. Now, I will ask you to file statement showing the average of subscribers each year and the average monthly rate charged, year by year, from 1900 down to and including 1908, as Exhibit No. 11?

A. I will do so.

Q. I observe that Exhibit No. 11 shows that in 1900 the average number of subscribers were 4277 and the average monthly rate per subscriber was $4.76, and in 1908 the average number of subscribers were 10,064, and the average rate per month was $2.56. That is correct, is it?

A. Yes. There is thirty-seven cents included in that average on account of the change in classification of earnings.

399 Q. How many patrons did the company have in the Louisville exchange, December 31st, 1908, paying the $7.50 net monthly business rate?

A. 730.

Q. And how many paying the $3.50 net residence rate in the Louisville exchange?

A. 875.

Q. Now, I wish you to file a statement, marked Exhibit No. 12, showing the maximum business and residence rate in Louisville, Ky., Memphis, Tenn., Nashville, Tenn., and New Orleans, La., as of December 31st, 1908, and give the number of business and residence subscribers at those maximum rates, and also the total number of stations in each exchange?

A. I will do so, marking the same Exhibit No. 12.

Q. The maximum residence rate in Louisville on December 31st 1908 as shown by Exhibit No. 12 was $3.50 net for residences, and $7.50 net for business. Now when the exchange rates in Louisville were $7.50 net and then the $6.50 net rate for three year contract was in force, how many business telephones were there at those maximum rates in the Louisville exchange?

A. There were 583.

Q. And how many when the residence rate was $2.00 net within a mile of the court house, and $2.50 a month outside of the mile radius and within the city limits, how many were paying the

400 maximum rate at that time?

A. 1499.

Q. Divided how?

A. Within the mile radius from the court house, 488; within the city limits, outside of the mile radius, 1011.

Q. So it appears that it was not an increase in the rates that caused such a small number of subscribers to pay the maximum rates?

A. No.

Q. During 1908, what service did the subscribers to the Louisville exchange receive. I mean, excluding pay stations and measured service patrons?

A. They received unlimited service to all exchange stations connected to the Louisville exchange, to New Albany, Jeffersonville, and to subscribers to other exchanges in Jefferson County who paid a rental for Louisville exchange service. Those exchanges are, Anchorage, 42 subscribers; Harrods Creek, 42; Jeffersontown, 36; Pleasure Ride Park, 41; St. Matthews, 63. There are also some at Pewee Valley and at West Point, and these two exchanges are outside of Jefferson County, and Sheapardsville.

Q. To all the subscribers having Louisville service at these various exchanges you have just named, the Louisville subscribers have the right to talk free for the rates they pay for Louisville service?

401 A. Yes.

Q. Now, is any part of the construction cost or capital account of those exchanges included in the capital account of the Louisville exchange?

A. No, sir.

Q. Are any part of the expenses of those exchanges included in the expenses of the Louisville exchange?

A. No.

Q. Now, I will ask you what is done by the company, if anything, with reference to ascertaining the volume of business that is handled at an exchange?

A. In order to make intelligent operating schedules, it is absolutely necessary to know the number of incoming calls to each exchange and to place the lines so that there will not be a minimum or a maximum number of calls coming to one operator. That is, an operator is recognized as being able to handle a certain volume of business and the lines and the operators are so placed that they will handle that volume of business as nearly uniformly as possible.

Q. Now, in order to see how that is, what do you do?

A. In order to do this, there is taken what is known as monthly peg count, which shows the number of calls coming into each position on the switchboard during each hour of the day.

Q. I will ask you whether or not those peg counts are made monthly from all the principal exchanges in the company's

402 system?

A. They are.

Q. I will ask you to file the last three peg counts for the Louisville exchange, being January 11th, February 10th, and March 10th, 1909, as Exhibit No. 13 to your deposition?

A. I will do so.

Q. I will ask you to give a statement showing the difference in revenue at present obtained by the company on the existing rates it

is charging and the revenue it would receive if it applied the rates provided in the ordinance involved in this litigation, applying the reduction solely and alone to the subscribers to the Louisville exchange residing and having instruments wholly within the corporate limits of the City of Louisville, and mark the same Exhibit No. 14?

A. I will do so. The revenues would be reduced $3,266 per month, or $39,192. In making up this statement we consider the rates of the ordinance as net rates.

Q. Now, in the bill in this case it was stated that the reduction would be little over $33,000?

A. Yes.

Q. You now state it is $39,192?

A. Yes.

Q. Where does the difference come in?

A. We examined our table which was first made up and found in that there were rates made charitable institutions and em-
403 ployés which we had considered would be increased, but those will not be increased, and could not be increased, so in making up the new schedule we have adhered to the rates which would be reduced.

Q. Now, I will ask you to state what expenses the company could dispense with if it were to apply the schedule of rates prescribed in the ordinance, over the expenses it now incurs on the schedule of rates it is using?

A. It could not eliminate any expenses without impairing the service.

Q. Would the reduction of rates have any effect on the question of expense?

A. None whatever; the only reduction in expense would be on the rental of the instruments.

Q. How much would that reduce it?

A. It would be four per cent on the reduction.

Q. Four per cent on the $39,000?

A. Yes.

Q. Please state the amount paid by the plaintiff company at the Louisville exchange for claims for damages for personal or other injuries for the years 1905 to 1908, inclusive

A. 1905, $2951.63; 1906, 5970.20; 1907, 220.85; 1908, $1945.81.

Q. Please state the per cent of net revenue to capital account or cost of plant, for the years 1905 to 1908, leaving out of con-
404 sideration any amount reserved for depreciation of plant. In other words, using the balance of revenue over expenses paid, and applying that to the actual cost of the plant year by year?

A. 1905, 2.43 per cent; 1906, 2.99 per cent; 1907, 3.36 per cent; 1908, 5.76 per cent.

Q. What do you mean by depreciation?

A. Depreciation is the natural wear and tear that occurs to everything that is exposed, everything except the ground. Depreciation in telephony is the depreciation or rather the antiquation of plant, as well as its decay.

Q. What do you mean by antiquation of plant?

A. Telephony is by no means a developed science. The strides have been very rapid indeed, the improvements many, and the necessity of discarding old apparatus, but still servicable, for newer apparatus is one of the items of expense which must be recognized and is one of the big items.

Q. What is the difference between maintenance and depreciation?

A. Maintenance is simply the repair of the property.

Q. Keeping it in operating condition?

A. Yes, repairing troubles, replacing lines that are blown down, adjusting instruments and replacing light repairs like cords on telephones, and cords of switchboards, resoldering connections,
405 replacing micas and fuses that are burned out and things of that kind.

Q. Now, what is the difference between maintenance and depreciation?

A. Maintenance is -imply the keeping in repair of the property; and reconstruction is caused on account of depreciation, and is a replacement of the property which is no longer servicable or must be discarded on account of having become useless, because of newer inventions.

Q. From your experience in the telephone business, are you able to testify as to what is a proper per cent of the cost of telephone property to allow for depreciation per annum?

A. Necessarily the amount of depreciation is an estimate based on past experience and future outlook. The past experience leads us to believe that a depreciation of seven and one half per cent on the value of the plant is justifiable. This depreciation would partly be spent from year to year and part of it would go into the reserve account.

Q. For what reason?

A. Because the depreciation cannot be possibly taken care of from day to day or year to year. If we take any one class of property, the switch-board for instance, it can be repaired from day to day so it will remain in operating condition, but the time will come when the board is either worn out or a newer board, more up-to-date, must be substituted, and then the old board must be thrown away
406 or junked, and at such time it is necessary to have a fund ready to purchase a new board, or, at least, provide for the cost of the old board.

Q. What per cent of the cost of the plant does the plaintiff company use for depreciation?

A. It uses seven and one half per cent.

Q. Do you consider that fair and reasonable and just?

A. I do, if it is applied as it is calculated to be applied.

Q. If applied as the plaintiff company applies it?

A. Yes.

Q. Now proceed?

A. The depreciation can be applied so as to very greatly complicate accounts. We have, in calculating our depreciation used a percentage, to be applied in the simplest way possible, that is, that the first cost of the property is the amount on which the depreciation

must be applied from year to year and the unused part of the depreciation fund must be considered as a trust fund to be borrowed from by the company and the trust fund must be made to earn interest so as to further accumulate and grow, to be large enough at the time it is necessary to use it. The depreciation fund if reinvested is treated exactly as borrowed capital. When the time comes to replace it, then the depreciation fund must receive its reimbursement from capital. For instance, the depreciation is kept
407 on the books of the company as a fund. The part of it which is not expended, as I say, is reinvested or invested, so that the amount of the depreciation fund will grow from the interest that it earns. As the depreciation is invested in plant, when you need the money to construct a part of the plant, you cannot sell any part of the plant to get that money, and therefore we get the money from capital. We repay the depreciation fund from capital.

Q. Now, let me see if this is correct. We will assume that this year you set aside out of earnings, ten thousand dollars, which is a depreciation fund, which is not needed to take care of the depreciation that year, but which will be needed five years hence to take care of the depreciation when the time comes for reconstruction of that property. Now, that ten thousand dollars, you simply credit on your books to depreciation fund and you take that fund and use it in the business. Now, at the end of five years, instead of it being ten thousand dollars, we will say it amounts to $12,500. Now the $12,500 at the end of five years you get from some other source to take the place of the $10,000 and accumulations which you have used in the meantime?

A. Exactly.

Q. In other words, to get along on as low a per cent as seven and one half per cent of the original cost of the property, you must allow that money to accumulate interest, otherwise you would have
408 to use a larger per cent for depreciation?

A. Exactly.

Q. Now isn't it a fact that some companies, by having more complicated accounts, use a higher system for depreciation and loan that depreciation fund out on low rates of interest, which accumulates at a less rate of interest than you allow it when you use it in your business?

A. Exactly.

Q. So, if you put the money in your treasury and do not use it, you must use a higher per cent than seven and one-half per cent for depreciation?

A. Yes.

Q. And, in order to get along on seven and a half per cent, you must use that unexpended portion of it in your business?

A. Yes.

By the COMMISSIONER:

Q. Suppose that depreciation account is a mere credit on your books and you allow it interest. Now, suppose the time comes when

you need that amount, plus the interest, where do you get it. You say you take it from capital, that is what I didn't understand.

A. We would have to borrow money on notes, or issue stocks or bonds in order to get the amount of money we need.

409 Q. You don't do that, however,—you don't add that to the value of your plant. You don't make any increase in the value of your plant, on your books, do you?

A. We do. Any amount of money that is expended, any additions or improvements in the plant, is added to plant, and if we did not do that and add it to plant, we would not make it earn any money.

By Mr. GRANBERY, for Plaintiff:

Q. That is not the question; do you add to your capital account twice, or just once?

A. Only once.

Q. When did you add to the capital account this money?

A. As the money is expended in improvements or extensions.

Q. When you replace that money do you add it to your capital account?

A. We do not.

Q. In other words, it is simply a system of book-keeping at last.

A. Book keeping, to fit the conditions which are the most economical.

Q. I will ask you to state whether or not the company's capital account is increased in any wise on account of the depreciation fund?

A. It is not.

410 By the COMMISSIONER:

Q. That is not clear in my mind, and I would like for you to explain one matter right here. You say the unexpended depreciation fund, as illustrated by Mr. Granbery, would be ten thousand dollars. To what account is that placed in your books?

A. Reserve for deferred maintenance.

Q. In what is that invested?

A. It is invested in plant extensions.

By Mr. GRANBERY, for Plaintiff:

Q. Treated precisely as any other borrowed money?

A. Yes; if we went to the bank and borrowed ten thousand dollars, we would use it in extending the business.

Q. And then, when that note matured, for the money you borrowed from the bank, you would replace it from some other source?

A. Yes.

Q. And depreciation, you would borrow it from this, and replace it in the same way?

A. Yes.

By Mr. COMMISSIONER:

Q. Suppose the line from Hopkinsville, Ky., to Nashville, Tenn.,

becomes useless by reason of decay of some sort or by sudden accident or otherwise. Now, you have to rebuild that one line, from here to Hopkinsville. Do you add that—I mean, do you
411 do that out of your reserve fund?

A. We do that and charge it to reconstruction. Now, there is one point I think I should make plain in regard to the method of applying the per cent for depreciation. If you start out with a new property, the first year we set aside seven and a half per cent, or, we charge up to the expense of the property, seven and one half per cent of its cost as depreciation. Part of that may be spent. The next year we must use the same value if the property has not been increased, and must charge up seven and a half per cent of that. We must not reduce the original cost by seven and a half per cent and the next year reduce the original cost again by seven and a half per cent of that, as, in that way, you never would wipe out the original property and it complicates the account so you never would know exactly what any piece of property in your plant cost you. If you apply it that way, you must know how much depreciation has been charged and you get the accounts into such complicated condition that you cannot apply it.

412 By Mr. GRANBERY, for Plaintiff:

Q. What do you mean by reconstruction?

A. Reconstruction is replacement. A reconstruction of a poll line would be the removal of the old poles and the substitution of new poles.

Q. To what would you charge that reconstruction?

A. If the new pole line was of no more value, had no higher poles, no more circuits, no greater capacity than the old poll line, the cost of replacement would be charged entirely to maintenance reconstruction, coming out of earnings.

Q. And no part be charged to capital account?

A. No.

Q. Suppose, as often happens, you replace a pole route with a very much larger pole route, costing very much more than the original pole route, how do you handle that?

A. The exact method is to value the old pole route at its original cost in service, to construct the new pole route, keeping an exact cost of doing so; the work being completed, the difference between the cost of the new pole route and the old pole route, coming out of service, is charged to capital; the cost of the old pole route that has been removed is charged to maintenance reconstruction. If there is any salvage from the old pole route, that is charged to supplies and credited to reconstruction.

Q. In other words, you value the old pole route at exactly what it cost you?

413 A. What it is on the books at.

Q. And you then find out the cost of the new pole route, assuming it to be a much better one and larger than the old one?

A. Yes.

Q. The difference between the cost of the new pole route and the old pole route goes to capital?

A. Yes.

Q. Because you have improved your line to that extent?

A. Yes.

Q. Now, whatever salvage you get out of the old poles and wires you credit that against the amount you charged to maintenance reconstruction?

A. Yes.

Q. In other words, for instance an old pole route cost as much as say ten thousand dollars; you replace it with a much better structure and one requiring more wires and larger poles, because of the increased business of the company, say costing twenty thousand dollars. Now, you charge ten thousand dollars to your capital of that?

A. Yes.

Q. And ten thousand dollars to maintenance re-construction?

A. Yes.

Q. Suppose you sell the old poles and wires out of that for a thousand dollars, what happens?

A. We credit maintenance reconstruction with one thousand dollars.

414 Q. Which means you only charge to that account, nine thousand dollars net?

A. Yes sir.

Q. And you charge to capital account the ten thousand dollars additional?

A. Yes.

Q. Now, suppose you have a pole route costing ten thousand dollars, and that is replaced with another of the same character, costing ten thousand dollars, what happens then?

A. The whole amount is charged to maintenance reconstruction.

Q. And no part to capital?

A. No.

Q. And I take it as in the growth of the business you find usually whenever you replace a piece of property, that the business necessities requires a larger and better structure than the former?

—. ——.

Q. So that practically you are adding to your capital account at the time you are reconstructing some of your plant?

A. That is usually the fact.

Q. Now taking an exchange, different pieces of that exchange deteriorate more rapidly than others?

A. Yes.

Q. For instance, underground conduits deteriorate probably the least of all of your appliances?

415 A. Yes.

Q. Now, the per cent of depreciation for that particular item would be very small?

A. Yes sir.

Q. Now you take switchboards, and their life would be not so long, therefore you would have to have a larger per cent of their cost for depreciation?

A. Yes.

Q. And so on, for poles and wires and other things?

A. Yes.

Q. Now, this seven and a half per cent is figured as the average of all, is that correct?

Q. Yes.

Q. So that many parts of the plant are replaced several times before you replace some other part?

A. Yes.

Q. For instance, you would replace a pole route several times before you would replace an underground conduit?

A. Yes.

Q. So, this question of replacing or reconstructing your plant goes on, after the first few years, year by year?

A. Yes.

Q. Now, taking the plant at Louisville, that has been in existence twenty-five years, many parts of that plant have been reconstructed more than once?

A. I take it so.

416 Q. So that from year to year you use part of this seven and one half per cent depreciation fund to reconstruct parts of the plant?

A. Yes.

Q. And the amount you would carry forward would be the difference between seven and one half per cent, and the actual amount you have used in reconstructing that particular year?

A. That is it exactly.

Q. Say that during 1908, for illustration, you had used four per cent of the original cost of the plant in reconstructing parts of the plant, you would then only use to carry forward of the depreciation fund, three and one half per cent.

A. Yes.

Q. Instead of seven and one half per cent?

A. Yes.

Q. Now, it very often happens, I assume, that you use more than seven and one half per cent in one year in reconstruction?

A. Yes.

Q. In that kind of a case, you would have nothing to carry forward to your depreciation or maintenance reserve?

A. Instead of carrying something forward, you would have to take something from it.

417 Q. And if you used exactly seven and one half per cent, you would have nothing to take from or add to it?

A. Exactly.

Q. Now, is it possible to operate a telephone plant any length of time without reconstructing parts of it year by year?

A. No, indeed.

Q. Now, take the plant at Louisville; some of it is new, and some

of it is old. The underground conduits, I take it have not been reconstructed at all, as they were started in about 1891. The old switchboards in the main office were removed in 1895 or 1897 and the new main switchboard has been in service since that time?

A. Yes, and the switchboards east and west and south have been put in and never been reconstructed.

Q. Now, you have pole routes in Louisville, I take it, of different ages?

A. Yes.

Q. Some have been reconstructed and some have not been reconstructed?

A. Yes.

Q. I will ask you to state whether it is possible to ascertain the exact value of the Louisville plant without an accurate inventory of the property?

A. No.

Q. And a personal inspection of every piece of property in the system?

418 A. No, and the most minute inspection would be required.

Q. How long do you think it would take to make that inspection?

A. It would take two or three months at the least, with a pretty good size force and a good, organized force, to do it and get good results.

Q. Now take a line of poles for instance that have been up five years, those poles, of course, have a shorter life than poles that were constructed and erected just one year. That is so, isn't it?

A. Yes.

Q. But, that pole route five years old is just as serviceable and performing the same duties that it did the first year it was constructed, is it not?

A. Yes sir.

Q. Is the maintenance on that pole route appreciably more the fifth year than it was the first?

A. Hardly so.

Q. Now, that pole route stands until its replacement or renewing or reconstructing?

A. Yes sir.

Q. Now, until the time comes to reconstruct that pole route it is just as serviceable as it was when first erected?

A. Yes. In the City of Louisville we have a good solid foundation to set a pole in. Out in the suburbs it would be probable that the poles would have to be straightened and possibly guys put on it.

419 Q. You mean, on account of wind and rain and moisture, the poles would sometimes lean and not be in the exact position they were when first set?

A. Yes, but I should say that the setting would become firmer and firmer as years went on.

Q. For instance, a wind storm would come along and push or pull a pole over at an angle, say, of forty-five degrees. Now, when

your men go and straighten that pole up, what would you charge that to?

A. Current repairs.

Q. That is, keeping the pole line in an operating condition?

A. Yes sir.

Q. Now, I will ask you whether or not work is constantly being done on these switchboards?

A. There is a force engaged always on the switchboards.

Q. Have parts of them been renewed from time to time since they have been erected?

A. Yes.

Q. Now, I will ask you whether or not the company has set aside for Louisville, and if so how much, of a depreciation fund, unexpended?

A. The company never earned enough money in Louisville to set aside any fund.

Q. So that as far as the Louisville plant is concerned it has been reconstructed out of earnings from other parts of the system?

A. That ought to be answered in this way: Either it has
420 been reconstructed on borrowed depreciation fund, or the dividends paid were not earned in Louisville.

Q. So that no part of this unexpended depreciation fund has gone into the capital account of the Louisville exchange?

A. It has not.

Q. And whatever property the plaintiff company has in Louisville represents actual investment and not borrowed depreciation fund?

A. Yes.

Q. I will ask you to state whether or not any part of the plaintiff's property in Louisville would cost more to reproduce it now than when it was constructed?

A. I should say almost every part of it would cost more.

Q. Why?

A. The underground conduits are doubtless now under different streets which at the time they were put down were only macadamized, but are now paved, and the cost of placing those now would be considerably greater than it was several years ago. The cost of practically every item of material has increased; labor has increased also.

Q. So that to replace the plaintiff's property in Louisville today you think would cost a larger amount than the company has expended in constructing it?

A. To reproduce it as it was constructed, would do so.

421 Q. Do you think that any depreciation that has taken place on the property would be offset by this increased cost of reconstructing it at the present time?

A. Well, there would be some of it.

Q. I say, whatever the amount the property has depreciated that has not been taken care of, so that however much less the property might be worth today than it was when it was originally construct-

ed, would that be offset by the increased cost of reproducing the plant?

A. I think it would be very largely offset.

Q. I will ask you to state if in your knowledge there is anywhere in the United States a telephone community receiving as broad and comprehensive a servicee on flat rates, as the patrons *to* the plaintiff company in the City of Louisville?

A. I know of no point, no exchange in the United States that receives as broad a service.

Q. Take the cities of Nashville and Memphis, Tenn., New Orleans, La., and other cities where the plaintiff company operates exchanges, is there *a* one of those exchanges having as broad or far-reaching a service as Louisville?

A. Not one of those exchanges has messages to another exchange without additional cost and not one has as broad a service as Louisville.

Q. Would it be fair to take any toll receipts arising from long distance toll business of the company and apply it on a per-

422 centage basis to each of the exchanges?

A. No, indeed.

Q. Why not?

A. Because the amount of business done throughout the territory has nothing at all to do with the amount of business done locally at any one point. The business done at a point is governed by the number of lines leading into that point, by the amount of business transacted at that point over the long distance lines, and it would be eminently unfair to give one exchange the earnings that accrued in an altogether different locality.

Q. You think the only fair way is to do it like your accounts show, to take a part only of the toll line receipts at that particular exchange?

A. That is the only basis that I have ever seen satisfactorily followed.

Q. Is that the usual method?

A. Yes.

Q. So that if you were to take the gross toll receipts and pro rate it on each exchange, you would leave out of consideration the two important elements, one, the number of toll lines reaching the exchange, and the amount of toll business radiating from that exchange?

A. Yes.

Q. And you think that would be unfair?

A. I cannot see on what basis you could possibly divide

423 them. You could not divide them on subscribers' or exchange basis or any other basis I can think of.

Q. Now, with reference to the exchange in the City of Louisville, does the exchange cover just the territory inside of the corporate limits of the City?

A. No.

Q. How is the exchange treated?

A. The exchange is the business in and around Louisville. It

includes lines to all points nearer to Louisville than any other point.

Q. In other words, you build an exchange to serve a community of people and not to serve the residents within the corporate limits of the town or city?

A. Yes, exactly.

Q. Now, would it be possible to separate the earnings inside of and outside of the corporate limits of Louisville, that is, the exchange service?

A. It would be possible to determine the gross revenue but not the net revenue.

Q. Why?

A. Because the operators on the switchboard are answering those outside and inside and they are connecting those on the outside with those inside, and vice versa. The switchboard men in the Central office are handling both classes of lines without probably knowing whether the subscriber is located inside or outside of the corporate limits. The trouble men work in districts, and it would
424 hardly be possible for him to know what part of his time is chargeable to those outside of the city limits or inside of the city limits, as he has to go out there before he can do anything. In fact, every employé of the exchange from top to bottom, handles both classes.

Q. Now, what about the service that the patrons receive? Do they pay any attention to the corporate limits?

A. Not the slightest.

Q. So, telephonically speaking, the exchange does not know corporate limits?

A. It does not, except in rates.

Q. The rates for service beyond the corporate limits are higher than those inside of the corporate limits?

A. Yes.

Q. Why is that?

A. For the reason it requires longer lines to reach them, requires longer pole routes, requires more time for repairs than are necessar-, etc.

Q. And, I presume that you have to have some limit with reference to the area in which you will give the service on certain rates?

A. Yes.

Q. And for convenience, you take the corporate limits in large cities?

A. Yes sir.

425 Q. What about small places, where towns are small?

A. In small places we make a radius of a mile and a half from the central office.

Q. Regardless of corporate limits?

A. Yes. If the small town has corporate limits exceeding that, we take the corporation limits.

Q. But generally speaking, a radius of a mile and a half from the exchange not only includes the corporate limits, but the suburbs as well?

A. Yes.

Q. Those rules are all more or less arbitrary, but selected as being the nearest basis that can be determined?

A. Yes, and they are general in their character.

Q. You have competition, have you, in the City of Louisville?

A. We have.

Q. Both in exchange and toll line service?

A. Yes sir.

Q. How long has that competition been going on?

A. About seven years.

Q. What are their rates, if you know?

A. Business $4.00; residence, $2.00 within one mile; $2.50 over a mile and within the city limits.

Q. The telephone directors for each exchange, or taking the Louisville exchange, how often is that telephone directory published?

A. Generally four times a year.

426 Q. Why is it published so often?

A. Because of the new installations and the removals are sufficient in number to require revision.

Q. And necessitates new subscribers' lists in order to enable subscribers to communicate with each other easily and properly?

A. Yes.

Q. Now, what is included in that directory?

A. The Louisville part of the book includes the names of all subscribers to the service, those that rent instruments, those who are joint users, that is, those who have one dollar a month additional, have their names listed with some other subscriber and use the telephone jointly with him. Also, additional names which are put in the books for convenience and advertising. That is for instance, Smith & Jones may wish to appear also as Jones & Smith and for that service or advertisement they pay a small fee.

Q. So that, taking the list of names in the book will not indicate the number of subscribers paying the regular straight rates?

A. By no means.

Q. Now, for instance, if Jones & Smith, as a firm, having No. 500, they might appear three times, might they not? For instance it might appear Jones & Smith, No. 500, then it might appear W. M. Jones, No. 5, and J. B. Smith, No. 500?

427 A. Yes, and it might be Smith & Jones also, and appear four times.

Q. Now, is that an exaggerated statement or illustration?

A. I think that one is somewhat exaggerated, but there are many firms that have it in two or three times, and some employés of firms, lawyers, who are not partners and who would wish to show their names in the directory.

Q. Do you remember a Mr. Munster, an expert accountant of Cincinnati, Ohio, that investigated the records of the company with reference to a report to the Committee of the Louisville Board of Trade during 1907?

A. I remember him well.

Q. How long was he engaged in making the examination of the records in your office?

A. He was in my office ten days.

Q. Did you give him access to all records you had, to enable him to investigate the Louisville exchange?

A. Everything.

Q. Did you withhold any book or paper from him?

A. Not a thing; gave him more than he asked for.

Q. Did he make requests of you for any information?

A. He asked me for quite an amount of information, all of which I furnished him as promptly as possible, and entirely accurate.

Q. Did you misstate any fact or circumstances to him in any way?

428 A. Not a thing.

Q. Did you know what his report was or know what it would be, in advance of the committee's action?

A. I did not.

Q. Did you see it or know what it was, until after the committee had reported?

A. Not until sometime afterwards.

Q. Did you mislead or deceive him in any way?

A. Not in the slightest.

Q. Was Mr. Munster apparently an expert and competent accountant?

A. I think he was very competent.

Q. Had he had experience in the examination of telephone accounts?

A. I cannot say so much about telephone accounts, but he had had a great deal of experience in street railroads, electric light and gas companies and other public service corporations, so he told me.

Q. Was he diligent during the time he was in your office making an investigation?

A. He was.

Q. I believe your accounts are audited by an expert telephone auditor every year, are they not?

A. They are.

Q. That is done at the instance of certain of the stockholders?

A. Yes.

429 Q. Independent of the management of this company?

A. Yes.

Q. And they report to the stockholders who employ them, direct?

A. They do.

Q. So that aside from anything you may do, you know your books have been, and will continue to be, audited year by year, by expert telephone auditors?

A. Yes.

Q. I will ask you to state whether or not you know whether they have discovered any material discrepancies or errors in your books, of any kind?

A. They have not.

Q. State whether or not they have, from year to year, reported upon the accuracy of your books and accounts?

A. They have.

Q. Have they reported them to be correct and properly kept?
A. They have.
Q. And that is for the entire system, is it?
A. For the entire system, yes.
Q. Including the City of Louisville and suburbs?
A. Yes.
Q. What do you mean by a flat monthly rental for exchange service in Louisville?
A. We mean that the subscriber is entitled to as many outgoing and incoming calls as it is possible to make.
430 Q. He has the privilege of sending and receiving as many calls as he likes, during the month?
A. Yes.
Q. And in any day?
A. Yes.
Q. Now, what do you mean by limited exchange service in Louisville?
A. Limited exchange service is a service which, for a small rental we place an instrument in the premises of the subscriber and allow, without additional charge a fixed number of calls per month, and for each call additional to that number, he pays two cents per call.
Q. What do you mean by pay stations?
A. Pay stations are stations located conveniently for the general use of the public where service will be given at the rate of five cents per outgoing call. Usually there is an automatic device at the instrument to receive the five cent piece.
Q. That is intended for strangers and people who have no telephones and don't wish to impose on their neighbors and friends?
A. Yes.
Q. Now, I will ask you to state whether or not it is necessary in the telephone business in a city the size of Louisville to have many different kinds of rates and service?
431 A. It is very necessary, for the reason that there are all kinds of people; people with big pocket books and people with little pocket books. Those who want the best class of service that can be rendered, and others who are willing to put up with that which is not so good and more limited in its convenience, and we might say, a little more annoying. A party line is not considered a first class service and the direct line is.
Q. What is the theory or difference between the direct service and the party line service?
A. The direct service gives to the subscriber an individual, exclusive circuit which is two wires running all the way from his instrument to the switchboard. Those wires are used only when his station is calling or when he is called. The party line is a circuit on which more than one instrument is placed, those instruments being located in different offices or buildings and being used by different people.
Q. Now, the theory of a party line is that because of the less amount of apparatus employed, two or more people in the same neighborhood can use the same pair of wires to the switchboard?

A. Yes.

Q. And in that way the service can be given cheaper than for one instrument on a pair of wires?

A. Yes.

432 Q. Now, is it a fact or not that it often happens that where you have, say four parties on a line in a neighborhood, one or more of those parties give up the telephone and then what happens until you can find others to take their place?

A. The majority of party lines, four-party lines and two party lines are not full, that is, have not the authorized number of instruments on it. When a party line has the designated number, or is full and if any subscriber gives up his telephone, you must wait until some other customer in the same neighborhood desires that kind of service before you can fill that party line to its proper number.

Q. Now, is it or not the policy of the company in Louisville, or elsewhere, to keep these party lines full up as much as possible?

A. Yes.

Q. Is it the practice or not to pretend to give party line service and keep others off the party line, except one favored person?

A. It is not the practice.

Q. If that is discovered, state what takes place?

A. I know of one manager who lost his position on account of it.

Q. In running the business and employing so many people, five or six thousand, you do encounter occasionally, employés who
433 for the purpose of their own interests, violate the rules of the company and do favor patrons do you?

A. We do, yes, just as insurance companies and others do.

Q. And whenever you discover it, it is corrected, is it?

A. Yes, and all our contracts state that the terms of the contract cannot be waived by anyone except the general manager or the president.

By the COMMISSIONER:

Q. Does the company pay the same rental to the Bell Telephone Company for the pay station telephones and party lines as they do for the regular instruments?

A. You see the rates charged control that, as it is based on the receipts.

Q. It is four and one-half per cent on the receipts?

A. Gross receipts, yes.

By Mr. GRANBERY, for plaintiff:

Q. Now, when the Ohio Valley Telephone Company was operating the Louisville Telephone exchange, did they have all these different kinds of rates?

A. They did not.

Q. What rates did they have?

A. In 1895 they had a private line, business, and a two station business and only a private line grounded. No party lines and no limited service, and no pay stations. In 1896 they had the
434 same classes of service and also in 1897 they still had the same classes.

Q. Now when the Cumberland Company purchases the Ohio Valley Telephone Company, how soon after this purchase did they change the rates?

A. Immediately.

Q. Did they increase them or decrease them?

A. They decreased rates for like service and increased the classes of service which could be secured.

Q. In other words they offered to the people of Louisville a more varied classification of service, suitable to each patron's desires and wants?

A. Yes.

Q. And at a lower price?

A. Yes.

Q. What do you mean by metallic, circuit, and grounded circuit?

A. Metallic circuit is one of two wires that carries the current and brings it back; a grounded circuit uses one wire and uses the earth for its return.

Q. Which is the more expensive?

A. The metallic is far more expensive and far better.

Q. Why is it more expensive?

A. Because it requires a second wire?

Q. What about the cost of installation?

A. The metallic circuit has always had a high-class instrument, a higher class instrument than the grounded circuit.

435 Q. And in addition to that, requires two wires instead of one, from the central exchange to the patron?

A. Yes, and then the switchboard used with that system is more expensive.

Q. And costs more to operate and maintain?

A. Yes.

Q. What advantage has that over the old switchboard used with the grounded circuit?

A. It has the advantage of time in answering the calls, and more prompt service.

Q. And more distinct and clear?

A. The whole apparatus combined is much more distinct.

Q. And more pliable?

A. Yes.

Q. How many patrons did the Ohio Valley Telephone Company have connected, who could receive and send messages to each other on the rates you have indicated, in Louisville?

A. December 31st, 1895, 2550; December 31st, 1907, 2525.

Q. Do you know the number they had on December 31st, 1898?

A. No, I do not.

Q. Is it an advantage or disadvantage to each subscriber to be connected with a few or a large number of persons?

A. It is very necessary in conducting a satisfactory and up-to-date exchange, to have a comprehensive telephone service.

Q. What brought about the expression that the telephone is
436 a public necessity?

A. The immense use that is made of it, the time saving qualities.

Q. Was it a public necessity when the patrons were few?

A. It was not, because the wants of many could not be satisfied through telephone communication.

Q. So that when you rent a subscriber an instruments that is of no advantage to him is it, its only advantage being that he can employ it to reach a number of other people?

A. Exactly.

Q. And the more people he can reach the more advantage it is to him?

A. Yes. It is as though a man knows a foreign language and cannot talk to anybody. If he knows the same language or is connected with the same exchange, everybody is connected with it, he can talk to everybody.

Q. And of course, the advantages are according to the more people he can talk to with it?

A. The advantages are greater and the uses are greater, the more people he can talk with.

Q. I will ask you to state how the number of calls increase or decrease with the increase of the number of subscribers to an exchange?

A. The records all show that the greater number of subscribers, the greater the number of calls per subscriber.

Q. In other words, you — a man connected with five hun-
437 dred persons will use his telephone say five times a day, and if he is connected with ten thousand, will he use it only five times a day?

A. He will use it probably ten times a day.

Q. So, the greater use he makes of the telephone when he is connected with a large number of people?

A. Yes.

Q. What is the minimum charge throughout the United States for measured service?

A. Two cents for each call, I think.

Q. Suppose the plaintiff company received two cents for each call in the Louisville exchange during the year 1908, what effect would it have on the receipts?

A. The revenues would have been far greater.

Q. So that the people of Louisville on an average are receiving telephone calls at less than two cents each?

A. Yes.

Q. What would you say is about the charge per call on the rates in force in Louisville?

A. I think it would average about one-half of a cent.

Q. Are you in a position to state whether or not the management of the plaintiff company exert themselves to give efficient service and develop the telephone business in the City of Louisville in a proper, intelligent and skilfull manner?

438 A. I believe so. I don't think there is any doubt of it.

Q. I will ask you whether or not the expenses are held down to a low point as is consistent with good service and proper facilities?

A. The supervision of the expenses, not only of Louisville, but of

the whole company, is given the strictest attention. There is no money spent until we know that it is being spent properly.

Q. How do the expenses of the plaintiff company in Louisville and elsewhere compare with the expenses of telephones generally throughout the United States?

A. Our expenses are less than is generally the case with other companies. I know of no company which has a smaller expense.

Q. Is it an advantage or a disadvantage to the Louisville exchange to be under the management or be connected with a system or part of a system with respect to expenses?

A. It is undoubtedly of advantage.

Q. In what respect?

A. The materials all are bought at wholesale; the fact that it is connected with a great system enables it to get the very best advice that can be gotten, at the cheapest possible cost.

Q. What about the general office expenses, is that pro rata to Louisville less or greater than it would be if it had an independent management?

439 A. It is less.

Q. Appreciably less?

A. Yes. Then too, I will say, the uniformity of service given from Louisville to every point is an advantage.

Q. Has each patron in the City of Louisville, regardless of the rate that is being paid, access to the toll lines without extra charge, from their station?

A. He has.

Q. Is there any charge for connection with the toll lines to the individual station?

A. If he uses them, there is for the toll service.

Q. I mean, is there any extra charge over those not having instruments or not being subscribers?

A. Not at all.

Q. In other words, any patron of the exchange gets toll service at precisely the same rate as if he should go to the central office and use the toll lines?

A. Yes.

440 In the United States Circuit Court for the Western District of Kentucky, at Louisville, Ky.

CUMBERLAND TELEPHONE AND TELEGRAPH CO.
vs.
CITY OF LOUISVILLE.

The Cross-examination of H. BLAIR SMITH, Taken at Nashville, Tennessee, in the Above Styled Cause, on This the 30th Day of August, 1909, at Ten O'clock A. M.

Present, Mr. W. L. Granbery, Attorney for Plaintiffs; Mr. Clayton B. Blakey, Attorney for Defendant; and Buford Duke, Stenographer and Notary Public.

H. BLAIR SMITH, called, and previously sworn, further deposed and testified as follows:

Direct examination.

By Mr. BLAKEY:

Q. Mr. Smith, your deposition in this case deals somewhat with the value of the property used by the Cumberland Telephone Company in connection with its system at Louisville and the joint report of the two accountants, differ somewhat from the statement contained in your deposition. For instance, in your deposition
441 you state that the value of the plant, or rather the cost of the plant when purchased from the Ohio Valley Telephone Co. was some six hundred and eighty seven thousand dollars, whereas the accountants find that according to your books, the plant appears to be valued at six hundred and seventy eight thousand dollars—I leave off the smaller figures. Can you explain that difference and explain which statement is correct; whether the accountants' statement in regard to your books is correct, or whether your statement is correct?

A. You say accountants; there were two——

Q. Yes and they made a joint report?

A. Now, I think the statement I presented, showing the cost of the Louisville part of the Ohio Valley Company plant at $678,354.69 is correct, and I think one of the accountants, at least, agree in this. In the joint report, they have included this sum in the total construction account of Louisville, amounting to $1,702,391.68.

Q. On page twenty-four of your deposition, question 86 as I have it here, the question was asked:

"Q. What was the actual cost to the plaintiff company of the Louisville exchange when it was purchased from the Ohio Valley Telephone Co.?

A. $687,354.69."

A. That is a typographical error of the stenographer, a trans-

position of the figures. It should read, $678,354.69, and the
442 correct sum was included in the construction cost.

Q. Now as I understand you then, the Cumberland Telephone Company paid the Ohio Valley Company $678,354.69 for its plant in Louisville, Ky.?

A. The Cumberland Company didn't buy the Louisville plant separately. The two companies were merged as a whole.

Q. Did the Cumberland Company pay out any money to the owners of the Ohio Valley Telephone Co., for its plant?

A. They didn't buy the plant.

Q. What did they buy?

A. They bought it through stock ownership.

Q. They bought the stock of the Ohio Valley Telephone Company, did they?

A. Yes, sir.

Q. What did they pay for that stock?

A. They brought some of the stock in the open market paying therefor.

Q. Just state how much they bought and the price they paid for it?

A. They bought 702 shares at $140 per share, $98,280, and 2855 shares at $141.00 per share, $402,555, making the total purchase, 3557 shares for $500,835.

Q. Is that all they purchased?

A. That is all that was bought for cash.

Q. Did they acquire the other stock in the company?

A. Yes.

—. ——.

443 A. They swapped share for share, stock of the Cumberland Telephone and Telegraph Company for stock of the Ohio Valley Telephone Company for the balance of 1937 shares.

Q. What was the par value of the Cumberland Co. stock?

A. The par value was $100.00 a share.

Q. At one hundred dollars a share, how much would that amount to?

A. The par value would be $193,700.

Q. Did the Cumberland Company pay out anything more or anything in addition to the amounts you have stated there as the consideration for the property of the Ohio Valley Telephone Company?

A. In cash nothing further, than this, its liabilities.

Q. What were its liabilities?

A. Those shown on the books were,

Bonds	$16,000
Various Reserve accounts	70,049.75
Bills Payable	221,005.09
Miscellaneous	63,755.16

Q. That makes a total of how much?

A. $370,810.

Q. Did the Cumberland Company assume the payment of the sum you have just mentioned.

A. It assumed all of the liabilities on the books and outstanding.

Q. What became of those bonds?

444 A. They have been retired.

Q. Redeemed at par, more than par or less than par?

A. They were redeemed finally at par, after paying six per cent per annum interest.

Q. Now, what items go to make up the various reserve accounts?

A. Reserve for taxes, $4,000.00——

Q. Now hold on, before we go any further we might as well take up each item separately as we go along. Did the Ohio Valley Company owe any taxes at that time?

A. I think it would be considered they did, a full year's taxes.

Q. Do you know as a matter of fact whether they did owe any taxes?

A. It would be a matter of opinion.

Q. Did the Cumberland Company ever pay that item of four thousand dollars?

A. It pa'd that and more.

Q. Then it did owe that much, did it?

A. I think it owed more than that.

Q. Did it owe that much in taxes?

A. Every bit that much.

Q. I thought you said it was a matter of conjecture?

A. I said it would be a matter of opinion, not conjec-

445 ture to me.

Q. Can you furnish any data or voucher showing you paid that four thousand dollars in taxes?

A. I can.

Q. I will get you to do that if you can?

A. Yes. I will have to look through the vouchers for that year.

Q. I will withdraw that request for the present. Now, when did the Cumberland Company first purchase any stock of the Ohio Valley Co.?

A. I think it was in June 1899.

Q. In whose name was that stock purchased?

A. I cannot say.

Q. Will your books show at all?

A. I cannot say.

Q. When did the Cumberland Company begin to operate the Ohio Valley Co.?

A. The consolidation was effected January 27th, 1900.

Q. That is not the question I asked. Please read the question to him.

(Question read.)

A. I can not give any other information answering your question better than that.

Q. Do the records of the Ohio Valley Co. show when Mr. Caldwell became president of that company?

A. The auditor's records would show his salary, if he got one, but I don't recall it.

446 Q. Did the Cumberland Telephone Co. begin to operate it from the time Mr. Caldwell became president of the Company?

A. I would say Mr. Caldwell began then; I could not say the Cumberland Company did it.

Q. Does not the operations of the Ohio Valley Co. appear as the operation of the Cumberland Company from the time Mr. Caldwell became president?

A. No, it does not, that is, provided he became president before the consolidation.

Q. Where were the records of the operations of the Ohio Valley Company kept subsequent to the time Mr. Caldwell became president of the company and prior to the time the consolidation took place?

A. The records were kept in Louisville.

Q. Were they kept in the same set of accounts that they had been kept in theretofore or kept in a separate set of accounts, or were they kept as part of the accounts of the Cumberland Company?

A. I know they were not kept as part of the accounts of the Cumberland Company. As I recall it, some time prior to the consolidation of the two companies, the records were sent from Louisville to Nashville, and those records were continued until the consolidation or until January first. In fact, they were kept separate through January.

447 Q. Will you ascertain when that procedure began that you have just mentioned?

A. What procedure?

Q. Sending the records to Nashville?

A. I can do so, possibly, by the handwriting on the books.

Q. When they were sent to Nashville, were they transferred on to the books of the Cumberland Co.?

A. They were not.

Q. Where were they kept?

A. Kept entirely separate.

Q. You can tell then from an examination of those records when they began, can't you?

A. An approximate date.

Q. Then will not those records show the date of the first report made to Nashville?

A. Well, I don't know that any reports were made to Nashville. I don't recall any.

Q. You just stated prior to the consolidation reports were made to Nashville from the Louisville office?

A. No, I did not. I said the books were sent to Nashville.

Q. Were reports sent to Nashville prior to the consolidation?

A. None that I recall.

Q. Will you ascertain whether or not any such reports were sent here?

448 A. Will you give me the nature of it; it might have been sent to the Secretary, might have been sent to the treasurer, or the president or to the general manager. I cannot determine and I would have to go through every record the company has if I am to determine from the company's records.

Q. The operations of the Louisville System are reported to Nashville now, are they not?

A. They are.

Q. Were reports somewhat similar to the present reports kept by the Ohio Valley Co. prior to the consolidation?

A. The books are practically the same.

Q. If the books were sent to Nashville then, it would be difficult to have any sort of record made on those books, after they were sent to Nashville, unless reports were sent here?

A. The vouchers for expenditures were sent here from time to time, from the time the books were sent here and revenue vouchers, of course, came in. The system was practically the same, the changes would have been immaterial as far as the accounting was concerned, or as far as the results were concerned.

Q. To whom were those reports sent?

A. The financial reports would come to the auditor.

Q. Each month or each day or how would they come?

A. The reports of earnings would come monthly, and the vouchers might come periodically, as they accumulated them.

449 Q. Then, if they were sent to the auditor you would have a record of when they began sending them to the auditor, would you not?

A. While I was auditor at that time, I was not in charge of those records or books, but if there is any special information or anything you want, I will be glad to give it to you if I can.

Q. I have been here ten or fifteen minutes trying to ascertain when the reports and operations of the Ohio Valley Company plant, prior to its consolidation,—when those reports first began coming to the Nashville office.

A. If you want me to guess at it, I will say it was about September 1899.

Q. Will you ascertain definitely and let me know when those reports first began coming here.

A. Yes.

(Witness starts to retire for information.)

Mr. BLAKEY: Note there that Mr. Blakey asked Mr. Smith if he had any objection to Mr. Warren who is assistant to Mr. Blakey, going with him. Whereupon Mr. Smith stated he had no objection and Mr. Granbery directed Mr. Smith to go ahead, that Mr. Warren had nothing whatever to do with the matter and would not permit him to go with Mr. Smith.

Mr. GRANBERY: Mr. Granbery states he does not know Mr.

450 Warren to be Mr. Blakey's assistant, or a lawyer at all, but understands he is assistant to Mr. E. W. Farnam, representing the Mutual Audit Co., who has made a report to the Master Commissioner in this case. Mr. Granbery also says he has not

the slightest objection to Mr. Blakey going with Mr. Smith and looking at the original entries, if he desires.

Mr. BLAKEY: Of course, Mr. Granbery, there will be a number of matters I will want Mr. Warren to examine, in connection with the books of the company and I want to get a ruling of the Master as to whether he shall be permitted to make such examination of records as are called for. If you object to that, I should like to know, in order that I may telegraph the Master to come here and make a ruling on it.

By Mr. GRANBERY: I am not prepared to deal with any question that may arise, until it arises.

Mr. BLAKEY: I will then ask you, instead of having Mr. Smith to look these records up himself, to present them here for inspection.

Mr. GRANBERY: Mr. Smith will present any record
451 pertinent to this lawsuit, which you may call for, for your inspection.

Answer by witness, Mr. SMITH:

A. The last entry made in the Ohio Valley Company's books by the Louisville bookkeeper, were for August accounts, which would be made sometime after the middle of September, or about the middle of September. The September entries were made at Nashville.

Mr. BLAKEY:

Q. Mr. Smith, I will ask you to produce the records about which you have just spoken?

A. I will be glad to do so.

(Witness retires, returning with record which is handed to counsel for defendant.)

Mr. GRANBERY: Mr. Warren, that book is not for your inspection.

Mr. BLAKEY: Mr. Warren, you are here for that purpose.

Mr. GRANBERY: If Mr. Warren is to look at those books, I shall have to insist he does not do so, and I am not going to permit Mr. Warren to look at the books, and there is one way of preventing it, but that, of course, I should regret very much to have to do.

I have not the slightest objection to Mr. Warren being pre-
452 sent and aiding counsel in any data or suggestions he desires but so far as looking at the books of the company, they are not here for that purpose and I shall not permit him to do so.

Mr. BLAKEY: I ask the stenographer to certify to the Master the fact that certain books were produced for inspection, the books referred to by the witness, and that counsel for complainant, after they were produced, objected to the representatives of the City inspecting the books, and that counsel for the defendant then and thereupon requested the stenographer to certify to the Master, the fact that such refusal had been made, and asked for a ruling as to whether the City's representatives should be allowed to inspect the books, which were called for and produced by the witness.

Mr. GRANBERY: Mr. Stenographer, just take this: In making any

certification to the Master, you will please state exactly what occurred, as indicated by your notes.

The further taking of these depositions was thereupon
453 adjourned until the Master can be heard from.

STATE OF TENNESSEE,
County of Davidson:

I, Buford Duke, a Stenographer, and a Notary Public in and for the County and State aforesaid, before whom said deposition was being taken, certify that the foregoing is a true, complete and correct transcript of the proceedings had in the taking of said deposition.

Given under my hand and seal on this the 30th day of August, A. D. 1909.

BUFORD DUKE.
Notary Public and Stenographer.

454 CUMBERLAND TELEPHONE AND TELEGRAPH COMPANY
vs.
CITY OF LOUISVILLE.

Cross-examination of H. BLAIR SMITH, resumed on this Thursday Morning, September 2nd, 1909, at 9:30 o'clock, the matters arising during the taking of the said cross-examination having been transcribed by the Stenographer and Notary Public and forwarded to Mr. Henry Burnett, Special Master, and he having replied by telegram as follows:

"WEQUETONSING, MICH., *Sep.* 1, 1909.

Buford Duke, Notary Public, Nashville, Tenn.:

I think Blakey and Assistant Warren may inspect original entries produced by witness and thus guarantee correctness, but assistant may not make other examination of books.

HENRY BURNETT.
Special Master.

Telegram received about eleven o'clock A. M. Sept. 1, 1909
455 Copy of same being left with counsel for Complainant and original telegram being read to counsel for defendant over the telephone about the same hour received.

Complainant's counsel stated that he, of course, would acquiesce in the ruling of the Special Master.

The further taking of said deposition was thereupon resumed, with the same parties present as stated in the caption at beginning of cross-examination of this witness.

Mr. BLAKEY, for Defendant:

Q. Mr. Smith, I believe we were discussing the question of when the Cumberland Telephone began to operate the telephone system in Louisville, when we adjourned on last Monday morning. Are you prepared to say now when the Cumberland Telephone Com-

pany began to operate the Ohio Valley Telephone plant or system in Louisville?

A. The Cumberland Telephone and Telegraph Company began to operate it when they were consolidated.

Q. Did it operate it prior to the consolidation?

A. It did not.

Q. When did the Cumberland Telephone Company first purchase any of the stock of the Ohio Valley Telephone Co.?

A. I think it was in June 1899.

Q. When was Mr. Caldwell elected president of the company?

A. At the same time, June 1899.

456 Q. Who were the other directors elected at that time, Mr. Smith?

A. I cannot answer that Mr. Blakey, unless I look at the records. It is not shown in any of my books.

Q. Will you look at the records and let me know what other directors were elected at the time Mr. Caldwell was elected president?

(Witness retires to examine records.)

Mr. GRANBERY, for Complainant: Mr. Warren, that book is not for your general inspection, but we will just follow the ruling of the Special Master.

Thereupon Mr. Warren surrendered said book.

(Last question read to witness on his return.)

A. William Literer, W. W. Berry and V. E. Shwab.

Q. Do you know those gentlemen?

A. I do.

Q. Were they directors of the Cumberland Telephone Co. at the time they were elected directors of the Ohio Valley Company?

A. I think so.

Q. When were the books of the Ohio Valley Company sent to the Nashville office of the Cumberland Co.?

A. As near as I can approximate it, it was sometime between the middle of September and the middle of October 1899.

457 Q. Do you know how much stock was purchased by the Cumberland Telephone Company at the time these four or five gentlemen, whose names you have just given, were elected directors of the Ohio Valley Company.

A. I do not.

Q. Had the controlling interest been purchased?

A. I cannot answer.

Q. Can you ascertain that fact?

A. I can.

Q. Please do so? And you might also ascertain while you are there, in what way the stock was paid for?

(Witness retires.)

A. June 3rd, 1899, there was bought from James Clark, 1427 shares at $141.00 per share, amounting to $201,207; $50,301.75 was paid in cash and a note for the balance of $151,905.25 was

executed, payable on or before six months after date. This note was paid January 4th, 1900. On the same day there was also purchased 1428 shares at $141. per share, total of $201,348, with a cash payment of $50,337. and a note due on or before, six months for $151,011 payable to Mr. James B. Speed. This note was paid November 2nd, 1899. Both of these notes bore interest at four per cent. That is all the stock that was purchased at that time.

Q. That was the controlling interest in the Ohio Valley Company, was it not?

A. Yes sir.

Q. Who was the manager of the Louisville system at the
458 time the Ohio Valley Company stock was purchased by the Cumberland Telephone Co., if you know?

A. I don't know of anyone who had that title.

Q. Do you know who performed the duties of manager?

A. No, I do not.

Q. Do you know who performed the duties of manager after this stock was purchased in June?

A. Mr. George G. Hall, I think.

Q. When did he become manager?

A. Without referring to the records, I think he became manager or superintendent about June 1899, or probably not before September.

Q. Will you ascertain whether it was before or subsequent to September 1st?

A. I will. (Witness retires.) Mr. Hall became superintendent November 1st, 1899.

Q. Who was superintendent between the time the stock was purchased, about which you have spoken, and November 1st, 1899?

A. I think Capt. H. N. Gifford was general manager at the time of the purchase and continued for two or three months and then there seems to be a gap in that official position at that office for a short time and Mr. Louis K. Webb was auditor at Louisville at the time and I believe held the next ranking position.

Q. When did Capt. Gifford retire from the management?
459 Was it before September 1st, or after September 1st?

A. About that time.

Q. Will you ascertain whether it was before or after?

A. Yes. (Witness retires to do so.) Capt. Gifford's resignation was tendered in writing, effective October 2nd, 1899.

Q. Now we were talking the other day about a reserve for taxes, four thousand dollars. Do you know what years were represented by those taxes?

A. Well, I should say that some of that was for taxes for 1899, called 1899 taxes. In addition to that, I understand that the taxes in Kentucky are assessed as of September 1st, for the following year. If a property began operation on September 5th, it would pay no taxes until the following year; therefore, its taxes are one year behind, so that in addition to unpaid taxes for the year 1899, or payable in 1899, there would be at least a full years' taxes unpaid.

Q. Do you know that any of that four thousand dollars is represented by taxes for the fiscal year ending September 1st, 1899?

A. Yes, I know that some of it is.

Q. How much of it?

A. Probably a thousand dollars.

Q. Will you ascertain between now and tomorrow morning some time after adjournment of the taking of this deposition, and let me know how much of those taxes were for the fiscal
460 year ending September 1st, 1899? known as 1899 taxes?

A. That is, the fiscal year ending August 31st, 1899?

Q. Yes?

A. That is, the taxes that are assessed in 1898.

Q. Yes, taxes for the year 1899?

A. You know, besides the taxes that are payable direct to the State of Kentucky, there are also taxes due the government. At that time we paid a tax on toll line messages.

Q. You didn't pay a tax on telephone messages transmitted from one subscriber to another?

A. We did on long distance messages exceeding a certain sum, which I believe was ten cents.

Q. You had no long distance messages inside of the City of Louisville, did you?

A. No, Louisville would not be affected, itself, but the plant of the Ohio Valley Telephone Company would be affected.

Q. No part of the taxes you paid the Government should be charged against the Louisville Plant?

A. No.

Q. Then, you can ascertain whether any state, county or city taxes are represented in this item of $4,000 for the fiscal year 1899?

A. You ask me to do this over night. I will do it if I can.

461 Q. Will you file an itemized statement with the stenographer showing the items going to make up the four thousand dollars you have mentioned as reserve for taxes, and when any payments were made by the Cumberland Company of those items?

A. I can do so if I am given time to get the statement up.

Q. Now the next item I find, it having been mentioned by you in your deposition on Monday, various reserve accounts $70,049.75, will you please state what items go to make up that gross item of $70,049.75?

A. In giving that sum I referred to an exhibit wherein it is shown as a total. I will deduct from that, items which I see are included therein, making the net liabilities different. I wish to deduct depreciation, $8,000, toll line construction, $9,000 and special account, $38,875.16. The other items which remain and which are liabilities in addition to the tax reserve of $4,000, are the interest reserve of $7770 and the S. B. Royalty reserve of $2459.

Q. So then, instead of assuming $70,049.75, you assumed that amount less $55,875.16, did you?

A. Well, there might be an argument in regard to that, but we will eliminate that from the liabilities for the present.

Q. In making up your original statement in your deposition as

first given, you included that $55,000 as items going to make up the total of six hundred and seventy-eight thousand dollars, in round figures?

A. No sir, I did not. In making up my exhibits in my
462 direct examination, I referred to the books for the figures I exhibited.

Q. Do the books show that this $55,875.15 are included reaching the value of the Louisville plant and fixing it on your books and six hundred and seventy eight thousand and odd dollars, in round numbers?

A. Those are certainly involved.

Q. So, those figures are erroneously included?

A. They are not erroneously included.

Q. What is your position now in regard to this fifty five thousand odd dollars?

A. It represents earnings of the plant.

Q. It appears on the books of the company as a liability, does it not?

A. Yes, all earnings appear on the books as liabilities.

Q. Do they appear on the books as having been assumed by the Cumberland Telephone Company at the time it consolidated with the Ohio Valley Company?

A. They appear on the books as having gone into the accounts of the Cumberland Company.

Q. Please read my question to him again.

(Question read.)

A. I understand the question to refer to them as liabilities. I say that they are not liabilities and I believe you assumed they are liabilities in asking the question.

463 Q. Don't the books show they are liabilities?

A. They do not.

Q. What do they show them to be?

A. Show them to be accounts for various purposes.

Q. Did the company ever pay any of those items, the Cumberland Company?

A. Well, not directly.

Q. Did it pay them indirectly?

A. I cannot say that they did. I will change that, the company paid them indirectly.

Q. How did they pay them indirectly?

A. After the company bought stock in the Ohio Valley Company, it ceased paying dividends, and by foregoing its dividends, it paid them.

Q. Now in your deposition, on Monday, the third item bills payable, $221,005.09, can you furnish me an itemized statement showing those bills payable?

A. I can.

Q. Have you it before you?

A. I have not.

Q. Have you vouchers representing those payments?

A. I think so.

Q. Have you before you an itemized statement of those payments?

A. I have not.

Q. In what records do they appear in your office?

464 A. In the ledger of the company.

Q. Will you produce the ledger for inspection?

A. I will do so.

Q. On what page is it?

A. You have the ledger; there is an index in there.

Q. Will you kindly indicate to me in this ledger where I will find a list of the items that go to make up this total sum of $221,005.09?

A. By referring to the index under notes payable, you will find the page.

Q. I notice that on page 326 of this ledger, you have handed me, the last item appearing on that page is June 3rd, 1899, are there any other records from June 3rd, to January 1st, 1900, dealing with this subject?

A. I would have to investigate. It is possible we have an individual ledger that belongs to the full set of accounts.

Q. The last item here seems to be balance to individual ledger. What does that mean?

A. It means that we carried two ledgers, one for general accounts and one for accounts that are known as individual accounts. Usually the general ledger represents the accounts payable, and the individual ledger, the accounts receivable.

Q. Is the balance appearing on this page, 326, which seems to have been carried to the individual ledger, is that balance carried over to the individual ledger and then this account continued on the individual ledger?

465 A. I take that to be a fact.

Q. Will you produce that individual ledger?

A. Yes. Page 170 shows the continuation of the account.

Q. Mr. Smith, if you will examine page 326 of the ledger you first handed me, you wil notice a balance to individual ledger, it seems to be the last item save the total, $170,000. And, on the right hand side of the page, save the total, is June 3, J. 378, $100,000. That is true, is it not?

A. Yes, sir.

Q. Now, when we turn over to page 170 of the second book you hand me, which you term the individual ledger, you will notice, balance from ledger C. 326, June 3, 1899, Louisville Cement Co. on demand, $70,000. Is that seventy thousand dollars I have just mentioned as being on page 170 of the individual ledger, a part of the items which appear on page 326 of the first ledger you handed me?

A. I think not. Wait a minute, read the question? Do you ask me the question, is this $70,000 a part of this balance of $170,000?

Q. Yes.

A. It is.

Q. Do you know what that $70,000 represents, what sort of a liability and how it was incurred?

A. The books show that it was a demand loan from the
466 Louisville Cement Co., bearing date June 30th, 1898. That is all I know about it.

Q. Was that $70,000 paid by the Cumberland Telephone Co.?

A. No, it was paid by the Ohio Valley Co. on September 29th, 1899.

Q. Then, that $70,000 was not a liability which the Cumberland Telephone Company assumed at the time it consolidated with the Ohio Valley Co.?

A. No sir.

Q. So that of the liabilities appearing in page 170 under the head of notes payable, only $100,000 remains, after deducting from it the $70,000 about which you have just testified?

A. Yes, as of the date transferred. That is, there remain unpaid notes issued prior to June 3rd, after the $70,000 was paid, $100,000.

Q. Now referring again to page 170 of the second book you handed me called the individual ledger, I notice these items in red ink; June 3, 1899, James E. Caldwell, $20,000. Same date, James B. Speed, $10,000; same date, James B. Speed, $10,000; same date, J. B. Speed, $10,000; same date, J. B. Speed, $10,000; same date, Mrs. Jessie L. Clark, $10,000; same date, Mrs. Jessie L. Clark, $10,000; same date, Mrs. Jessie L. Clark, $10,000; same date, Mrs. Jessie L. Clark, $10,000, making a total of the items I have
467 just read, of $100,000. Now is that the $100,000 liability that appears under the head of notes payable in the first book you handed me?

A. Yes.

Q. What were those notes given for, if you know?

A. Those notes were given, I think for the payment of the Jefferson Street property, called the main exchange, now occupied by the main office of the Cumberland Telephone Company.

Q. Were those notes paid?

A. They were.

Q. When were they paid?

A. The first note, for $20,000 seems to have been paid—from this record, on December 8th, 1899. The other notes were paid at maturity.

Q. When was that?

A. The notes in favor of James B. Speed were paid as follows, $10,000 June 3, 1900; $10,000, June 3rd, 1901; $10,000, June 3rd, 1902; $10,000, June 3rd, 1903. The notes in favor of Mrs. Jessie L. Clark, were paid as follows: $10,000 June 3, 1900; $10,000, June 3rd, 1901; $10,000 June 3rd, 1902; $10,000 June 3rd, 1903.

Q. Now, the first item I read was June 3rd, 1899, James E. Caldwell, $20,000. Was James E. Caldwell a part owner of the Jefferson Street property, occupied by the Ohio Valley Company as its exchange?

468 A. He was not. That note was part of the $100,000 and represented the cash payment. It was made in favor of Mr.

James E. Caldwell and endorsed by him individually and negotiated through bank.

Q. Do you know that it was endorsed by him and negotiated through bank?

A. The records show that.

Q. What records?

A. The records of the company.

Q. Did he get any part of that $20,000 individually?

A. None whatever, that I know of.

Q. Do you know that he did not?

A. I don't know further than what the records show and I have the greatest fatih that he did not.

Q. What does the note show?

A. The books show that, the books that I now have before me only show that the note was made in favor of Mr. James E. Caldwell.

Q. Is that note now in the records and archives of this company?

A. I cannot say positively, but we have records of the note.

Q. Will you ascertain if that note is now in existence and produce it if it is?

A. It is ten years ago; it is a payment made ten years ago and it will take considerable length of time to determine whether it is in the files or not.

469 Q. Have you any assistant that you could direct to make the search while you proceed with the deposition?

A. None that I think would be familiar with the records at that date.

Q. Will you, at the same time, or at some time before the proof is closed in this case, see if you can find that note and if so file a copy of it with the stenographer?

A. I will.

Mr. GRANBERY: I would suggest that at the adjournment for lunch that Mr. Smith be given such time then as necessary then, before resuming his testimony, so as not to accumulate too much for him to do at the end of the deposition.

Mr. BLAKEY:

Q. You don't know then, as a matter of fact whether Mr. Caldwell got any part of that money that was paid to him under that note, or not?

A. The books show the transaction as a very clear one and show that he did not.

Q. In what books, and in what way do the books show he did not?

A. The books show that the payment was made.

Q. To whom?

A. To the bank.

Q. The books don't show when the note was discounted

470 that he didn't get the money, does it?

A. The books show that the deed to the property was for a consideration of $100,000, $20,000 of which was payable in cash,

the balance in notes. It takes the $20,000 note we are discussing to make up the full $100,000.

Q. And the note was executed payable to Mr. Caldwell and delivered to Mr. Caldwell, was it?

A. I cannot say that.

Q. That is the presumption, isn't it. The note would be delivered to the man to whom it is payable?

A. Let us see if the note will not show for itself if we find it.

Q. That would not show to whom it was delivered?

A. I can't say what it would show.

Q. So far as your records show then, the note was executed payable to Mr. Caldwell and delivered to him. In other words your record shows nothing to the contrary?

A. The records don't show it was delivered to Mr. Caldwell. The records show that the note was executed and negotiated in bank.

Q. Does it show who negotiated it?

A. The records will show that.

Q. What records?

A. The note itself and the journal would probably explain more fully. I can produce the journal if you like.

471 Q. How long will it take you to produce the journal?

A. Two minutes.

Q. All right, suppose you produce the journal?

A. (Witness does so.) On page 377 of the journal, it shows the transaction complete.

Q. Where is that, here at the bottom of the page?

A. Yes sir.

Q. From this journal,—and, by-the-way, is this the journal of the Ohio Valley Telephone Co.?

A. It is.

Q. From this journal it appears that the Ohio Valley Co. purchased from J. B. Speed and Mrs. Jessie L. Clark, the property on Jefferson Street, about which we have been talking, does it?

A. Yes sir.

Q. And it also appears from this record that the Ohio Valley Co. paid therefore or agreed to pay therefor, the sum of $100,000, $20,000 of which should be in cash, does it Mr. Smith?

A. Yes sir.

Q. And it also appears that Mr. James E. Caldwell the president of the company—what company, president of the Ohio Valley Company does that mean?

A. He was elected on that day.

Q. And advanced twenty thousand dollars to meet the
472 cash payment and a note was given to James E. Caldwell for twenty thousand dollars to cover that advance payment, is that correct?

A. Yes sir.

Q. Now do you know as a matter of fact whether Mr. Caldwell did advance that $20,000?

A. I was not present.

Q. Then you don't know that?

A. No, I don't know it personally, but I have no reason to doubt it.

Q. The next item I notice on page 170, immediately following the items I have read, which we have just gone over, is an item of September 28th, 1899, D. L., which I understand means demand loan, made, 4½% is that right?

A. I take it to be correct.

Q. For $50,000 what does that represent?

A. That represents a loan which was made by the Ohio Valley Telephone Co.

Q. Do you know who they borro-ed that money from?

A. The ledger does not show it; I can find out and let you know, if you desire.

Q. Have you the journal here which shows it?

A. The journal would not show it, but the cash book would.

Q. Suppose you get the cash book, if you will?

A. The cash book shows on page 8, under date of September 28th, 1899, the following entry, Cash debit, account of bills payable, demand loan made this date with the Union National
473 Bank, 4½% interest, $50,000.

Q. Now there appears opposite the item of $50,000, to which we have just referred, October 31, cash, $25,000. What does that item represent?

A. Represents a partial payment made on account of that note.

Q. Is that October 31st, 1899?

A. Yes sir.

Q. The next item I find, on the right hand side of the page, under the item of $50,000 is, October 31st, 1899, 3 months, 6 per cent L. Hume, Treasurer, to C. T. Co. First National, Louisville, $14,728.32. What does that item represent?

A. That represents a note given by the Ohio Valley Telephone Co. for $14728.32, payable to the Cumberland Telephone & Telegraph Co., dated October 30th, 1899, due in 3 months, at six per cent interest.

Q. For what was that note given?

A. On account.

Q. On account of what?

A. After the Cumberland Company purchased the stock in the Ohio Valley Telephone Company in June, it began selling it supplies and financing it generally, and the note mentioned was given as part payment of the debt that the Ohio Valley Telephone Company owed at that time to the Cumberland Telephone Co.

474 Q. What debt did the Ohio Valley Telephone Company owe the Cumberland Company at that time?

A. At what time?

Q. The date of the note you have just been speaking of?

A. About $48,500.

Q. You ascertain that fact from page 182, do you?

A. Yes sir of the individual ledger.

Q. Are these charges against the Ohio Valley Company, or are these credits to the Cumberland Telephone Co.

A. They are credits to the Cumberland Telephone Co.

Q. I notice a number of credits there of material to Jeffersonville, material to Morganfield, material to Louisville, material to Elizabethtown, five items, material to Morganfield, five items, and various other items which do not designate for what point they were intended, the forty eight thousand dollars in round figures, then I assume that was for supplies furnished over various parts of the company's territory?

A. No sir, the forty eight odd thousand dollars was represented largely by cash advances.

Q. Now, when was that note paid if you know, if at all?

A. It was paid after January 1st, 1900.

Q. Was it paid prior to January 27th, 1900?

A. It was paid after the Ohio Valley Company's accounts were taken into the Cumberland Company's accounts, which was
475 January 1st, 1900.

Q. Read him the question again?

(Question read.)

A. If you wish to know the exact date, I will refer to the Cumberland Company's books and ascertain it.

Q. There are three other items here. You might ascertain those at the same time—there are also two other items, notes, one of October 3rd, 1899, for $16,170.98; and one for $13,680.10. Ascertain when all three of those notes were paid, will you?

A. I will. (Witness retires to do so.) Company paid the note for $14,728.32 on February 2nd, 1900; the note for $16,170.98 was paid March 31st, 1900. The note for $13,670.10 was paid March 31st, 1900.

Q. Now at the time the Cumberland Company was furnishing the supplies to the Ohio Valley Company and at the time these notes were given, who was receiving the earnings from the Ohio Valley Co.?

A. They were kept in the treasury of the Ohio Valley Co. I say they were kept within that company, they probably were expended for construction or liquidation of li/abilit-es, etc.

Q. Do you know what part of this forty-eight thousand dollars was devoted towards the Louisville plant, towards upkeep, or maintenance of the Louisville plant?

A. I can not say what part of that specific forty eight
476 thousand dollars was.

Q. Do you know whether any part of it was so used, except the amount indicated on this ledger?

A. The amount of the money put into the Louisville plant would be shown by the vouchers.

Q. You don't know now whether any part of it was?

A. I can not say these specific dollars went into it.

Q. Can you say any sum advanced or any material furnished by the Cumberland Telephone and Telegraph Company to the Ohio Valley Telephone Co. and which is represented by this forty eight thousand dollars was used on the Louisville plant, except such as

appear on this page 172 of the ledger as having been as follows, for Louisville?

A. If you ask me to speculate, I should say that the largest part of the cash advances went for the improvement and extension of Louisville plant, for the reason that Louisville was the main exchange, in fact, practically the only exchange deserving the name that the Ohio Valley Telephone Company had.

Q. You don't know that, though?

A. I don't know it absolutely.

Q. I will ask you whether this record here shows any material or cash furnished to Louisville, Ky., except one item of September 30th, 1899, which shows material to Louisville, $9.00?

A. The ledger record does not state specifically, but simply
477 states that supplies were sold and cash was advanced.

Q. It does show what the supplies were furnished for when it mentions supplies, doesn't it?

A. It does, in a few instances.

Q. Doesn't it in most of them?

A. No sir, possibly less than half.

Q. About half of the items on there are cash items, aren't they?

A. By far the largest part of the money represented in the account, was advances of cash.

Q. Well, the next item on page 170, under the three notes about which we have just been talking, is an item of November 6th, 1899, of $25,712.85. Will you please explain what that item represents?

A. That item represents a note given to the Western Electric Co., for that amount, dated November 6th, 1899 and due January 8th, 1900.

Q. For what?

A. The Western Electric Company furnished quite a quantity of apparatus and material, and it was given in part payment of the account due that company by the Ohio Valley Telephone Company?

Q. Was that note paid on January 8th, 1900?

A. Shall I ascertain from the Cumberland Telephone Company's records?

478 Q. Yes.

(Witness retires.)

A. The note was paid January 6th, 1900.

Q. The next item is an item of November 6th, 1899, $25,713.84. State what that represents and when it was paid?

A. The note is for $25,712.84 and was paid February 6th, 1900.

Q. Was that the same character of note as the preceeding one?

A. Yes sir.

Q. The next item on page 170 is December 1st, 1899, an item of $20,000. Please explain what that item is and what it represents?

A. That is a four months' note, dated December 1st, 1899, due April 4th, 1900, in favor of the Cumberland Telephone and Telegraph Co.

Q. For what was that note executed?

A. That note was executed in part payment of the open account

due the Cumberland Telephone Company by the Ohio Valley Telephone Co.

Q. Where do you ascertain that fact?

A. I ascertain that fact from individual ledger, page 123.

Q. Is that the same character of notes as the three notes you testified about awhile ago, amounting to $14,728.32 and the other two?

A. I think so.

479 Q. Do you know whether or not it is?

A. The records show that it is.

Q. Have you any minutes on your directors' meeting records or any other records showing the authority for the issuance of that note?

A. I can not say; I have nothing to do with those records.

Q. Have you any journal that will make any minute of that item or show any minute of that item?

A. The journal, page 480, under date of December 1st, 1899, shows the following entry, "Cumberland Telephone and Telegraph Co. charged, and bills payable credited, $20,000. The explanation is, "Our four months' note in favor of Cumberland Telephone and Telegraph Co., payable at Union National Bank, Louisville, dated December 1st, 1899, due April 4th, 1900, interest, six per cent."

Q. Is that the same note that was executed to James E. Caldwell, payable December 3rd, 1899, for $20,000?

A. It is not the same note.

Q Is it a renewal of the same note?

A. The records do not show that it is, and further than that I do not know.

Q. Do you know to whom the note was executed which is referred to in the entry here as a note payable at Union Bank?

A. It states it is in favor of the Cumberland Telephone and Telegraph Co.

Q. But this note here seems to be a renewal of some other

480 note?

A. The entry does not so state.

Q. Do you know whether that is a renewal of the note which appears as of date June 3rd, 1899, payable to J. E. Caldwell on December 3rd, 1899, for $20,000?

A. I don't know.

Q. Have you any way of ascertaining?

A. I have not.

Q. Do you know whether or not that note was paid?

A. It was.

Q. To whom was it paid?

A. I will have to refer to the voucher.

Q. When was it paid?

A. It was paid April 4th, 1900.

Q. I notice here immediately under the item, bills payable, on page 123, an item of James Clark, $15,000. What does that item represent?

A. On December 2nd, 1899, the Cumberland Telephone Co. ad-

vanced the Ohio Valley Company $15,000 which was paid to Mr. James Clark on the note given him dated June 3rd, 1899, for $150,905.25. As the Cumberland Telephone Company advanced the Ohio Valley Telephone Company that money, the Ohio Valley Company credited the Cumberland account with it and then paid it to Mr. Clark.

481 Q. So that transaction represented a payment by the Cumberland Telephone Company of $15,000 of the purchase price of the capital stock of the Ohio Valley Co.?

A. No, I think the entry is this: that the Cumberland Co. loaned —no, wait a minute. The Cumberland Company issued a check for $15,000 and sent it for that purpose and the books here just mix it. They credited it on the Ohio Valley Company books and then had to withdraw it for it was a payment direct from the Cumberland Company to Mr. Clark, but it went through incorrectly on the books of the Ohio Valley Company, as the books will show and as will be seen from the following entries, on December 2nd, the Cumberland Company account is credited with $15,000 and on December 19th, when the error was discovered the Cumberland Company account is charged with that $15,000.

Q. How much did the Ohio Valley Company owe the Cumberland Company on December 1st, 1899?

A. On the open account?

Q. Yes?

A. It owed the Cumberland Company $11,824.70.

Q. Why should it give its notes to the Cumberland Company for $20,000 on that day, unless it was necessary to make up this payment of $15,000 to Mr. Clark and which follows immediately after the entries you have just read?

A. The Cumberland Company had loaned money to the Ohio Valley Co. and I guess, or I should say in this instance it was a return of favors.

482 Q. So, the Ohio Valley Company was simply loaning money then to the Cumberland Telephone Co.?

A. The Ohio Valley Company gave its note on December 1st, for $20,000 to the Cumberland Telephone Co.

Q. Loaning its credit to the Cumberland Telephone Co.?

A. It might be termed that.

Q. Now isn't it a fact Mr. Smith, that on December 1st, when this note was made, it was made in order that the money might be procured from the bank to pay Mr. Clark?

A. I think not.

Q. The records show that out of the proceeds of this loan, Mr. Clark was paid, don't they?

A. No sir.

Q. The Ohio Valley Co. got the twenty thousand dollars, didn't it?

A. The Ohio Valley got the $20,000 you ask?

Q. Yes.

A. Where from?

Q. From the Cumberland Co.

A. The records don't show it.

Q. The records do show that $15,000 was credited to the Cumberland Telephone Co., on December 2nd, does it not?

A. Yes.

Q. And the records do show that on December 19th, James Clark was paid $15,000 do they not?

483 A. The records don't show this as a payment to James Clark. The records show this debit of $15,000 which says to James Clark, as a correction entry of the $15,000 credited to the Cumberland Telephone and Telegraph Company's account.

Q. Now, I notice on page 124, bills payable, $20,000. What does that item represent?

A. On page 482, of the journal, under date of December 18th, bills payable is charged and the Cumberland Telephone and Telegraph Co. credited with $20,000, the entry reading as follows—"Latter paid our note dated June 3rd, 1899, due in six months, December 6th, 1899, in favor of James E. Caldwell, which they had discounted on August 24th, with the Fourth National Bank of Nashville."

Q. Well, what is your explanation of that entry?

A. My explanation is on the date mentioned, that the Cumberland Company took up a note which had been made by the Ohio Valley Telephone Co.

Q. To whom?

A. Been made to James E. Caldwell, and which had been discounted on August 21st, with the Fourth National Bank of Nashville.

Q. Had the Ohio Valley Company executed any note to Mr. Caldwell, except the $20,000 with which we first examined the books?

A. I think this entry covers the note specified in the pur-
484 chase of the Jefferson Street property.

Q. And that is charged the Ohio Valley Company is it on your books?

A. Which are our books?

Q. That $20,000 is charged in the shape of bills payable to the Ohio Valley Co. and the Cumberland Telephone Company is credited with that $20,000, is it?

A. The Cumberland books would show a charge to the Ohio Valley Company and the Ohio Valley Company books show a credit to the Cumberland Company.

Q. Twenty thousand dollars paid by the Cumberland Telephone Co. for the property on Jefferson Street, in Louisville?

A. Show a loan of that amount to pay a note.

Q. That particular note already appears as of December 8th, 1899 as having been paid, does it not?

A. That is a part of this journal entry which we are discussing.

Q. It appears as a charge in favor of the Cumberland Telephone Co. against the Ohio Company here, does it not?

A. On page 170 it appears as a credit to notes payable, and would not appear at all on the Cumberland Telephone Company's books.

Q. It appears as a debt of the Ohio Valley Co. does it not?

A. It appears as a debt of the Ohio Valley Telephone Co.

485 Q. On page 170 doesn't it?

A. On page 170 it so appears, as a debt until December 8th, 1899.

Q. Now isn't it a fact that the money represented by that same note appears on page 124 of the same book, as a charge against the Ohio Valley Telephone Co.?

A. The transaction you refer to is a transfer of the $20,000 debt from notes payable account on page 170, to the Cumberland Telephone and Telegraph Company account on page 124.

Q. But this $20,000 on page 170 is part of the $221,000 is it not?

A. It is not.

Q. Do you mean to say that $20,000 does not constitute a part of the two hundred and twenty odd thousand dollars about which I first asked you?

A. No part whatever.

Q. The $221,000 that you have said was a part of the liabilities, are derived from the items on page 170, here, aren't they?

A. From the balance of unpaid items on page 170.

Q. And the $20,000 which appears on page 124 as bills payable is part of the $21,997.93 which the Ohio Valley Company owed the Cumberland Company at the date of the consolidation, isn't it?

A. That is correct.

486 Q. Now, will you turn to your minutes and see what item of date November 29th, 1899, $3,000, which appears on page 123, represents?

A. On the cash book of the Ohio Valley Company under date of November 29th, 1899, appears the following entry—cash being charged therewith: "Cumberland Telephone and Telegraph Co., Nashville, Tenn., check November 20th, on account, $3,000," that being a loan of $3,000 from the Cumberland Telephone and Telegraph Company to the Ohio Valley Telephone Co.

Q. A check on account would simply seem to imply that the Cumberland Company owed the Ohio Valley Telephone Company something?

A. It would indicate the Cumberland Company had a running account with the Ohio Valley Company.

Q. Now are there any items any additional items in the records of the Ohio Valley Company, any of these cash items such as you see all the way through here, which were devoted towards the paying off of any of the notes given in payment of the Jefferson Street property or in payment of any stock bought by the Cumberland Telephone Co.?

A. The Cumberland Telephone Co. itself paid for all of the stock which it bought of the Ohio Valley Telephone Co. The Cumberland Telephone Company paid directly $80,000 of the notes given in exchange for the Jefferson Street property, and seems to have paid indirectly, by a loan to the Ohio Valley Tele-

487 phone Co. of $20,000 additional, that was paid for the Jefferson Street property. I know of no transactions other than those, that have been brought out in this deposition.

Q. When the stock of the Ohio Valley Telephone Co. was purchased by the Cumberland Telephone Co. was it taken in the name of the Cumberland Telephone Co. or in the name of the directors of the Cumberland Co.?

A. I can not say.

Q. Now I notice Mr. Smith from the examination the other day you give another item of liabilities assumed by the Cumberland Telephone Co., as miscellaneous, $63,755.16. Of what individual items is that miscellaneous item made up?

A. L. C. Maddux account, $139.68; toll agents' accounts, $1.35; Cumberland Telephone and Telegraph Co., $21,997.93, exchange subscribers', $2,059.93; American Bell Telephone Co., $14,197.91; Western Electric Company, $23,950.21. Other line accounts, $1,408.15; total, $63,755.16.

Q. Now the first item I call your attention to is Cumberland Telephone Company $21,997.93. Is that the item attention to which was called a moment ago in which was included the $20,000 note which was a renewal of the note given by the Ohio Valley Co. to J. E. Caldwell?

A. The amount that is shown as due the Cumberland Telephone and Telegraph Co., is the balance of the open and running account shown on the Ohio Valley Telephone Company's books and the note you specified does enter into the account.

488 Q. Now, exchange subscribers, $2,059.93. What does that represent; explain that item will you, I mean, in a general way?

A. I think it probably represents advance payments made by exchange subscribers.

Q. American Bell Telephone Co. $14,197.91. What did they owe the American Bell Telephone Company for?

A. They owed the American Bell Telephone Co. rental on instruments and royalty on switchboards. The ledger that I have before me shows that at the time it was opened, prior to September 1899, they owed the American Bell Telephone Co. $1,708.76, and the balance of the amount represents what was due the American Bell Telephone Co. net, through December 31st, 1899.

Q. Is that the amount that is represented by what you call later on in your deposition four and one half per cent of the gross receipts of the company?

A. It is not. That contract wasn't effective at that time.

Q. You paid a royalty at that time?

A. We paid what was known as a rental and royalty.

Q. Can you tell from this book how much the Ohio Valley Telephone Company owed the American Bell Telephone Company on June 3rd, 1899?

A. The general ledger, page 332, shows that the Ohio Valley Telephone Company under the previous management, paid their bills monthly.

489 Q. So then, on June 3rd, the Ohio Valley Telephone Co. owed the American Bell Telephone Company, practically nothing?

A. Yes.

Q. Now the next item is Western Electric Company, $23,950.21. What does that item represent?

A. That represents purchases.

Q. Of what?

A. Telephone apparatus and supplies.

Q. How much did the Ohio Valley Telephone Company owe to the Western Electric Company on June 3rd, 1899?

A. Something over $7200.

Q. The next item is other line accounts, $1,408.15. What does that item represent?

A. It represents toll collections made by the Ohio Valley Company for connection companies?

Q. Money it had collected and owed to other companies?

A. Yes, for messages going over their lines.

Q. In those various reserve accounts, will you turn back to your memoranda on that subject and indicate what items it was you eliminated from that seventy thousand dollars. I do not recall them just now?

A. I eliminated, depreciation $8,000; toll line construction, $9,000; special account, $38,875.16.

Q. Does that leave anything there except the $4,000 or reserve for taxes?

490 A. It leaves reserve for interest $7770; reserve for S. B. royalty, $2,404.59.

Q. Now what do you mean by reserve for interest?

A. Reserve for interest account represents, either by its debit or its credit, the amount of interest due and unpaid, or the amount of interest due but not paid. In this instance, it represents by its credit an amount of interest which has actually accrued but which has not yet been paid.

Q. When did it accrue?

A. It accrued prior to December 31st, 1899.

Q. Did it accrue prior to June 3rd, 1899?

A. I don't know.

Q. Can you ascertain whether any part of it, and if so what part, accrued prior to June 3rd, 1899?

A. By a very careful analysis of each item entering into the account, beginning with the items entering into balances on the books as of June 3rd, 1899, and coming down on the books as of June 3rd, 1899, and coming down through all other items to December 31st 1899, such analysis can be made.

Q. The Ohio Valley Telephone Company paid its interest payments monthly, I suppose, didn't it. It paid it when it accrued?

A. It did not; it paid it like anyone else would pay it. On demand loans the interest is usually paid quarterly.

Q. Can you state what the Ohio Valley Company owed on
491 June 3rd, 1899 in the way of demand loans?

A. I can.

Q. Suppose you look at the book and tell me what it did owe in the way of demand loans on that date?

A. It owed one demand loan of $70,000.

Q. When was that loan made; does it appear there?

A. June 30th, 1898.

Q. Does it show whether any interest had been paid at all on that demand loan?

A. No sir.

Q. What interest did the loan bear?

A. The account does not show.

Q. If it bore six per cent interest, the interest for the entire year would not have been over four thousand dollars, would it?

A. Forty-two hundred dollars.

Q. The year wasn't quite up. Now, about this S. B. Royalty Reserve for S. B. Royalty, what did you say that was for, if you have stated?

A. It is switch-board royalty. At that time there were various patents——

Q. I thought you said in this American Bell Telephone Co. item of fourteen thousand and odd dollars, that was for rental and switch-board royalty?

A. No, I don't think I did. I think the debt due the
492 American Bell Telephone Company was for instrument rental and royalty, that is, royalty on instruments.

Q. When did that reserve for S. B. royalty accrue, was that due at the time of the consolidation?

A. The switch-board royalty was usually calculated by the year and a part credited off each month. That is, each month would be charged with its part of the rental of royalty of the switchboards, so that amount is probably the exact amount that was due at the end of the year.

Q. That was for the entire year?

A. I think probably so, or due for whatever fiscal year they followed.

Q. What would generally be the royalty on switch-boards for the year?

A. It depended entirely upon the number of lines in the switch-board; I think that was what determined it.

Q. Can you tell from the books about how much they paid for a year, usually, in a general way?

A. In 1897, we paid $2370; in 1898, $2579; and the reserve at the end of 1899 was $2404.59.

Q. That was the amount that was paid for the year 1899?

A. This record does not show what amount was paid.

Q. Have you any record that shows when that was paid?

A. If it was paid it would be shown in the Cumberland Telephone Company's books.

Q. Some time during December 1899, would you say?
493 A. It was paid after December 1899.

Q. Was it paid before January 27th, 1900?

A. I will have to refer to the Cumberland Telephone Co. books to determine.

Q. Were the records of the Ohio Valley Telephone Co. kept as a

part of the records of the Cumberland Telephone Co. after January 1st, 1900?

A. They are included in the records of the Cumberland Telephone Co. from January 1st, 1900, having been put into the Cumberland Company records after the consolidation.

Q. Suppose you refer to those at the lunch hour and tell us?

A. Very well.

At 12:30 o'clock, recess was taken until this afternoon at two o'clock.

494 Afternoon.

At two o'clock this afternoon, September 2nd, 1909, the further taking of this deposition was resumed at the same place, with the same parties present.

A. Regarding the switch-board royalty, I beg to exhibit bill of the Western Electric Company, dated January 10th, 1900, against the Ohio Valley Telephone Co., which reads, as follows; Royalty on multiple switch-board at Louisville, Ky., for first 10 months of 1899—average number of lines 2812.3, amount $2343.58. No further bills for royalties will be rendered."

Q. That was paid when?

A. That was paid some time in 1900.

Q. Doesn't it say there on the bill?

A. Paid March 16th, 1900.

Q. I will ask you if you will have a copy made of this page 170 as it appears upon the records from which you have testified and file it as a part of your deposition?

A. It reads, as follows, on page 170 of ledger of the Ohio Valley Telephone Co. Title of account, "notes Payable."

Debit side, Sept. 29th, to cash, page 9	$70,000
December 8th, to C. T. & T. Co., page 482	20,000
Oct. 31, Cash, page 13	25,000
Total debits	$115,000

Credit Side. Balance from Ledger C, p. 326.

495 Date, Favor of, Due, Amount.

Q. Permit me to interrupt you. I don't care for it in the way you are reading it, as it does not serve my purpose. I will ask you to have a copy of it made as it appears on your books, and file it as an exhibit to your deposition?

Mr. GRANBERY: Just stop and make a copy of it. I do that, not in order to be arbitrary, but the auditor's time is very much taken up with his ordinary duties and in taking a long deposition this way he gets very much behind and in order that there may be no mistake about furnishing it and about getting what is asked for, I think it is better to have it done now.

Mr. BLAKEY:

Q. Have you some assistant or clerk that you could have do that and you verify it?

A. I have.

Q. Will you have it done that way?

A. Yes. (Paper to be marked, Exhibit No. 14.)

Q. Now, Mr. Smith, I believe we have covered the ground of the amount paid by the Cumberland Telephone and Telegraph Company for the stock of the Ohio Valley Telephone Company plus the amount of liabilities of the Ohio Valley Company which it assumed. I should now like for you to tell me what property the Cumberland Company acquired by reason of this purchase or this consoli-

496 dation as you may be pleased to term it?

A. In the first part of your question you make a statement but I do not care to agree to it. We have covered the liabilities that the Cumberland assumed which are shown on the Ohio Valley Telephone Company's books. There are always outstanding liabilities which are not on the books. As to the properties acquired——

Q. Before we go into that then, I should like to interrupt you just here and ask you if you didn't state in the early part of your cross-examination, that the Cumberland Company paid certain sums of money and exchanged certain shares of stock for the stock of the Ohio Valley Telephone Company, and whether you didn't then say that the Cumberland Company paid in cash nothing further than the amounts it had paid or exchanged for stock, but assumed certain liabilities, and if you didn't then proceed to detail what liabilities were assumed?

A. May I refer to my deposition. (Witness does so.) My answer to your question, what were its liabilities," is this. "Those shown on the books were"—and then I detail them.

Q. Did the Cumberland Telephone Company pay anything further for the control and ownership of the property of the Ohio Valley Company except what it paid for the stock and the amounts

497 you have detailed as the liabilities it assumed?

A. I can not give you specific items but if there were no outstanding obligations not shown on the books, it was an exception —one in a thousand. I never have seen the time since I have been in business that any corporation knew its obligations and could express them on its books, especially a corporation as large as was the Ohio Valley Telephone Co.

Q. If there were any other liabilities you don't know of them?

A. I do not know of them in detail, because, as I say, I was not auditor of the Ohio Valley Telephone Co. and not in charge of those records at that time or at the time such would have been paid; and, it was ten years ago, and would be too long ago to remember now.

Q. Did the Cumberland Telephone Company pay any such liabilities in addition to the ones you have already mentioned here?

A. If any of them presented themselves they were.

Q. But, as I understand you, it is impossible now for you to give any detailed statement or accurate information on that subject?

A. I am unable to do it. I could, by hard work, go through every record of that section of the territory from that time to date and determine approximately what there was outstanding at the time.

Q. Now, reverting to what property the Cumberland Tele-
498 phone and Telegraph Company acquired by reason of this purchase or consolidation, can you state from the books of either the Cumberland Telephone and Telegraph Company, or the Ohio Valley Telephone Company, what property was acquired?

A. Just in what detail would you like to have that Mr. Blakey, dollars and cents?

Q. No, actual property, exchange systems or toll line systems, or what nature?

A. I can give you the exchange systems but my books don't show just what the toll lines were.

Q. What were the exchange systems?

A. The first records we have of what the Ohio Valley Telephone Company had in the way of exchanges, is of September 1st, 1899. At that time the Anchorage exchange had one telephone; the Bardstown, Ky. had 50; Corydon, Ind. 57; Elizabethtown, Ky., 94; Eminence, Ky., 47; Jeffersonville, Ind., 309; Louisville, Ky., 3221; New Albany, Ind., 461; Salem, Ind., 113; Shelbyville, Ky., 118; making a total of 4471 instruments.

Q. How many exchanges?

A. Ten, counting Anchorage, Ky.

Q. You had no exchange at Anchorage, I suppose?

A. I guess not.

Q. Nine exchanges, then?

A. Nine, excluding Anchorage, which was listed as an
499 exchange and transferred to us as an exchange. This record is of September 1st, 1899, and you understand the Cumberland Company did not have the Ohio Valley Company at that time. It only owned stock in it, but I understand your question to be what subscribers did the company have at the time the Cumberland Telephone Company purchased an interest in the stock.

Q. Did the Ohio Valley Company have any additional exchanges on January 27th, 1900?

A. Yes, sir.

Q. Name them, will you?

A. Cloverport, Ky., Morganfield, Ky., and there are seventy five toll line stations shown as of December 1st and 80 as of January 1st, and fifty-five private lines as of January 1st.

Q. What do you mean by private lines?

A. A private line is a line connected by telephone instruments between two stations, and it is not connected with the switchboard. It may be inside of an exchange area, but is not a part of the exchange.

Q. Were these lines you have just spoken of, private lines in Louisville or outside of Louisville?

A. I don't know.

Q. What was the number of subscribers in the various exchanges which you have named, on January 27th, 1900?

A. The nearest record I can give you to that date is either
500 January 1st, or February 1st.

Q. Is the February 1st record sent to you as of January 22nd?

A. The record we have used is January 1st, so far as taking the property over from the Ohio Valley Telephone Co. is concerned.

Q. Is the record you have as of February 1st, the record which was sent in to you as of January 22nd?

A. The record which we have on our books as of February 1st, would be for Louisville as of January 22nd, but for the other exchanges as of February 1st. No, I will not state that as a fact, for Louisville, because it is so far back, and at one time our exchange records closed on the last of the month and not on the 22nd, but it is either one or the other.

Q. What records have you as of January 1st, so far as the telephones in the various exchanges are concerned?

A. Anchorage, Ky., 1; Bardstown, Ky., 65; Cloverport, Ky., 71; Corydon, Ind., 57; Elizabethtown, Ky., 123; Eminence, Ky., 78; Jeffersonville, Ind., 383; Louisville, Ky., 3536; Morganfield, Ky., 29; New Albany, Ind., 614; Salem, Ind., 80; private lines 55. Total, 5395.

Q. Now, have you any record showing what the Ohio Valley Telephone Company valued these various exchanges at, at the time of the consolidation?

A. We have records showing how the construction account at these various exchanges stood on the books at that time.

Q. Will you produce those?

501 A. Yes. The Ohio Valley Telephone Company's ledger shows amount charged to construction, December 31st, 1899, as $638,196.74.

Q. Was that for all exchanges and all toll lines?

A. Yes.

Q. Is there any memoranda or minute or other records, showing what the construction account was for each exchange or for the toll lines?

A. Not that I know of.

Q. Does their record show what amount was allowed for the construction of toll lines?

A. That can be secured by going through the ledger of the company and determining the charges to toll line construction, which, at the end of each year were transferred to general plant account.

Q. In the joint report of the auditors, it is placed at $125,406.80. Do you know whether or not that is correct?

A. I think that is the balance the ledger would show remaining on the books at that period.

Q. That is, deducting that amount, $125,406.80 from $638,196.74 will leave a balance of how much?

A. Leaves a balance of $512,789.94.

Q. That last amount you have just named then, is the amount which the books of the Ohio Valley Company shows as being the value of the various exchanges owned by it, does it not?

A. It is the balance; shown by the books.

502 Q. Does that include the exchanges at Morganfield and Cloverport?

A. Yes sir.

Q. These figures that you have given me, do they appear as of January 27th, and if not, of what date do they appear?

A. They appear as of January 1st, 1900.

Q. Do those figures include the value of the real estate owned by the Ohio Valley Telephone Company at the time of the consolidation?

A. They do not.

Q. What did the real estate appear on the books of the Ohio Valley Telephone Company as being valued at, at that time?

A. $115,765.46.

Q. What did that comprise; what real estate did the company own?

A. It owned a three story brick building on land 44 by 210 feet on Jefferson Street in the City of Louisville, which cost the Ohio Valley Company $100,000; it represented a lot 50 feet by 200 feet on Ormsby Street in the City of Louisville with a cottage thereon, purchased in April 1898 for $4500, and a lot on Green Street in the City of Louisville, with a building used as a warehouse, which cost $3534.50. Also land and building used as a telephone exchange in New Albany, Ind., amounting to $7,730.96. That makes

503 a total of $115,765.46.

Q. Did the Cumberland Telephone and Telegraph Company acquire any property other than the property you have detailed?

A. No other real estate, that is shown on the books.

Q. Did it acquire any other exchanges or any other toll lines, other than those you have mentioned?

A. I have not mentioned any toll lines. It acquired no other exchanges.

Q. Did the Cumberland Telephone Company acquire any toll lines from the Ohio Valley Co.?

A. It did.

Q. I believe you said those toll lines were valued at $125,406.80, did you not?

A. I said that was the net value shown as a balance in the construction account on the books of the Ohio Valley Telephone Co.

Q. Well, were they of any greater value than that?

A. Undoubtedly.

Q. Did they cost any more than that?

A. Yes.

Q. How much more?

A. I will have to refer to the Ohio Valley Telephone Company's books to see how much would be charged off against them.

Q. What would be charged off against them on the Ohio Valley Telephone Company's books?

504 A. The value was reduced each year, or at different periods by transferring some part of the surplus amount to them, I think.

Q. Was that due to the fact that the Ohio Valley Company considered that the toll lines had depreciated in value?

A. I was not connected with the Ohio Valley Telephone Co. I simply see that the books do charge it off. I do not think it was charged off for that purpose.

Q. Why do you think it was charged off?

A. I think it was charged off to rid the books of any surplus account.

Q. Would it affect the management or conduct of the Ohio Valley Company's business, one way or the other, to rid it of surplus account?

A. That is a question of policy.

Q. Do you, of your own knowledge, know that those toll lines were of more value than $125,406.80?

A. You asked me whether they cost more than that and I said yes.

Q. Do you know whether or not they were of more value or not?

A. I didn't see their lines, and I cannot testify as to their value, but I can testify as to their cost.

Q. Now, did the Cumberland Telephone Company acquire anything further than the exchanges, toll lines and real estate, by the consolidation with the Ohio Valley Telephone Co.?

505 A. Yes, it acquired other things.

Q. Will you detail them?

A. It acquired supplies valued at $37,299.59; cash, $288.81; Board of Trade stock, $10.00; an account against the auditor of the company amounting to $30,215.18; toll agents accounts, $715.42; an account against the American Telephone and Telegraph Company for $869.45; against the Cumberland Telephone Co. for tolls, $143.84; against the Central Union Telephone Co., $118.19; against the East Tennessee Telephone Co., $544.40; against the Louisville Railroad Co., $2233.40; H. Brown, foreman, $300.00; Sundry small accounts, $351.17; Sundry manager's accounts, $3,822.14.

Q. Was there an item of unearned rentals of $1558.29?

A. There is an account of that nature on the books of the Ohio Valley Telephone Co. which on its books appears as an asset, but it is no asset.

Q. But you mean it was never collected?

A. It is impossible for that account to have a debit, except through an error in the accounts.

Q. If telephone companies had paid them $1558.29, for service, in advance, then they would owe those subscribers either service of the value of $1558.28, or the actual money?

A. Yes, but if they did owe them service or money, it would appear as a liability.

506 Q. That is just an error in the book-keeping then, is it, to put it there?

A. I think so, and that is the reason it was wiped out.

Q. Were the sums which you have detailed here, in the accounts taken over by the Cumberland Telephone and Telegraph Company?

A. They were taken over at face value.

Q. Did the company realize face value from them?

A. I think not; not from all of them.

Q. Is there any way of ascertaining whether the Cumberland Telephone Company did or not?

A. Not practically, but, for instance the item of thirty thousand and odd dollars due by the auditor, was for accounts due the company by the subscribers of the Louisville exchange, good and bad.

Q. Do you know how much of that was collected?

A. I do not.

Q. Out of three hundred thousand dollars that you collect, substantially, from your Louisville subscribers—that you earn from your Louisville subscribers, you usually collect all with the exception of from two to three thousand dollars, do you not?

A. Yes, just about that. This, however, represents what we took over from another company and just whether or not they have carried their uncollected accounts longer than we carry them before charging them off or whether there is an accumulation in this account, I am unable to say.

507 Q. Well, you got the $288. cash, didn't you?

A. Yes sir.

Q. And you got the items representing the supply account?

A. Yes sir.

Q. And you got the Board of Trade stock?

A. Yes, but we did not consider that of any value and left it out. Didn't put it in as any asset.

Q. You got the agents' toll line accounts?

A. Collected some of them; probably some part was charged off.

Q. What about the American Telephone and Telegraph Co., was that collected?

A. That account has always been a fluctuating account. You put certain items on your books and lots of times you charge them off, because they are formed from reports of linemen in the field, and often those linemen make incorrect reports and incorrect bills are sent and there will have to be a great deal of adjustment in that account.

Q. The Louisville Railroad Company paid you, I suppose?

A. Part of that was charged off.

Q. How much?

A. Two or three hundred dollars.

Q. How about sundry managers' accounts?

A. I suppose most of that was collected.

508 Q. Now, going back to the $512,789.94, which you say the books show as the value of the eleven exchanges and fifty-five private lines, have you any data or is there now in existence any record from which you can determine how much the Ohio Valley Telephone Company value the property in its various exchanges at?

A. Mr. Blakey, if you quote me as saying that that sum represents the value of the lines, I want to correct it, because I say that it is

simply a balance of the construction account as shown by the books of the Ohio Valley Telephone Co. The balance of the cost.

Q. The books of a corporation conducting any business, usually show what the company values its property at, does it not?

A. Our books do.

Q. Did you ever have any connection with any other business that did not?

A. I have never been in any other business.

Q. Wouldn't you think as a business man a company conducting a business should show by its records and would show by its records, if properly kept, what it valued its property at?

A. I say, the Cumberland Telephone and Telegraph Company certainly does.

Q. Now, as I understand you the Ohio Valley Telephone Co. valued the eleven exchanges and the private lines at $512,789.94, as shown by its books, did it not?

509 A. I will say that is the balance of the construction account on the general ledger of the Ohio Valley Telephone Company's books.

Q. Well, will you answer my question one way or the other? Read it to him again.

(Question read.)

A. If it considered its books to represent the value, it did; that was the net cost of the construction.

Q. Did it show in any part of its records, the books, that it valued its property at any other sum or any additional sum to that amount?

A. The construction accounts of the Ohio Valley Telephone Co. contain a great many credits at the end of the year, which are charged against the surplus, and after spending a large allowance for the maintenance of their properties, they, nevertheless, at the end of the year, wipe off a large part of their construction cost, against the surplus account.

Q. Did the Cumberland Telephone and Telegraph Company acquire anything other than the items you have gone over here since noon, from the Ohio Valley Telephone Co.?

A. Nothing that I can recall, except the going business, goodwill, a profitable company.

Q. Now, after the Cumberland Telephone and Telegraph Co. consolidated with the Ohio Valley Company, can you tell me how much the Cumberland Company spent in the way of new

510 construction during the year 1900?

A. For the whole of the Ohio Valley Company plant.

Q. No, on the Louisville plant exclusively?

A. The books show that $166,939.03 was added. I wish to explain, that in the examination of the construction vouchers by the Mutual Audit Company, exception was made to charges to Louisville construction account amounting to $2,852.31, which exceptions were accepted. The construction account was reduced by this amount and it was increased by the sum of $4,707.16, which is also accepted. In my original deposition, Exhibit No. 2, the book values

before these corrections were made, were shown. The net difference of these errors adds $1854.70 to the total cost of plant as of December 31st, 1908.

Q. Now, you say exceptions were made. By whom were exceptions made?

A. Every construction voucher, I think of any amount whatever was analyzed thoroughly by Mr. Warren and Mr. Castleman of the Mutual Audit Co. and it was by them that these criticism- of charges was made and all the criticisms that they did make were found to be correct.

Q. Now, in order to get the matter started off after this explanation, please state what amount was expended by the Cumberland Telephone and Telegraph Co. on new construction in the City of Louisville or in connection with the Louisville exchange, for the year ending December 31st, 1900?

511 A. In order to more readily answer this question, I will accept the joint report with corrections made, as correct, and the amount shown therein is $166,775.23.

Q. For what purpose were these expenditures made?

A. Generally for enlarging the exchange.

Q. How were the items for enlarging the exchange, paid?

A. They were finally paid in cash.

Q. What was the procedure whereby those claims representing this $166,000 and odd dollars were audited and allowed and paid?

A. The pay-rolls were made up on the ground, and without referring directly to them, I think they were O. Kd. by the foreman in charge, by the manager of the exchange, and they were verified in the office at Louisville, there paid and sent to the general office at Nashville for credit. At the general office, they were checked up and audited, approved by the auditor and the general manager and the Louisville exchange given credit for the disbursement. In case of material, being purchased, the invoices for the material were checked up, the delivery determined, the correctness of the price checked, approved by the general manager, some of the invoices being paid locally, and others from the general office. All vouchers would be approved by the auditor and the general manager or the auditor and the president.

512 Q. Have you vouchers representing all of these payments covered by that total item of $166 and odd thousand dollars?

A. I believe we have. They were exhibited to the Mutual Audit Co. I recall now, in January 1900, I believe it was, that one or two vouchers, amounting to probably two thousand dollars or twenty-five hundred dollars, were not located. I explained to Mr. Warren, the vouchers were ten years old and that they had been misplaced, and I was unable to locate them, but showed him the entries on the books of the company.

Q. Mr. Smith, I should like to have you produce Voucher No. 325, May 1900, if you will; and I should also like to have you produce say a dozen or fifteen other vouchers, say, two vouchers a month for each of the months of 1900, representing payments

made in the original construction account for that year, in the City of Louisville?

A. Will you please specify which ones I shall furnish you.

Q. It is immaterial, except I would like to have some for labor, some for material and some for equipment, during that period?

A. Shall we adjourn while I do that.

Q. Will it take some time to do that?

A. Yes.

513 Q. And while you are at it, I would like to have you do the same thing for the other years up to and including 1908.

At 3:45, an adjournment was taken until tomorrow morning at the same place.

514 FRIDAY MORNING, *September 3rd*, 1909.

Cross examination, resumed.

At 9:30 o'clock this Friday Morning, September 3rd, 1909, the further taking of this deposition was resumed; present same parties.

By Mr. BLAKEY:

Q. Mr. Smith, in response to my request for Voucher No. 325 for the year 1900, you handed me a bundle of papers marked No. 325, in favor of Huston & Liggett which seems to be a voucher for $3460.71. I will ask you what they furnished to the Cumberland Telephone and Telegraph Co., as represented by this voucher?

A. May I inspect the voucher. (Witness does so.) Telephone poles and insulator pins.

Q. Among other papers I find in this package, is a paper dated April 25th, 1900, which has an item, sold to Cumberland Telephone and Telegraph Co., Nashville, Tenn., 53 poles 30 feet 7 inches; 21 poles 35 feet 7 inches; 4 poles 40 feet 7 inches, total of $156.00 shipped from Sulphur Springs to Anchorage, Ky. That paper has also written on it in lead pencil, Louisville, Ky. I will ask you who made that pencil mark on that paper, if you know?

A. From the handwriting I think it is the handwriting of Mr. J. L. Pearey, Jr.

515 Q. Who was he?

A. He was the chief clerk of the supply department at the time.

Q. What did that notation mean, what was it intended for?

A. It means that the poles were shipped, and that his information was that they were to be used in constructing the Louisville, Ky. exchange.

Q. Were they used in constructing the Louisville, Ky. exchange?

A. They were used at the Anchorage, Ky., exchange, which at the time was a very small exchange or which was just being built and it was doubtful, probably, as to whether it would be a part of Louisville exchange or a separate exchange.

Q. Did Anchorage ever become a separate exchange?

A. It is a separate exchange now.

Q. Was it ever a part of the Louisville exchange?

A. No, it was not, but it is very near and is a part of metropolitan Louisville.

Q. It is more than twelve miles from the City of Louisville?

A. I don't know the exact mileage, but about that, I suppose.

Q. So, that item should not have been charged to the construction of the Louisville telephone plant and you agree with the accountants that it should be eliminated from the construction
516 account of the Louisville exchange?

A. I agree that it may be deducted.

Q. Now, I show you another paper contained among the papers, as a part of this voucher, dated Lewisburg, Tenn., April 20th, 1900, Cumberland Telephone and Telegraph Co., Nashville, Tenn., a number of poles aggregating in value $127.15, freight $26.95, which seem to have shipped from Nashville, Tenn., to O'Bannon, Ky. and which also has endorsed on it in lead pencil, Louisville, Ky. Will you examine that paper and tell me who placed that endorsement in pencil on that paper?

A. Mr. J. L. Pearcy, Jr.

Q. What does that endorsement mean?

A. It means that the invoice should be charged to the construction,—aerial account, of the Louisville, Ky. exchange.

Q. Do you know where O'Bannon, Ky., is?

A. I do not.

Q. Do you know it is at least twenty miles from Louisville?

A. I do not.

Q. Do you know whether or not those poles were used in connection with the construction of the Louisville exchange?

A. I have no reason to doubt that they were.

Q. Do you know that they were?

517 A. Personally, no.

Q. Does anybody personally know, connected with your office?

A. I think the supply department would have secured information to determine that before charging it.

Q. Can you produce anybody connected with the supply department and will you produce a witness, who will testify that the poles represented on that paper I have read you, were used in constructing the Louisville exchange?

Mr. GRANBERRY: I object to the question, because this witness is not supposed to be furnishing other witnesses. He is here to testify as to what he knows and not to produce witnesses for examination.

Mr. BLAKEY:

Q. You are an official of this company are you not?

A. I am.

Q. Well, will you answer that question that I have propounded or not?

A. It was nine years ago; I don't know of anyone who saw the poles and who set the poles. I might state here, at the time the joint report was made, there was no mention of that in the joint

report and there was no exception taken to that item at the time.

518 Q. That sum is now, the sum of $154.10 is now a part of the construction account, or rather now represents a part of the construction account of the Louisville exchange, does it not. In other words, does that sum enter into the one hundred and sixty six thousand and odd dollars which you say was expended in new construction in connection with the Louisville exchange for the year 1900?

A. Unless the poles have been removed in the meantime and exchange construction credited therewith, the charge still stands.

Q. It was charged at the time as a part of the one hundred and sixty six thousand and odd dollars?

A. Yes.

Q. I will ask you to examine that bunch of papers representing an expenditure of $3460.71, and see if there are any other items in that which was charged to Louisville?

A. The distribution of the voucher shows charged to the Louisville exchange, $310.10; the sum of the two invoices which you have mentioned, equals this amount.

Q. I understand, Mr. Smith, these vouchers are stored away in a room above and it takes considerable time to get them out. Is there any objection to us adjourning to that room and calling for such vouchers as we want there?

Mr. GRANBERY: Not a bit in the world.

519 Mr. BLAKEY: I suppose we might as well now go ahead here, though, with those we have and go up there later.

Q. Mr. Smith, you have also produced Voucher No. 842, which seems to be for $6,088 in favor of Houston & Liggett, I will ask you how much of that amount was charged to Louisville, Ky.?

A. $302.25.

Q. And as I understand, your answer to a former question, that amount you agree should not have been charged to the construction account at Louisville, Ky.?

A. Yes, I will agree to that, with this explanation; that the poles so charged were actually shipped to Louisville, but were handled through the supply account, and charged from the supply account.

Q. In other words, they were charged twice?

A. They were charged twice, actually, on the books.

Q. One of the bills going to make up the $302.25 which you say you agree should be eliminated, seems to be a bill for 66 poles shipped from Shelbyville, Tenn., to Prospect, Ky. for $108.90. That is one of the bills which should be eliminated, is it?

A. Yes, it is one of the bills which should have been handled through the supply account.

Q. Another one I notice is a bill for 50 poles shipped from

520 Monetery, Tenn., to Prospect, Ky., amounting to $87.75?

A. That is correct, it should have been handled through the supply account.

Q. Another one seems to be a bill for 64 poles invoiced at $105.60,

shipped from Lewisburg, Tenn., to Prospect, Ky., under date of December 31st, 1900. Is that also one of the bills which should be eliminated?

A. It is. It should have been handled through supplies.

Q. Now, I will ask you to examine this bunch of papers which go to make up this voucher and ascertain whether there are any sums other than those three mentioned, going to make up the $302.25 about which you have testified?

A. The sum of the three invoices which you have asked about, amount to $302.25. It is noted that on these invoices, the original charge was Louisville, Ky., that a correction was made charging invoices to supply account. The correction was not followed by the clerk in making the distribution of the charge.

Q. Do you know when that correction was made?

A. I do not. This voucher is one of the vouchers already agreed to as being improperly charged to Louisville and is included in the amount objected to by the Mutual Audit Co., and is embodied in the report of the accountants for the complainant.

Q. Mr. Smith, Voucher No. 2571 seems to be in favor of Louis K. Webb, and for a total amount of $2,133.30. It seems to
521 have a date on it of March, 1902. What position did Louis K. Webb hold with the Cumberland Telephone Co., at that time, if any?

A. Assistant Manager in charge of the accounts.

Q. At what place?

A. Louisville, Ky.

Q. The second paper going to make up the bunch of papers which appear as part of this voucher, seems to be for fare Eubank to Danville, Ky., loading poles at Eubank, Ky., to ship to Louisville, Ky. Is that item charged to the Louisville, Ky., exchange?

A. It was, Louisville, Ky., Construction—aerial.

Q. Is that one of the items that was eliminated from the construction account at the suggestion of the accountants?

A. On page 24 of Mr. Wilkinson's report to the Master, April, 1902, voucher shown as No. 2571 eliminates $1,049.42 from Louisville construction account. Some few small items in the voucher are properly chargeable to Louisville, Ky., but the larger part of the charge was made to Louisville construction in error and in order not to grab at straws, we cancelled the whole charge. The error is a clerical one; the charge is properly to construction—aerial, but not to Louisville and the charge was made to Louisville by a failure of the clerk who distributed the voucher, to show what exchange it was chargeable to, and as the voucher came in
522 from Louisville, it was charged to Louisville, which is the regular method for handling them.

Q. Do you mean to say all vouchers paid at Louisville, are charged to Louisville?

A. By no means. The method is this, that vouchers coming in from Louisville show clearly the name of the exchange thereon. After the voucher has its proper distribution on it, it is likely in some instances, chargeable to a number of different exchanges. In

this instance a star is not opposite the charge, which refers the bookkeeper to another part of the voucher for a distribution of the charge among exchanges. The star being omitted, the charge is to the exchange whose name is in the heading of the voucher.

Q. Who places that star on the voucher?

A. The clerk compiling the distribution.

Q. And if the star does not appear and the voucher comes from Louisville, it is charged to Louisville?

A. If the Louisville exchange is in the heading of the voucher and nothing designates that any part of the voucher is chargeable to another exchange, it is charged to Louisville.

Q. What territory is embraced under the jurisdiction of your chief manager at Louisville, chief officer at Louisville?

A. At the present time?

Q. Just generally speaking, Mr. Smith?

523 A. The exchanges are as follows: Anchorage, Ky., Borden, Ind., Greenville, Ind., Georgetown, Ind., Harrods Creek, Ky., Jeffersontown, Ky., Jeffersonville, Ind., Louisville, Ky., New Albany, Ind., Pewee Valley, Ky., Pleasure Ridge, Ky., St. Matthews, Ky., Utica, Ind., West Point, Ky.

Q. What represented the district over which your chief officer at Louisville, had jurisdiction in the year 1900?

A. I will have to send upstairs to get it. It will probably take an hour to do that, as we will have to go through the vouchers.

Q. Have you any general idea about what district was covered in the district I have asked about?

A. Well, New Albany, Jeffersonville——

Q. The ones you have already named?

A. If they were in existence, probably, yes.

Q. What other territory?

A. No other. It was not as extensive in 1900 as in 1909.

Q. Was it ever more extensive than it is now?

A. No, never as extensive as it is now.

Q. When material is purchased for any of that territory, at what point is the material paid for?

A. Some small items of material would be purchased in Louisville and handled through the supply account. The large bulk of the material is purchased by order of the supply department

524 at Nashville and paid for at Nashville and handled through the supply account. Regular pay-rolls and regular miscellaneous expenses, vouchers covering the expenditures at all of the exchanges mentioned, are handled — each exchange separately and separate accounts are kept with each of the exchanges mentioned.

Q. Where is the money paid out from?

A. Some from Nashville, and some from Louisville.

Q. What percentage of it is paid out from Louisville?

A. The pay-rolls are handled through Louisville; the larger part of the supplies are paid for from Nashville.

Q. Sixty per cent of the supplies paid from Nashville?

A. Yes.

Q. Seventy per cent?

A. I suppose seventy per cent would probably be accurate.

Q. When a wagon or team of mules is purchased for use say in Charleston, Ind., where is that paid for?

A. I hardly think we would supply an exchange as small as Charlestown, with a team of mules.

Q. Well, a toll line, suppose you were building a toll line in Indiana?

A. If we had a gang building a toll line in Indiana, the vouchers would be handled with the construction foreman and be cashed at Louisville and Louisville would be reimbursed from Nashville.

Q. Now if you were building a toll line from Jefferson, Indiana, to Charleston, Ind., and you had twenty-five men working
525 on it and pay day came around what would be the method of paying those men?

A. The present method.

Q. The method in 1900?

A. The method would have been for the foreman to have submitted the time, for the check to have gone to the foreman from Louisville, for the foreman to have had the pay-roll receipted and certified and returned to Louisville in exchange for the check.

Q. And what record would the Louisville office have of having paid that?

A. They would have the stub in their check book and an entry on the cash book stating that voucher number so and so for a certain amount, had been sent to Nashville for credit.

Q. Then when that voucher came to Nashville what would be its course?

A. The voucher upon reaching Nashville would be registered as having been received from Louisville; it would be checked in the auditor's office to see that the salaries paid out are according to the authorized schedule; to see that the charges made of the expenditure were according to its records; be approved by the general manager and by the auditor and to be credited to the Louisville Cashier's office and charged to the proper construction or expense accounts.

526 Q. Now I hand you voucher No. 2571, which seems to be approved by Leland Hume, Assistant General Manager. Was that paper ever approved by the auditor of the Cumberland Telephone Co.?

A. It was approved for the auditor, by two clerks.

Q. That paper has possibly fifty individual bills and attached to the back of the bills is a form which has Mr. Hume's endorsement or approval thereon; the individual bills have never been approved by the auditor or anybody for the auditor or by the general manager?

A. Yes, the larger part of the bills in this voucher represent freight. Every single freight bill has been approved by the clerk who audits the freight. There is another bill in the voucher for poles. That has the approval of the supply department, the price and order clerk having approved it. There are a few small board vouchers in it which have the approval of the Assistant Manager,

not individually, but on the cover. There are a few transportation vouchers representing a small amount of money which have had like approval.

Q. Now when the clerk comes to put the star on there, showing it should be charged to some exchange other than the Louisville exchange, if he fails to put the star there showing it should be charged to toll line for instance between Jefferson, Ind., and Charleston, Ind., it would be charged to Louisville?

527 A. Nothing charged to toll lines would be charged to Louisville. This voucher shows a charge of $962.70 to toll lines and this charge has not been made to Louisville.

Q. When you say nothing that is expended in constructing toll lines is ever charged to Louisville, do you say that of your own knowledge or merely because that is your belief?

A. I have been connected with the company for a long time and with the disbursement department, and not to my knowledge have we ever intentionally charged anything for the construction of toll lines, to an exchange.

Q. You didn't intentionally charge this $1049.33 represented in Voucher No. 2571 to Louisville, did you?

A. We did not.

Q. Then, you don't know whether as a matter of fact charges to toll lines have been made against Louisville, or not?

A. I believe they have not.

Q. You don't know that?

A. I know it as well as I can know it without proof to the contrary. I do not handle individually every item and every transaction of the company, but I believe we have a very competent force of clerks to do this, and it is done under my supervision.

Q. And they charged up here $1049.32 to Louisville which

528 should not have been charged to it?

A. That is correct.

Q. Do you know whether or not they charged up any more for that month that should not have been?

A. The Mutual Audit Company made a most searching investigation into practically every voucher charged to the Louisville construction account and that is the only voucher in the month of April which they brought up for criticism, so I take it, nothing else was charged improperly.

Q. But you don't know it yourself?

A. I believe there was not.

Q. Now here is Voucher No. 353, August 20th, 1904, amounting to $17.50, which seems to be in the shape of a check payable to John Same for hauling poles on New Albany gravel road, $17.50. Is that chargeable to the Louisville Construction account?

A. The $17.50 item in there I remember being referred to me by Mr. Warren of the Mutual Audit Co. as proper charge to New Albany.

Q. What was being done on the New Albany road at that time Mr. Smith?

A. I don't know.

Q. Is the New Albany gravel road a gravel road out of the city of New Albany and a road on which you were either then constructing or repairing a toll line?

529 A. I don't know.

Q. If the New Albany road is outside of the city of New Albany and the work was done hauling poles along that gravel road, then would you say it was for work in connection with toll lines?

A. If it was a toll line that was being built, I should say so; if it was a subscriber's line being built, then it is an exchange line. I am not familiar with the territory near there nor with the work done; the charge is against New Albany, aerial, on the invoice, but not so designated on the cover of the voucher. It was a clerical error unintentionally made.

Q. So that when you say no charge was made against Louisville for work done on the toll lines, you are mistaken if this was work done on a toll line, are you not?

A. I say that was a clerical error, and there was no intention to charge it to Louisville, by anybody concerned.

Q. Is that one of the items you have eliminated from the construction account.

A. It is, and is one which the accountants agreed should be eliminated.

Q. Mr. Smith, I find here a voucher No. 352, for $331.50, and I will ask you what part of that voucher was charged to Louisville construction account of Louisville exchange?

A. The voucher is for August 1904, No. 353, you gave the number incorrectly; $80.00 of this voucher is charged

530 Louisville, construction-aerial.

Q. What was the money represented by that amount paid out for?

A. For the board of twenty-two head of horses for the month of July and for the hire of horse and buggy to go to Pleasure Ridge Park, on local trouble.

Q. Where were those horses used?

A. They were used for many purposes. Some of them for repairing telephones, some of them were dray horses with construction gangs.

Q. Were they used at all in the construction or repairing of toll lines?

A. There is nothing in here to indicate that.

Q. Do you know whether or not they were so used?

A. If the toll line in the district was in trouble that could be reached by a vehicle, they probably repaired it.

Q. Didn't all of the toll line construction gangs, together with their wagons, go out from Louisville if trouble was reported?

A. When trouble was reported?

Q. Or, when it was necessary to make any re-construction or repair work or new construction?

A. Well, we had Louisville City gangs and we had construction gangs. If the necessity of the case required, a gang was sent.

Q. Out from Louisville?

531 A. Yes, from Louisville or anywhere else.

Q. And would they take these horses and use them out on these toll lines?

A. They possibly might have done so.

Q. Did they have any other horses except horses they used indiscriminately in Louisville and out on the toll lines?

A. Yes, we rented horses, we had horses at other points.

Q. Did you have any horses at Anchorage, Ky.?

A. Shall I refer to my records to determine? We have hundreds of horses all over the territory and just at what exchanges we have them, I do not know.

Q. Isn't it a fact when you wanted to repair a toll line between Louisville and Anchorage, or Louisville and Jeffersontown or Louisville and Harrods Creek, that you had the same teams and used the same teams that you used when you had occasion to use it, in the same character of work in the City of Louisville?

A. Either the Louisville manager or the trouble man would attend to it, or the Anchorage trouble man, and they might have used street car service or vehicles.

Q. If Anchorage is a place of five hundred inhabitants, would you say that you had a construction gang there with wagons and teams?

A. We would not have a construction gang at Anchorage.

Q. Would you have teams there?

532 A. We would not have teams; we may have a horse and a wagon.

Q. I didn't get a satisfactory answer or, rather a succinct answer to my question about whether you would send out wagons and teams from Louisville, Ky., to Anchorage or to Jeffersontown and places of that size surrounding Louisville, should you have occasion to make any repairs or do any new construction work in those vicinities?

A. If it were necessary I should say we would do so.

Q. And if that work was in connection with toll lines the boarding of those horses, notwithstanding they were used for that purpose would all be charged to Louisville?

A. I would say this; that the routes leading out of Louisville don't bear toll lines exclusively. They bear subscribers' circuits. If there is anything the matter with those circuits, the Louisville trouble man goes out after it. If anything is the matter with one circuit on the pole, why, all the circuits are in trouble, and the same man would repair them all.

Q. And it would all be charged to Louisville?

A. That depends as to whether it was Louisville circuits out of order or other exchange circuits out of order.

Q. How do you mean that depends?

A. I just said, on what circuits were out of order.

Q. Do you mean to say if you sent out a gang of men from Louisville to a point halfway to Jeffersontown, which is

533 fifteen miles from Louisville and they put a cross arm on the pole out there which carried long distance wires as well

as local wires, that you would charge any part of the expense of doing that to toll lines?

A. If the cross-arm was a toll line cross-arm, it would be charged to toll line construction, provided it was a new cross arm and not replacing a previous cross arm.

Q. But, would it be charged to toll line re-construction?

A. I said it would be charged to toll line construction.

Q. How would you go about charging it?

A. We would report on the pay roll the time of the man in doing that and his time would be charged to toll line construction. We would report, from the supply department, the use of the cross arm and by the supply department would be charged to toll line construction.

Q. How about the board of the teams?

A. The placing of a cross arm would not require a team.

Q. If it did require a team?

A. If the cross-arm required a team, the team might have been used from Louisville or from Anchorage or it might have been hired.

Q. And would not be charged up to toll lines?

A. If there was a special expense incurred in order to do that it would be charged to toll lines.

Q. What do you mean by special expense?

A. I mean, any additional cash outlay.

534 Q. If it was the regular team, that would not be charged up to toll lines?

A. Well, probably not.

Q. So you can not say whether any part of this voucher which I have shown you for board of teams, whether the items were used for toll lines or for Louisville exchange work?

A. These teams may have been used to put up two cross arms but, if there was any work done to any appreciable extent, it would be charged direct to that work.

Q. Now here seems to be voucher No. 290 for $63.00 which seems to be freight on poles from Hartselle, Ala., to Georgetown, Ky., $63.00. Was that charged to Louisville construction account?

A. This voucher, November 1904, No. 290 is shipment of poles to Georgetown, Ky. The distribution on the freight bill is to construction account of that exchange, but the clerk in making the distribution on the cover of the voucher charged it to Louisville exchange in error. This is one of the items included on page 24 of Mr. Wilkinson's report.

Q. Here is another part of voucher No. 290 which seems to be for two shipments of poles from Pine Hill to Centerville. I will ask you whether those two items of expense were charged to the Louisville construction account?

A. The shipments of these poles was for Paris, Ky., and the distribution in the voucher is clear, but by clerical error, $104.00 was incorrectly charged to Louisville. This item is one men-

535 tioned on page 24 of Mr. Wilkinson's report.

Q. I show you here voucher No. 353, May 13th, 1905,

Stewart Bros., $61.05. It has marked on it, O. K. Gooch. Has also marked on it, work done on new switchboard at Jeffersonville, Jeffersonville, Ind. equipment. Was that charged to the construction account of the Louisville exchange?

A. It was so charged, incorrectly.

Q. All of these items which you have said were charged incorrectly or by error, are included in the respective amounts which you have given as the amount expended for the new construction in Louisville for the respective years, are they?

A. Yes. And as explained yesterday they are all included in the exceptions taken to construction account by the Mutual Audit Co. and agreed to by Mr. Wilkinson and by me.

Q. I also have part of voucher No. 353, which is a piece of paper which seems to be a bill in favor of Laid & Co., for various items, one of which appears to be April 8th, 1905, 620 feet pipe bands, and several other items, including freight, shipped to East Tennessee Telephone Co., Frankfort, Ky., and I will ask you whether or not that item was charged to the construction account of the Louisville exchange?

A. The invoice shows as clearly as possible that the purchase, amounting to $65.83 is chargeable to the Frankfort, Ky. office.

536 The distribution on the voucher is incorrectly made and so the $65.83 is incorrectly charged to Louisville construction account. This is one of the items included on page 24 of Mr. Wilkinson's report.

Q. As a part of the same voucher, No. 353, I hand you a paper made payable to W. L. Drake & Co., for $299, for board of horses, hire of horses, etc. What part of that item, if any, is charged to the Louisville construction account?

A. Now, there is $59.80 of the $299 charged to Louisville construction—aerial.

Q. And the same statement you made in regard to the voucher about which I asked you a few minutes ago, for board of horses, applies to this voucher, does it?

A. Yes sir.

Q. Here is voucher No. 290, for $75.63 to June 1905, which seems to be order or check payable to the order of S. O. Bouldware. Please examine that part of the voucher, explain it and say whether or not the amounts therein named were charged to the Louisville construction account?

A. Yes, the voucher mentioned covers freight on material shipped for use on Campbellsburg Ky. exchange. It is clear that the charge should be against that exchange and not against Louisville, as it was incorrectly made. This is one of the items included in Wilkerson's report on page 24.

Q. Mr. Smith, what is the extent of the vouchers for each year, that have come into this office from Louisville, Ky. What

537 space would they likely fill?

A. Well, the vouchers, of course, have grown, as the exchanges under the Louisville manager have increased, and as the business in those exchanges has increased. I take it vouchers cov-

ering construction charges alone, of the Louisville exchange, will number over 1300 from the first of 1900 to the last of 1908. This does not include the sub-vouchers which are parts of the main vouchers. Many vouchers have as many sub vouchers as fifty. These vouchers are distributed in my files among something over 3200 file cases.

Q. How large are the file cases?

A. A file case is a little larger than a regular, ordinary letter file case, or about the size of a Jumbo letter file, if you know what that is.

Q. That is, for the period from January 1st, 1900, to December 31st, 1908?

A. Yes, and as we have not had space in any one part of the building to store these vouchers, they are distributed on different floors of the building.

Q. There is a voucher, No. 290 for September, amounting to $18.73, which seems to have been a charge which should properly have been made against toll lines, but was made against Louisville construction. Do you know the facts in regard to that voucher. I do not find it here?

A. I think it is in the file I gave you. Mr. Wilkinson's report shows it is part of a voucher for $3095.08, and that the
538 charge should have been made against toll lines instead of aerial construction account at Louisville. I will admit that it is correct. The item is doubtless there, but as it is incorrectly charged on the consolidated cover, there being about thirty sub-vouchers with hundreds of bills in them, it would be difficult to locate the item, which is very small.

Q. Now I hand you here voucher No. 753, February 14, 1906, for $93.00 which seems to be check to order of J. U. Laswell for $98, less $5.00 for 98 chestnut poles. Attached to this as a part of this voucher is a letter signed by J. C. Symmes, purchasing agent, in which he says, D. S. Read, Louisville, Ky. Dear Sir: This will be your authority for placing order immediately with party for one car load of strictly first class 25 chestnut poles, top diameter 7 or over, delivered on cars for shipping to this company at Watson, Ind., at $1.00 per pole, f. o. b., cars shipping point, same to be used in taking care of new business at Utica office. I will ask you whether that item of $93.00 was charged to the construction account at Louisville, Ky., and if so, whether it should have been so charged?

A. The item was, through a clerical error, charged in the consolidated cover, to Louisville, Ky., incorrectly. This item is one of those outlined in Mr. Wilkinson's report, page 24.

Q. I hand you voucher No. 204, August 1st, 1906, for $50.71, and will ask you whether or not that item was charged to
539 the construction account of the Louisville exchange, and if so, whether it should have been so charged?

A. This is one of the items mentioned on page 24 of Mr. Wilkinson's report and it is agreed that the charge is incorrectly made against the Louisville, Ky., aerial construction account.

Q. Where should that item have been charged?

A. Charleston, Ind.

Q. Charleston exchange or toll line?

A. Charleston, Ind., exchange, aerial-construction.

Q. Now, I hand you voucher No. 206, November 1st, 1906 which seems to be freight bill for arms, pins, braces, insulators, brackets, wires and bolts, amounting to $3.50 which seems to be freight sent to Pleasure Ridge Park, Ky. Can you say what that material was used for, for which freight was paid?

A. Without referring to the voucher I will agree it is charged incorrectly to the Louisville construction account. This item is shown on page 24 of Mr. Wilkinson's report.

Q. Was that freight paid on material used in toll line or exchange business at Pleasure Ridge Park?

A. Exchange—aerial.

Q. Do you know that or are you just guessing at it?

A. The record shows it was for the exchange.

Q. What record?

A. The record Mr. Wilkinson has made in his report.

Q. Will you look at the voucher and see whether there is
540 any record showing what it was for?

A. The item is so small I don't find it. Yes, here it is. The distribution shown on the voucher at the time it was fresh, and as made by the supply department which was familiar with the purpose for which the shipment was made, shows that it was chargeable to aerial construction, Pleasure Ridge Park, Ky.

Q. How does it show that?

A. By the notation thereon.

Q. Who made the notation?

A. Mr. Johnson.

Q. Who was Mr. Johnson?

A. Freight clerk.

Q. Where?

A. In the general office at Nashville.

Q. How did he know it was aerial construction at Pleasure Ridge Park?

A. Before shipments are made, requisitions therefor are provided and it is specified for what purpose the material is to be used.

Q. Is the requisition there?

A. The requisition is not attached, but when freight bills come in, they are compared with the requisition which has been, in the meantime, attached to the bill of lading covering the shipment, and both the material and the freight, are charged in the same manner.

541 Q. That is your custom, at least, is it?

A. That is our practice. At the same time, he audits the freight charge to see that it is proper.

Q. Now, Voucher No. 206, for November 1906, seems to be an item of $8.89 freight on material shipped from Jeffersonville to Louisville and placed in the warehouse. The voucher also seems to show it was charged up to aerial construction of the Louisville exchange. Is that correct?

A. This voucher shows that it covera freight and drayage on the return of cable reels which had been shipped to Jeffersonville, Ind., loaded with cable. The amount of freight and drayage is $8.89. This item is included in a voucher for $962.24 containing at least 100 other similar bills.

Q. Was it charged to aerial construction at the Louisville plant?

A. It was incorrectly charged by the distribution clerk to aerial construction of the Louisville exchange, and such is admitted in Mr. Wilkinson's report, page 24.

Q. Mr. Wilkinson in his report simply admits that the exceptions from the construction account which the Mutual Audit Company contended for, were proper exceptions, does he not?

A. Mr. Wilkinson's report reads in part as follows: "In conducting this part of the investigation, we examined the vouchers
542 and pay-rolls for an aggregate sum of $944,667.64. This is 92% of the total sum expended by the complainant on its telephone plant in the City of Louisville during the nine years from 1900 to 1908, as shown by the joint report (see page 17).

"During the progress of their detailed examination of the vouchers above referred to, the employés of the Mutual Audit Company took exception to certain payments charged to the Louisville exchange construction account, on the ground that the amounts, or in most cases, portions of the amounts so charged should have been charged to other exchanges than Louisville. Having looked into the facts, we find that the above contention is well founded and we have accordingly made due allowance for the full amount claimed, by deducting same from the cost of construction as recorded on the books of the company. This deduction is shown in the joint report. (See page 17)."

Mr. Wilkinson also states in his report; "We have compared these vouchers and pay-rolls with the abstract before mentioned and we find same to have been correctly recorded."

Q. I hand you voucher No. 204, January 25th, 1907, which seems to have a number of items, among which is one for $36.07, charged to Louisville which should have been charged elsewhere. Will you examine that voucher and state what items there are charged to Louisville which should not be charged to Louisville?

A. Mr. Wilkinson's report, page 25, shows that $36.07 is
543 incorrectly charged to Louisville construction account, and that the charge should be to Pewee Valley, Ky. construction account, aerial construction.

Q. Now, will you answer my question?

A. The vouchers cover an expense incurred for adding to the Pewee Valley, Ky., exchange, to the amount of $36.07, which were distributed on the face of the items as chargeable to that exchange, but which were, through clerical error, charged incorrectly to Louisville.

Q. I notice one item on the voucher, stringing wire, estimate #173. I will ask you if that was work on a toll line?

A. The voucher reads as follows: "13th to 19th inclusive, new subscriber's line, Pewee exchange, stringing wire, estimate, #173.

The voucher itself indicates clearly that the work was for a subscriber.

Q. Is not all toll line work done by estimate?

A. Yes, now.

Q. Was it then?

A. It was about the time we began it. Exchange work was also done under estimate.

Q. Was then done under estimate?

A. Yes.

Q. Is it now?

A. Yes.

Q. You don't know whether that was done for exchange
544 work, then, or toll line work?

A. The voucher itself states clearly it was for exchange work.

Q. I call your attention to one of the pages included in this voucher, in which occurs this verbiage: "stringing toll line between Pewee Valley and Anchorage, estimate, #173, and ask you what that means?

A. I guess the foreman meant what he put on there, but as you know, there are subscribers' lines between Pewee and Anchorage, as well as toll lines.

Q. Estimate #173 seems to include the toll lines at least?

A. I cannot say.

Q. I call you to notice the next sheet immediately following the one I have just read, which says, "stringing toll line from Pewee Valley, Ky. to Anchorage, estimate #173 and will ask you if estimate #173 would not necessarily be estimate for toll lines?

A. Not necessarily.

Q. How do you explain then the language on that sheet of paper?

A. I am afraid we would have to ask the foreman to explain it.

Q. The next sheet contains the following language; stringing toll lines, Pewee Valley to Anchorage, Ky. You think that
545 would have to be explained by the foreman also do you?

A. The case has nothing whatever to do with Louisville.

Q. It was toll line work that was charged to Louisville?

A. No, we have never charged any toll line work to Louisville intentionally.

Q. At the same time, you did charge this voucher to Louisville?

A. We did, incorrectly and have agreed to take it out.

Q. The next item, stringing toll line between Pewee Valley and Anchorage, estimate, #173. That is correct, isn't it?

A. You mean what you have read is correct?

Q. Yes?

A. I believe so. Vouchers are all so plain, anybody looking at them can see whether they are properly charged or incorrectly charged, as far as Louisville is concerned.

Q. Here is a voucher containing some twenty-five or thirty papers, being Voucher No. 204, January 11th, 1907, for $162.41, $156.10 of which seems to have been for work or material performed or furnished for Crab Orchard. Is that correct?

A. This voucher is a part of Voucher No. 204 for January, the total of which was $2,487.58 and it contains quite a number of sub-vouchers. The voucher referred to by the counsel for the City of Louisville, is a sub-voucher. There are items in this voucher
546 which are plainly marked as chargeable to Crab Orchard, Ky., which are distributed in error to construction account of the Louisville exchange. This voucher is one of the items shown on page 25 of Mr. Wilkinson's report.

Q. That was erroneously charged then, was it?

A. Clearly so.

Q. Here seems to be a voucher, No. 204, for $39.11, in February 1907, which seems to be the payment of freight on a car load of poles shipped from Crab Orchard, Ky. to Frankfort, Ky. Was that item charged to the Louisville exchange, construction account, and if so was it correctly charged?

A. This item is one of the items shown on Mr. Wilkinson's report, page 25, as incorrectly charged and is admitted by me. The voucher shows clearly that it does not concern Louisville.

Q. I hand you voucher No. 702, May 1907, which seems to be a pay-roll voucher for the East Tennessee Telephone Co., amounting to $920.60, $152.76 of which seems to be charged to Louisville. I call your attention to a notation on the voucher which reads as follows: "Running line orders from August 1st to August 9th, reconstructing Winchester and Mt. Sterling toll route, from August 10th to August 30th." and I will ask you whether any part of that pay roll represented by this voucher was charged to the Louisville
547 exchange construction account, if so, what part and state whether it was correctly charged, if so charged?

A. Mr. Wilkinson's report, page 25, shows that this item was incorrectly charged to the Louisville construction account, and such is admitted by me.

Q. No part of that voucher then, should have been charged to the Louisville construction account, should it?

A. You are correct.

Q. To what account should it have been charged?

A. The explanation on the voucher would indicate that it concerns Winchester Kentucky and not Louisville.

Q. Doesn't the notation on the voucher indicate it concerns the toll line business and that it should be charged to toll line construction or re-construction?

A. The voucher shows that two classes of work were done during the month for which the pay-roll is made out. It shows that from April 1st to April 9th, the gang was running new line orders, and therefore the charge of $152.76 is properly made where it is placed, except it should not have been to Louisville.

Q. How about the notation reconstructing Winchester and Mt. Sterling toll route?

A. That has nothing whatever to do with Louisville nor with the Winchester account.

Q. Would not that notation indicate that at least a part of
548 the work should have been charged to toll line reconstruction?

A. It would indicate that an expenditure chargeable to

maintenance, or what we term, or the foreman terms, a line between Winchester and Mt. Sterling, was made. He calls it a toll route; at the present time I don't know just what is on the route.

Q. Do you know whether it was toll line or not?

A. I do not.

Q. Do you know how far Winchester and Mt. Sterling are apart?

A. I do not.

Q. If they are thirty miles apart, would you call it a toll route?

A. Might be.

Q. If it was reconstructing a line from Winchester to Mt. Sterling, which are thirty miles apart, would you say it could be anything else but a toll line?

A. Yes.

Q. What could it be?

A. Might be that part of the route which bears subscribers' of the Winchester exchange and also of the Mt. Sterling exchange.

Q. The presumption is that it was a toll line as it says toll line?

A. Your presumption is.

Q. What is your presumption?

549 A. Mine is that I don't know. I want it to be clear, though that the case does not affect Louisville.

Q. Your presumption is when a voucher says it was done on toll line, you don't know what it was done on?

A. I say, the foreman thinks it was done on a toll line.

Q. If it was done on a toll line, then you have charged up as part of the construction of the Louisville exchange work done on a toll line?

A. Absolutely none.

Q. This was charged up as part of construction?

A. No reconstruction.

Q. This was charged up as part of the construction?

A. No, reconstruction.

Q. I didn't say anything about reconstruction, I said construction?

A. A part of the pay roll is incorrectly charged to the Louisville construction account.

Q. And that work was actually done on toll lines?

A. No.

Q. Where was it done?

A. The part which was incorrectly charged to Louisville construction account is the part of the pay roll which was spent in running line orders at an exchange.

Q. How can you tell that?

A. Because that is what the pay roll shows.

550 Q. The pay roll shows two things? *Q.* How can you tell which is line orders and which is toll line construction?

A. Part of the pay roll is charged to maintenance and part is charged to construction.

Q. The reconstructing part is the maintenance part according to your statement now, I believe?

A. Yes sir.

Q. And the other is the running line orders. You think then the $156 was expended in running line orders?

A. $152.76.

Q. You think that was expended in running line orders, do you Mr. Smith?

A. I think that is true.

Q. Do you know that to be true?

A. No.

Q. Where was this voucher paid?

A. It was cashed through the Louisville, Ky. office, Louisville cashier's office.

Q. Was Winchester in the Louisville district?

A. It is under the superintendent at Louisville.

Q. Over what territory has the superintendent jurisdiction?

A. The Louisville superintendent.

Q. Yes?

A. Over Southern Indiana and Central Kentucky; at the present time his jurisdiction is as far west as the eastern counties in Illinois.

551 Q. How far north?

A. As far as the territory of the Cumberland Company extends, now.

Q. How far is that.

A. It embraces the counties in Indiana which border the Ohio River.

Q. How far east does the territory extend?

A. I will have to refer to my files.

Q. How far south?

A. The general answer I will give you is, Central Kentucky. If you wish more detailed information I will have to ask for time to get it.

Q. This morning you gave a list of towns which were included in the Louisville District; that is a sub district is it, and the district over which the superintendent has jurisdiction?

A. Yes, this morning you asked me for the jurisdiction of the manager.

Q. The manager of the Louisville exchange then and the Louisville office, has jurisdiction over the towns you named this morning, has he?

A. I stated so.

Q. Then you have a superintendent there also?

A. Yes.

Q. Who is your manager?

552 A. The present manager is Mr. W. K. Boardman.

Q. Who is your present Superintendent?

A. Our present Superintendent is Mr. George G. Hall.

Q. And are bills for material and labor over the district presided over by Mr. Hall, paid at Louisville in the same manner and to the same extent as over the district which you named this morning?

A. No.

Q. What is the difference?

A. All exchanges in Mr. Hall's territory get their money, except those specified as being under the Louisville manager, direct from Nashville; they account for their money to Nashville direct, and they pay their own pay rolls and expenses.

Q. How long has that system been in force?

A. That has always been in force but the superintendent has a few gangs of construction men over whom he exercises a supervision, whose pay rolls are sent to him at Louisville and audited by him and cashed by the Louisville cashier.

Q. How about freight bills, where are they paid?

A. As a usual thing, they are paid by the exchange. It so happens, at times, they must have funds immediately and in such cases, they are authorized to draw drafts.

Q. On whom?

A. Sometimes on Louisville and sometimes on Nashville. Before proceeding, I would like to state this. In the examination
553 which has lasted all morning, eighteen vouchers have been involved, representing total expenditures of $85,324. That is, eighteen vouchers were taken from more than 1300 vouchers, which go to make up the charges against the Louisville construction account. In many of these 1300 vouchers mentioned, there are sub-vouchers, running from three to fifty. All vouchers amounting to small sums were furnished the Mutual Audit Company, and two of its employés spent weeks in going through these vouchers most thoroughly. The result is, that out of the whole, they find eighteen vouchers which have incorrect charges in them, and these incorrect charges amount to $2,852, which is less than one third of one per cent of the charges made to the Louisville construction account for the period running from January 1st, 1900, through December 31st, 1908 or nine years.

Mr. BLAKEY: I object to that statement by Mr. Smith, as not answering any question and purely a matter of argument on his part.

At this time, 12:30 P. M., a recess was taken until this afternoon at two o'clock.

554 Cross-examination resumed at 2 p. m., Friday, September 3, 1909.

By Mr. BLAKEY, for the Defendant:

Q. Mr. Smith, will you produce a half a dozen vouchers representing expenses for construction of Louisville Exchange, for the year 1900?

A. Here they are. (Producing vouchers).

Q. Mr. Smith, I find here one voucher No. 156, for $783.52, which seems to be a pay-roll voucher, and I will ask you how much of that was charged to the Construction Account, City of Louisville?

A. The voucher mentioned is for February, 1900, Louisville,

Kentucky Exchange, Aerial, was charged $188.30 from this voucher.

Q. That represents a pay roll, does it?

A. That represents a pay roll.

Q. For what month—was it a pay roll for work done in connection with new construction?

A. Yes sir.

Q. In what month was that work done?

A. December, 1899.

Q. Is that amount of $188.30 comprised or included in the item of $166,000 for new construction for the year 1900?

A. It is.

Q. If the work was done in December, 1899, prior to the consolidation?

555 A. And was paid from the general office after December, 1899.

Q. Pay roll #502 seems to be for the same month; how much, if anything, was charged against the Louisville Exchange for new construction for that period?

A. $304.79 was charged Louisville Exchange Construction Aerial; $269.38 was charged Louisville Construction Underground Conduits.

Q. When was the work done?

A. This pay roll is for the month of January, 1900.

Q. Here is voucher #733, for $338.50; to what account was that charged

A. The voucher is March, 1900, No. 733; it was charged to Construction Exchange Aerial, Louisville, Ky. exchange.

Q. Does that voucher represent the purchase of poles?

A. It does.

Q. When were those poles furnished?

A. The invoices are dated March 14, 1900, March 16, 1900, and March 21, 1900.

Q. Who directed that the cost of these poles should be charged to the Construction Account of the Louisville Exchange for the year 1900?

A. The voucher was prepared and approved by the Purchasing Agent, and charged in his office.

Q. Who was the Purchasing Agent then?

A. Mr. J. C. Symmes.

Q. Who is the Purchasing Agent now

556 A. Mr. J. E. Warren, with the title of Supply Agent.

Q. What has become of Mr. Symmes?

A. Mr. Symmes is now District Superintendent of the Nashville District.

Q. Were those poles used in new construction in the city of Louisville?

A. The voucher would not be so charged if they were not.

Q. Do you know, of your own knowledge, that they were so used?

A. I do not.

Q. Do you know, as a matter of fact, whether they were put in Supply account, or used in some other way?

A. I know from the records that they were charged and used direct and did not go through Supply.

Q. Do you know, of your own knowledge, that they were not placed among the supplies which were accumulated at Louisville?

A. Of my own knowledge I do not.

Q. Do you know, of your own knowledge, whether they were used in the construction of the Louisville Exchange, or in the construction of a pole line outside of Louisville?

A. I do not, of my own knowledge.

Q. Have you any records in your office showing where those poles were used

A. I have not, further than as shown by the voucher itself.

557 Q. I hand you voucher No. 231, for the month of March, which seems to be a pay roll; I will ask you for what month that was a pay roll?

A. February, 1900.

Q. For the month ending February 28th?

A. I presume so.

Q. One item there is Mr. L. K. Webb, Assistant Manager, $125.00; is that the salary of Mr. Webb?

A. Yes sir.

Q. How much of that salary was charged to new construction, if anything?

A. $41.00⅔ (forty-one and two-thirds dollars).

Q. Where was the balance of it charged?

A. Part to Operating Salaries and Wages, Louisville, Ky. Exchange, and part to Maintenance, Salaries and Wages.

Q. Was Mr. Webb then Assistant Manager for the same District that Mr. Boardman is now Manager of?

A. Mr. Webb was Assistant Manager; his duties did not represent those of Manager.

Q. I believe you said yesterday that during the time Mr. Webb was Assistant Manager you had no Manager?

A. I did not say that.

Q. Who was your Manager at this time?

A. The Superintendent.

Q. Who was the Superintendent?

A. Mr. George G. Hall.

Q. Did you not say on yesterday or the day before that for a time after Mr. Gifford resigned that you had no manager,

558 and that Mr. L. K. Webb, Assistant Manager, performed the duties of the Manager?

A. Mr. Gifford resigned effective October 2, 1899, and Mr. Hall assumed charge as Superintendent and Manager at Louisville November 1st, 1899. During the period between those dates Mr. Webb had the title of Auditor of the Ohio Valley Telephone Company, and I think was the ranking officer at Louisville.

Q. Who is Assistant Manager now?

A. We have no one by that title.

Q. When you appointed a Manager, did you do away with the office of Assistant Manager?

A. I do not recall.

Q. Is it not true, then, that Mr. Webb, during the time he was Assistant Manager, performed the duties that the Manager subsequently performed?

A. I don't know; at the time the best judgment of the general office was that Mr. Webb's salary should be charged as it is charged in this pay roll.

Q. I notice you have down here one item, H. Seymour, toll clerk; was any part of that charged to the Construction account of Louisville Exchange?

A. No part.

Q. How do you ascertain that fact?

A. I note that the distribution on the pay roll shows his salary was charged to Operating Salaries and Wages.

559 Q. Was any part of that charged to operating the toll lines?

A. We have never kept a separate account for the operation of the toll lines.

Q. Have you ever kept a separate account for the construction of toll lines?

A. Yes.

Q. In the city of Louisville?

A. Yes.

Q. Has there, since 1900, been any such an account kept of the construction as between toll lines and exchange lines in the city of Louisville?

A. No toll circuits in the city of Louisville have ever been charged to exchange construction. There have always been kept separate accounts between toll line construction and exchange construction.

Q. Is it not a fact that on June 7th, 1909, Mr. Warren, of the Mutual Audit Company, asked you that if you had any accounts showing the construction since 1900 as between toll line construction and exchange construction, is it not a fact that you then said that no such record has ever been kept?

A. It is not a fact.

Q. In what books do you keep a record of your toll line construction in the city of Louisville?

A. We have never kept exclusively the cost of toll line
560 construction within the city of Louisville. There are various toll lines which enter the city of Louisville, and the cost of the part within the city of Louisville is charged to the cost of those toll lines.

Q. Is there any record showing that fact?

A. The record of the lines themselves.

Q. What toll lines have you running out of Louisville, Kentucky?

A. I will get them for you. (The witness here went to get the list).

Mr. BLAKEY: I would like to note that Mr. Smith was over an hour getting this information.

A. I would like to explain that the information had to be secured from the Engineer's office; that the Engineer himself, with a clerk and a stenographer, prepared the information as soon as possible; that the Auditor himself helped in the work.

Q. Read the question. (Question was here read).

A. One route from Louisville towards Lexington, Kentucky.

A route from Louisville to Worthville, Kentucky.

A route from Louisville to La Grange, Kentucky, through Harrod's Creek.

A route from Louisville to Charlestown, Indiana.

A route from Louisville to Sellersburg, Ky.

A route from Louisville to Salem, Indiana.

561 A route from Louisville to Marengo, Indiana.

A route from Louisville to Huntingburg, Indiana.

A route from Louisville to Owensboro, Kentucky.

One from Louisville to Nortonville, Ky.

One from Louisville to Bowling Green, Ky.

One from Louisville to Danville, Ky.

One from Louisville to Taylorsville, Ky.

Q. Are all of those routes under the superintendency of Mr. Hall?

A. They are where they leave Louisville.

Q. Now, without taking up further at this time, Mr. Smith, the statement you have made in regard to the separate items of cost for construction of toll lines and Exchange system of Louisville, Ky., I proceed with the investigation of the vouchers concerning the construction account of the Louisville Exchange. I believe you said that no part of the charge for H. Seymour, Toll Clerk, was made against Construction for the Louisville Exchange?

A. That is correct.

Q. How do you ascertain that fact from that voucher?

A. Opposite the salary or name of H. Seymour, Toll Clerk, is noted "O. S. & W." which indicates that this man's salary is charged to Operating Salaries and Wages.

Q. I show you voucher No. 109, for April, 1900, which seems to be a pay roll voucher, the first item appearing being that of E. Bright, I-n-s-t Man. What does that stand for—"I-n-s-t?"

A. I think it stands for Instrument man.

562 Q. On the next page is the name of M. C. McCarthy, a lineman; what was his salary charged up to?

A. He worked on the first day of March, 1900, and the salary drawn by him, amounting to $1.75, was charged to Construction Aerial, Louisville Exchange.

Q. What do you mean by Aerial?

A. It includes the cost of pole lines, cables, wires, and other parts making up an outside pole route used for exchange purposes.

Q. Now do you know whether Mr. McCarthy worked on that day in Louisville in that class of work, or whether he was engaged on that day somewhere else outside of Louisville.

A. The pay roll shows clearly that he worked that day in Louisville; distribution is therefore made to Louisville.

Q. Is it not a fact that all linemen engaged in Louisville worked

indiscriminately in Louisville and outside of Louisville, wherever their services were needed?

A. In the Louisville Exchange.

Q. If their services were needed in West Point, Ky., wouldn't they be sent to West Point?

A. They would be sent to West Point, and their salary would be charged to West Point.

Q. You don't know whether this man worked that day in West Point or not, do you?

A. No sir I don't know anything further than what the
563 pay roll shows.

Q. Do you know whether he worked on aerial construction or aerial reconstruction?

A. The pay roll shows that his time is chargeable to Construction Aerial.

Q. How does that appear on the pay roll?

A. It appears on there by the following being written after his title: "Con ex a," which means what I have stated.

Q. Who wrote that on there?

A. The clerk in charge of that work at Louisville.

Q. How did he know whether he did that work in connection with construction of reconstruction?

A. By the daily Time Reports.

Q. Have you any of those Daily Time Reports?

A. We do not keep them for nine or ten years, and they are not forwarded here in cases of that kind; they are filed locally.

Q. Now that is one of a large number of names that appear on this pay roll, making an aggregate for Construction Aerial of $1,132.73, is it not?

A. That is correct.

Q. And that is for the month of March, 1900?

A. It is for two weeks ending March 14, 1900.

Q. Is this pay roll which I now give you a fair example of the pay rolls and the character of the charges made against orig-
564 inal construction for labor in the city of Louisville?

A. It is a very good example exhibiting the care that was used in doing this.

Q. I call your attention to the name H. Otte, Laborer, and ask you what the letters in pencil mark made after his name indicate?

A. That his time is chargeable to Underground Cable Construction.

Q. Is that new construction or re-construction?

A. New construction.

Q. I will ask you if any item on that entire pay roll consisting of seven large sheets shows that any of the salaries or wages of any of the men were charged up to re-construction?

A. In 1900 all reconstruction done was charged as Maintenance. The pay roll shows that $168.20 was charged to Maintenance.

Q. That was the pay roll for the two weeks?

A. That is a pay roll representing certain employees in the city of Louisville for two weeks.

Q. Will you please indicate to me some of the names on there whose salaries or wages are charged to reconstruction?

A. As stated before, we did not have an account known as Reconstruction, in the year 1900.

Q. Well, to maintenance, then?

A. The following salaries were charged to Maintenance: E. Bright——

565 Q. What did he do?

A. His title is given as Instrument man. G. Coons——

Q. What does he do?

A. His title is shown as Trouble man. P. Frech, whose title is shown as Trouble man; D. Gwyn, Instrument man, A. Moraweck, Wire Chief, L. Newhouse, Instrument Man, C. Rozenbaum, Instrument man.

Q. Is that all?

A. That is all in that pay roll.

Q. Do you know what duties an instrument man performs?

A. No, it would be guessing.

Q. Does he do any reconstruction work?

A. He might.

Q. It would be in connection with the instrument itself, wouldn't it?

A. It would be in connection with the subscriber's station.

Q. What about the trouble man, what are his duties?

A. Repair man.

Q. What does he repair?

A. Repairs lines and cables, and probably instruments.

Q. Isn't he the man that you send when a telephone gets out of order so that you cannot hear well through it, don't you send the trouble man to see what the trouble is?

A. He might be sent, after the test.

566 Q. Isn't that the main thing he is used for?

A. Yes.

Q. What does the Wire Chief do?

A. The Wire Chief does the testing to see where the trouble is, and directs the trouble man.

Q. None of these men would be engaged in the service of taking down one line of poles and replacing it with another line of poles, would they?

A. If they had nother else to do that would keep them busy they would be; our men are always kept busy, no matter what their title is.

Q. Is it not a fact that the class of men who take down a line of poles and put up another line of poles are laborers under the head of a foreman?

A. Yes sir.

Q. Is it not a fact that the men whose names are on here on these other seven pages and who drew for two weeks service $1132.73, are the class of men who work for $1.75 to $1.80 a day, and who work under a foreman, and who are used for taking down a line of poles that have become valueless and replacing with another line

of poles. I am not asking whether or not they did, but I am asking whether or not they are that class of men who did that class of work?

A. If there was work of that kind to be done they would probably have been engaged in it.

Q. I show you another voucher, No. 461, for July, 1900, in which it seems that the total is $1303.00, which appears to have
567 been expended in the way of pay rolls for the month ending June 15, 1900, is that correct?

A. No.

Q. For the two weeks ending June 15, 1900?

A. Ending June 14.

Q. Please indicate what men, if any, were paid during those two weeks for doing any work in the way of maintenance which you say included reconstruction work?

A. G. Coons, Trouble man, P. Freck, Trouble man, D. Gwyn, Instrument man, A. Moraweck, Wire Chief, C. Stephens, Instrument setter; I. Hall,—I don't know his title—he, however, was included for one day; J. Helm, Inspector, J. Lally, Watchman, G. Wathan, Clerk, W. M. Gilmore, Bricklayer.

Q. Now on what character of paper, as to size, and how many pages are there, that go to make up this pay roll?

A. The pay roll is about 14 inches long eight inches high, and it consists of six sheets; the name of each man paid anything through the pay roll is shown thereon, the days of the month he worked, the number of days, the rate per day, the amount paid, his receipt for the payment, and a memorandum showing how each salary should be charged.

Q. I should like to have you cause a copy of that pay roll to be made, and file it with your deposition as an exhibit as a part of your deposition, if you will. You can do it at some time before the deposition is closed.

568 A. I will do so and file it as Exhibit No. 15.

Q. Now with the exception of $175.98 for Maintenance, all the balance of this voucher, which represents a total payment of $1303.82, was paid to men for services, and the payments so made were charged up to new Construction was it?

A. $18.00 of the pay roll was charged to the Supply department; $1109.84 charged to Construction Exchange Aerial, Louisville. You understand, of course, that this is only one of several pay rolls of the Louisville Exchange.

Q. Are there any more pay rolls for that period covering payment to laborers engaged either in reconstruction or in construction work for the Louisville Exchange?

A. I will investigate and see, and answer it later.

Q. I now show you pay roll No. 548, which seems to be dated Sept. 25, 1900, and which on its face seems to be the pay roll for the month ending August 14, 1900; is that correct?

A. Yes sir, it is a pay roll.

Q. Will you examine that pay roll and indicate the wages of what men, if any, were charged to Maintenance, which you say

includes reconstruction work as well as maintenance, in the city of Louisville, for that period?

A. F. Weick, Foreman, J. Lally, Night Watchman, G. Wathan, Clerk, G. Coon, Trouble man, P. Freck, Trouble man, D. Gwyn, Instrument man, A. Moraweck, Wire Chief, L. Newhouse, Asst. Stock keeper, C. Stephens, Instrument setter.

569 Q. What is the total amount charged to Maintenance on that voucher?

A. $210.25.

Q. What is the total amount charged to new construction?

A. Exchange Aerial, $1078.89; Exchange Underground Conduits, $98.64.

Q. And the facts stated by you in regard to the pay roll which was exhibited to you prior to this pay roll substantially apply to this pay roll, do them?

A. Yes sir.

Q. Now I show you voucher No. 1695, which seems to be a pay roll for the last fourteen days of November, 1900; is that correct?

A. It includes in it for some men pay for the full month.

Q. And for the majority only half of the month?

A. And for others a half month.

Q. Will you indicate on that pay roll what men were paid salaries which salaries were charged to Maintenance?

A. J. T. Featherstone, Supt. Construction, 1/3 of his salary, for the full month; W. R. Harris, engineer, all of his salary for the full month; G. Wathan, all of his pay except for one day, payment half of the month, J. Arnold, Ground man.

Q. How much was paid to those men whose names you have just read off and charged to Maintenance account?

A. $185.58 to Maintenance Salaries and Wages, and

570 $32.05 to Maintenance Damage and Compensation.

Q. How much was charged, as appears by that pay roll, to New Construction?

A. To Underground Construction, Louisville, $108.20.
To Underground Construction, Jeffersonville, Ind., $19.50.
To Aerial Construction, Eminence, Ky., $3.00.
To Aerial Construction, Bardstown, Ky., $56.50.
To Aerial Construction, Louisville, $1289.27.

Q. Now have you any pay rolls for the year 1901?

A. I have.

Q. I show you a pay roll now which seems to be for the first two weeks of January, 1901, and which seems to represent a payment of $38.35 for maintenance and $905.27 for aerial construction; is that correct?

A. Yes, the aerial construction not all being charged to Louisville.

Q. How much of it is charged to Louisville?

A. $828.76.

Q. This pay roll is similar to the pay rolls I have exhibited to you heretofore, and which you have testified to, in the main, is it?

A. Yes sir.

Q. Where are your other vouchers for the year 1901?

A. They are here before you (pointing to the cases in the file room).

Q. Have you any objection to Mr. Warren's selecting some of them for me to look at?

571 A. No one in the Voucher Department is authorized to go into these vouchers except the File Clerk.

Q. Would you send for the File Clerk, and get him to produce me certain vouchers that I may ask for?

A. This is the file clerk here now.

Q. I wish you would have him produce the pay roll account for the month of July, 1901.

A. I will do so. You mean those affecting Louisville?

Q. Yes.

A. I here hand you two July, 1901 pay rolls, both referring to Louisville, Kentucky.

Q. Mr. Smith, the voucher you have produced for the first 15 or 14 days of July, seems to be Voucher No. 158, for $2046.11, $2013.11 of which seems to be for maintenance, and $33.00 for Supply Department, is that correct?

A. That is the way the voucher shows.

Q. Now I want you to look at this voucher, if you will, and take these names up as I point them out to you, and indicate to what account they were charged by the clerk whose duty it is to indicate to what account it should be charged—and by clerk I mean the clerk you mentioned in the earlier part of your deposition who you said made the mark "ex ael." For instance, take the name of Jas. Leigh, the first man whose name appears on this voucher, appears to be a foreman, I will ask you to what account his wages were charged, as appears from that pay roll?

572 A. The black pencil notation charges his salary to Exchange Aerial.

Q. Is that Construction?

A. Yes sir.

Q. How about the next seven men on the pay roll?

A. The same answer.

Q. Now why is it that the amount of their pay roll does not seem to have been charged to Construction account?

A. Clerical error.

Q. A clerical error?

A. That is my explanation.

Q. Would you say that the amounts represented in dollars and cents opposite the respective names of these 8 men was a part of the new construction for the year 1901, or a part of the maintenance for that year?

A. I should be guided by the black pencil notations.

Q. And say that it was a part of the——

A. Part of construction.

Q. And was so charged up?

A. It seems that it was not so charged up.

Q. Would you say, then, that those amounts there were in-

cluded in the part of the $178,549.14 which you say was expended in the way of new construction for the year 1901?

A. Those amounts should be included in it, whether they are or not I am not now able to say; it is possible that the error was caught and corrected, but the voucher does not show it.

Q. This voucher #158 is in every respect similar except as to the names and amounts—similar in form at least, to the vouchers which you have heretofore testified about, is it?

573

A. Similar to the other pay rolls that I have testified to this afternoon.

Q. And how many pages are there in that particular voucher?

A. Eleven, including the last page, on which there is a recapitulation.

Q. Will you kindly read off to the stenographer the names of the laborers whose wages according to the pencil notation should have been charged to maintenance?

A. I. Herrin, Trouble man.

Q. How much was he paid?

A. $27.23. L. Lewis, Trouble man, $33.30. H. Linet, Trouble man, $27.00.

Q. Should the balance of $2013.11 which appears on this voucher to have been charged up to Maintenance have been charged to Reconstruction?

A. No, it should have been charged to Construction.

Q. Are the laborers or other employees whose names appear on this voucher substantially the same class of laborers and employees whose names appear on the former pay roll vouchers of 1900 about which I asked you?

A. I think so.

The further hearing of this proof was here adjourned until 9.30 a. m., to-morrow.

574 SATURDAY, *September* 4th, 1909.

Cross-examination of H. BLAIR SMITH, resumed.

By Mr. BLAKEY, for the Defendant.

Q. I think when we closed yesterday, Mr. Smith, you had been testifying in regard to pay roll voucher for fifteen days during the month of July, 1901. I now show you Voucher No. 1236, which seems to be for the month of June, 1901, or the first fifteen days of the month of June, 1901, is that correct?

A. The first fourteen days.

Q. I will ask you to examine that voucher, and especially the pencil marks immediately after the name and the occupation of the labor or employee, and state what portion of the expenses appearing on that pay roll should have been charged to New construction?

A. I have examined the pay roll. It consists of quite a number of sheets. In order to determine this accurately it would require the recapitulation of each item.

Q. Are not the pencil marks, such as "ex. ael" which appear after the occupation of the employee substantially the same character of pencil marks that appear in the same position on former pay rolls which have been exhibited to you?

A. The pay roll is one which I will grant is not charged properly, but it is probable that the correction was made later on, properly distributing it. The pay roll itself does not show that a correction was made.

Q. Is any part of it correctly charged?

575 A. The charges which are made to construction aerial at Louisville, and Anchorage, are proper; the charge made to the Supply department is proper, and some of the charge to Maintenance, Salaries and Wages is proper.

Q. How much is charged to Maintenance, Salaries and Wages?

A. The total charge to Maintenance, Salaries and Wages is $2092.40; $59.75 of this is charged to Jeffersonville, Indiana.

Q. How much is chargeable to aerial exchange construction?

A. Ninety dollars is charged by the voucher to Construction Exchange Aerial.

Q. How much to Supply department?

A. $45.00.

Q. How much of the $2032.65 which appears here to be charged to Maintenance, Salaries and Wages at Louisville should have been charged to that account?

A. $77.00, as far as Louisville is concerned.

Q. Where was the mistake in the charge made, in Nashville or in Louisville?

A. Made at Nashville.

Q. Do you know, as a matter of fact, whether the sum which should have been charged to the construction account on the books of the company was ever so charged?

A. I think so.

Q. Do you know that as a matter of fact?

576 A. There were corrections made in that year, and I feel certain that the results of the year's business were properly charged.

Q. Have you any way of determining that fact?

A. Yes sir.

Q. How would you go about determining it?

A. Mr. Warren was given a memorandum which showed the corrections that were made. I saw you both looking at that memorandum yesterday.

Q. Do your books show whether this particular item about which you are testifying, namely: voucher 1236, was ever corrected in such a manner as to charge Construction account with the amount which you say should have been charged to Construction account?

A. The books show quite a number of errors like the errors mentioned in this pay roll. There are four or five of such in the accounts for 1901. These were discovered before the close of 1901, and the actual facts in the case were very carefully gone over and

adjustments made to the very best of our ability and knowledge at the time.

Q. This pay roll, as well as the one you said yesterday was improperly charged, has on the face of it blue pencil marks on the first page, certain memoranda; will you look at that, and tell me what it is?

A. These are memoranda made by a clerk at the Nashville office, and are a change in the distribution made on the ground at Louisville, and incorrectly made.

577 Q. Do you know what clerk wrote that on there?

A. I think Mr. J. L. Pearcy, Jr., wrote it.

Q. Is he still connected with your company?

A. He is not.

Q. Do you know why he made that change?

A. I do not.

Q. Was he the man that was accustomed to handling payrolls of that character?

A. As I remember, he was new at his job; he had been with the company for quite a while, but was new at this job.

Q. You said yesterday that he handled them in 1900, did you not?

A. I do not recall that I did.

Q. If he is the same man you spoke of as having handled the pay rolls in 1900, then he had been handling them for a year had he not?

A. If he began in 1900, he certainly had.

Q. If he charged them up in 1900 according to the memoranda made by the Louisville office, then he knew that the memoranda made by the Louisville office was there for a purpose, did he not?

A. I presume so; it is difficult to testify as to another man's mind.

Q. Is it possible to tell, without looking at every pay roll, how many errors similar to this have been made or

578 were made during 1901?

A. It would be necessary to examine the pay-rolls.

Q. Have you any other pay roll for laborers during the first fourteen days of June, 1901?

A. I will examine the files, and see.

Q. While we are waiting for you to have that found, I will ask you if you found any additional pay rolls for the month of June, 1900, about which I asked you yesterday?

A. I did.

Q. Will you let me have that?

A. (Witness produces voucher.)

Q. Mr. Smith, the voucher you have handed me is Voucher No. 286, which seems to be for the last half of the month of June, 1900; is that correct?

A. No, it is for the full month of June, 1900.

Q. And the pay roll about which you testified yesterday was for what part of the month of June?

A. I believe it was for the first fourteen days.

Q. So this pay roll covers all expenditures in the way of pay roll

for the first fourteen days of June except that that you mentioned yesterday for the first fourteen days of June?

A. Well, I won't say that it covers all, but it covers the monthly men; there may be other pay rolls.

Q. Can you produce any others?

A. If you wish me to continue to search, I will do so.

579 Q. What others could there be besides the laborers paid twice a month and the monthly men paid once a month?

A. If all the laborers were included in the other pay roll there would not be, but I am not certain all the laborers were paid in the one pay roll.

Q. Is it not the custom to pay all the laborers in one pay roll?

A. It is now, but it was not then.

Q. You made quite a thorough search yesterday, and it took you quite a while to find any additional pay rolls to the one you found yesterday, did it not?

A. My File Clerk looked through July and August vouchers rather hurriedly, and found this one.

Q. Will you file a copy of this pay roll, and make it part of your deposition?

A. I will, as Exhibit 16.

Q. Will you have your file clerk search further for any additional pay rolls for the first 14 days of June, 1900?

A. If you desire it.

Q. I do. Now I notice the first two names on this pay roll are repair men on the Brandenburg line, charged to Maintenance Salaries and Wages, is that correct?

A. No.

Q. What does that memorandum I have just read mean?

A. It applies to one man.

580 Q. Which man?

A. A. Applegate.

Q. What amount did he receive, according to that pay roll?

A. $30.00.

Q. To what was that charged?

A. Maintenance Salaries and Wages.

Q. Where?

A. Louisville.

Q. Now I notice in this pay roll the name of F. Ammon, repairman; what sort of work did he do?

A. I don't know, further than his title designates.

Q. Would you not infer that he did repairing where an instrument got out of order or fell off of a man's desk, or a new cord had to be put in, or some such trouble as that?

A. I do not know.

Q. I notice the name of E. Coons, Night repairman, what would he do?

A. He would probably care for a switch-board.

Q. I notice the name of E. Bright, Instrument man, what would be his duties?

A. They would seem to attach to Instruments.

Q. I notice the name of W. Elrod, Trouble man; what would he do?

A. The title indicates care for troubles.

Q. I notice here three men, Switchboard Inspector, As-
581 sistant Switchboard Inspector, assistant switchboard man. Switchboard Inspector. Their duties would be in connection with the switchboard, would they?

A. With the switchboards, testing troubles, cutting changes of numbers, installing lines for new stations, and other duties that are attended to in the central office.

Q. Now the Superintendent of Equipment and Maintenance, he would have what duties?

A. Supervision.

Q. Superintendent of Construction, what would be his duties?

A. As designated in the title.

Q. Would he have anything to do with maintenance?

A. Yes.

Q. In what way?

A. He would supervise gangs engaged in maintenance.

Q. Doesn't his title indicate that he would superintend construction work?

A. The Superintendent of construction means the superintendent in charge of the construction in existence and of new work.

Q. To what account are his wages charged, according to this pay roll?

A. One-third to maintenance, two-thirds to Construction aerial.

Q. I notice that you have four names on here which seem — be foremen; to what account were their salaries charged?

582 A. By the Louisville office, to Construction, and charged at the general office to Maintenance, Salaries and Wages.

Q. Why was that done?

A. I do not recall. It was done eight years ago.

Q. By whom was that done?

A. It must have been done by Mr. Pearcy.

Q. Is he the same man you spoke of a few minutes ago that made error in charges for 1901?

A. Yes sir.

Q. Do you know whether that was an error on his part in charging those men's wages to Maintenance & supply?

A. It was not charged to Maintenance and Supply. It was charged to Maintenance Salaries and Wages, and I don't know whether it is an error or not.

Q. The Louisville notation is not followed in the charges, is it?

A. No, not in this instance.

Q. Now do you find on that pay roll the name of a single man whose duties would be to assist in the taking down of worn out or useless line of poles and replacing it with a new line of poles?

A. I am not familiar enough with the work to answer that positively, but there are not many of them on there.

Q. The voucher No. 1236, for the first 14 days of June, 1901,

about which I was asking you a few moments ago, is signed by you, is it not?

A. Yes sir.

583 Q. Was that signed by you after the blue pencil marks were made opposite the names, or before those blue pencil marks were made?

A. Well, probably after they were made, but it was signed with a great many more vouchers that were put on my desk.

Q. The blue pencil marks are very pronounced are they not?

A. They are.

Q. Two or three times as large as the lead pencil marks made by the Louisville clerk, are they not?

A. They are clear.

Q. Now I show you voucher 166, which seems to have been for the last 15 days of June, 1901, and which also seems to be the pay roll for those 14 days I believe you say it represents, and will ask you to examine the first 12 pages of that voucher, and see if there is any material difference between those 12 pages as to where the Louisville clerk said the wages should be charged and as to the blue pencil marks made by the Nashville clerk wherein it is indicated that the wages were charged to a different account?

A. Yes, the Nashville clerk has made a complete change.

Q. Explain in what respect?

A. Just as in the first 14 days of June.

Q. There is no material distinction between the two vouchers in that respect?

A. Practically none.

Q. And generally speaking, it seems that the same propor-

584 tion of wages paid and which the Louisville clerk said should have been charged to New construction is, under the notation made by the Nashville clerk, made chargeable against Maintenance, is that correct?

A. Yes, this is one of the pay rolls that I referred to just a few minutes ago, in which errors had been made and corrected.

Q. These pay rolls which you have exhibited to me were asked for at random, were they not?

A. I do not know.

Q. Is that pay roll signed by you?

A. It is.

Q. Was it signed by you before or after the blue pencil marks were made thereon?

A. After the pay rolls were checked and distributed, they were, with other vouchers, put on my desk for me to certify that they had been handled in my office.

Q. Do you know where Mr. Pearey is now?

A. I think he is in the Isle of Pines.

Q. Does his family live in Nashville?

A. His father is dead; I think he is taking care of his mother, and where she is I don't know.

Q. This pay roll has a charge against Maintenance Salaries and

Wages of $4230.74, and charged against Construction Aerial $41.67, has it not?

A. Yes sir.

Q. How much of that $4230.74 was charged to Louisville
585 Maintenance Salaries and Wages?

A. All of it. And a large part of this seems properly so charged.

Q. Properly so charged to what?

A. To Maintenance, Louisville.

Q. Will you go through it and tell me specifically what part should be charged to maintenance according to the Louisville clerk's notations?

A. $1668.20.

Q. The first 12 pages of this voucher, with the exception of six men, seems to be for the last 15 days of June, 1901, is not that correct?

A. Yes sir.

Q. And how much of the salaries appearing on those 12 pages should, according to the Louisville clerk's notation, be charged to maintenance?

A. $105.50.

Q. The balance of the $1668.20 appears on two pages and a half, immediately preceeding the recapitulation, does it not?

A. Yes sir.

Q. And is for pay roll for the entire thirty days?

A. Yes sir, for the men shown.

Q. And those were the character of men who were paid monthly, that appear on this last two and a half pages?

A. Some of them were paid monthly.

586 Q. They were generally speaking—I mean those who appear on the two and a half pages I have just referred to: trouble clerk, night watchman, switch-board inspectors, wire chief, instrument setters, battery men and stock room men, and stock keepers, were they not?

A. You have picked out a few of the titles.

Q. Generally speaking doesn't that cover practically all that appear on those two pages?

A. There are seventeen names on each page.

Q. Well, don't the titles that I have indicated in my question a moment ago cover practically all the titles that come on those two and a half pages?

A. They cover some of them.

Q. You hand me voucher #1231, which seems to be pay roll voucher for the first 14 days of June; is that the only voucher you have in addition to the ones you have heretofore exhibited for the first fourteen days?

A. The only one I have found since the file clerk began searching.

Q. I notice on this voucher an item "trimming trees" for this company, under which appear the names of several men. Does that mean that those men were engaged and paid for trimming trees?

A. I think so.

Q. I notice one item of C. Kettig, Team, $21.00; do you know what that team was used for?

587 A. For the purpose explained on the pay roll, I take it.

Q. Assisting in trimming trees?

A. Yes sir.

Q. Do you know where those trees were trimmed?

A. Within the city of Louisville.

Q. How do you think that?

A. It is Louisville pay roll, Okayed by the Assistant Manager at Louisville.

Q. The Assistant Manager had under his jurisdiction and O. K. pay rolls for people who did work outside of the corporate limits of Louisville, did he not?

A. He had jurisdiction of the payment of those pay rolls.

Q. Did he O. K. the pay rolls before they were paid, of any men who did work outside of the city of Louisville?

A. I think not.

Q. What supervision did he have, then?

A. Supervision of handling the money.

Q. If trees were to be trimmed within three miles of Louisville, and Louisville men, employees and laborers and teams, were sent out from Louisville to do the trimming, would not he O. K. the pay rolls?

A. If the Louisville men were sent out, yes, but in that case if the lines did not belong to the City of Louisville District, he would so specify; but within three miles of Louisville we can rest assured that the routes were those of the Louisville District.

588 Q. The Louisville clerk did not indicate on this paper, to what account it should be charged, did he?

A. It does not seem to have gone through the Louisville clerk's hands—the one who made the pencil notations on other pay rolls.

Q. I notice on this pay roll a memorandum which seems to be erased, "ael," what did that mean?

A. The erasure meant that it was wrong.

Q. The original charge meant what?

A. It meant Aerial.

Q. Do you know who made that memorandum on there?

A. I do not.

Q. Did you do it?

A. No.

Q. Did you make the memorandum on there, "M. S. & W?"

A. No, that is Mr. Pearcey's; I think this other one is Mr. Skipwith's.

Q. Who is he?

A. He was a clerk in the Auditor's office at the time.

Q. Louisville, or Nashville?

A. Nashville.

Q. Do you know, as a matter of fact, whether that work was done in original construction or reconstruction?

A. No, I didn't see it.

Q. What does the pay roll amount to?

A. $58.00.

Q. Now will you furnish me any part of the pay roll for
589 the month of November, 1901? I say November, it is immaterial whether you furnish me October, or November or December.

A. Yes sir.

Q. Your clerk has handed me voucher No. 114, for $126.00, which seems to be a voucher for "hauling poles to Bedford on toll line," and which, according to the notation, seems to be charged Aerial Construction, Campbellsburg. Did I not understand you to say the other day that no toll line construction was charged to exchange construction?

A. You did.

Q. How do you explain that charge?

A. This has absolutely nothing to do with Louisville, but I am glad to be able to give you a clear explanation, which is this: Bedford and Campbellsburg doubtless at this time and now I think are given a free interchange of service from the subscribers of one exchange to the subscribers of another exchange, and the lines in between them were for this purpose.

Q. That says on its face it was for toll lines, does it not?

A. It says so.

Q. Then if it shows it was for a toll line, it was for a toll line, wouldn't you say?

A. Unless better information to the contrary were given me it would have been so charged.

Q. Who charged it to Campbellsburg?

590 A. The Auditor's office.

Q. Do you know what particular man in the Auditor's office?

A. It looks like the handwriting of Mr. Skipwith, and the charge has the approval, in this instance, of the Assistant to the Assistant General Manager.

Q. Why should it be charged to Campbellsburg instead of Bedford?

A. I do not now know; it probably was the part of the route nearest Campbellsburg, and which would be utilized for Campbellsburg subscribers.

Q. There is no indication by the Louisville clerk where the voucher seems to have been paid that it should be charged to Campbellsburg, is there?

A. The Louisville clerk does not seem to have noted.

Q. Mr. Smith, you have furnished me pay roll No. 2224, for the first 14 days of October, 1901; that is correct, is it?

A. Yes, it is a pay roll.

Q. I notice, among other things, that you have a charge on the back of this pay roll of $151.50 for Maintenance Salaries and Wages, that is correct, is it?

A. Yes.

Q. And $2657.38 for Construction Exchange Aerial, and $383.46 for Underground construction, making a total of $3192.34, is that correct?

A. Yes sir.

591 Q. The first ten names appearing on this pay roll seem to have under the heading occupation the word "Foreman" opposite them. Now were the wages of those ten foremen charged to Maintenance or to Aerial Construction?

A. Aerial construction.

Q. The next man is a ground man, to what account were his wages charged?

A. To the same account.

Q. The next man is a laborer, to what account were his wages charged?

A. Same account.

Q. Aerial construction?

A. Yes sir.

Q. The next four men are denominated Linemen; to what account were their wages charged?

A. Aerial construction.

Q. The next man was a ground man, to what account were his wages charged?

A. Four and a half days to Underground cable, the balance to Aerial construction.

Q. Underground cable construction work?

A. Yes sir.

Q. The next four names, at the top of the second page of the pay roll seem to be laborers; were their wages chargeable to Construction or Maintenance account?

A. Construction.

592 Q. The next account is a team and teamster; are his wages charged to Construction or Maintenance?

A. Construction.

Q. The next nine pages contain a list of the names of men—17 to a page; I will ask you to look over those names casually, and state, in a general way, what their occupations were, and whether or not substantially all of their wages were charged to Construction account?

A. The general class of workmen represent Linemen, Ground men, laborers, painters, Cable men, Pavers, and bricklayers. Practically the full part of the wages paid these employees is charged to construction.

Q. There are only one or two pavers and bricklayers, were there not?

A. Three or four.

Q. The last two pages of this pay roll before the recapitulation has how many names on it?

A. These two pages have six names.

Q. What is the occupation of those six men?

A. Trouble men, repairers and help in stock room.

Q. And to what account were their wages charged?

A. Maintenance.

Q. And what is the total of their wages?

A. $151.50.

Q. That was the total amount charged in that voucher to Maintenance, was it not?

A. Yes sir.

593 Q. And all of the balance was charged to Original Construction?

A. Yes sir.

Q. Now have you any additional pay rolls for the first 14 days of October, of the year 1901?

A. I cannot answer without further search of the File clerk.

Q. Will you cause such search to be made, and let me know on Tuesday, or as soon as you ascertain?

A. I will try to do so.

Q. Here, Mr. Smith, is a voucher No. 1035, which seems to be for the month of May, 1900, among other sub-vouchers is one of the Western Electric Company, dated May 28, 1900, $1815.43, which seems to be for factory cabling and certain wire for switchboard cables, spring jacks, triple terminal strips, and arresters. To what account was that item charged?

A. Louisville Construction Equipment.

Q. Why was it charged to Louisville Construction Equipment?

A. Because the equipment was furnished and used at Louisville.

Q. Was it in connection with the Louisville exchange, or in connection with some part of the district over which the Superintendent presided?

A. Used for the Louisville exchange.

Q. How do you know that?

594 A. Because it is charged that way; and I don't know of another exchange in the Louisville district which would have required as extensive apparatus.

Q. You don't know, of your own personal knowledge, though, that that was used in Louisville?

A. The shipment was made to Louisville. When the invoice was received it was checked with the order evidently, and the order would clearly show for what purpose the apparatus was ordered.

Q. The two accountants, I believe, found that you had charged to the Nashville Exchange certain switchboard apparatus which was used in Louisville, amounting to some $4,000.00 or more?

A. Yes, and it was so clear that it was improperly charged that they both discovered it.

Q. That was a mistake of the Auditor's office, having that charge made against Nashville instead of against Louisville?

A. If you will produce the original invoice or tell me what it was, I will answer the question.

Q. You cannot explain that item without my furnishing you the number of the voucher, I take it?

A. I cannot. My information at the time was that it was a clerical error, which was easily discovered.

Q. It was not discovered, was it, until the Accountant examined the record?

595 A. It was discovered, but not corrected.

Q. When was it discovered?

A. I don't know.

Q. Was it discovered before the Accountant called your attention to it?

A. Personally I don't know. At the time the accountants were here, the matter was brought up and a written memorandum was handed to the Mutual Audit Company in regard thereto.

Q. Whose error was it?

A. I don't know.

Q. Whose duty was it to see that material for equipment for the different exchanges was charged to the proper exchange?

A. It was the Auditor's duty.

Q. Mr. Smith, who had charge of the construction work in the city of Louisville during the year 1900, if you know?

A. The Assistant General Manager is the only one that I could specify.

Q. Who was the man who had immediate control of the various foremen who did the construction work?

A. I do not recall at this time, but the District Superintendent is immediately next to the Assistant General Manager.

Q. What would be the title of the man who directed the foremen of the various working gangs in 1900, where to go to work and what to do?

A. I don't know.

596 Q. Can you ascertain that fact from your records?

A. No, I could not from mine.

Q. Well, are there any records in your office to which you have access and from which you could ascertain that?

A. There are no records in the Auditor's office which would show that.

Q. In whose department would that appear?

A. It would logically appear in the General Manager's.

Q. Who is the General Manager?

A. The president of the company was the General Manager at that time; he had an Assistant General Manager.

Q. Who was his assistant?

A. Mr. Leland Hume.

Q. And he is now the General Manager, is he not?

A. Yes.

Q. Now Mr. Smith, getting back to some of those pay rolls which were charged up to Maintenance Salaries and Wages, and which you said should have been charged to Aerial Construction according to the notation made on the pay roll by the Louisville clerk, will you kindly say whether you could tell from your records anything definite on the subject of those errors having been corrected and the charge properly made against aerial construction?

A. I know that corrections were made in the year 1901.

Q. Do you know whether the correction was made in respect to these particular items, and if you don't know, can you ascertain?

597 A. I believe that corrections were made for all of the errors which we have mentioned and referred to.

Q. You don't know that to be a fact?
A. I believe it.
Q. But you don't know it?
A. I am pretty certain of it.
Q. Can it be ascertained definitely from your books that such correction was made?
A. I think so.
Q. Will you ascertain and let me know?
A. I will.

The further hearing of this proof was here adjourned until next Tuesday morning, Sept. 7th, at 9:30 o'clock.

598 TUESDAY MORNING, *September 7th*, 1909.

The further cross-examination of Mr. H. BLAIR SMITH was resumed at 9:30 o'clock this morning.

By Mr. BLAKEY:

Q. When we adjourned on Saturday, I asked you to ascertain whether pay roll vouchers which you stated had been erroneously charged to maintenance, had ever been corrected on the books of the company and correctly charged up to construction account as you said it should have been. Can you tell me now any facts in regard to that matter?
A. Pay rolls for 1901 have been corrected in that year. The pay rolls originally charged maintenance with $47,278.94. The revision shows the charge corrected to $31,230.94.
Q. How do you ascertain that fact?
A. I ascertain that fact from the books of the company?
Q. What books?
A. The journal.
Q. Will you produce that journal so we may inspect it?

(Witness produces book.)

Q. I notice in the book you have produced, page 324 an item, sundries to expense, maintenance, salary and wages $5,480. Immediately under that, construction, aerial or exchange-aerial, Louisville, Ky., $3350 and under that the following notation: "Estimate: amount charged to expense which is properly charged to con-
599 struction, estimated by gain in subscribers, signed H. B. S." That is correct, is it?
A. It is not a signature; it is just a notation made by the general book-keeper who I instructed, after revising the pay roll, to make the journal entry specified. I do not think the explanation is good.
Q. Is that your signature?
A. It is not.
Q. Did you authorize someone to write those letters there representing your name?
A. It was not intended, I think, as a signature, but entries of that kind always bear authority, or notation for authority.

Q. Does that $3660 charged to construction, exchange aerial, represent the pay roll or represent sundry accounts?

A. It represents the pay roll in as much as it deals with salaries and wages.

Q. The $5480 is opposite the word sundries and also under the caption at the top of the page sundries, is it not?

A. No.

Q. What is it under?

A. The item of $5480 is opposite credit expense M. S. & W. That credit is divided; part of is is charged to Louisville, and part to New Orleans.

Q. What does that $5480 represent, wages or sundries?

A. It represents wages. The explanation, sundries, is used
600 in journal entries when more than one account is treated in the charge or credit.

Q. What accounts are included in that entry?

A. Expense, maintenance, salary and wages, and construction exchange-aerial at Louisville and New Orleans.

Q. Was there any other expense connected with maintenance, salary and wages or construction, exchange-aerial, except pay rolls?

A. Certainly, maintenance, salary and wages come from pay rolls, but construction items come from many different classes of vouchers, including pay rolls.

Q. Are there no expenses connected with maintenance, salary and wages, except pay rolls?

A. Salaries and wages indicate labor, and it has been our custom to have all labor appear on pay rolls.

Q. Do you know as a matter of fact that $5480 represents anything but pay rolls?

A. I stated before that it represented pay rolls and only pay rolls.

Q. How do you ascertain that fact?

A. From my knowledge of the system.

Q. Was that amount paid out in Louisville or in Louisville and New Orleans, jointly?

A. In Louisville, and in New Orleans.

Q. Do you know how much was paid out in Louisville and
601 how much in New Orleans?

A. The entry is very clear, and shows that $3660 of the $5,480 concerns Louisville and that $1,820 concerns New Orleans.

Q. But, do you know as a matter of fact that $3660 was charged up as of that date to expense, maintenance, salary and wages on your books, as an expenditure in Louisville for salaries and wages and that only $1820 was charged up to New Orleans?

A. The question is too vague for me to answer. I do not understand it.

Q. Does the $5,480 represent all that was expended by the Cumberland Telephone and Telegraph Co. in the way of salary and wages for Louisville and New Orleans for the month of June, 1901?

A. It does not.

Q. How much more was expended?

A. The pay rolls concerning Louisville for the month of June,

showed salaries and wages charged to maintenance, salary and wages, amounting to $4,649.03.

Q. How much from New Orleans?

A. I don't know. New Orleans is not concerned and I have not examined the records, but I will do so if you think it is desirable to know it.

Q. What was the occasion for putting this item down of
602 $5480, and then dividing that between Louisville and New Orleans?

A. The occasion is the correction of pay rolls which were improperly distributed.

Q. Now was this item of $3,660 charged up to construction, exchange—aerial, in addition to the other pay rolls which you have exhibited and testified about in regard to pay rolls for the month of June, 1901?

A. Mr. Blakey, I didn't say this charge came from June pay rolls. What I said was, in the month of June the pay rolls entered on our books were incorrectly charged and that this entry was made to correct those pay rolls.

Q. This entry then is a mere estimate based on the amount of gain among the subscribers in the Louisville exchange, was it?

A. The entry shows that, but I know as a matter of fact that no estimates, or no important entries of this kind were ever made without more direct and detailed information than is shown in the entry.

Q. The entry then, is erroneously made?

A. It is not erroneously made; it is just not fully explained.

Q. It purports to state on what basis this amount is charged to construction—aerial, Louisville, Ky., does it not?

A. It seems so.

603 Q. And it purports to show that was made on an estimate from the subscribers gained, does it not?

A. It seems so, from the entry.

Q. Therefore, the entry to that extent is not full?

A. The entry is not full; that would be one factor to be taken into consideration.

Q. It did play a part in determining what amount should be charged to Louisville, then, did it?

A. Necessarily so.

Q. Then it could not be an accurate charge if it was based on an estimate, could it?

A. My opinion is that almost all accounting, of every nature, is the closest estimate that we can get to the facts.

Q. Your pay roll showed where work was done, did it not, what class of construction or what class of work was being done, did they not?

A. The pay rolls showed notations made by the Louisville clerk, indicating the class of construction to which the salaries should be charged.

Q. And if that had been followed, there would not be any estimate about it, would there?

A. I think the pay roll clerk's notation must be made from a time report, which is no more than an estimate.

Q. You didn't follow the clerk's notation made in Louisville in putting this $3,660 against construction, did you?

A. Partly.

604 Q. Not fully?

A. Not fully.

Q. Now have you a book or record of any nature in which appears the Louisville exchange construction, or an account of the Louisville exchange construction?

A. We have.

Q. Can you produce that?

A. For what year?

Q. Well, for 1901?

A. I will do so, and this book was also exhibited to the Mutual Audit Company at the time it made its audit of our accounts.

(Exhibits book.)

Q. Is the item of $3,660 on the book which you now exhibit, which purports to be the exchange construction for Louisville, Ky., for the year 1901?

A. This item does not appear on the Louisville books. When the Mutual Audit Company were at work in the office there were a few discrepancies in the 1901 construction account, and as I remember it, before an explanation was asked of these, I handed to their Mr. Warren on or about May 10th, a memoranda explaining to him fully these discrepancies, and at that time, as well as now, he has had full access to any of the original records and details in regard thereto.

Q. Is that item of $3,660 now a part of the $178,000 now
605 included as a part of the $178,000 for original construction in the Louisville, Ky., exchange for the year 1901?

A. I don't bear in mind just now how much original construction was added in 1901, but the item of $3,660 is a part of the Louisville construction account.

Q. Now have you a book showing the maintenance, salary and wages for the year 1901?

A. It is before you.

Q. The book you exhibit now shows then not only the construction but the maintenance, does it?

A. It shows the charges as originally made from the vouchers to both construction and to maintenance.

Q. Mr. Smith, I believe you have stated that $4,649.03 was the amount of the pay roll for maintenance for the month of June, 1901?

A. I didn't say that. I said that was the amount of the pay roll vouchers charged into the month of June, 1901.

Q. You subsequently transferred $3,660 of that to construction—aerial, I believe?

A. Yes.

Q. Now when you transferred that did you show on your books

under the head of maintenance, that that item had been transferred to construction and taken out of maintenance?

A. It necessarily appeared on the general ledger of the company.

Q. Does it appear anywhere except under the item which
606 we read a short time ago?

A. It appears on the journal as the book of original entry. From the journal it is posted to the general ledger.

Q. Does it now appear on your books as a part of the expense of maintenance for the year 1901, that sum of $3,660, I mean?

A. It does not so appear on the general ledger of the company.

Q. It does so appear on the book which is now before me, which you have exhibited?

A. No change on the book before you has been made. This book was compiled from the original voucher entries.

Q. Now do any other items appear on your journal in the way of corrections, such as the one about which you have been testifying?

A. Yes, on page 5, September, 1901, there appears this entry: September 30th, construction, exchange—aerial, charged, and credits are made to expense, maintenance, salary and wages, $9,000, and expense, maintenance, material, $1,000. Of that entry, $5,000 involves Louisville, Ky., salaries and wages, and $600, Louisville, material. That is a total of $5,600 was credited maintenance accounts and charged exchange—aerial construction account.

Q. Is that the same class of entry as the entry as of June, 1901, about which you have testified?

A. Yes.

607 Q. In other words, you transferred from material as it appears on your books, being a part of maintenance, salary and wages, $600. You transferred that sum to aerial construction?

A. Exactly.

Q. And the sum of $5,000 which appears charged on your books to maintenance, salary and wages, you have here transferred to aerial construction, and charged it to that account?

A. You are correct. This original entry corrects entries originally made.

Q. The entries originally made were erroneously made, were they?

A. Yes.

Q. I notice here a memoranda in connection with the items about which you have just testified, of labor and material used and charged to expenses, which considering the gain in subscribers is properly charged to construction. Is that the theory on which this correction was made?

A. The theory on which this correction was made is the same as that on which the previous correction was made and which I have explained fully.

Q. And this wording which I have just read then does not state the facts?

A. It states facts, but only partial facts.

Q. I notice as a part of this same entry that you have charged

up to Lexington, Ky., $100 for material, $500 salaries and
608 wages; Nashville, Tenn., $100 for material and $2,000 for salaries and wages; New Orleans, $200 for material, $2,000 for salaries and wages; the $10,000 which you first mentioned, was distributed among the four cities I have just named in the same way that the $5,400 was distributed between Louisville and New Orleans, which you explained in answer to the question about the entry for June, 1901, was it,—I mean, in the same general way?

A. Yes.

Q. I notice that entry contains the following item "Memo of entry and from H. B. S. Is that your signature?

A. It is not, those are my initials.

Q. Have you any additional entries for the year 1901 similar to the two about which you have just testified?

A. On page 74, under the head of October 30, 1901, is the following; construction, exchange—aerial charged $15,052, and expense, maintenance, salary and wages, is credited. Of this amount Louisville if affected to the extent of $7,388.

Q. I notice other items in addition to the $7388 of $150 to Jackson, Tenn.; $796 to Jeffersonville, Ind., $2086 to Memphis, Tenn.; $1557 to Nashville, Tenn., $2134 to New Orleans, $576 to New Albany, Ind., $682 to Shreveport, La. and $673.00 to Vicksburg, Miss. The same explanation in regard to the other vouchers, in so far as these particular items are concerned, applies, in so far as items of this nature are concerned, applies to the items I have
609 just read, does it?

A. Yes.

Q. Do these two items aggregating $5600, which appear on your books as of September 1901—do they now appear in your construction account and go to make up the $178,000 of original construction in the City of Louisville for the year 1901?

A. They are included in the cost of construction in the year 1901.

Q. And the same is true of the item of $7388 for the month of October 1901?

A. Yes.

Q. Are there any other items for the year 1901 similar to the ones about which you have testified?

A. Under date of October 31st, 1901, the following entry appears, on page 127: Construction, exchange—aerial, is charged $624.00 and this amount is credited to expense, maintenance, traveling. The Louisville exchange is affected in the sum of $200. The explanation of this is that livery hire and board charged for September in October vouchers direct to expense, which according to construction done during month, is properly chargeable to construction.

Q. This item of $624 is divided up among nine cities, is it not?

A. Yes.

610 And the item of $200 chargeable to Louisville construction is one of the items that goes to make up the aggregate of $178,000 for original construction for Louisville in 1901?

A. Yes.

Q. Now are there any other additional items of a nature similar to the ones you have just testified about, for the year 1901?

A. I know of no others. You will bear in mind, of course, as stated, this morning, that the original charges to maintenance for the year 1901 at Louisville, or rather of the payroll vouchers charged into the year 1901 at Louisville, was $47,278.94, and that the corrections outlined above and made in the books, there remains charged to maintenance, $31,230.94.

Q. Does it include the proportion of the general expense which was charged to Louisville?

A. I think not.

Q. Mr. Smith, can you tell me how much was charged to original construction in the City of Louisville according to your vouchers for the month of January 1900?

A. $17,018.40.

Q. Does that amount go to make up a part of the total of $166,000 which is the construction account for the year 1900?

A. It does.

Q. Does that item include, salaries, wages and material?

A. Yes, expended for construction purposes.

611 Q. When was the material furnished for which any part of this total item is a charge and when was the labor done for which this item is a charge?

A. The only way I can answer that accurately is to go back to the records and determine. It is often a fact that these vouchers are thirty days late getting into the books of the company.

Q. I will ask you if you didn't state to Mr. Warren, in connection with this particular item and the vouchers representing this particular item, that the vouchers representing this total item could not now be found?

A. I stated to Mr. Warren that through January 1900 the accounts of the Ohio Valley Co. and of the Cumberland Telephone and Telegraph Co., were run on separate books of account and the vouchers were filed in separate files, and that owing to the fact that my office had been moved several times during the nine or ten years, that at the time the Mutual Audit Company was engaged in their work, we were unable to locate January vouchers of the Ohio Valley Telephone Co., and to this date, we do not know where they are. At the time I took out of the files, the voucher record of the Ohio Valley Co. and showed Mr. Warren the original entries thereon and individually explained to him our inability to furnish the vouchers, and the explanation seemed entirely satisfactory to him at the time, he making several comments as to the age

612 of the vouchers and the tremendous number of vouchers or papers necessary to be filed.

Q. Have you then, any original entries or papers whereby you can show when this expenditure of $17,000 for the month of January was made, or when the labor or material were furnished?

A. If necessary to get this information up I should analyze subsequent vouchers and determine whether or not they were sent in

promptly and which ones were the first ones we could locate, and in this way determine through induction which were missing.

Q. You could not determine definitely, however, I assume from what you say?

A. I think it could be determined definitely enough for a reasonable person.

Q. What would be your best judgment as to when this material was furnished or labor performed, representing this item of $17,000?

A. Probably within thirty days of the time it reached the books.

Q. When did it reach the books?

A. During January 1900.

Q. The books do not show the exact dates on which the vouchers were paid?

A. The book that you are looking at shows the number of the voucher and the charges on that voucher.

Q. Would you say that any of this material was fur-
613 nished or any of this labor performed which is represented by this $17,000, subsequent to January 27th, 1900?

A. Hardly.

Q. Now Mr. Smith, I will ask you if you can produce voucher No. 711 in favor of the Western Electric Co., being a voucher for the month of January 1900?

A. Here it is. (Hands same to counsel.)

Q. I notice among this voucher an item of $154.36, goods returned from Louisville, Ky; another item of $134.00 goods returned from Louisville; another item of $128.80, goods returned from Louisville. Were those sums ever charged up as a part of the construction of the Louisville exchange?

A. The credit memoranda show that supply was credited with the proceeds. I presume from that, that supply had been charged at the time the reels were shipped, and that no part of the charge was made against Louisville.

Q. How is your supply department conducted?

A. In what way?

Q. You have, in Louisville, a department known as the supply department, have you not?

A. Yes, a supply house.

Q. And for what district is that a supply department?

A. The supply house at Louisville is established to enable the company to buy at wholesale as much as possible, or as is prudent, and store for the use of the system in that locality.

614 Q. You mean, the system in the district?

A. The district, or the system; at times Louisville will have supplies that other supply houses have not. In that case, Louisville is drawn on, if economical, for such supplies.

Q. And does the supply department furnish Louisville with such supplies as are required and such as it has in stock?

A. Yes.

Q. Is Louisville charged with the cost price of supplies when such are furnished?

A. As near as possible.

Q. Is any percentage added to the cost?

A. Yes.

Q. How much?

A. Covering freight, drayage, rental etc. This percentage has varied at different periods, the maximum, I believe, being ten per cent.

Q. Do you use cables in any part of the Louisville district, except at Louisville?

A. I think most of the exchanges which we have, had some cables in them.

Q. Was that true in 1900?

A. I cannot say positively, but I think so.

Q. Mr. Smith, I would like to see voucher No. 779, for the month of February 1900?

615 A. I hand it to you.

Q. Among other items I find in this voucher, is one in favor of the Western Electric Company for $12,667.37, which seems to have been charged to underground construction in the City of Louisville. Does that item go to make up a part of the $166,000 new construction in Louisville during the year 1900?

A. Yes.

Q. Do you know whether that underground cable was used in replacing any cables which were originally installed in Louisville, Ky.?

A. I think it was not, from the fact that it is charged to construction. If it had been used to replace other cable, it would not have been charged to construction.

Q. Do you know of your own knowledge that it was not used to replace other cable?

A. I wasn't present in Louisville during the years either 1900 or 1901.

Q. And don't know for what purpose that cable was used, of your own knowledge?

A. The cable is cut into special lengths, as will be noted from the invoice. I don't know that it was not used as charged. All my information at this time is what the voucher shows.

Q. Will you examine the voucher about which you have just been testifying and see whether any underground cable in

616 that was charged to re-construction or maintenance?

A. Voucher No. 779 for February 1900 shows no charge against maintenance account at Louisville, Ky.

Q. What charge does it show against underground construction in Louisville?

A. It shows a charge of $13,813.87 against Louisville construction, underground.

Q. Now, voucher No. 711, which you produced a short time ago, shows $401.64 against underground construction, Louisville, Ky. I will ask you if that voucher shows any charge against re-construction or maintenance in connection with underground construction?

A. Voucher No. 711 for January shows no charge against Louisville maintenance for underground re-construction.

Q. I would like to see Voucher No. 897 for April 1900?

A. I hand it to you.

Q. Mr. Smith this voucher No. 897 for April seems to be in favor of the Western Electric Company and I will ask you what was the character of the purchase made from the Western Electric Company?

A. We purchased two sections of toll switch boards with a keyboard equipment; one subscribers' section multiple switchboard with keyboard equipment; extra frame work for subscribers' section; local wiring was done by that company for subscribers and toll sections and miscellaneous switchboard material furnished, together with factory cable, labor in factory framing and attaching
617 566 cables to jacks, lamp sockets and terminals strips. We purchased one subscribers' section key and plug shelf and one trunk section, key and plug shelf with full equipment.

Q. At a total cost of how much?

A. $11,146.42.

Q. How much of that expenditure was for the purchase of toll board equipment or material in connection therewith?

A. I am unable to analyze the voucher and answer that. The first two sections are entered here with keyboard equipment as $728.73 and $653.95, and local wiring for two toll sections $251.30.

Q. Was any part of the material and labor which appears charged in this voucher made necessary on account of the toll switchboard equipment and installation thereof?

A. Yes.

Q. Was that entire sum of $11,146.42 charged up to original construction of the Louisville exchange?

A. It was, necessarily so.

Q. Do you know whether the only subscribers' section, multiple switchboard which appears as a part of this voucher, was used to take the place of a subscribers' section multiple switchboard which had worn out or become useless?

A. Without knowing absolutely, I am pretty certain from other facts in the case, that it was a brand new section for the accommodation of new subscribers, which the company was gaining very rapidly at this time. The main office switchboard which
618 was acquired from the Ohio Valley Telephone Company had only been installed a few years, two or three. The voucher itself indicates that it was a brand new purchase for construction purposes as it is charged to construction.

Q. The voucher itself does not show that it was not *be* be used to take the place of some other switchboard?

A. It does, by being charged to construction.

Q. And that charge to construction was made at Nashville?

A. The notation on the voucher itself was made at Nashville.

Q. Is the eleven thousand and odd dollars which appears in this voucher and which you say was charged to original construction—does that go to make up the one hundred and sixty six and odd

thousand dollars, the original construction for the year 1900 in Louisville?

A. Yes.

Q. I now would like to have Voucher No. 1476 for November 1900?

A. I hand it to you.

Q. This seems to be a voucher No. 1476 for November and it seems to contain a bill in favor of the Western Electric Company dated November 23rd, 1900, making a total of $12299.44, which is charged to Louisville equipment. What does that expenditure represent?

619 A. The invoice reads, in part, as follows: 16th and 17th sections, multiple switchboard equipment for Cumberland Telephone and Telegraph Co. at Louisville, Ky. It then itemizes the various apparatus.

Q. Would that indicate then that you had seventeen sections in your switchboard at Louisville when these two were installed?

A. It would seem so.

Q. Do you know how many you have there?

A. I do not.

Q. To what switchboard were these sections added?

A. These sections were added, I think, to the main exchange. In fact I am sure of it.

Q. Mr. Smith, I wish Voucher No. 2307 for December 1901?

A. I hand it to you.

Q. This voucher seems to be for some $39,000 for installing and equipping the South exchange, Louisville, Ky., is that correct?

A. The voucher contains a number of invoices. One of those vouchers, dated November 30th, 1901, is for $39,209.54 for a No. 1 relay switchboard built for the South office, Louisville, Ky.

Q. Was that the cost of the switchboard and the installation thereof?

A. On the last page of the invoice is this notation: an additional bill for installation and balance of material, will be rendered.

620 Credit will be given for material returned.

Q. Do you know whether or not that was rendered?

A. Not at this date, but I have no doubt it was as the Western Electric Company is a very well managed company, and therefore I presume it was.

Q. Do you know what percentage of the cost of the South Exchange, the $39,000 represents?

A. No, I do not, and I do not know what you would consider the South exchange.

Q. I mean by the South exchange, the equipment used in connection with the South exchange?

A. We have two styles of equipment. One central office equipment and one subscribers' station equipment. I think the invoice we are referring to is the largest part of the cost.

Q. What does the invoice show as the capacity of that South Exchange?

A. It shows as the ultimate capacity, 4900 lines, 350 outgoing

trunks, 216 incoming trunks. It shows as the equipment at the present time, that is, at the time the invoice was rendered, 2100 subscribers' lines, 200 outgoing and 200 incoming trunks, and 10 toll trunks.

Q. Does that mean that the South exchange was equipped to take care of 10 toll trunk lines?

A. No, it means that it was connected with the main ex-
621 change or had the capacity of being connected with the main exchange for ten trunks which could be used for tolls.

Q. Doesn't the 10 toll trunks appear under the present equipment?

A. Yes.

Q. Would not that then mean it was at that time equipped with ten trunk toll lines?

A. Not with ten toll trunk lines, but with the equipment for ten toll trunk lines.

Q. And was the entire $39,000 represented by this invoice charged to the construction account of the Louisville exchange and does that amount now go to make up a part of the $178,000 total construction for the year 1901?

A. The whole of the invoice was charged to construction, Louisville exchange, and is a part of the present cost of that exchange.

Q. Have you these vouchers on this list?

A. I am handing you the nine vouchers of the Western Electric Company for 1902 requested on your written memorandum.

Q. Mr. Smith, this voucher seems to have one invoice from the Western Electric Company of date December 1st, 1901, amounting to a total of $17,087.45. Will you explain what expenditure that represents?

A. The invoice reads, "Additional switchboard equipment
622 to be installed for Cumberland Telephone and Telegraph Co., at Main office, Louisville.

Q. I will get you also to read the language immediately following the part you have read?

A. Ultimate capacity 4800 subscribers' lines; 360 outgoing trunk lines; 180 incoming trunk lines, 160 toll lines. Present equipment 4800 subscribers' lines, 200 outgoing trunk lines, 180 incoming trunk lines; 160 toll lines.

Q. What does that language mean that you have just read?

A. I don't know that I could express it any clearer than it is in this invoice.

Q. Does it mean that the items going to make up the $17,000 was an expenditure to increase the capacity of the main switchboard by adding thereto sufficient equipment to take care of 4800 subscribers' lines, 200 outgoing trunk lines, 180 incoming trunk lines and 160 toll lines?

A. I take it to mean that, since it states it.

Q. Now I notice on the second page of this invoice the following language: "2 (24th and 25th) sections trunk, multiple switchboard. The last invoice which was exhibited here from the Western Electric Company was for the installation of the 16th and 17th sections of

the multiple switchboard in the main exchange. Can you explain how this bills calls for the 24th and 25th sections?

A. No, the invoice itself shows that; I don't know anything further about either of them.

623 Q. Do you know whether this item of $17,000 represented by this invoice was for equipment to take the place of other equipment theretofore installed, or whether it was for new equipment?

A. It is charged to construction account, Louisville, to which account would not be charged such item if it were not new equipment.

Q. You don't know yourself, though, whether it was actually used to take the place of other equipment, do you?

A. Not individually or personally. All my information in regard to such things comes through reports.

Q. I notice on page 6 of this invoice, third section of toll equipment and on page 7, keyboard equipment and on page 8, fourth section of toll switchboard, and on page 9 keyboard equipment, and I would ask you if the items following the third section, toll switchboard on page 6 and the other items down to miscellaneous switchboard material on page 9, was for material used in connection with toll switchboard?

A. The invoice states so.

Q. What is the total of those items which I have just referred to?

A. The third section of toll board, including keyboard is billed at $1065.05; the fourth section, with keyboard, at $883.93.

Q. Are there any other expenditures appearing in that invoice, for other material and for labor in connection with install-

624 ing those third and fourth sections toll switchboards?

A. I think so.

Q. Are the items for toll switchboards and other material and labor in connection therewith, which appear in this invoice for $17,000 and a part of the $178,000 charged to construction of the Louisville exchange for the year 1901?

A. These vouchers are for the year 1902. The total of this invoice is included in the total of the Louisville construction account and properly so, for the year 1902.

Q. One of the invoices which go to make up this voucher No. 2588, April, 1902, seems to be miscellaneous labor and material, and labor in installing switchboard shipped to main office, Louisville, Ky., an item of $2137.17. I will ask you to explain what the individual items going to make up that total, were used for, if you can?

A. The invoice seems to be for switchboard material and labor in connection with installation of switchboard at Louisville main office.

Q. Can you determine from that when any such labor was performed or material furnished?

A. The invoice is dated April 21st, 1902, and states material shipped since our invoice of December 31st, 1901.

Q. Now do you know whether or not that was used in replacing any part of the old switchboard or whether it was material and labor performed in new construction?

625 A. The invoice is charged to construction equipment account of the Louisville exchange and that indicates to me clearly that it was a case of new construction.

Q. You don't know that of your own knowledge, however, do you?

A. I do not.

Q. Was that material and that equipment used in connection with the main exchange?

A. I think so.

Q. Another invoice in this voucher is of date April 17th, 1902, representing an expenditure of $4707.16 in favor of the Western Electric Company. I will ask you to explain that item?

A. That item is part of the cost of switchboard equipment, at the South office, Louisville, Ky.

Q. Was that new equipment or equipment used to replace some that had been theretofore placed there?

A. The south office was only completed about that year; the charge is to construction equipment and the voucher clearly indicates that it was not reconstruction.

Q. Do you know whether some of the original equipment placed in the South exchange proved to be valueless and had to be removed and replaced with other, such as represented by this item?

A. If such had been the case, I am certain it would have been done without additional cost to the Cumberland Co.

626 Q. This seems to be for three sections, seven panels. How many sections were there originally placed in the South exchange?

A. I don't know.

Q. Were both of these items in this voucher for $2100 and for $4700 charged to construction account for the year 1902, and was those items there included in and do they go to make up the total sum which you have heretofore testified to as being the amount expended in Louisville for construction during the year 1902?

A. Yes.

Q. This item of $4700 appearing on the invoice of April 17th, 1902, has the following memoranda written thereon: This amount being approximately 25% of the estimated cost of additional switchboard equipment at South Office, Louisville, and now due, according to our circular letter of February 11th. How do you explain that memoranda?

A. I have the original circular letter if you would like to read it.

Q. No, I don't care to read it.

A. The circular was something to this effect, it requires a considerable length of time to build and install a switchboard of the size of the one being referred to. The circular states that future installations will be made so that 25% of the cost of the switchboard will become due at a specified time, say, at the date the

627 apparatus is shipped from the factory; another 25% falls due at some specified time, as the work progresses; and the third twenty five per cent later on, and the final payment, I think, thirty days after the apparatus has been accepted and tested. I

am not positive as to the dates, but this answer is approximately correct.

Q. Would you say then, the additional switchboard equipment, third section, seven panels, three operator switchboard equipped for eight subscribers' operators, which seems to be the equipment for which $4700 is charged, cost four times forty-seven hundred dollars?

A. Yes, but the final invoice adjusts any additions if there are any.

Q. And this $18000 which seems to have been substantially the amount charged for this additional equipment, switchboard equipment, is for equipment in addition to the equipment of the South exchange originally costing $39,000, is it?

A. Yes. If the final invoice shows that the estimated advance charges were correct.

A recess at this hour, 12:45 was taken until this afternoon at two o'clock.

628 Cross-examination of H. BLAIR SMITH, resumed, at 2 o'clock, p. m., Tuesday, Sept. 7, 1909.

By Mr. BLAKEY, for the Defendant:

Q. Was any equipment for switchboard for either the main, south, east, or west Exchange, purchased from any source except the Western Electric Company?

A. That is a question that can not be answered positively by me, but I think that all of our Louisville switchboard equipment was bought from the Western Electric Company.

Q. Have you before you the construction account showing the vouchers for purchases from the Western Electric Company for equipment for the Louisville Exchange?

A. Our Construction account for the nine years is in this office. If you desire it analyzed, it can be done. It would take a considerable period of time to do it accurately.

Q. Does this book which is now before you show the number of the vouchers for expenditures on account of Construction, in so far as the equipment is concerned, for the Louisville Exchange?

A. I have before me the book showing the Construction account for one year. Our Construction records show the voucher numbers, or original sources of entry for all charges made against construction.

Q. I show you voucher No. 167, for May, 1902, which contains, as a part of it, an invoice of the Western Electric Company, April 30, 1902, which shows a total of $11,503.75
629 charged to Construction Louisville Exchange. I will ask you where the material represented by that invoice was used?

A. The invoice shows that it was for the South office.

Q. What are the character of the items furnished for the South office, as shown by that invoice?

A. The invoice covers something over 5 pages about a foot long, and itemizes what I think is switchboard apparatus.

Q. Was that material used to take the place of apparatus theretofore installed in the South Exchange, or new apparatu- which was installed at the time the bill was made?

A. The invoice shows that it was new apparatus, and not for the purpose of replacement.

Q. How do you ascertain that fact?

A. The invoice is charged to Construction Equipment.

Q. Who charged it to Construction Equipment?

A. It was so charged in the office of the Purchasing Agent.

Q. Do you know, yourself, for what purpose the material represented by this invoice was used?

A. I know nothing further than what the invoice shows.

Q. I notice one item on this bill, 2150 No. 103 A Relays, $2.50 $5375.00. What are "A" Relays?

A. I don't know.

Q. Is that entire bill of $11,503.75 charged up as a part of the new construction for the year 1902?

A. It was so charged.

630 Q. I show you voucher No. 2586, June, 1902, which seems to have $4916.64 charged up to Equipment Construction for the Louisville Exchange. Will you tell me what that item represents?

A. The charge is from two invoices, as follows: June 5, 1902, One G. I. 1¼ 115 volt motor per Tel. #6366; One M. I. 30 volt generator, per Tel. 6367; 1 cast iron sub base with cushions. One flexible insulating coupling. Two line terminals for M. I. Generator. Amount $209.48. Also invoice of June 6th, for approximately twenty-five per cent. of the estimated cost of addition to switchboard at the south office, Louisville, Kentucky, amount $4707.16.

Q. The first item you refer to, of date June 5th, 1902, seems to be for motor and generator, and I should like to know what a motor and generator are used for in connection with the exchange?

A. I am not well up on the technical or mechanical or electrical sides of the business, but I think a motor and generator are used for ringing subscribers.

Q. Do they produce the electricity necessary to transmit messages over the wires?

A. You are asking me questions on a subject that I am not familiar with; but my answer to that is that I think not.

Q. Are they necessary in connection with operating a telephone system?

A. I believe them to be, otherwise they would not have been bought.

631 Q. Were those motors and generators to take the place of others that were displaced for some reason, or were they new?

A. The invoice indicates new.

Q. Does the invoice indicate whether they took the place of old ones that were removed?

A. It indicates that they do not.

Q. In what way?

A. The charge is to Equipment.

Q. Do you know yourself whether the material mentioned in this voucher did take the place of other equipment which was removed?

A. I know nothing further than what the voucher shows on its face.

Q. And this item is part of the gross item making up the construction account for the Louisville Exchange for the year 1902, is it?

A. The item mentioned was charged to Louisville Construction in 1902.

Q. Was this material used in connection with sending toll messages, or Exchange messages?

A. I don't know.

Q. The other item you mention I believe was payment on the South Exchange Board?

A. Invoice for a payment due on the South Exchange board.

Q. It seems to be for 3 sections 7 panel 3 operator switch board equipped for 8 subscribers operators' additional switchboard equipment: is that the correct item?

632 A. The invoice shows that.

Q. The next voucher I show you is No. 2287, October, 1902. There seems to be among the papers in this voucher an invoice in favor of the Western Electric Company for $6480.00. Please state what that payment represents?

A. That invoice reads in part as follows:

"To first installment of 25% due this date for the furnishing and installing of 5 sections 6 panel 2 operator switchboard No. 1 Relay multiple type equipped with 10 trunk operators, 3 sections 6 panel 3½ operator switchboard. No. 1 relay multiple type equipped for 7 subscribers' operators, at main exchange, Louisville, amount $6480.00."

Q. Do you know when that equipment was installed?

A. The invoice is dated September 30th, 1902. Further than this I know nothing about it.

Q. This invoice represents a fourth of the total cost of this particular installation, does it?

A. It represents 25% of the estimated cost.

Q. Do you know what five sections are referred to in this invoice—what their numbers are?

A. No.

Q. Do you know whether any equipment was placed in the main exchange in Louisville during the years 1901 and 1902, and afterwards removed from the main exchange?

A. I am not familiar with the subject. I have a faint

633 recollection of one or two sections of switchboard having been taken out of Louisville and transferred to another exchange; but this recollection of mine is not clear.

Q. Do your records show any item crediting to the Construction

account at Louisville any such switchboards so removed from the Louisville Exchange?

A. As I say, my recollection is dim. If such transfer is made, the records will show it.

Q. Will you investigate your records and let me know whether they do show any such removal?

A. I can do so, but I would like to state beforehand that it may require a few days to do it.

Q. I will withdraw the request, then, for the present. Mr. Smith, I show you voucher No. 2652, for November, 1902, in which there is contained an invoice of date Oct. 22, 1902, amounting to $245.95. I will ask you what that expenditure represents.

A. The invoice shows that it represents A toll record of switchboard equipment to be installed at the Main office Louisville, Ky., the amount of the invoice $245.95.

Q. Is that charged up to the construction account of the Louisville Exchange, for that year?

A. It was, properly so.

Q. I notice another invoice of date October 31, 1902, $6480.00. Please explain that item.

A. That is the second installment of 25% for the 5 section 6 panel 2 operator switchboard, etc., for the main office Louisville.

634 Q. Mr. Smith, what is the difference between the switchboard equipped for 4800 subscribers' lines and equipped for 4800 circuits?

A. I don't know; they seem to me about the same.

Q. In the same voucher, No. 2652, I find a bill of the Western Electric Company, of date October 27th, 1902, for a No. 1 Relay switchboard equipment to be installed for the Cumberland Telephone and Telegraph Company, Nashville, Tenn., the same seeming to contain 13 sections 7 panel 3 operator switchboard equipped for 1 switching and 36 subscribers' operators. I notice a memorandum attached to the back of that invoice which reads as follows:

"Cost of Nashville switchboard power plant power switchboard generator equipment, storage plant, conduits and cables in this building, chief operators', wire-chief's sections, etc., $75,769.87, connected and ready for use as equipment for 4500 circuits, cost per circuit $16,838. Cost of toll board not included."

Can you explain the meaning of that memorandum at the back of that invoice?

A. You have not read it as it is there. The cost per circuit is $16.83.8 (sixteen dollars and eighty-three and eight-tenths cents). What is it you would like to have me explain?

Q. Does that memorandum mean that the Nashville of-
635 fice equipped its plant with the switchboard and the other items I have mentioned, for 4500 circuits, for $75,769.87?

A. The memorandum seems to indicate that.

Q. Does that memorandum mean that the cost of the toll board connections is not included as a part of the $75,000?

A. I think the memorandum states that. Of course you under-

stand that no two sections on a switchboard are the same or cost the same amount. The cost given by you of the Nashville switchboard is as originally installed, and does not include any additions thereto, which have since been made.

Q. I show you now voucher No. 2766, for November, 1902, which has, as a part of it, an invoice in favor of the Western Electric Company for $2218.44, and ask you to state for what purpose that expenditure was made?

A. The invoice reads: "For power apparatus to be installed for Cumberland Telephone and Telegraph Co. at main office, Louisville."

Q. Had there been any power apparatus at the main exchange at the Louisville office, prior to this date?

A. I presume so.

Q. Do you know whether this was installed to take the place of the power apparatus that was in use prior to the installation of this plant?

A. The invoice shows that it was new.

Q. Does the invoice show that it took the place of another one that was removed

636 A. It does not.

Q. Do you know whether it did take the place of another that was removed?

A. I know nothing further than what is shown in the invoice.

Q. Was that item of $2200.00 charged up to the construction account of the Louisville Exchange for the year 1902?

A. Yes sir.

Q. I show you voucher No. 2617, for the month of November, 1902, which seems to be in part an invoice in favor of the Western Electric Company for $19591.30. Will you please explain what the articles represented in that invoice were used for?

A. We have already referred to two 25% bills on account of additional switchboard equipment at the South office in Louisville. This is the final bill for that equipment. The total cost of the installation is shown as $19,591.30, but from this is deducted the two 25% bills previously referred to, leaving balance of this bill $10,176.98.

Q. I will ask you to read the writing which appears on the first page of this bill immediately before the particular items which go to make up the bill.

A. The caption of the bill reads as follows:—

"An additional switchboard equipment to be installed for Cumberland Telephone and Telegraph Company at South office,

637 Louisville, Ky. 3 sections 7 panel 3 operator switchboards equipped for 8 subscribers' operators; 2 sections 9th and 10th subscribers' multiple switchboard."

Q. Were the items represented in this bill charged to the Construction account for the year 1902?

A. Yes.

Q. I show you voucher No. 2382, for the month of December, 1902, which contains, among other papers, an invoice in favor of

the Western Electric Company, of $3870.41. Please explain what the items represented by that invoice were used for?

A. The invoice shows that the shipment was for work at the South office, Louisville, Kentucky. It reads, in part, as follows:—"Miscellaneous Material shipped since our bill of April 30, 1902 and November 22, 1902." It states that credit will be given for any material returned. The amount of this invoice was charged to Construction.

Q. I show you an item in the same voucher which seems to be in favor of the Western Electric Company, $56.67. Will you please explain that item?

A. Invoice, dated Dec. 9th, 1902, states that it is for one No. 2261 Combination bridge rheostat and galvanometer.

Q. Do you know where that was used?

A. It is charged to Louisville, and it must, therefore, have been installed at Louisville.

Q. Do you know, as a matter of fact, whether it was installed at Louisville?

A. Nothing further than what the invoice shows.

638 Q. Does the invoice show that it was installed at Louisville?

A. The invoice shows that it was charged to Louisville.

Q. Do you know whether it was to take the place of another instrument of that nature?

A. I know nothing further than what the invoice says.

Q. Do your records show any charge for equipment against Maintenance for the years 1900, 1901 and 1902?

A. I don't know; I would have to analyze charges to determine.

Q. You have stated, I believe, that all reconstruction charges for the years 1900, 1901 and 1902 are included as a part of Maintenance?

A. All reconstruction done during those years was charged to Maintenance.

Q. Have you before you a book for any one year showing the items that go to make up the Maintenance charges for the particular year in question?

A. I have before me a book showing charges to Maintenance from vouchers and other original records, but the charges are in total and not in detail. To get them in detail it is necessary to refer to the original records.

I am handing you herewith nine more vouchers from the Western Electric Co., as requested on your written memorandum, for the year 1903.

Q. I hand you voucher No. 2526, for the month of January, 1903, which seems to include an invoice in favor of the Western

639 Electric Company for $6480.00; is that one of the payments of the same amount about which you have already testified?

A. This invoice is dated December 11, 1902, and is the third installment of 25% due date bill for furnishing certain apparatus for Louisville which has already been referred to twice.

Q. That was in connection with the main Exchange, I believe was it not?

A. Yes.

Q. I hand you voucher No. 2849, for the month of March, 1903, which contains an invoice in favor of the Western Electric Company for $6,160.00. Please explain what that item represents.

A. The invoice is dated March 6, 1903, and is in March voucher No. 2849. It covers the first installment of 25% for the furnishing and installing of four sections 7 panels 3 operators No. 1 Relay multiple switchboards equipped for 10 subscribers' operators and 1 testing operator; one section 5 panels 2 operators No. 1 relay multiple switchboard equipped for 2 trunk operators; one section 7 panels 3 operators, No. 1 relay multiple switchboard equipped for 1 trunk and 1 switching operators, at East Exchange, Louisville, Ky., amounting, the first installment, to $6,160.00.

Q. Was the East Exchange installed and equipped at about that date?

A. The invoice indicates that.

640 Q. Did the Western Electric Company furnish the apparatus and equipment for the East Exchange?

A. The Western Electric Company furnished and installed the central office apparatus.

Q. What additional apparatus was needed or used, if any?

A. Subscribers' apparatus.

Q. That means the telephone instrument itself?

A. Yes, and apparatus in connection with cables.

Q. Who furnishes that?

A. We get some of it from the Western Electric.

Q. Is any of that included in this bill?

A. This bill covers a central office equipment only.

Q. Does the central office equipment include cables running into the central office?

A. It includes cables inside the building.

Q. So it would seem, then, that the original cost of installing and equipping the apparatus for operating the East Exchange cost something less than $25,000, would it?

A. That invoice indicates such to be the case.

Q. I show you voucher No. 2609, for the month of July, 1903, for $6,160.00; is that correct?

A. Yes sir.

Q. What does that represent?

A. That invoice is for the second installment of 25% due on central office apparatus described just above, for the East Exchange, Louisville, Ky.

641 Q. Were both of the items you have just mentioned charged to Construction account of the Louisville exchange, for the year 1903?

A. Yes.

Q. I show you another voucher, 2515 which has connected with it an invoice in favor of the Western Electric Company, for $6,160.00. Is that the third payment of the indebtedness for installing the East Exchange, the first two of which you have just mentioned?

A. Our reference is to August voucher 2515. The invoice mentioned covers the third installment of 25% due on the East office

switchboard. It is for $6,160.00, and was charged to Construction equipment, Louisville.

Q. I show you voucher No. 2552, for the month of August, 1903, which contains an invoice in favor of the Western Electric Company for $4,095.00. Will you please explain what that expenditure was made for?

A. The invoice, dated August 1, 1903, reads, in part, as follows: "To first installment of 25% due this date for the furnishing and installing of 5 sections 6 panel 2 operator No. 1 relay multiple switchboard equipped for 9 subscribers' and 1 testing operator; 2 1-3 sections 6 panel 2 operator No. 1 relay multiple switchboard equipped for 3 trunk and 1 switching and incidental trunk operators, at West Exchange, Louisville, Ky., amount $4,095.00.

Q. When you say equipped for 9 subscribers, do you mean 9 subscribers' operators?

A. 9 subscribers' and 1 testing operators, making 10 oper-
642 ators.

Q. It was then equipped for 9 subscribers' operators, was it?

A. Yes.

Q. Do you know whether or not the West office was equipped and installed at about that date?

A. The invoice I have just read from is the first installment, which ante-dates the completion of the installation.

Q. Do the facts you have stated with regard to the extent of the equipment in regard to the East Exchange apply to this bill in so far as equipment of the West Exchange is concerned?

A. Do you mean have the invoices for the East Exchange Equipment antedated the completion of the installation?

Q. No. You stated in connection with the East Exchange that the equipment and installation covered by the bill rendered by the Western Electric Company was for the switchboard and all equipments, including cables in connection therewith inside the building. Is that also true of the bill here represented for the installation of the West exchange?

A. I think what I stated regarding the East exchange applies to the West exchange, except as to the amount; and I would here add that it is possible that some additional invoices may have been rendered for installation and other material that it was found necessary to add. These invoices for installments are based on estimates.

643 Q. It would seem, then, that the Western Electric Company's bill for installing and equipping the West Exchange was less than $17,000.00, would it?

A. I think so.

Q. And that item was charged up as cost of construction for that year, was it?

A. The invoice mentioned was.

Q. I hand you voucher No. 2356, October, 1903, which has as a part of it an invoice in favor of the Western Electric Company for $4,095.00. Will you please explain that item?

A. That item is the third installment for the West exchange switchboard.

Q. And the facts with regard to the other two installments apply to this also?

A. Yes.

Q. I hand you voucher No. 1183, December, 1903, which contains, as a part of it, an invoice in favor of the Western Electric Company, Nov. 30, 1903, in the total sum of $16,997.14. I will ask you to explain that invoice.

A. This invoice, covering 22 large sheets of invoice paper, shows the total cost of the West office switchboard and equipment. It shows that the cost of this was $16,997.14, but from this amount is deducted the total of the three 25% installment bills of $4,095.00 each, which have been heretofore referred to. The balance due is bill amounting to $4,712.14.

644 Q. I will ask you to read the caption of this invoice. By caption I mean the part which immediately precedes the individual items that go to make up the total.

A. The invoice reads in part as follows:

"A No. 1 relay multiple switchboard equipment to be installed for Cumberland Telephone and Telegraph Company at West office, Louisville, Ky. Ultimate capacity 4,800 subscribers' lines, 500 outgoing trunk lines, 106 incoming trunk lines; present equipment, 1,000 subscribers' lines, 120 outgoing trunk lines, 106 incoming trunk lines; 2 1-3 sections 6 panel 2 operator switchboard equipped for 3 trunk operators and 1 switching and incoming trunk operator, 5 sections 6 panel 2 operator switch board equipped for 9 subscribers' operators and 1 testing operator."

Q. Did the equipment represented by this bill include power plant?

A. Page 18 of the invoice bills miscellaneous power plant parts.

Q. I also notice on the same page an item, I notice the word Conduits, under which there are a number of items. What would be your explanation of that part of the bill?

A. I don't know.

Q. Do the cables run into the building in which the switchboard is located in conduits, or do they run into the switchboards overhead?

A. I don't know.

Q. If they run into the building through conduits, then
645 it would seem, from this bill, that a part of the conduit system outside of the building would be included in the total payment of $16,997.14, wouldn't it?

A. I think not.

Q. Where else would the conduits be except outside the building?

A. A conduit is sometimes inside the building, even in through the walls of the building.

Q. Aren't they called cables when they are inside the building?

A. Cables are entirely different from conduits.

Q. In the equipment and apparatus for the South exchange I

notice there were certain toll lines provided for as a part of the equipment; is that true of the East and West exchanges, also?

A. I don't know that toll lines run into the South exchange; and I don't know that any toll lines run into the East or West exchanges.

Q. I now hand you voucher No. 950, which seems to be for the month of November, 1903, and contains, among other papers, an invoice in favor of the Western Electric Company for some $24,940.58. Will you please explain that invoice?

A. The invoice, dated October 30, 1903, is for $6460.58. It is 18 pages, and shows in detail apparatus and cost of the switchboard built and installed for the East Exchange, at Louisville. From the
646 total cost of installing the Board is deducted the total of the three installments heretofore referred to, for $6160.00 each.

Q. What was the total cost?

A. The total cost, as shown by the invoice, was $24,940.58.

Q. And what is the caption of the bill?

A. The caption is as follows:—

"A No. 1 Relay multiple switchboard equipment to be installed for Cumberland Telephone and Telegraph Company at East Exchange, Louisville, Kentucky. 1 Section 7 pannel 3 operator switchboard, equipped for 2 trunk and 1 switching operators, 1 section 5 panel 2 operator switchboard, equipped for 2 trunk operators; 4 sections 7 panel 3 operator switchboard equipped for 10 subscribers and 1 testing operator."

Q. I will ask you to examine pages 11 and 13 of the invoice and state whether the cost of the power and generator equipment and storage battery equipment appear as part of the cost of the apparatus and equipment furnished by the Western Electric Company and charged up as a part of the $24,000?

A. Page 11 shows charges for power apparatus; page 13 shows charges for storage battery equipment.

An adjournment was here taken until 9:30, A. M., to-morrow.

647 WEDNESDAY MORNING, *September 8th*, 1909.

The further cross-examination of Mr. H. BLAIR SMITH was resumed this morning, September 8th, 1909, at 9:30 o'clock.

A. Mr. Blakey, I hand you herewith seven more vouchers which you have asked for specifically on your memoranda.

Mr. BLAKEY:

Q. In voucher No. 906 which I find for the year 1904, I do not know what month, I find an invoice in favor of the Western Electric Company, dated January 19th, 1904, and with a total of $370.02. Please explain that item?

A. The invoice reads in part, as follows; Material used in addition to specifications on West Office installation and installed in switchboard not included in our bill of November 30th, 1903, and the amount is $370.02.

Q. Would you say from that invoice that the material there speci-

fied was used in connection with the installation of the West exchange and was in addition to the material heretofore referred to by you?

A. Clearly.

Q. I also show you paper headed Western Electric Co., dated January 16th, 1904, which seems to be for goods returned, amounting to $87.86. Please explain that item?

A. The credit memorandum shows that it covers goods re-
648 turned which were billed in the Western Electric Co. bill of November 30th, 1903. The amount of the credit memoranda is $87.86. These goods were shipped for the West exchange and upon being returned are credited thereto.

Q. You mean to say then of the material referred to in the bill immediately preceding this one, there was material to the extent of the value of $87.86, which was not used in connection with the West exchange?

A. It says that the bill applies to material returned, which was billed in Western Electric Co. invoice of November 30th, 1903. The other invoices which you have mentioned, is material used in addition to that billed in invoice of November 30th, 1903.

Q. This material shipment is then either included in the material originally sent or in the material sent on January 19th?

A. You mean material billed on the 19th. It was material which was sent but not used, and returned.

Q. I show you invoice in the same voucher, dated January 28th, 1904, in favor of the Western Electric Co. for $284.90 please explain that bill?

A. This invoice is for 2, 3x7, oak Monitor switchboards, frame work and wiring. The goods were shipped to Louisville and charged to Louisville construction, equipment.

Q. Does that bill represent material used in connection with private branch exchanges?

649 A. The bill, at the bottom, states, one board for Southern National Bank; one board for McElroy & Shannon Co.

Q. Is the price for those private branch exchanges the average price paid for private branch exchanges?

A. These are private branch exchange switchboards and I take it if they could have been gotten cheaper, or if we could have built them cheaper, we would have done so.

Q. What I want to know, Mr. Smith is, without going through the various vouchers to ascertain what you paid for private branch switchboards is to know in a general way if this is about the price that was usually paid for private branch exchanges?

A. I am unable to answer that, as it is a technical question. There are several different classes of private branch exchange switchboards and each of those classes has different sizes.

Q. Do you know how many stations were connected up with these two switchboards about which you have just testified?

A. I do not.

Q. In the same voucher, under date of February 8th, 1904, appears an invoice which seems to be for two switchboards. Will you

please examine the paper, see if that is correct, and state what was paid for those two switchboards?

A. The invoice does cover two switchboards for private branch exchanges. The two cost $776.50.

Q. Where were they installed?

A. The invoice shows that one board was for Grabfelder &
650 Co. the other for Bradley, Gilbert & Co.

Q. In the same voucher appears another invoice in favor of the Western Electric Company of February 9th, 1904, which seems to be for one switchboard. Will you please state whether that is correct and the amount charged therefor?

A. The invoice referred to in February Voucher No. 906, is for a private branch exchange switchboard for Messrs. Snow, Church & Co. and cost $142.45.

Q. In the same voucher appears an invoice in favor of the Western Electric Co., dated February 9th, 1904, which seems to be for private branch exchange switchboard. Will you please state whether or not that is correct and the amount paid therefor.

A. The statement is correct and the amount paid therefor was $142.45. You understand, of course, that I am not testifying that these switchboards were complete and *and* they were not installed by the company building them. I am merely reading from the invoices referred to me.

Q. Where was that exchange installed?

A. The invoice shows that the switchboard was for the International Harvester Machine Company of America.

Q. Do you know how much additional charges, approximately, were needed to install the switchboards and place it in operating condition?

A. That depends very greatly on the character of the building,
the location of the stations, the number of stations, the num-
651 ber of trunk lines required to the central office, etc.

Q. If there were one trunk line and five stations and the switchboard was installed within half a mile of the exchange in the ordinary business building of the city, what would be your judgment as to the additional cost?

A. It depends whether those five stations were in one room or whether they were in different rooms of the building, and it was necessary to go through solid walls, but, I believe the average cost for installation per station, including wiring, labor, etc., for a private branch exchange, simply considering the wiring from the the switchboard to the instruments, runs from five to fifteen dollars.

Q. Five to fifteen dollars per set?

A. Yes, per station. That does not include the cost of installing the switchboard.

Q. I show you voucher No. 872 for March 1904, which contains an invoice of March 7th, 1904 in favor of the Western Electric Co., for $699.59. Will you please explain that invoice?

A. The invoice states that it is for one two-position wire chief's desk for Louisville, Ky.

Q. What office was that used in?

A. The invoice does not state.

Q. Have you a wire chief's desk in the main office?

A. I believe so.

652 Q. Have you one in the South office?

A. I believe so.

Q. In the East office?

A. I think so.

Q. In the West office?

A. I think so.

Q. From the size of that bill and the items contained in it what would be your judgment as to where that desk was installed?

A. I would not like to guess.

Q. Did the various exchanges have a wire chief's desk at the time they were installed?

A. I don't know. The invoices will show.

Q. Did the main office have a wire chief's desk in 1903?

A. I presume so.

Q. If this wire chief's desk was installed in the main office would it be for the purpose of taking the place of one theretofore installed or would it be supplementing the one theretofore installed?

A. It is charged on the invoice to equipment, and I therefore believe it was new and not to substitute something else.

Q. Would there be more than one wire chief's desk in the main office?

A. The invoice states that it is one two-position wire chief's desk. And there might be more than one two-position wire chief's

653 desk in the main office.

Q. Can you determine from your records whether this desk was installed in the main office to take the place of one which was taken out?

A. My records would not show.

Q. Are there any records in the office that would show?

A. Not in my office.

Q. What office then?

A. It would be in the department of the general manager.

Q. Was that item charged up to Louisville construction account for that year?

A. Yes.

Q. I hand you voucher No. 354 for November 1904, which seems to be for $1421. Will you please explain that voucher?

A. This voucher is in favor of the Gray Telephone Pay Station Company and it contains an invoice therein for 22 #7 pay Stations, $1400 shipped to Louisville and used at that exchange.

Q. Were those pay stations used in connection with the Louisville exchange?

A. They were.

Q. What are the articles that go to make up a pay station as charged for in this bill?

A. The item charged for in this bill is nothing more nor less than the automatic coin device attached to the instrument at the pay station.

you if anything in that voucher was charged to Louisville construction account; if so, how much, and also, will ask you to explain the items?

A. This voucher represents the value of supplies withdrawn from stock of supply stations for the month of March. It shows that at Louisville there were issued supplies as follows; Aerial construction, $2601.67; construction, equipment, $3320.47; construction, underground, $114.45; it also shows that $739.24 of material was issued for maintenance.

Q. From where was that material issued?

A. The voucher does not specify. It was issued from supply, and probably the larger part of it from the Louisville supply station.

Q. Have you any data from which you can tell what was the character of supplies issued to the Louisville exchange?

A. Not in my office.

Q. In whose office would such data be found, if it could be found at all?

A. In the purchasing agent's.

Q. Is the supply department under the supervision of the auditor?

A. No.

659 Q. Is the supply under any department and if so, under whose supervision?

A. The general manager.

Q. How do these papers I have just shown you get into your office?

A. They come from the supply department as a monthly report.

Q. Then, the supply department reports to you?

A. The supply department makes a monthly report to the auditor of the supplies issued and for what purposes.

Q. Do you know, of your own knowledge, that any of the items charged to aerial construction, equipment, or underground construction, the materials were used in connection with the Louisville exchange for new construction?

A. The voucher you refer to shows supplies issued to three or four hundred exchanges; Louisville is one of these; it is impossible for me to see every item of material issued put into the plant. The items which I have read to you as applying to Louisville, are from a report which has been compiled systematically and regularly, and certified to by those who are familiar with it.

Q. Are all of the supply vouchers in your office in which appear items charged up to original construction in the Louisville plant in substantially the same form as the voucher which you have just testified about?

660 A. Yes, if by supply voucher you mean a monthly report from the supply department similar to the one which we have before us.

Q. From such reports as this you charge up to construction the items appearing on the report, in the same way you would charge up the items appearing on a voucher for construction, do you?

A. Just exactly. This supply report is a voucher itself.

Q. This list I hand you Mr. Smith calls for additional vouchers I wish?

A. I hand you eleven special vouchers for the years 1900 and 1901 which you have specifically requested on the written memoranda.

Q. Of what do the supplies for equipment consist in the year 1901, if you know?

A. Well, roughly speaking we charged to equipment central office apparatus and its installation and subscribers' station apparatus and its installation.

Q. Does the central office apparatus come from the supply department?

A. Parts of it may.

Q. According to the vouchers we examined on yesterday from the Western Electric Co. for items from them, it would seem that the central office equipment was furnished and installed by the Western Electric Co. direct to the Louisville office, does it not?

661 A. Largely.

Q. Then, what would you say would constitute the bulk of the supplies furnished by the supply department and charged to equipment?

A. Without analyzing the books I should say private branch exchange switchboards, subscribers' sets, booths, signs, interior wiring and miscellaneous apparatus and expense.

Q. Expense would not be included in the vouchers from the supply department, would it?

A. The supply department does report material issued for expense purposes.

Q. What material is charged for expense purposes?

A. Material for repairs and for reconstruction.

Q. That would not occur under original equipment, would it?

A. I don't understand the question.

Q. Read his answer?

(Questions and answers read.)

Do you understand it?

A. If I understand correctly, you want to know if any items of cost incurred in installing original equipment are charged to expense. My answer to this is that the total cost of installing new equipment is charged to construction.

Q. I hand you seven vouchers for the year 1901, which seem to be from supply department and will ask you to state the total charges contained in those seven vouchers against Louisville

662 construction and equipment for that year?

A. Do you want expenses stated too, Mr. Blakey?

Q. All I desire is the amount charged from the supply department to Louisville, and charged up on your books as original cost of equipment?

A. January, 1901, $1,818.08; March, $6,723.63; May, $4,099.45;

September $4,806.24; October, $3,152.08; November, $3,950.02; December, $2,432.57; total, $26,982.07.

Q. Assuming that Voucher No. 1973 for April 1901 is $2549.88; Voucher No. 1815 for June 1901, is $2801.47, and Voucher No. No. 1719 for July 1901 is $2033.72 and voucher for August seems to have no Nuumber, amounts to $1880.53, are the correct amounts in the supply vouchers which you are now asked for, what would be the total amount charged to original construction for equipment from supply department for the year 1901?

A. This makes only eleven months. The total of the figures which you have called to me and those enumerated by me in an answer just given is $36,350.57.

Q. That total, then, would represent the amount which the supply department had furnished in the way of equipment for the year 1901, and which was charged to original construction, would it?

A. If the figures you have called me are correct and represent all the vouchers for the year.

Q. Now, private branch switchboards are purchased direct
663 from the Western Electric Co. are they not?

A. Sometimes.

Q. Are any of them kept in stock?

A. Yes, now.

Q. Were they in 1901?

A. I don't remember.

Q. Are any purchased new from the Western Electric Co. and put in the supply department now?

A. I think not.

Q. Where do those that are kept in stock now come from?

A. The shops of the company build them.

Q. Where did they come from in 1901, if any were in the supply department?

A. I don't know whether the shops built any at that time or not. I presume most of them were probably bought from the Western Electric Co.

Q. From the vouchers I have shown you, the private branch switchboards were, in the year 1901, being installed by the Western Electric Co.?

A. They were not.

Q. Being purchased then from the Western Electric Co.?

A. Some of them were.

Q. Do you know whether or not any of them were made at that time by your shops?

A. No, I do not.

664 Q. Now, when a telephone instrument is taken from the supply department and charged to equipment for the Louisville exchange, how much is charged to the Louisville exchange?

A. The cost of the apparatus taken from supply.

Q. Do you know the cost of telephone instruments?

A. There are, I believe, as many as fifty to seventy-five different types of bells which are part of what you term the instrument. I am not familiar with the cost of the different types.

Q. I show you a telephone instrument on a desk, known as a desk set, I believe; it seems to be a metal instrument, with green cord attached to it and which can be moved about from place to place on the desk or other parts of the office. Can you tell me, approximately, the cost of that instrument?

A. You understand what you see does not represent all of the apparatus used for the installation. I am not familiar with the cost of the different pieces or in fact, the technical names of the different parts that must be assembled to make a complete instrument.

Q. Is there anything connected with the installing of the desk set about which I have just asked you, except the wiring and the bell?

A. You are asking me technical questions.

Q. Can you answer the question?

665 A. I am not an electrician.

Q. Read him the question. (Question read.)

A. Yes.

Q. What else?

A. I know there are other items of apparatus, such as condensers, induction coils, etc., but what they all are, I do not know.

Q. Now, when an instrument is installed with all the apparatus necessary to make it a working instrument, to what is the cost of installing that instrument charged?

A. Originally and for several years, we charged the total cost of the wire and the labor in addition, to the apparatus, to construction. Later we charged simply the apparatus to construction, charging the interior wire, labor, transportation, etc., to maintenance.

Q. When did this change take place in your accounts?

A. Offhanded, I don't remember. I could probably give you an answer after an investigation of half an hour or an hour.

Q. What is your best recollection about it now?

A. I don't remember.

Q. Was it in 1901?

A. I don't remember.

Q. Don't you know, as a matter of fact, it wasn't in 1901?

A. I don't remember.

Q. Did you ever at any time make a charge of ten dollars against construction account for instruments installed?

666 A. We made a charge at one time of ten dollars against construction account for each instrument gained and very legitimately so.

Q. When was that done?

A. Off hand, I don't remember.

Q. About when?

A. If you will allow me to refer to my records, I will give you the date.

Q. Was it in 1901?

A. I say, Mr. Blakey, I don't remember.

Q. Well, what is your best judgment on the subject?

A. I don't like to guess.

Q. At the time you did this were the supplies used for installing

a telephone instrument charged to construction account, other than the instrument itself?

A. I think so, that is, the apparatus.

Q. Now when that telephone instrument was taken out was anything credited to capital?

A. Yes.

Q. What?

A. The apparatus, and by considering it as a removal, not charging any part of the $10. for some other instrument gained.

Q. Did the labor and material charged to construction account for the installing of that instrument remain a part of the capital account, or rather, a part of the construction account for the

667 exchange?

A. If you will analyze my answer, I think you will see that it did not.

Q. I believe you said that all supplies used in connection with installing an instrument was charged to construction account at the time the instrument was installed, did you not?

A. All apparatus.

Q. That is correct, is it?

A. My answer is correct.

Q. You mean that your answer would be yes, if I had used the word apparatus?

A. Yes.

Q. Now when you come to take that instrument out if we assumed you charged to construction account $10 for installing the instrument and fifteen dollars for the labor and material used in connection with installing the instrument, you then give the construction account credit for ten dollars when the instrument is removed, is that correct?

A. It is not.

Q. Now explain just how any credit is given to construction account for say the labor and material used in equipping and installing the subscribers' instruments?

A. During most of the period during which we have owned

668 the Louisville exchange, we have charged almost wholly the cost of livery and installers' services and interior wire for single, and party line instruments to expense. We have never charged as a part of construction any cost of general office supervision, interest on supplies, engineering plans, work in the central office in testing the new instrument or stations and running connections to the terminal frames therefore, to construction direct. After a study of the proposition it was during a short period of time the custom of the company to charge what it considered it had a right to charge for construction for instruments gained, coming from the sources outlines above. As long as the exchange continued to gain, it will be readily seen that as this charge was for instruments gained only, that it was proper. This was stopped before the Louisville exchange showed any losses. Hence, any charge which has gone to construction from this source is a proper charge and should be in construction account.

Q. Now, confine your answer exclusively to the time at which you charged ten dollars for installing the subscribers' instrument, I would like for you to tell me at that time whether you charged the cost of the supplies which went to make up the apparatus and also the labor used in connection with installing the subscriber's instrument, whether at that time these items were charged to cost of construction?

A. My best recollection is that we did not.

669 Q. Will you have time after we adjourn at four o'clock or at lunch time to procure for me the information as to when the company ceased charging to construction account in Louisville the material and supplies and labor used in connection with installing subscribers' instruments?

A. Mr. Blakey I am giving the best part of every day, and have now for almost a week, exclusively to you. Work is accumulating on my desk and it is as much as I can do to keep things running, by coming to the office before eight o'clock and leaving the office after six o'clock. If any information is needed by you, I think it should be gotten during the time of day that I am giving up to you.

Q. Have you any assistants whom you could request to get this information for me?

A. I don't know of anyone as familiar with it as I, or anyone whose report I would rely on like my own. Few of my men have been with me long enough to know anything about the records this far back.

Q. What is your system at the present time in so far as making this charge of $10 against construction account when subscribers' instrument is installed?

A. We do not make it, though I think we have a legitimate right to do so, but we prefer not to do it, desiring to be as conservative as possible.

Q. When did you cease making this charge?

A. Many years ago.

670 A. I answered the question several times by stating that I do not know. I would like to add that the American Telephone Company makes a careful audit of accounts of this nature yearly. One of their representatives, high in position, told me that he had made a thorough analysis of this matter and he considered that under many conditions a charge of as much as ten or fifteen dollars was legitimate.

Q. Who employs the American Audit Co. to do this?

A. I didn't say the American Audit Company did it.

Q. The American Telephone Co. I believe you said instead of the American Audit Co.?

A. Yes.

Q. Have your subsidiary books been balanced in the last two years?

A. We have hundreds of subsidiary books.

Q. Have they been balanced in the last two years?

A. I believe so, those that are intended to be balanced.

Q. What about your individual expense ledgers, when were they balanced?

A. I don't know of any such ledger that we keep.

Q. I think I will ask you to obtain the information in regard to the time at which you kept your books in such a manner as to charge construction with supplies, material and labor used in installing the subscriber's instrument and also the time at which you charged to construction ten dollars for each subscriber's instrument installed?

671 A. I notice that each time you ask this question, you state we charged ten dollars for each subscriber's instrument installed; but, as previously stated, this is not a fact. It is ten dollars for each subscriber's instrument gained.

A. I will secure the information asked for. Mr. Blakey, I hand you herewith, four more supply vouchers for the year 1901 which you have requested specifically by number.

Q. I will ask you to state whether the amounts which I assumed to be correct a few minutes ago, were substantially the amounts as they appear on the supply vouchers?

A. They are.

Q. Mr. Smith, you have produced auditor's bill No. 46861, which seems to be for $3,663. Will you please explain that bill?

A. That bill reads, estimate cost of installing new instruments during May, 1907, actual amount charged to expense in vouchers. I thought the practice had been discontinued prior to this date.

Q. It would seem then from this bill that as late as August 1907 the cost of installing new instruments was charged to construction account, that is, the gain for each exchange was charged to construction account, would it?

A. The bill is for May 1907. The rest of your question is correct.

Q. Now, do you know whether as late as this date the cost of supplies and material used in connection with installing sub-

672 scriber s instruments, was charged to the cost of construction?

A. My belief is that such costs were charged direct to expense.

Q. In May 1907?

A. Yes.

Q. What were the items of supplies for the year 1901 aggregating the sum of thirty six thousand dollars, intended to represent?

A. I presume you speak of the charges from the supply vouchers to construction equipment, Louisville. I explained in a previous answer this question.

Q. Were those items included and would they include interior wiring or wire for interior work, bells, cords and material of that nature used in connection with installing the subscriber's instrument?

A. Are you asking this question as relating to 1901 accounts or 1907 accounts?

Q. 1901 accounts?

A. As to 1901 accounts, I cannot answer from memory.

Q. What would be your best judgment on the subject?

A. I would prefer not to guess.

Q. What could possibly represent the items of supplies furnished to the extent of thirty-six thousand dollars to the Louisville exchange for the year 1901 unless it was just such items as I have asked
673 you about?

A. Many supplies furnished would relate, as previously stated, to the equipping of central offices and subscriber's station.

Q. Did you not state awhile ago that the bulk of it would be for subscriber's stations?

A. I believe such to be the fact.

Q. Well then, what is expended in connection with subscriber's stations except the interior wiring, the labor performed in installing the instruments, and the other incidental matters which you have heretofore mentioned?

A. There are private branch exchange switchboards, booths, automatic coin boxes, pay station signs, etc. Those, I believe represent the bigger items.

Q. You still are not willing to say in your judgment that this thirty-six thousand dollars for 1901 represented or included the supplies furnished and used in connection with installing using subscriber's instruments?

A. If I knew such to be the fact, I would not hesitate the least bit in telling you. If it is a fact, it is entirely proper.

Q. Now, was any part of this auditor's bill #46861 charged to Louisville, Ky.?

A. $240.48 of this bill was charged to Louisville.

Q. Was any part of it charged to aerial construction?

A. Yes, $160.32.

674 Q. Now, how many subscribers' instruments were gained over the last month in Louisville, for that month?

A. Sixty-two.

Q. At ten dollars per subscriber for the gain it would be $620.00 would it not?

A. That is correct.

Q. Then will you explain what you meant awhile ago by insisting it was not ten dollars per instrument that was installed, but ten dollars for the net gain per instrument?

A. I said the greatest charge, or rather, I should have said, the greatest charge ever made for that service was ten dollars for an instrument gained. This bill represents a little less than four dollars for each instrument gained.

Q. Had you any method at that time for determining what you would charge against the construction account for the net gain?

A. We did.

Q. What was that method?

A. The instruments gained for the company as a whole, less those known a farmers' line instruments and instruments in private branch exchanges, were considered and the charge had been reduced to nine dollars, which was pro rated on the basis of new put ins, to the different exchanges.

Q. If an exchange had a net loss, was it charged with any-
675 thing?

A. Louisville was not.

Q. If any exchange had a net loss was it charged with anything?

A. As long as the big exchanges where this plan was effective, continued to gain, the plant was kept up. I do not think any of the big exchanges were ever so charged.

Q. If at the time the system was in force the Louisville exchange had shown a loss in instruments, other than the switchboard stations, would it have been charged with any part of the total sum which was charged to construction for the month?

A. I don't understand what you mean by switchboard stations.

Q. I understood you to say awhile ago that this plan did not take into consideration instruments connected with private switchboards?

A. No, I don't know of any private switchboards in Louisville.

Q. I should have said private branch exchanges?

(Last several questions and answers read.)

A. In case Louisville had shown a loss, Louisville would have been charged with some part, and legitimately so.

Q. In making your estimate of the number of gains each month, did you take into consideration the gain or loss of instru-
676 ments connected with private branch exchanges?

A. The bill before us shows that from the total gained, is deducted private branch exchange instruments gained.

Q. What would that indicate?

A. That indicates that in the installation of private branch exchanges, the cost thereof was charged to construction direct, in most instances.

Q. Would it also indicate that the gain or loss was not affected by the gain or loss in private branch exchange stations; I mean, the gain or loss on which it was based.

Q. I mean, the gain or loss on which your estimate is made for that month?

A. The gain or loss is exclusive of private branch exchange stations.

Q. Now, was this system in force in the year 1901?

A. I cannot answer.

Q. Did you have any system in force for purchasing—or to be more accurate, after you acquired the Ohio Valley Telephone Co. other than the system which you now have in force and the system which was in force in May, 1907, dealing with this particular subject?

A. This system was put into effect some time prior to May, 1907. Just what year, I do not recall. There may have been some details in the system changed during the time it was in effect, I do not recall.

Q. Now when a subscriber's station was abandoned and the
677 instrument was removed, what was done with it?

A. With the instrument?

Q. Yes.

A. It was returned to stock, unless it was replaced before.

Q. Was that instrument subsequently used for installation for another subscriber?

A. If it could be made fit for future use, it was so treated.

Q. If it could not be made fit for future use what was done with it?

A. It would be shipped to the general shops of the company at Nashville, and there, whatever of value was in it, would be utilized.

Q. Utilized in what way?

A. For repair of other instruments or the building of other instruments.

Q. When the instrument reached the Louisville stock department, from what source is it taken?

A. That is more closely connected with the supply department than mine; I think it would be one of two plans. There is, I believe, a local supply room where some small supplies are carried for the Louisville exchange exclusively. They may have been returned to this stock room and accumulated, then turned over to the supply department stock room.

Q. Now, when it reaches the Louisville stock room, is the
678 Louisville exchange charged with the cost of that instrument?

A. Until the instrument reaches the supply department, the Louisville exchange remains with the instrument.

Q. At the time the Louisville exchange gets it, it is charged with the cost of it?

A. Yes.

Q. Now if the instrument can no longer be used and is shipped to Nashville for use in repairing other instruments, is the Louisville exchange given any credit for it on the construction account of the Louisville exchange?

A. It is given full credit for it.

Q. What do you mean?

A. Given credit at its cost.

Q. Where do you ascertain that fact?

A. That is the plan followed by the company.

Q. Have you any records showing any credits for any such instruments?

A. Not in my department. Such records would be in the supply department.

Q. Your records show the entire cost of constructing the Louisville plant, do they not?

A. Yes.

Q. Do those plans show any credits for the value of instruments returned?

A. In making the report to me, the supply department
679 makes a net report, material issued for construction, less material returned from construction. My books show the net results.

Q. Now will you point out to me on one of the supply vouchers any fact that would indicate that the plan is followed which you have just detailed?

A. I can point out the construction account for the year 1908. You will note from the joint report of the accountants that construction is credited for that year instead of being charged. That is, construction has a net credit.

Q. Read him my question.

(Question read.)

A. I have stated that the supply voucher shows the net result for the month. It does not show the debit less the credit, but shows the difference.

Q. It purports to show the amount of supplies furnished to Louisville?

A. It purports to show the next amount furnished to Louisville.

Q. How do you ascertain that fact from the examination of the voucher itself?

A. I do not ascertain it from the voucher itself.

Q. Then how do you ascertain it?

A. I knew it to be the plan followed.

Q. You don't have under your jurisdiction the supply department, I believe?

680 A. You are correct.

Q. Then, all you know is what somebody has told you about it, is it?

A. I was interested in formulating the system.

Q. But you do not know of your own knowledge that that is carried out?

A. The supply account would not be in adjustment if it were not.

Q. Now, the eleven thousand dollars credit in 1908 about which you spoke a few moments ago, is a credit for instruments returned to the supply department, is it not?

A. I believe some of it is.

Q. And you don't know whether those instruments were in good shape or poor shape, do you?

A. They are usually in poor shape.

Q. If the exchange has more instruments in its stock than it has any use for, which are in good condition, they are returned to the supply department, are they not?

A. They should be.

Q. Are they or not?

A. I say as a practice, yes.

Q. And so, you don't know whether the instruments which are returned and given credit for, are instruments in good shape

681 or dilapidated instruments, do you?

A. No, it is not necessary.

At this hour, 12:15 p. m., a recess was taken until this afternoon at two o'clock.

682 H. BLAIR SMITH, Cross-Examination, Continued.

2 p. m., SEPT. 8, 1909.

By Mr. BLAKEY, for the Defendant:

Q. Mr. Smith, have you ascertained when the plan was adopted of making a charge against the Exchange when an instrument was installed?

A. I find the first charge was in March, 1902.

Q. Prior to that date, what was your system, in so far as making charges against construction for instruments installed?

A. The only charge made was for labor and material.

Q. Did material include the instrument?

A. Technically the instruments are the telephone and the transmitters. These have never been charged to construction, as they do not belong to us.

Q. What do you mean by telephones and transmitters?

A. The telephone is the device which is placed to the ear; the transmitter is the small cap or device through which the talking is done.

Q. And on the desk set, on the table here, the set itself as I understand it, contains attached to it what seems to be a gutta percha apparatus which is placed to your ear when you wish to use the telephone, is that correct?

A. That is known as the telephone or the receiver.

Q. Is the receiver the entire gutta percha apparatus that is some six inches long, or is it the small cap or instrument within the gutta percha instrument?

683 A. It is the whole of the gutta percha instrument, including the nickel-plated nuts attached to it.

Q. And the metal part of the desk set is the part that the company furnishes itself, is it, and is not the part which is owned by the company which furnishes you the receiver and the transmitter?

A. Part of the transmitter is metal. The transmitter begins at the screw which attaches the metallic disk and mouthpiece to the stand.

Q. How large an instrument is the transmitter?

A. The instrument known as the long distance transmitter is biscuit shaped, with a rubber mouthpiece attached; it is about three and one-fourth inches in diameter.

Q. And how thick?

A. About an inch thick, and includes the rubber mouthpiece.

Q. Now was any charge made for the balance of the instrument used in connection with a subscriber's telephone such as the metallic desk set itself or the wall set, was any charge made for that part of the telephone against the construction account?

A. Yes sir.

Q. Prior to the date in 1902 you have just mentioned when the different plan was established, was any credit given to the construction account for any sum when a subscriber's station was discontinued?

A. Undoubtedly.

684 Q. What sum was credited to construction account?

A. Construction should and did receive credit for the apparatus which had entered into the construction cost at the time of installation.

Q. Have you any record showing that fact?

A. The records of that would all be in the supply department.

Q. If the apparatus was taken from the place where it was installed and placed into the stock account of the Louisville exchange, and not returned to the supply department, would any credit be then given?

A. It would not.

Q. Now as to the balance of the labor and material used in installing that subscriber's station, would the Construction account be credited with any part of that?

A. During what period?

Q. During the year 1901?

A. No special entries were made at that time crediting that.

Q. Now during the period when the ten dollar plan, the plan that I will call the ten dollar plan, which was established in 1902, seemed to have continued certainly until 1907, when a subscriber's station was discontinued, was any credit given to the construction account for the labor and material other than the instrument, on account of such discontinuance?

A. I answered that question fully before the lunch hour.

685 Q. Well, I ask you to answer it again in this connection, as I do not now recall.

A. I would like to have my answer read to me.

Q. The stenographer tells me that he cannot now read it.

(—because of a change of shifts, the notes now being transcribed by Mr. Duke.)

A. Then I will ask him to please refer to his notes and copy my answer here.

Q. Is there any reason why you should not answer the question now?

A. Nothing further than that I went into it very thoroughly before the lunch hour.

Q. What did you say in that answer?

A. Please to copy it here.

Q. Will you now tell me what you said in that answer?

A. Please copy my answer.

Q. Read the question to him, will you?

(Above question read.)

A. To go into this thoroughly would require about as much explanation as I gave before the lunch hour. If I have not fully and thoroughly explained the matter already, I would like for you to state just in what particular I have not done so, and I will try to make that clearer.

Q. As I recall, you said that at the present time the cost of

material and labor of installing a subscriber's instrument was charged to Expense, is that correct?

A. That is correct.

686 Q. Did that apply to the period prior to March, 1907?

A. I would like to add to my answer, "yes, including the labor, transportation, wire, tacks, testing, etc.

Q. Not the apparatus?

A. To a part of the period I believe it did.

Q. What part of the period?

A. This is now being investigated for you at your request.

Q. Well, for the part of the period to which it does apply, was any credit given to the Louisville exchange for such labor and material when the subscriber's station was discontinued?

A. No, because it had not been charged to construction.

Q. My question was intended to apply to that portion of the period during which the labor and material had been applied to construction.

A. I believe you are assuming that at one time this was the case. You asked me to investigate whether it was or not. This investigation is now in progress.

Q. I believe you said a few minutes ago that that was the case during a part of the period, did you not?

A. I said I thought probably it was.

Q. Well, if it did then was any such credit given?

A. This is all speculation.

Q. Well, will you answer the question?

A. I don't know.

Q. Do you know the cost of the part of the instrument which was purchased and owned by your company during the

687 period of 1901?

A. I think I answered this question this morning by stating that there were from 25 to 50 different styles of subscriber's bells, and there are a great many other items of equipment which enter into what is generally termed the instrument. I do not know the prices of the various articles.

Q. Now you say that no charge was made during the period the ten dollar plan was in force, for the apparatus going to make up the instrument, I believe?

A. I said that we have never charged to construction the cost or value of the telephone and the transmitter.

Q. During the time the ten dollar plan was in force, did you charge to construction at any time the value of any part of the telephone instrument set, or wall stand?

A. My belief is that at all periods we have charged to Construction the cost of the apparatus used which was owned by us.

Q. During the time the ten dollar plan was in force you charged it by means of that plan, did you not?

A. Regardless of the plan which you term the ten dollar plan, we have always charged to construction all apparatus placed at subscriber's stations.

Q. And while the ten dollar plan was in force you charged certain amounts in addition to the cost of the apparatus, did you?

A. Yes.

688 Q. Now you have detailed the facts in regard to a number of vouchers here aggregating some $36,000.00 furnished to the Louisville exchange and charged to Construction for the year 1901. Can you furnish me any data showing what articles are represented by these vouchers?

A. These vouchers were compiled from original memoranda and receipts in the supply department. The original papers have never been in the possession of the Auditor.

Q. The Supply Department is a department of the Cumberland Telephone & Telegraph Company, is it?

A. Yes.

Q. I will ask you to furnish me the individual items going to make up the sums appearing on these vouchers which you have referred to for the year 1901, and which aggregate a total of something like $36,000.00.

A. The request must necessarily be referred to Mr. Granbery who is not now present. I have no control over the Supply records.

Q. Will you, or will you not produce it?

A. I will refer the case to Mr. Granbery. I cannot produce them myself.

Q. In these vouchers you have submitted to me, which appear to contain items furnished the Louisville exchange from the Supply Department, are there any additional items appearing in those vouchers furnished from the Supply department and charged to the Construction account for the period covered by the voucher?

689 A. Yes, and to the expense account also

Q. Just give me the items, will you, in addition to the ones you have already given which appear in these vouchers and which were charged to the Construction account of the Louisville exchange?

A. —

	Construction.	
	Aerial.	Underground.
January, 1901	$2,577.60	$63.91
March, 1901	3,102.92	.....
April, 1901	3,815.75	.....
May, 1901	7,448.78	110.10
June, 1901	7,414.94	377.60
July, 1901	6,439.06	.....
August, 1901	6,298.35	.....
September, 1901	6,997.25	.....
October, 1901	6,867.71	203.07
November, 1901	4,599.93	541.22
December, 1901	3,710.10	287.33

Q. Do you know what articles were furnished to the Louisville exchange which are represented by the charges you have just read off?

A. The articles which are charged to Construction aerial, repre-

sent poles, cross-arms, insulator pins, insulators, guy wire, brackets, braces, pole steps, cables, cable boxes, equipment in cable boxes, open wire, etc.

Q. What do you know, of your own knowledge, whether those articles so furnished were used for original construction or
690 whether they were used for reconstructing parts of the plant?

A. The information which I have was received by me in the regular channels. I have never personally acted as an inspector.

Q. You mean, then, that you have no personal knowledge on the subject?

A. I have no information except that which has come in regular channels and without direct inspection of the property.

Q. Do you mean by the regular channels the examination of these vouchers?

A. I don't understand the question.

Q. Is there anything on these vouchers to indicate what character of articles were furnished, or what the articles were used for?

A. The vouchers show the value of materials issued during the month, classified to show the amount chargeable to Expense, the amount to Aerial Construction, Construction Equipment, Underground Construction and Toll Line Construction. The items in detail are not furnished the Auditor's office.

Q. Will you furnish me the individual items going to show the articles which were furnished, according to these vouchers which you have just read?

A. As stated in regard to Equipment charges, the papers
691 in detail are not in my charge, and I must necessarily refer your request to Mr. Granbery.

I now hand you herewith ten vouchers, for the years 1902, 1903 and 1904, which you have requested specifically on a written memorandum.

Q. Have you any data from which you can tell the number of horses your company acquired at the time it took charge of the Ohio Valley Company's plant in Louisville, Ky.?

A. The detailed records of tools and teams are kept in the Supply Department. Whether they can produce records this far back. I don't know.

Q. You cannot tell from your records?

A. I have no records.

Q. I show you voucher No. 2169, of April, 1902, which has two invoices, one in favor of W. L. Drake & Co., for $90.00 and one in favor of Chas. J. Fegenbush for $75.00. Will you explain what those invoices were for?

A. The invoice of W. L. Drake is for one gray mare, sound and a good worker, cost $90.00. The other invoice is for one bay mare about 6 years old, and cost $75.00.

Q. Were those two items charged to the Construction account, Louisville Exchange?

A. They were.

Q. Were those two horses purchased to take the place of other horses that were sold or had become useless?

A. The two invoices are charged to Construction account,
692 and attached thereto I note a letter signed by the Assistant General Manager, authorizing their purchase for use to two new trouble wagons.

Q. I show you voucher of July 31, 1902, which contains an invoice in favor of W. L. Drake & Co. for $210.00. Will you please explain that item?

A. It is for one bay horse, $110.00 and one brown horse, $100.00.

Q. Were those horses purchased to take the place of horses which had died or been sold and become useless?

A. The letter attached to the invoice authorizes the purchase of three horses for trouble wagons, and states "that trouble wagons and harness will be shipped you from Nashville."

Q. Was that item charged up to Construction Account, Louisville Exchange?

A. Yes.

Q. I show you voucher No. 2405, for March, 1903, which seems to be for expenditure of $320.00. Will you please examine that voucher and explain what it means?

A. The voucher is for one pair of mules.

Q. Is there a letter attached to that voucher explanatory of why the mules were purchased?

A. There is a letter of authority for their purchase from the purchasing agent attached to the voucher; it does not specify.

Q. Will you kindly read that letter.

693 A. The letter is dated March 17, 1903. To "Mr. L. K. Webb, Assistant Manager, Louisville.

DEAR SIR: Replying to yours of March 16th, this letter attached to receipts properly vouchered, will secure credit in our Auditing department for the purchase of a good sound pair of mules 16 hands high at a cost of $320.00 for the pair.

(Signed) J. C. SYMMES,
Purchasing Agent.
By B."

Q. I see some pencil memorandums in the left hand corner of the invoice. Please examine those pencil memoranda and tell me what they are, and what they mean, if you can?

A. There is a memorandum reading: "New work, Bardstown. Kentucky Aerial."

Q. If you will look on the inside of the cover of that voucher you will find on the top line some writing in ink. Will you please read that and explain it?

A. Written on the inside of the cover is "Mules to use on new work, Bardstown, Ky."

Q. Was the cost of those mules charged to the Louisville Construction account?

A. Yes sir.

Q. What does the language on the inside of the cover which you have just read mean?

A. It means what it says, I presume.

Q. I show you Voucher No. 305, for the month of April,
694 1903, which contains among the papers an invoice in favor of Hudson Bros. & Co. for $340.00. Will you please examine that voucher and explain the meaning of that item?

A. The voucher is for a pair of mules, four and six years old. The letter and the voucher state that they are to be used to construct the Harrod's Creek Exchange.

Q. Was that item charged to the Construction account, Louisville Exchange?

A. Yes.

Q. I show you voucher No. 968, for May, 1903, which seems to be a voucher in favor of T. L. Hornsby, $400.00. Please examine that voucher and explain it.

A. The voucher is for one pair of mare mules, 16 hands, straight and sound, $400.00.

Q. Is there anything on this voucher to indicate that those mules were purchased for use in Louisville, Ky.?

A. There is not, except the fact that the voucher is charged to Construction account, Louisville.

Q. The bill is made out as at Shelbyville, Ky., is it now?

A. Yes.

Q. What does "O.K., H." in blue pencil mean on the bill?

A. It is the O. K. of Mr. Hunter.

Q. Who was Mr Hunter?

A Mr. John W. Hunter was at that time Assistant in the Assistant General Manager's office.

695 Q. At Nashville?

A. At Nashville.

Q. Do you know, as a matter of fact whether those mules were used at Louisville, Ky.?

A. I know nothing further than what the voucher shows.

Q. Do you know whether they were purchased to take the place of other mules that had died or been sold?

A. I presume not, as they are charged to Construction.

Q. I show you voucher No. 836, April 9, 1904, which seems to be in the shape of a draft to Hudson Bros. & Co. for $350.00. Will you examine that and explain its meaning?

A. The voucher is not in the shape of a draft, Mr. Blakey. A bill or invoice was rendered for two horses, for $350.00.

Q. Is there anything among these papers to indicate that they were to be used in Louisville, Ky.?

A. Nothing except the charge of the voucher to the Louisville, Ky. Exchange, and the approval of the Assistant Manager thereon, and Supply Department.

Q. Do you know, as a matter of fact, whether those horses were used in connection with the Louisville exchange?

A. I never saw the horses.

Q. You don't know, then, where they were used?

A. Nothing further than what the voucher shows.

Q. Was that sum charged to Construction account, Louisville Exchange?

A. Yes.

Q. Do you know whether those horses were purchased to
696 take the place of other horses which had died or been disposed of?

A. The memorandum on the voucher indicates to me that these horses were to take the place of other horses, and that the salvage value of the other horses plus the loss was credited to the Construction account.

Q. What memorandum do you find on that voucher that indicates any such fact?

A. The voucher refers to Auditor's bill of May 11, 1904, for $180.00. That memorandum causes me to believe what I stated.

Q. Will you furnish me Auditor's bill No. 19113?

A. I hand you herewith bill No. 19113, which explains the transaction. It states that one of the horses purchased from Hudson Bros. failed to come up to the guarantee, and was sold back to Hudson Bros. for $180.00, and the $180.00 is credited back to Louisville equipment. I therefore withdraw my previous explanation in reference to the note on the voucher.

Q. What is now your explanation?

A. In regard to what?

Q. In regard to this voucher. Do you mean to say that of this $350.00 one horse was resold for $180.00?

697 A. One horse was returned for $180.00, leaving the other horse in the company's possession at the cost of $170.00.

Q. You don't know whether that other horse upon remaining in the company's possession was used to take the place of some horse that had died or been disposed of, do you?

A. The voucher is charged to Construction; I therefore believe that such is not the case.

Q. Here is voucher No. 290, for June, 1904, which contains an invoice of $165.00. I will ask you to explain that invoice.

A. This invoice is for one 7 year old bay mare, weight 1400 pounds, for $165.00. This horse seems to have been purchased to replace the horse returned to Hudson Bros. at $180.00.

Q. Is there anything on that invoice to indicate whether that horse was to be used in Louisville or outside of Louisville?

A. The cost of the horse is charged to Louisville Construction, and has the approval of the Assistant Manager thereon. This would indicate to me that the horse was purchased for Louisville.

Q. The invoice which you examined a few minutes ago for horses to be used at Bardstown, Ky. had the assistant manager's approval, did they not?

A. I believe so; and also the explanation made by him thereon.

Q. Here is voucher No. 353, June, 1904, for $475.00, which seems to be an invoice in favor of Prince Wells. Will you explain that?

A. The invoice is for a Rambler Automobile for Louis-
698 ville, for $475.00.

Q. Do you know whether that automobile was to be used in Louisville?

A. At the time the automobile was paid for I wrote on the invoice, "for Louisville."

Q. You wrote that yourself?

A. Yes sir.

Q. Do you know whether it was used in Louisville?

A. If I had not investigated it and found such to be the fact I would not have written it there.

Q. Well, do you know whether it was actually used in Louisville or not?

A. No, I do not.

Q. Do you know whether it was for use in connection with trips out from Louisville over the various toll lines, and for the purpose of visiting other exchanges in the vicinity of Louisville?

A. I do not.

Q. Was the item charged to original construction?

A. Yes sir.

Q. Do you know whether the automobile was purchased to take the place of horses or vehicles that had theretofore been used for the purpose for which the automobile was thereafter used?

A. I think not.

Q. Why?

A. Because it is charged to Original Construction.

699 Q. Any official or employee of the company in Louisville who would require the services of an automobile in 1904 would require some sort of vehicle to travel in prior to 1904, would he not?

A. Yes, but the Exchange was growing rapidly and it was necessary to do much purchasing at that time, in order to keep it fully equipped.

Q. Wouldn't the purchase of an automobile necessarily supplant the use of some sort of vehicle?

A. I presume it would for the person who used the automobile, and that he would pass whatever method of transportation he had been using down for another purpose.

Q. Do you know when that automobile was sold, if it was ever sold?

A. No, but in such case the records would show.

Q. I would like to see Auditor's Bill No. 23778.

A. I beg to hand you the Auditor's bill requested.

Q. Please explain that Auditor's bill will you?

A. This Auditor's bill charges the Louisville Cashier and credits Louisville Construction Equipment with $400.00, being for the sale of one automobile. The explanation on the bill reads as follows:

"Above auto brought from Prince Wells for $475.00. Voucher issued for $875.00 being difference in cost and selling price. Note correspondence attached."

Q. Now was any credit made to the Construction account on account of the sale of that automobile?

700 A. Yes.

Q. How much was Construction account credited with?

A. $475.00.

Q. Where do you ascertain that fact?

A. From the Auditor's bill from which I have just read.

Q. I would like to see voucher No. 533, for December, 1904.

A. I beg to hand you the voucher called for.

Q. I show you part of voucher No. 533, and will ask you to explain that item?

A. The voucher is 533 for December, 1904. It credits Construction Equipment, Louisville, Ky. with $75.00 and charges this to what is termed "Auto Account, Traveling," this being an expense account. The explanation in the voucher is this:

"Above auto sold for $400.00 to A. W. Metzger, original cost of same, $475.00, purchased of Prince Wells, Louisville, Voucher No. 353 for June, 1904."

Q. Now was that $75.00 charged in as a part of the cost of operating the plant for that year?

A. I would prefer looking at the record before answering.

Q. What would be your opinion on the matter, from that memorandum you have read?

A. I don't know whether we had a separate account for Auto account, or whether the expense was charged into Louisville. I think it should have been charged into Louisville.

701 Q. I show you Voucher No. 290, for July, 1904, which has an invoice in favor of Wakefield & Barringer, $150.00. Please explain that, will you?

A. The invoice is for one bay horse, 15¾ hands high, 5 years old, for $150.00. The Assistant Manager has okayed it, and states that the horse will be used in Louisville by City Foreman, O. O. Mitchell.

Q. Do you know whether that horse was purchased to take the place of some horse that had died or been disposed of?

A. The horse is charged to the Equipment account. If he was bought to replace a horse which had died or which had been disposed of the records would show it.

Q. You don't know though of your own personal knowledge, do you?

A. I have never seen this horse that I know of, and know nothing further than what the voucher shows.

Q. I show you another voucher No. 353, for July, 1904, for $175.00. Will you please state the facts with regard to that voucher?

A. This voucher is for the purchase of a brown mare for $175.00, from W. L. Drake & Co.

Q. What is the date of it?

A. It is dated June 27, '04.

Q. Does that bill show for whose use that horse was purchased?

702 A. The letter of authority attached to the invoice states that it is for Construction Foreman Mitchell's use.

Q. Just read that part of the letter, will you, which deals with the use to which the horse is to be put?

A. The letter reads, in part, as follows:

"This letter will authorize the purchase of a five year old mare

for Construction Foreman Mitchell's use, at $175.00, superseding authority previously sent you authorizing first purchase at $150.00."

Q. Now the horse that you spoke of and which is mentioned in Voucher No. 290 was also purchased for Construction Foreman Mitchell's use, wasn't it?

A. The invoice states so.

Q. Do you know what became of the horse mentioned in voucher No. 290?

A. Neither of the vouchers show just what was done in regard to the duplicate purchase. The records probably do. If you wish it investigated I will do so.

Q. The second voucher of June 27, 1904 contains the following statement, does it not?

"This is the first animal we have found for some time at any price suitable for the purpose. We have had to rent a horse for Mr. Mitchell's use for the past week or ten days."

Is that correct?

703 A. That is in a letter which is included in the voucher

Q. Was this second voucher, No. 353, charged to Original Construction, Louisville Exchange, for that year?

A. Yes.

Q. Was the first voucher, No. 290 also charged to original construction for that year?

A. $150.00 voucher No. 290 was.

Q. That was the part that represented the purchase of the horse for Mr. Mitchell, was it?

A. Yes.

Q. Did Mr. Mitchell perform services exclusively within the city of Louisville?

A. The voucher states he was foreman of the Louisville Exchange.

Q. The voucher also speaks of him as Construction Foreman Mitchell, does it not?

A. Yes.

Q. Did he have charge of all the construction in and about Louisville?

A. My information would lead me to think that he was in charge of the Louisville forces.

Q. Exclusively?

A. The Louisville gangs were run by him; whether he had anything to do with other gangs I don't know.

Q. Now during the period covered by these vouchers did any horses die or were any horses disposed of by the Telephone

704 Company in the city of Louisville?

A. I do not know individually, but if such was the fact I believe the records will show it.

Q. If such is the fact would not credit be given to the Construction account?

A. Yes.

Q. What credit?

A. The credit at original cost.

Q. If a horse died, would the price of the original cost of that horse be credited to the Construction account?
A. Yes.

An adjournment was here taken until nine thirty o'clock to-morrow morning.

705 THURSDAY MORNING, *September 9th*, 1909.

The further cross-examination of Mr. H. BLAIR SMITH was resumed this morning, September 9th, 1909 at 9:30 o'clock.

A. Mr. Blakey, I hand you herewith thirteen specific vouchers requested of me on your memoranda of yesterday afternoon.

Mr. BLAKEY:

Q. I show you voucher No. 290, April 1905, which seems to be a purchase of one pair of mules for $350 from Gentry & Thompson by the East Tennessee Telephone Co. Will you please explain that voucher?
A. The voucher seems to be for the purpose of a pair of mules for $350.00.
Q. Was that pair of mules purchased for the East Tennessee Telephone Co.?
A. They are billed as to the East Tennessee Telephone Co.
Q. Does the voucher explain where those mules were to be used?
A. The voucher states the mules are to be used for construction work at Georgetown, Ky.
Q. Does the voucher show on whose order those mules were purchased?
706 A. On the order of the assistant general manager.
Q. Was the sum represented by that voucher charged to construction account of the Louisville exchange?
A. I will have to refer further to the records to determine. If the charge was made to Louisville and has not since been corrected, it is in error.
Q. Was the charge made to Louisville construction account?
A. I cannot tell from the voucher.
Q. Where was the voucher paid?
A. The voucher was paid through the Louisville office. If the $391.87 shown on the cover of the voucher, as charged to tools and teams, is charged to the Louisville account as Mr. Warren states it is, I will agree it is charged to Louisville in error.
Q. Is there any star on that voucher indicating it is to be charged anywhere, but to Louisville?
A. There is no star whatever on the individual sub-voucher which you mention.
Q. I show you voucher No. 290, May 1905 for $330 and will ask you to explain that voucher?
A. This voucher is for $330.00 for one pair of mules four years

old, guaranteed sound in every particular, purchased from Willard Shaffer, Corydon, Ind.

Q. Where were the mules delivered?

A. The voucher does not specify; they were bought at
707 Corydon, Ind.

Q. I call your attention to this paper appearing in this voucher and will ask you if that paper does not state on its face that the mules were delivered at Corydon, Ind.?

A. I stated that the mules were purchased at Corydon, Ind. and this paper does state delivered at Corydon, Ind., but does not state that they are to stay there.

Q. Do you know whether they were used in and around Corydon, Ind.?

A. The mules were charged to tools and teams, Louisville, which indicates to me that they were for Louisville. Authority for their purchase was given to the manager at Louisville, and he was authorized also to buy a double wagon and a double set of harness.

Q. Do you know, as a fact, that they were purchased for use at Louisville?

A. I know nothing further than what is shown by the voucher.

Q. Was that item charged to construction account of the Louisville exchange.

A. Charged to tools and teams, which is an asset account.

Q. Is that part of the items which go to make up the construction account for the year 1905 at Louisville?

A. At the time we began charging live stock and vehicles to tools and teams, we began the system by an inventory of what we had and since that, the live stock, vehicles, etc., have been in-
708 ventories periodically, and the records verified. If this pair of mules and wagon were charged to Louisville incorrectly, the Louisville account has since received credit.

Q. Well, was it charged to Louisville construction account?

A. The cost of the two mules were charged to property account, known as tools and teams, Louisville, which is a construction or investment account. This same answer will apply to the pair of mules purchased at and for Georgetown, Kenoucky.

Q. I show you voucher No. 290, for August 1905, $454.50. Please explain that voucher?

A. This voucher is for the purchase of a mule team for extra hauling in Springfield, Ky., and in development over the county. The mule team cost $365.00. The cost of the team was originally charged to Louisville, Ky., but I am certain that credit has since been given the Louisville account therefor, through the inventory and adjustment.

Q. How long would it require for you to ascertain whether Louisville was ever given credit on its construction account for the amount of this voucher?

A. Fifteen or twenty minutes.

Q. Was the $454.50 charged to Louisville construction account?

A. The entry $454.50, representing the purchase of the team

wagon and harness, was so charged, in error, and my explanation applies to the whole.

709 Q. I show you voucher No. 290 for October 1905, for $125.00. Will you please explain that voucher?

A. This voucher also is for the purchase of horse for Shelby County, charged to Louisville in error, and my previous explanation of corrections will apply to this item also.

Q. Will you read the letter addressed to yourself, which is a paper appearing in that voucher?

A. The letter reads as follows:

"LOUISVILLE, KY., *Oct.* 17, 1905.

Mr. H. Blair Smith, Auditor, Nashville, Tennessee.

DEAR SIR: We are herewith returning your voucher for one horse, amounting to $125, and with reference to the authority to purchase same, it was sent us on or about September 20th. This horse was purchased for county construction in and about Shelbyville. Mr. Symmes will remember the matter, inasmuch as it was taken up in connection with the harness and jolt wagon to complete an outfit for Shelby County.

Yours truly,

BEN S. READ, *Manager.*"

Q. I show you voucher No. 290 for October 1905, which seems to be a voucher representing the payment of $125. Please

710 explain that voucher?

A. It is for the purchase of a horse for use at Charleston, Ind., exchange. The charge is in error to Louisville and has since been adjusted.

Q. Do you know it has been adjusted?

A. I am satisfied of the fact.

Q. I will ask you now to examine your records and ascertain whether any credit was given to the Louisville exchange for the amounts charged to it on account of the last three vouchers about which you have testified?

A. Our April 1909 voucher, No. 553, adjusts the Louisville tool and team account as of February 28th, 1909. As of that date an inventory of the tools and teams was made and the inventory value found to be $7,998.34. The book value was $9,849.49. Louisville account was credited to show the correct or inventory value. That adjustment you will see, is in 1909.

Q. Do you mean to say then that on April 22nd, 1909, you credited the construction account of the Louisville exchange with something more than two thousand dollars on account of tools and teams?

A. At the end of April 1909 we credited Louisville construction account with $1,851.15.

Q. Now that $1,851.15, as I understand it, represented the difference between what your books showed to be the value of

711 your tools and teams and what an inventory showed to be the value of them?

A. That is correct.

Q. In making the inventory was the value of the tools and teams at the date the inventory was made, placed on each article, tools and teams, or was the value placed on them for which they were purchased?

A. As near the original cost as we could arrive at.

Q. How do you know that?

A. That is our practice.

Q. You don't know that, though, of your own knowledge?

A. I know that is our system. Further than the fact that it is our system, I do not personally know.

Q. Then, your inventory didn't show the value of the tools and teams as of April 22nd, but showed what you paid for them?

A. It showed the cost.

Q. Are your teams and tools as of April 22nd, as shown by that inventory, so, it was not the correct value of the tools and teams?

A. It may have been too small.

Q. It was not the correct value?

A. It was as near the cost, which I take it to be a very correct method of arriving at the value, as we could get. We keep our live stock in first class condition and keep tools and vehicles in repair.

Q. Did the $7,989.34 represented by the inventory in-
712 clude all of the tools and teams on hand at that time?

A. It included what was located at the Louisville exchange, and in the hands of Louisville employés.

Q. Now, if you had purchased $9,849.49 worth of teams and tools and charged that amount up on your books, and subsequently $1,851.15 worth of tools and teams had ceased to be a part of that plant, by reason of death of horses or the wearing out of tools, then on April 22nd, 1909 the inventory would not show but $7,989.34 would it?

A. It would not, if the condition you state was a fact.

Q. Now I show you voucher No. 2900 for October 23rd, 1905, which seems to have certain items charged to the construction account of the Louisville exchange. Will you please examine that voucher and explain it?

A. This is for the purchase of a dark bay mare, fifteen hands, two inches high, six years old, for use at Springfield, Ky., $135.00. I find in the same voucher the purchase of one horse mule, sixteen hands high, four years old for $150, for use at Mackville, Ky., both of which seem to have been charged to Louisville, and both charges have been adjusted in April 1909 voucher No. 553, if not adjusted before.

Q. In regard to the last mule purchased for $150., mentioned by you, I show you a letter dated October 11th, 1905, as
713 part of the voucher and will ask you to read it to the stenographer.

A. The letter of October 15th, 1905, reads as follows: "As per telephone conversation this P. M. of Mr. B. S. Read, Manager, Louisville, this will authorize the purchase of one 16½ hands high mule, four years old, guaranteed to be sound in every respect, for

your use, replacing one which died. The above mule to cost not exceeding $150.00.

Q. Are those two items contained in that voucher, properly charged to Louisville construction account?

A. It would be well here to state that it is the system of the company to charge purchase of new live stock to tools and teams account and to issue a voucher for the loss entailed through the death or sale of worn out live stock or tools. These two vouchers are properly charged to tools and teams account, but not to Louisville.

Q. And they do appear, do they, as a part of the construction account in Louisville, Ky., for the year 1905?

A. Unless a voucher correcting this was issued during that year. One correcting it has been issued.

Q. I hand you voucher No. 290B for December 1905, and will ask you to explain that voucher?

A. Under date of October 21st, 1905, one sorrel mare, six years old, sound, and buggy and harness, was purchased from N. B. White at Louisville for $100. Also, on November 9th, 1905, $50.00 was paid as the difference between the cost of a mare that
714 could not be used and a good sound horse weighing a thousand and fifty pounds, fifteen hands high, nine years old, well built.

Q. Are those two items charged to the construction account of the Louisville, Ky., exchange for that year?

A. They are, and properly so.

Q. Now I show you voucher No. 204 for 1906 for $500 and will ask you to explain that voucher?

A. This is an invoice of April 26th, 1906 in favor of Gentry and Thompson for two mules, $500. The mules were purchased at Lexington, Ky., and seem to have been originally used at Winchester, Ky.

Q. Against whom is the bill made out of Gentry & Thompson?

A. Against the East Tennessee Telephone Co., but was paid through Louisville. These errors which you are bringing to my attention must certainly have been discovered promptly and corrected.

Q. Was that $500 charged up to construction account for the Louisville exchange, for 1906?

A. It was originally so charged.

Q. I show you Voucher No. 753, June 1906, for $430.00 and ask you to explain that voucher?

715 A. This voucher is for the purchase of two mules for $430. The mules seem to have originally been used for building Charleston, Ind., exchange. The charge for the mules seems to have been incorrectly made against the Louisville exchange, temporarily at least.

Q. Did you approve that voucher?

A. I did.

Q. Did you approve all of the vouchers which have been shown you?

A. Not personally.

Q. Did you approve this one personally?

A. Yes, but I know it was without a careful examination, as I should not have permitted the charge to be incorrectly made, even temporarily, intentionally.

Q. I show you voucher No. 753 for April 1906, for $500, and ask you to explain that voucher?

A. This voucher is for the purchase of two mules, $500 for trouble, Louisville District. The charge was made to Louisville tools and teams, correctly.

Q. Does that amount go to make up the total of the construction account about which you have testified for the Louisville exchange for the year 1906?

A. That charge was originally made to that account.

Q. I show you voucher No. 204, February 1906, for $200. Please explain that voucher?

716 A. This invoice is dated January 19th, 1906, in favor of Hudson Brothers & Co., for the purchase of one dray horse, $200.00. It is charged, properly, to Louisville tools and team account.

Q. Do you know whether that horse was used in Louisville or not?

A. The statement on the voucher is that it was for a dray horse. It does not show to the contrary, and I believe it is correct.

Q. Do you know whether that dray horse was intended to take the place of another dray horse that had died or been sold?

A. If such had been the case the voucher for the dray horse that had died or been sold, would be made, crediting the tools and team account.

Q. How long would it take to examine your records and furnish me with a statement of any credits to construction account made on account of the death or sale of horses over the period we have covered, in 1900 to 1906 inclusive, Mr. Smith?

A. I think it will require two or three days.

Q. I show you voucher No. 753, February 1906, for $275. Please explain that?

A. The invoice is dated Louisville, January 13th, 1906, is in favor of Killgore & Stilz and is for one new platform truck
717 wagon at a cost of $275.00. It is charged to Louisville, tools and team account.

Q. Do you know whether that wagon was used in connection with the Louisville exchange or not?

A. Louisville's notation on the voucher is that it should be charged to tools and team account. My information from the voucher leads me to believe that it was used in Louisville.

Q. Do you know whether it was used to take the place of some wagon which was worn out?

A. If such was the case, the other wagon has doubtless been already charged off.

Q. Do you know that it has been charged off?

A. Not individually.

Q. Would it be credited to construction account of the Louisville exchange, or charged off to profit and loss account?

A. It would be charged off by credit to tolls and teams account and a charge to expense.

Q. Would the construction account be given credit for the wagon which had worn out?

A. Tools and team account would be given credit, even though the wagon were worn out in the performance of construction.

Q. Read him my question Mr. Duke.

(Question read.)

718 A. If you consider tools and team account as a construction account, it would be.

Q. You have stated that for the year 1906 you charged a certain gross sum to construction of the Louisville exchange. If this wagon had been used to take the place of another wagon which had worn out, would the gross sum which had been charged to the construction of the Louisville exchange, be credited with the original cost of the wagon which was supplanted by this wagon?

A. I don't recall testifying specifically to the fact that certain gross charges were made against Louisville in 1906, further than that as the items have been brought up. In my direct examination I gave a statement of net charges at the end of the various years. If the wagon being discussed, was to take the place of another wagon, a voucher for the original cost of the other wagon provided it has been sold or torn to pieces or otherwise disposed of, should, and I believe, has, been made, and such voucher would credit tools and team account, which is, and has been, considered a part of the construction account.

Q. I show you voucher No. 350, January, 1906. Please explain that voucher.

A. The invoice is for the purchase of two model C Ford Automobiles, as runabouts, at $600 each and one like automobile
719 with tonneau for $650. The voucher shows that the automobiles were received at Louisville January 24th, 1906.

Q. Do you know whether those automobiles would be used in connection with the Louisville exchange exclusively?

A. I believe they were.

Q. Do you know, as a matter of fact, that those automobiles are used to travel over the Louisville district?

A. Does not the Louisville District cover the Louisville exchange?

Q. You have testified that the Louisville District comprised a number of towns surrounding Louisville?

A. It is possible that these automobiles were used to make inspection trips to the nearby exchanges, but I do not know that this is a fact and do not so testify.

Q. To what account was that item charged?

A. Tools and team account—auto, Louisville, Ky.

Q. Did that go to make up the total of construction account about which you have testified, for the year 1906 Mr. Smith?

A. Yes.

Q. Do you know whether those three automobiles were used to take the place of certain horses, the use of which was discontinued?

A. If such is the fact, the value of those horses was credited to Louisville.

720 Q. I show you voucher No. 352 for June, 1908, for $800 and ask you to explain that item?

A. The item of this voucher is for one second-hand, four cylinder Peerless automobile, with canopy top purchased for $800.

Q. Where was it purchased?

A. Purchased at Louisville.

Q. Was it charged to the Louisville construction account for that year?

A. It was charged to Louisville construction account. I find a notation on the voucher which shows that the charge was in error and that it should have been to general account.

Q. Was there a correction made of that charge?

A. The voucher shows such to be the case.

Q. Read the item showing that correction?

A. Correction in July 1909.

Q. Was that correction made after the two accountants had gone over your records?

A. I don't know whether they had this voucher before or after that correction was made.

Q. Do you know who made that memoranda on that voucher?

A. Mr. Armstrong.

Q. Did you direct him to do it?

A. Yes.

721 Q. At whose direction did you direct him to do it?

A. At the suggestion that the voucher was in error.

Q. Who made that suggestion?

A. The fact that I recalled the automobile had been purchased in Louisville, and that it had been driven through the country. It was done at the time of an inventory.

Q. Did Mr. Wilkinson suggest to you it should be charged to general account?

A. He did not.

Q. Did he ask about it?

A. He did not.

Q. Is there any notation on any of the other vouchers which you have said were erroneously charged to Louisville of a nature similar to the memoranda you have just read on this voucher?

A. I think not.

Q. Now what goes to make up the items of tools and team account.

A. Do you mean what articles are charged to tools and team account?

Q. Yes.

A. General tools used by employés in the exchange, provided they belong to the company; teams and individual horses and mules, wagons and harness, and automobiles.

Q. Do you know how many automobiles are now in service
722 in connection with the Louisville exchange?

A. I do not, but the records will show.

Q. When tools are purchased to replace tools which have become useless, are they charged to construction account of the Louisville exchange?

A. When tools are issued to foremen for construction purposes, or for any other purpose in the Louisville exchange, they are charged to the Louisville exchange.

Q. Does that mean to the construction account of the Louisville exchange?

A. Yes.

Q. Is any credit given on the construction account for the tools which they are intended to replace?

A. As explained, it is the custom to make periodical inventories of the tools and teams and at such inventories to make adjustments, which have not been made as such tools and teams may have been driven away, lost or worn out. It is our effort to keep at this time the tools and team account as nearly accurate, from day to day, as possible.

Q. How long has the inventory plan about which you have just testified, been in force in connection with the conduct of your business?

A. It was begun about two or three years ago.

Q. Prior to that time was any such credit made to construction account, where tools were replaced?

A. I believe such was the custom

723 Q. You don't know that to be a fact?

A. Not positively.

Q. Now in a general sort of way, please state what items you are accustomed to credit to construction account, if any, prior to the inventory plan?

A. In regard to what?

Q. All through your deposition there have been a number of instances mentioned in which you said, credit has been given the construction account for certain items which were taken out and became no longer a part of the Louisville exchange system. Now I would like to know in a general sort of a way, what character of articles go to make up the items of credit to construction account?

A. Do you refer to tools and teams or the whole account?

Q. The whole account.

A. The reconstruction account would represent mainly the cost of credits to construction, that is, when properties were reconstructed or replaced, instead of crediting construction with the cost of those properties and charging construction with the cost of the new properties taking their place, the system was to charge the cost of the original properties replaced to reconstruction account.

Q. Now please read him my question again, will you?

A. Will you kindly specify one of the items in my deposition, to which you refer?

724 A. Well, some of them were mules and some were automobiles and I cannot recall them all, but irrespective of whether you have referred to them or not, I should like to have an answer to my question?

A. I cannot answer your question, unless you make the question specific.

Q. Well then you state that when mules or teams die or were disposed of, that the original cost was credited to construction account, I believe?

A. That is the system.

Q. And the same is true in regard to automobiles?

A. That is correct.

Q. And the same is true in regard to tools?

A. That is correct.

Q. Now are there any other items of which that is also true?

A. Those are all the items involved in the account known as tools and teams and it was in referring to such items that I stated, construction would and should be credited with articles disposed of in any way. All of these properties are movable and exceedingly difficult to keep up with. They can be driven through the country, carried off, worn out and thrown away, and it is difficult to get prompt and accurate reports. New teams and new automobiles can be brought into Louisville in the same way, so that the only satisfactory way we have found to keep the accounts in proper condition regarding these movable items, is by the method described.

725 I did not say the method for tools and teams applied throughout.

Q. Well, does it apply to anything else?

A. Not in the past, that I recall now?

Q. What about office furniture?

A. The custom was to charge new furniture either to construction or reconstruction, according to the facts.

Q. What about telephone instruments?

A. Telephone instruments are credited to construction when returned to supply stock.

Q. What about private branch exchange switchboards?

A. The same is true.

Q. What about the telephone booths?

A. The same is true.

Q. Can you recall any other articles of which that is true?

A. If articles are removed because not wanted or needed, and are not replaced, then the system was to deduct such from construction account.

Q. You mean by that, give construction account credit for the cost of the articles?

A. Yes.

Q. The only other voucher I can recall that I desire to look at now is Voucher No. 2544, July, 1902. Mr. Smith, I asked you yesterday for the period during which the cost of installing subscribers' station was charged to construction. Have you got-

726 ten that information?

A. I have examined at random, pay rolls from Louisville

for the whole period from 1900 to the present date, and specifically, the following vouchers: February 1900, No. 502; November, No. 1695; September 1901, No. 163; December 1902, No. 1875; July 1903, No. 526; February 1904, No. 301; September 1905, No. 301. April 1906, No. 205; August 1907, No. 480; and, during the balance of the period, I am personally able to testify about, and I find that the salaries of all instruments setters and instrument men have been charged to expense, and if you wish to examine the vouchers, or others, please ask for them.

(Counsel examines vouchers.)

Q. Mr. Smith, did you examine any vouchers other than the ones you have handed me?

A. I did.

Q. How many more?

A. About twice as many, and I found them all to be just the same as these and returned them to the files, because I thought the pile was too large.

Q. Do you know whether wages of any employés during that period which employés were engaged in installing instruments for subscribers, were charged to construction account?

A. The employés that I refer to are the men who run the interior wire and set and test the telephone, and the men in the central office who make connections on the route frames. My belief
727 is that these salaries have always been charged to expense.

Q. Now, what about the material furnished for installing such subscribers' stations: to what account is that charged?

A. I inquired of the supply department in regard to this and their records in detail do not go back further than October or November 1904. That is, their records are not in sufficient detail to determine this, but from that date to the present date the interior wire used in the central office, route frames and in the subscribers premises, with the exception of private branch exchanges, and also, the hand telephone cord and the long cord and any original batteries used, if any, have been charged to maintenance.

Q. Were any of those items you have detailed there, charged to construction account over any of that period?

A. I am advised by the supply department that they were not.

Q. You don't know that of your own knowledge?

A. I do not. I am not in charge of the supply department and the reports of material and its uses come to me in consolidated form from the supply department.

I hand you herewith July Voucher No. 2544 specifically requested.

Q. Mr. Smith, this voucher, No. 2544 has connected with it an invoice in favor of Stewart Bros., $1266.40. Will you ex-
728 plain that item?

A. The invoice is dated July 2nd, 1902, and states that it is for work and material building bay window by trouble clerk's room, and building room over court square according to contract The voucher is charged to Louisville real estate account.

Q. Does that go to make up a part of the items for construction for that year of the Louisville exchange?

A. It is a part of the real estate account which I think is not included in construction account by the Mutual Audit Co. in their report.

Q. Now I also call your attention to what seems to be a letter of May 5th, 1902, addressed to the Cumberland Telephone and Telegraph Co. Will you please read to the stenographer the body of that letter?

A. The letter reads. "May 5th, 1902. We propose to shore up walls and put in I beams in rear of second story walls of the Jefferson Street exchange building; also put in two I beams to span court and to support floor joists; stud up the west side and raise the east side of present bridge enclosure; put on tin roof and cover side with sheeting and corrugated iron, and plaster inside. Also move out the window in wire chief room about four feet; enclose sides with sheeting and corrugated iron and plaster inside. This window will be supported by six by six posts. Also take down stud par-
729 tition in Jefferson Street building, second story to throw hall into rooms and paint all new wood work for the sum of $1093.25. Do you want an explanation of the difference between the amount of the bid, and the amount of the bill?

A. No. Mr. Smith, I should like to have you detail now the items charged to construction account for the years 1901 to 1908, inclusive, for the Louisville exchange?

A. The joint report of the accountants, dated the 7th of July, 1909, shows amounts added to construction account of the Louisville exchange, as follows:

1900		$166,775.23
1901		178,549.14
1902		217,128.05
1903		163,486.84
1904		131,371.13
As total for the five years		$857,310.39
Added, 1905		60,591.21
1906		89,770.42
1907		20,770.42
Net taken out, 1908	$4,351.83	
Making the grand total for the nine years		$1,023,545.34

Q. Do those items show correctly the amount expended for construction for those years?

A. I believe they do. We had up one or two small items this morning which would affect them some little.

730 Q. Now we have gone through some of the items going to make up the total items you have referred to for each year and I should like to know in a general way, whether all of the items which go to make up the total item for each year as you have detailed

it, are substantially the same character of items represented by the vouchers which we have examined?

A. My belief is that so far the whole of the examination has been on specific items, which the Mutual Audit Co. picked out from all the vouchers which they examined and on which they felt they could throw some doubt as to their accuracy; that they have not taken up further items, because they felt satisfied that they can not in any way throw any shadow of doubt on them.

Q. Don't you know as a matter of fact Mr. Smith that until Tuesday morning of this week, Mr. Wilkinson had all of the working papers of the Mutual Audit Co. dealing with the construction account, and that the items about which you were asked and the vouchers selected prior to Tuesday morning of this week were asked for at random and without any memoranda whatever or any knowledge of what they would contain?

A. No, I don't know it. In the first place, I do not think it is material as to whether Mr. Wilkinson had the working papers or not. In the second place, one whole morning of my examination was spent in questioning me about errors in accounting
731 which had been admitted and which were embodied in the joint report, and in the individual reports of the accountants. They were specified items and with a few vouchers excepted, every voucher has been asked for has been carefully selected, in my opinion.

Q. Did I ask you for any vouchers by number prior to Tuesday morning of this week?

A. I do not recall. The records will show this. You at first asked me to please get out for you two vouchers for each month, for each of the nine years and after spending a large amount of time in doing this, you looked over a few of the vouchers for the first year and never asked for those for the other eight years numbering something near two hundred.

Q. Have I ever asked about or failed to ask about, rather any voucher for which I asked or which you have presented to me?

A. Yes.

Q. How many?

A. A number of pay rolls.

Q. How many would you say?

A. During the pay roll examination you have avoided some vouchers, but after that, you have asked for vouchers specifically.

Q. How many would you say I avoided, as you term it?

A. Half a dozen pay roll vouchers, I think.

732 Q. Don't you know, as a matter of fact, I have asked you questions about every voucher I have ever called for?

A. No.

Q. Don't you know I have asked you questions about every voucher you have presented to me, whether I called for them specifically by number or not?

A. No.

Q. I tried to get you to tell me awhile ago, whether the items going to make up the totals of expenditures for construction for the

Louisville exchange were the same character of items which have been gone into from vouchers, in regard to some of the years, and I should like to have a specific answer to that question?

A. My previous answer I consider a very clear one, and I will add to it, that I believe the vouchers which you have not gone into specifically, are clear and accurate in all particulars.

Q. Do they represent the same character of articles referred to in the vouchers in which we have gone into?

A. They represent some of the same.

Q. What in addition do they represent; what articles in addition?

A. The Louisville exchange, and all other telephone exchanges are built from thousands of articles which it would take a catalogue to enumerate. You have asked nothing in regard to the gen-
733 eral run of supplies. You have asked about some few specific items and charges.

Q. Are the accounts for the other years—the construction account for the other years, made up of items similar in character to the items represented by the vouchers which we have examined?

A. I repeat my answer.

Q. Are the total items for construction account, which you have detailed here for the various years, made up in part of articles similar in nature to the articles represented in the vouchers which we have examined?

A. Of course the Louisville construction account is made up of charges from vouchers for labor and sundry articles of material. Some of these charges have been enumerated but by no means the larger part of the construction account.

Q. How long do you think it would require to go through the construction for those nine years, voucher for voucher, as we have been going through them in the past few days?

A. The Mutual Audit Company did that, and I think two men spent about two or three weeks on it.

Q. Will you read him the question?

A. Basing my answer upon the work done by the Mutual Audit Company I would say that it would take a considerable time to do so, except for the fact that I believe so many questions as were asked about the vouchers which seemed to you not clear, would be eliminated.

734 Q. From what source was the money derived which was expended and charged to construction account of the Louisville exchange.

A. The money was all paid out of the treasury of the company. The larger part by far of all the construction which has been done throughout the whole of the company's system has been derived from the sale of its stock at par. There were no appropriations of money from specific sums for the construction of the Louisville exchange but think the money practically all came from its stock.

Q. Where was the money placed which was derived from the sale of the stock?

A. In the treasury of the company.

Q. Where were the earnings from the Louisville exchange placed?
A. In the treasury of the company, if there were any.
Q. And was this money which was expended for construction account in Louisville paid out of the same treasury into which the proceeds of the sale of stock and the earnings were put into.
A. Yes, but accounts were kept so that the earnings are known, if there were any.
Q. Have you ever sold any stock for more than par—has the company, I mean?
A. I do not recall any sales now of that kind.

Q. Do you know what is the market price of the stock of
735 the Cumberland Telephone and Telegraph Co., at the present time?

A. It is about a dollar forty-five.
Q. Did the Cumberland Telephone and Telegraph Company sell any stock in 1900?
A. There was stock issued in 1900 in payment of some shares of stock of the Ohio Valley Telephone Company. There was no other specific issue of stock during that year.
Q. How about 1901?
A. There was stock offered to stockholders twice in 1901.
Q. Was it sold?
A. It was.
Q. How much of it?
A. The first issue was $1,467,400; the second issue was $1,771,200.
Q. For what amount was it sold?
A. Par.
Q. Was any of it issued to the American Telephone and Telegraph Co. or the American Bell Telephone Co.?
A. Yes.
Q. How much of it?
A. My records would not show; That company is a stockholder of our company and they have always taken their pro rata of stock.
Q. How did they pay for that stock?

A. Their subscriptions to our stock have always been paid
736 for in cash at par.

Q. How much stock does that company own in the Cumberland Telephone and Telegraph Co.?
A. My records do not show.
Q. Did they pay for all of it at par?
A. They have paid par for their stock during my connection with the company.
Q. Do you know that of your own knowledge?
A. I do.
Q. Did they pay anything for the stock that was issued to them for exchange of stock of the Great Southern Telephone Co. or the Ohio Valley Telephone Co.?
A. They did not pay cash. The stock was exchanged.
Q. Was any stock issued by your company in 1902?
A. There were two issues made.
Q. Amounting to how much?

A. The first, $1,693,950; the second $2,339,050.
Q. Was that stock sold at par?
A. It was.
Q. Was any stock issued in 1903?
A. No.
Q. Any in 1904?
A. No.
Q. 1905?
A. Yes, $1,754,300.
Q. Was that paid for in cash?
A. It was.
737 Q. What about 1906?
A. Yes.
Q. How much?
A. There was offered $3,362,400.
Q. How much was issued?
A. That sum.
Q. Was it issued at par?
A. Yes.
Q. Did the company receive par for the sale of that stock?
A. Yes.
Q. How about 1907?
A. There was offered the same amount, $3,362,400.
Q. Was that stock issued and sold?
A. All of it was not issued and sold.
Q. How much of it was issued and sold?
A. $2,868,100.
Q. Was that stock sold at par?
A. It was.
Q. How about 1908?
A. No.
Q. None sold?
A. No.
Q How about 1909?
A. None sold.
Q. Don't you know as a matter of fact, Mr. Smith, that the American Telephone and Telegraph Company owns the
738 controlling interest in this company?
A. I do.
Q. You don't know specifically, though, how much stock it does own?
A. I do not.
Q. I show you what purports to be the twenty-sixth annual report of the Directors of the Cumberland Telephone and Telegraph Co. for 1908. I wish you would examine that and tell me how much stock was outstanding of the Cumberland Telephone and Telegraph Company at the end of the period covered by that report?
A. The amount is $19,680,150.
Q. What period does that report cover?
A. It covers two periods, the years ending December 31st, 1907, and December 31st, 1908.

Q. Was that for the period ending December 31st, 1908?

A. Yes, and the same for the period ending December 31st, 1907.

Q. Now is there any other stock not yet issued but which is authorized?

A. Authorized by whom.

Q. By the directors of the company.

A. I am not able to answer.

Q. What is the authorized capital stock of your company under the articles of your incorporation?

A. $20,200,000.

739 Q. You stated awhile ago that for the year 1907 a certain amount of stock was offered for sale, but not all sold. Has the difference between the amount offered for sale and the amount issued, been sold since that date?

A. It has not.

Q. Then would you say that the difference had been authorized by the Board of Directors?

A. What difference.

Q. The difference between the amount offered for sale and the amount sold?

A. It was offered by the directors to the stockholders at par, provided certain conditions were complied with. It seems those conditions were not complied with and the stock has not been issued.

Q. You mean not complied with as to all of it?

A. Yes.

Q. Now, if you will examine the report I have shown you, you will find under the head of resources an item purporting to show the amount invested in plant, as of December 31st, 1908. Will you please state what that amount is?

A. $24,381,297.64.

Q. And what is the total amount which seems to be invested in real estate and buildings?

A. $790,163.23.

Q. And what is the total amount represented by material on hand?

740 A. $640,861.40.

Q. And what is the total amount appearing under the heading of stock and bonds?

A. $435,599.04.

Q. And what is the total amount appearing opposite the word cash?

A. $457,546.49.

Q. And that makes the total of the resources how much for that period?

A. $26,705,467.80.

Q. Did you have any bonds outstanding at that time?

A. We did.

Q. What did they amount to?

A. One million dollars.

Q. What was the surplus as of December 31st, 1908?

A. $3,286,202.12.
Q. What was the reserve?
A. $1,198,586.30.
Q. What was the undivided profits?
A. $393,603.
Q. What were the total earnings for the year ending December 31st, 1908?
A. The total earnings from all sources, being gross earnings, was $6,141,817.95.
Q. Was that an increase over the year 1907?
A. Yes.

741 Q. What were the total expenses for the year ending December 31st, 1908?
A. The total expenses, including interest and taxes, were $4,148,387.87.
Q. What was the surplus as of December 31st, 1908?
A. $3,286,202.12.
Q. What was the surplus as of December 31st, 1907?
A. $2,768,783.28.
Q. I hand you also what purports to be the annual report for the year 1907, and will ask you what was the surplus as of December 31st, 1906?
A. $2,343,774.99.
Q. And what was the surplus as of January 1st, 1906?
A. $1,940,842.70.
Q. What were the earnings for the year ending December 31st, 1906?
A. The gross earnings for the year 1906, were $5,384,844.76.

At this hour, one o'clock P. M. a recess was taken until this afternoon at two o'clock.

742 Cross-examination of H. Blair Smith, Resumed, at 2 o'clock, p. m., Sept. 9th, 1909.

By Mr. Blakey, for the Defendant.

Q. What dividends were paid by the Cumberland Company in 1908?
A. Dividends at the rate of 7 per cent. in January, April and July, and at the rate of 8 per cent. in October.
Q. Were there any dividends paid in 1909?
A. Yes, dividends paid in January, April and July were at the rate of 8 per cent. per annum.
Q. Do you know what dividends were paid by the Ohio Valley Company during the year 1899?
A. There were two dividends, one in January, and one in April, which I think were at the rate of 7 per cent. Mr. Wilkinson in his report states so.
Q. Do you know what dividend was paid by the Ohio Valley in 1898?
A. I do not know myself, but Mr. Wilkinson goes into this on page 12 of his report to the Master.

Q. What does Mr. Wilkinson say was the rate of dividend paid from 1890 to 1898 by the Ohio Valley?

A. He says it paid to its shareholders regular quarterly dividends of $31,500 every year except in 1894, when the fourth quarterly dividend was passed, making only $23,625 paid for that year.

Q. Will you read him my question, please. (Question read.)

A. He states further. In all, from '90 to '99 inclusive the
743 shareholders received $291,375.00 in dividends, this being at the uniform rate of 7 per cent. per annum.

Q. Mr. Wilkinson had access to the books of the Ohio Valley, had he?

A. Yes.

Q. He was employed by your company to examine these books and report to the Master his findings, was he not?

A. I believe that is the case.

Q. Are the facts you have detailed as being a part of the report made by him contained in the report made by him to the Master?

A. That is the report I have read from.

Q. Now what is the life of a switchboard used such as the switchboard now installed in the main office Louisville exchange?

A. Part of the switchboard now in use in the main exchange at Louisville was, I believe, installed about 1897, and I think some of it, if not the main part of it, is still in use. Further than this I cannot testify.

Q. Now I hand you a transcript of the record in the case of the Railroad Commissioners of Louisiana vs. The Cumberland Telephone Co., No. 182, in the transcript of the record of the Supreme Court of the United States, and refer you to the following question and answer of your deposition, in which it seems that you were asked this question:

"Don't you maintain the property?"

To which question you answered:

"In part we do, but you might take the case of the switch-
744 boards, to make it plain, the life of that switchboard is estimated at near 15 years."

I will ask you if that question was asked in that case, and if you answered that question in that way?

A. The question I will grant was asked me, I don't remember it. You have asked me a very specific question about a new type of switchboard which I believe as far as I know has never been tried fully and none of which as a whole have yet been thrown aside as useless. There are as many different kinds of switchboards as there are books.

Q. I will ask you if that deposition was not given along about the month of May, 1907?

A. I gave a deposition at that time, and the printed copy from which you read I believe is a copy of the deposition.

Q. Now if the average life of a switchboard such as is installed in the Louisville exchange is 15 years, then it would depreciate at the rate of about 7% a year, would it not, in value?

A. A switchboard the size of that in Louisville is a very compli-

cated affair from the standpoint of depreciation. You start out with a small switchboard—at least smaller than you end with. When the switchboard becomes useless as a type, not only the old part is usually taken out, but the newer parts which have been
745 added from year to year also become useless. To determine the exact depreciation on these requires a specific study, but the generally accepted belief is that switchboards as a whole last from ten to fifteen years as an average.

Q. I will ask you if you did not further say, in answer to the question which I have just read to you from the transcript of the record mentioned in my former question the following:

"Each year it is worth a little less than it was when put in and its life is a little less, but you cannot do anything to that switchboard then during that year to make its life a year longer, therefore that switchboard has deteriorated a certain proportion of its value during that year. And that is applicable to all other property."

A. If you read it—I think that I said that.

Q. Then will you say now whether or not the switchboard installed in Louisville in 1897 as you say has depreciated each year to the extent of seven per cent?

A. I will say this, that the switchboard installed at Louisville which we are talking about, as far as the operation thereof is concerned is as valuable to the customers, or for service, as it was when it was installed, but it must be agreed by every one that its life now is less than its life was at the beginning.

746 Q. Have you set aside any sum during the life of that switchboard to replace it with when it has to be removed?

A. The earnings of the Louisville plant have been so meagre during the past seven or eight years that there could hardly have been set aside anything. There has not been enough to pay the dividends.

Q. Do you consider the paying of dividends or the providing a fund to take care of depreciation the more important item?

A. I consider it exceedingly important to earn a sufficient amount of net revenue to have a Depreciation fund. This we have not done.

Q. What have become of your earnings from the Louisville exchange?

A. Whatever net earnings there were—and there has been precious little—have been placed in the general treasury.

Q. Has any of it been set aside for a depreciation fund to take care of the Louisville plant when it ceases to be in operating condition?

A. Not specifically.

Q. Has any of it been used to pay dividends?

A. Not specifically.

Q. What has become of it?

A. It has been placed in the general treasury of the company.

Q. Are the earnings from the Louisville exchange sent direct to

Nashville, or are they kept in Louisville and vouchers and
747 pay rolls paid out of those earnings?

A. The gross earnings are remitted in toto to the Treasurer, at Nashville.

Q. Who is the Treasurer?

A. Mr. T. D. Webb.

Q. Does he have under his control and in his department the items going to make up the earnings from the various exchanges?

A. Not that I know of. Don't put that down.

Q. Yes, put it down.

A. Read the question.

Q. (The stenographer read the question to witness.)

A. He knows the gross earnings.

Q. Does he know anything about the expenditures for the Louisville exchanges and other exchanges?

A. Checks for all expenditures go through his hands.

Q. Does he know what the expenditure is for?

A. If he chooses to examine.

Q. If I understand you, then, Mr. Smith, all the earnings from the Louisville exchange are paid into the general treasury. That is correct, is it?

A. The gross earnings, yes, that is a fact, all over the territory.

Q. And no part of the earnings from the Louisville exchange have been set aside to take care of depreciation?

A. The earnings have been so scant at Louisville that we
748 have not been able to specifically set aside anything.

Q. Have the expenses of operating the Louisville exchange been paid out of the general treasury?

A. All expenditures for the benefit of the Louisville exchange have been paid out of the general treasury.

Q. Then the difference between the gross earnings and the expenditures of conducting the Louisville exchange have remained in the general treasury until they have been used for some other purpose, have they?

A. Yes.

Q. Now I asked for some books for examination concerning the earnings and operation of the Louisville exchange for the years 1900 to 1904, inclusive. Have you any of those books?

A. The books are here before you.

Q. I should also like to have the books containing the items going to make up the revenue for the years 1900 to 1905 inclusive?

A. Do you mind stating how long you and Mr. Warren will be engaged in auditing these four big books, in order that I may know how to dispose of my time?

Q. Neither Mr. Warren or I are engaged in auditing any books. I am not on the witness stand, and therefore am not required to answer your questions.

A. No, I do not ask it as a demand, but would like to know what use I can make of my time rather than sit here.

749 Q. You asked Mr. Beall, the stenographer, to take down your question, did you not?

A. Yes, it seems advisable for the proceedings to note that Mr. Warren is busily at work again upon the books.

Q. Have you any records from which you can furnish to me the amount of the earnings for the four years from 1900 to 1904 inclusive, and also the expenses in connection with operating the plant for that period?

A. Yes.

Q. Are these the books you are furnishing?

A. These are the books in detail.

Q. Have you it in any more succinct form?

A. I have statements which I have prepared myself.

Q. Will you let me have those statements?

A. Yes. (The witness here retired to look for records).

Q. What is this book you produce?

A. This book I produce shows earnings and expenses for the Louisville exchange, by months, for the year 1903.

Q. Why did it require almost an hour for you to produce this book, Mr. Smith?

A. I don't think it required that long, and I don't think I have been gone this long.

Q. It is now twenty minutes to four, we are in twenty minutes of adjourning time,—is it not?

A. Yes.

Q. Have you the books similar to this for the years 1900,
750 1901, and 1904?

A. I think we have. I have a man looking for them.

Q. You said, I believe, you had a statement prepared showing the earnings and the expenses for the Louisville Exchange for the period from 1900 to 1904?

A. This is the summary I referred to.

Q. Does this show the total for the year?

A. Yes.

Q. On what page?

A. The pages are unnumbered. The totals for the year are in pencil.

Q. This book shows the total revenue for the year 1903 does it?

A. I think so.

Q. What does the total revenue amount to?

A. The revenue from subscribers' rentals I think is $240,335.01.

Q. And from toll service amounting to how much?

A. The amount of tolls collected in the city of Louisville, part of which is of course not earned by Louisville, is $44,673.19.

Q. What were the operating expenses?

A. General?

A. I do not mean itemized, but I mean your total expenses for conducting the plant.

A. The expenditures charged to Louisville on this record are
751 $178,312.10. That is the actual expenditures, nothing being included for any depreciation which may have accrued and remained unexpended.

Q. What was expended that year for maintenance?

A. $51,630.75.

Q. Now at that time was the salary and wages of employees and officers whose duty extended over the district which Mr. Hall presided over charged to the expenses of conducting the Louisville plant?

A. I think a part of Mr. Hall's salary was so charged.

Q. Did you say in your direct examination that prior to 1908 the salaries of those officials and employees were charged to Louisville, and that the change was made in 1908?

A. I don't remember now, but at the time I made my deposition it was fresh in my mind.

Q. Is it not a fact that you made a change in so far as the charges for district employees and officials is concerned beginning with the year 1908?

A. Yes, we made some changes in the method of apportioning the supervision expenses.

Q. Was the result of that change to charge less or more to the Louisville exchange than had theretofore been charged in connection with those officials?

A. I don't know; I never made a study of it from that standpoint.

Q. Is it not a fact that you began in 1908 charging to Louisville only certain portions of salaries of officers and employees
752 whose entire salaries had theretofore been charged to Louisville?

A. I will have to go up stairs and see what we did do.

The witness here retired to look up the information called for, and pending his search the adjourning hour of 4 p. m., being reached, an adjournment was taken until 9:30 a. m. tomorrow.

753 FRIDAY MORNING, *September 10th*, 1909.

The further taking of the cross-examination of Mr. H. BLAIR SMITH was resumed this morning at 9:30 o'clock.

Mr. BLAKEY:

Q. Mr. Smith, it is now three minutes to ten o'clock, is it not?

A. Yes.

Q. Did you know that 9:30 was the time to begin taking these depositions?

A. I have just this minute been notified that you gentlemen had arrived and I came immediately.

Q. Mr. Granbery, your lawyer, is in the office, is he not?

A. Yes.

Q. This is his office, is it not?

A. It has been my custom, as long as this deposition has been taken with you and with other attorneys in taking other depositions, for him to notify me just as soon as I am wanted.

Mr. BLAKEY: Mr. Stenographer I wish you would note that we met here at 9:30 and indicate who was present at the time we met, including, of course, Mr. Granbery.

754 (There was present at the hour named, 9:30, Mr. Blakey, Mr. Warren and the Stenographer in the room where deposition was being taken on yesterday, and Mr. Granbery was in the adioining room, with folding doors open between.—STENOGRAPHER.)

Q. Mr. Smith, did you procure the information which I have asked for, asking for it at noon yesterday, relative to the books containing in a succinct form, the records of the earnings and operations of the company for the years 1900 to 1904 inclusive?

Mr. GRANBERY:

Q. Mr. Blakey, don't you think the order of reference limits the proof to the earnings and expenses for certain years. That is my recollection of it.

Mr. BLAKEY: I do not recall the order of reference specifically.

Q. Mr. Smith I have asked you the question you might answer it?

Mr. GRANBERY: I prefer that the question be referred to the Master Commissioner.

Mr. BLAKEY: The witness then declines to answer?

755 Mr. GRANBERY: Under my instructions, until the Master Commissioner rules upon it.

Mr. BLAKEY:

Q. Mr. Smith, yesterday you produced here two books showing the expenses of conducting the exchange system of the Louisville plant for the years 1900 and 1901. Will you please examine those books now and tell me what the amount is appearing on those books as charged up to maintenance for those two years.

Witness starts to figure from book.

Q. Before you proceed with answering this question, I should like to call your attention to the fact that the book from which you are taking these figures, shows the maintenance by months; that there are at least eight items of figures under each month for maintenance, and that each of these eight figures for each of the months will have to be placed on a sheet of paper and added up; and also call your attention to the fact that you stated yesterday you had this information in succinct form and that you produced for the year 1903 the book showing total of maintenance for the year, and will ask you if you will not, in the interest of saving time, produce a book similar to the second book produced yesterday for the year 1903, in order that we may get the total amounts in one sum?

A. You referred in your first question to the book which I
756 exhibited yesterday and I was doing just as you requested.

Q. I also requested you to produce the book which contained the total item in succinct form. Will you now produce that book?

(Witness does so.)

A. From the book which you are now requesting, I read the fol-

lowing: "Amount charged to maintenance for the year 1900 $50,-180.03." For the year 1901 I am unable to produce or find the book showing the tabulation like this book has it. I do find this book for 1902 and as presented yesterday, for 1903.

Q. Then, I will ask you to examine the book for 1901 which does show the maintenance for the year 1901, and let me know what the book shows?

A. You understand that the book I am now referring to shows the gross charges to maintenance from the vouchers.

Q. Are there any other charges to maintenance than such as appear in this book?

A. None that I know of.

Q. Will this book show more is charged to maintenance or less, than should be charged?

A. There were some corrections as I have heretofore explained in my depositions which were made on account of pay rolls.

Q. Were those corrections, corrections in which maintenance was credited and construction charged, or maintenance charged
757 and construction credited?

A. Maintenance credited and construction charged. I find the total is $85,265.50. If you would like to prove this total, the machine is at your service.

Q. Mr. Smith, I wish you would look on this book and answer me one or two questions. What was the amount of salaries and wages charged to maintenance for the month of April of that year?

A. The amount charged is below the normal, as pay rolls went into other months. The amount shown in the record for that month is $154.95 for salaries and wages.

Q. How much for May?

A. $3,630.64.

Q. How much for June?

A. $4,649.03.

Q. How much for July?

A. $6,033.48.

Q. How much for August?

A. $304.16.

Q. How much for September?

A. $12,973.34.

Q. How much for October?

A. $12,552.73.

Q. How much for November?

A. $2,338.97.

758 Q. How much for December?

A. $387.62.

Q. How do you account for the vast difference between the charges for salaries and wages for the various months you have read?

A. By the work done and by the months in which the different pay rolls were entered, some months showing two pay rolls, while some show only partial pay rolls. It is probable that the pay rolls were returned for correction, and failed to get into the office corrected in due time to go into the proper month.

Q. Now, what proportion of that eighty-five thousand and odd dollars would you say was readjusted and charged to construction account.

A. This matter was fully gone into before on this cross-examination. I can get my figures if you would like for me to state it again.

Q. I would like for you to examine this book further and state how much was charged to maintenance under the heading of incidental expenses for the month of September 1901?

A. For the month of September there is a charge of $2,115.89.

Q. What articles go to make up the incidentals as charged to maintenance?

A. At the present period we charge to maintenance—incidentals, those items which cannot be classified under the other heads of maintenance, the other heads being, salaries and wages, rent, light
759 and heat, material, traveling, conduit, pole and roof rent, insurance and damages and compensation.

Q. Now, how much was charged to incidental expenses for the month of August 1901 under the head of maintenance?

A. $292.23.

Q. How much in the month of July?

A. $343.63.

Q. How much in the month of June?

A. $399.76.

Q. How much for the month of October?

A. $542.76.

Q. Now, when we were going over the vouchers you produced a paper showing that the sum of sixteen thousand dollars or about that amount, had been credited to the maintenance account and charged to the construction account. Was that one of the items that should have been deducted from maintenance for that year?

A. The paper which you refer to is dated May 10th, 1909 and is a written explanation given to the Mutual Audit Co. while they were making their examination of the accounts, and it shows corrections made in the year 1901 involving the maintenance account.

Q. What was the amount of those corrections?

A. $16,848.

Q. So, at least that amount should be deducted from the
760 eighty five thousand and odd dollars which you have testified about, in order to ascertain what the maintenance charges were for the year 1901?

A. That amount should be deducted.

Q. Now, can you tell me what the maintenance charges were for the year 1904?

A. Shall I just get you the amount, or would you like to have the details.

Q. Is it in book form such as the 1903 account?

A. No.

Q. In what form is it?

A. At that time we made changes in the form of the book and I don't know just exactly the form.

Q. Then, suppose you ascertain the amount, for the present?
A. $66,456.72.
Q. Now, is that the correct amount which should be charged to maintenance or are there some deductions which should be taken from that?
A. That is the net amount.
Q. Now in the book which you showed me for the year 1903, the net earnings were shown on the book to be something like a hundred and six thousand dollars. Did that amount include earnings from toll department of your system at Louisville?
A. It included all tolls collected at Louisville.
761 Q. The net amount collected, or the gross amount collected?
A. It includes the gross amount of tolls sent from Louisville. We have always included in expense, the uncollectable.
Q. Do you mean by gross amount collected, the gross amount collected over your lines?
A. Yes.
Q. Now did you at that time include the collections from the toll department as a part of the earnings of the Louisville exchange?
A. We never considered them as such.
Q. Did you treat them in your account as a part of the earnings of the Louisville exchange?
A. We always charged up the Louisville office with the tolls it was responsible for, and in the book shown you it shows the gross amount of tolls originating at and for which Louisville was responsible as to collection, but we have never, in considering the earnings of an exchange either for ourselves or in giving statements to others, considered that the tolls earned at an exchange belonged to the exchange.
Q. Do you make an annual report to the American Telephone and Telegraph Co.?
A. Yes.
Q. Do you keep copies of those reports?
762 A. Yes.
Q. Will you produce those copies for inspection?
A. For what period, please.
Q. For the years 1900 to 1908 inclusive?

(Witness produces same.)

Q. Will you show me the report which you made for the year 1900 for the Louisville exchange?
A. We have never made any separate reports for any exchange, to the American Telephone and Telegraph Co. The reports which I referred to in my reply, are reports for the whole company.
Q. They do not show by exchanges, what each exchange earns, or what it costs to operate each exchange?
A. We have never done it during my term of office and not before that I know of.
Q. Now, coming to the earnings for the year 1905, how much did the company earn from operating the Louisville exchange in 1905?

A. My exhibit No. 1 shows $37,907.34, nothing for depreciation being deducted.

Q. I am asking now about the gross earnings?

A. My answer showed the net earnings. The same exhibit shows the gross earnings as $278,170.73.

Q. Does that include any earnings from the toll department?

A. It does.

Q. How much?

763 A. That exhibit shows $11,821.07.

Q. Now the joint report shows exchange earnings of $264,675.13. Can you tell me which is correct, the amount appearing on your exhibit No. 1 or the amount appearing in the joint report of the two accountants who examined the books?

A. I believed that my statement was correct when I presented it, and I see no reason to change.

Q. Now, the report of the joint accountants shows that fifteen per cent on all outgoing messages, which is the proportion of toll earnings credited to Louisville, amounts to $6,759, and your Exhibit No. 1 shows that they amount to $11,821.07. How do you account for that difference?

A. I have never analyzed the papers of the accountants, but I note this; the statement you made is not correct.

Q. What does the joint report show on that subject?

A. Shall I read it all.

Q. What does the joint report show the fifteen per cent amounts to?

A. The joint report, under item 2, page 4, gives the proportion of toll earnings for 1905 as $6,539.92, and from the American Telephone and Telegraph Co., $2,865.29. Both of these items are commissions, as well as the item of $983.88 from telegraph companies.

Q. What does the $983.88 represent?

764 A. It represents earnings from the handling of messages in and out, for telegraph companies.

Q. Is that for the use of telephones installed in telegraph offices and which are used by the telegraph companies to transmit messages which may be received over their wires?

A. Partly.

Q. Is any charge made to the telegraph company as rental for the telephones placed in their office and so used?

A. No.

Q. What does the total of the three items you have read, amount to?

A. $10,289.09.

Q. Do all three of those items which you have read from the joint report go to make up what you term in your exhibit proportion of tolls earned by the exchange?

A. They are included in that.

Q. Which is correct now, the $11,821.07, which your exhibit shows, or the amount you have just read as shown in the report of the two accountants?

A. I believe, as I stated before, that mine is correct.

Q. Now, taking up the year 1906, what were the gross earnings of the Louisville exchange for the year 1906?

A. Exhibit No. 1 to my deposition shows $296,120.52.

765 Q. How much does the joint report show to be the total receipts for that year?

A. $294,498.44.

Q. Which of those items is correct, the one that purports to be correct in your exhibit, or the one that appears in the joint report?

A. You will note that they are made up in one particular, along different lines.

Q. What is that particular?

A. They deduct bad debts from revenue, and I have included them in expense.

Q. What did the bad debts amount to for that year?

A. They are shown in my exhibit as $1,519.41.

Q. What are they shown in the joint report to be?

A. $4,230.58.

Q. Which is correct, your Exhibit or the joint report?

A. The joint report is correct in that instance, I believe. I have not analyzed it thoroughly, but I did see an omission made in making up my exhibit.

Q. Now for the year 1906, the exchange earnings are put down in your exhibit as $279,844.49, I believe. Is that correct?

A. Yes, exchange service.

Q. And in the joint report it is placed at $280,076.12. Which of those items is correct?

766 A. The difference is about $200; I don't know where it comes in. I take my figures from our books.

Q. Now the proportion of tolls earned by the exchange for the year 1906 is placed at $13,099.34 in your exhibit, I believe?

A. Yes.

Q. How much do the accountants, in their joint report say it amounted to?

A. In their second item, they say, $7,034.91.

Q. Is there any other sum represented in the joint report which should be added to that amount to make it include what you have included in your thirteen thousand and odd dollars?

A. Yes, three other items.

Q. What is the total of those three items?

A. Of the three items, the total is $5,257.61.

Q. And that added to the seven thousand and odd dollars makes a total of how much?

A. $12,322.52.

Q. Which is correct, the thirteen thousand dollars appearing in your exhibit or the twelve thousand dollars appearing in the report of the joint accountants?

A. I know of no reason to change my original figures.

Q. Now do you know what the fifteen per cent on the outgoing toll messages from the Louisville exchange amounted to for that year?

767 A. I do not.

Q. Would you say the report of the joint accountants is correct on that subject, or inaccurate?

A. I understand the joint accountants have apportioned fifteen per cent of the tolls earned by the Cumberland Company sent from Louisville and not on all tolls as you stated.

Q. I spoke of outgoing toll messages from the Louisville exchange. That is the only item on which you give Louisville credit for fifteen per cent, isn't it?

A. The statement I made up gives Louisville credit for commissioners from the American Telephone and Telegraph Co., which are less than fifteen per cent of the amount of their tolls, plus fifteen per cent of Cumberland Telephone & Telegraph Co. tolls and other items.

Q. Do you know what fifteen per cent of the Cumberland tolls for the year 1906 amounts to?

A. It is not separated on my report. The joint report of the accountant gives fifteen per cent of the Cumberland tolls as $7,064.91.

Q. Do you say that is, or is not, correct?

A. I don't know.

Q. Now, coming to 1907, what were the gross earnings from the Louisville exchange for the year 1907?

A. My exhibit No. 1 shows $316,981.61.

Q. How much does the joint report show were the gross
768 earnings from the Louisville exchange for that year?

A. $319,758.51.

Q. How much does the joint report show was deducted from the total earnings for that year on account of bad debts?

A. $2,050.77.

Q. Then, if the joint report was made up on the same basis as to earnings, that your exhibit shows, their report would show that the gross earnings were something like $321,895, would it not?

A. $321,809.28, exact.

Q. Now which is correct, the $321,000 shown by the joint report or the $316,000 shown by your report?

A. I would like to make a correction in my figures for each of the years, and say that I had overlooked to mention until just now, I wish to say that item eight, page 4 of the joint report shows a class of revenue which I did not include in my exhibit, but which I admit should have been included, it was not intentionally omitted at the time that I made up my exhibit.

Q. What does that item eight represent?

A. It represents a rental for telegraph drops.

Q. That amounts to $2,110.61 for the year 1907, does it?

A. Yes.

Q. And that, added to your report would make how much?

A. $319,092.12.

Q. Is that amount now, as corrected by you, the correct gross

earnings for that year, or is the amount represented by the
769 accountants' report, $321,000 the correct amount?

A. The difference between the two reports is $1,717. I don't know of any other corrections to be made in mine.

Q. You think yours is correct then?

A. I think so.

Q. For the year 1907, your exhibit No. 1 shows $13,258.03 as the proportion of tolls earned by the exchange. Is that correct?

A. I think so.

Q. What is the proportion of tolls earned by the exchange placed at in the report of the joint accountants?

A. Item No. 2, page 4, for 1907, shows $8,030.15.

Q. Is that what the accountants show is the proportion of toll earnings, being fifteen per cent on all outgoing messages?

A. All outgoing Cumberland messages.

Q. Now to include in a total all sums appearing in the joint report which would make it conform to your item on this subject, and other items in the joint report should be added to that amount?

A. Items 3, 4 and 9.

Q. What are those teams?

A. Item 3 is from telegraph companies; Item 4 is from American Telephone and Telegraph Co., and Item 9 is messenger fees.

770 Q. Adding those three items to the item you first gave from the accountants' report, makes a total of how much?

A. $13,602.95.

Q. Which do you say now is correct, the item appearing in your exhibit or the total of the items appearing in the joint report, which you have just indicated?

A. I know of no corrections which should be made in my exhibit. I think it is correct.

Q. I notice opposite the uncollectable in your exhibit No. 1, under the head of general expenses you have an item of $2,344.94 for the year 1907. What does the joint report say should be the amount representing the same item?

A. For that year the joint report shows $2,050.77, or about three hundred dollars less than my report. You will note that in the previous two years' accounts they show a much larger amount of bad debts than is shown in my exhibit.

Q. What do you say as to bad debts for the years 1905 and 1906?

A. For the year 1905 I show, $1,679.39; the accountants show $10,366.42. For the year 1906, I show $1,519.41 and the accountants show $4,230.58.

Q. Which statement is correct, the one contained in the joint report or the one contained in your exhibit?

A. As just stated a few minutes ago, I omitted the total of a column for 1905 and 1906 in making up my reports. The amount should be larger than I show. I don't know of any errors in the accountants' figures; I have not checked them over, but they
771 were given full access to all records.

Q. Now for the year 1908 what were the gross earnings of the Louisville exchange?

A. My Exhibit No. 1 shows $325,603.54.

Q. What do the accountants in their joint report show them to be?

A. On the same basis, $328,951.52. I should add to my figures the item No. 8, $2,130.55.

Q. What is that item?

A. The item was explained before, as telegraph drops.

Q. That would bring your total up to what amount?

A. $327,734.09 about twelve hundred dollars less than the accountants show.

Q. Which would you say is correct, the joint report of the accountants or the figures appearing on your exhibit No. 1?

A. I believe my figures are correct; I don't know of any errors, with the addition I have mentioned.

Q. Now your exhibit seems to show the proportion of tolls earned by the exchange at $7,728.08. Is that correct?

A. Yes. In the year 1908 we adopted a classification of earnings issued by the American Telephone and Telegraph Co. in order to make our system uniform with that of other companies. We changed the classification of some of the revenue, but the same items of revenue enter into the 1908 figures on my exhibit as in the other years.

772 Q. Now, was that the fifteen per cent earned on outgoing Cumberland messages?

A. Yes.

Q. What do the accountants show in their report was the amount earned from that fifteen per cent?

A. $7,632.11, about a hundred dollars less.

Q. Do they show in their joint report any sum which should be deducted from that fifteen per cent for bad debts?

A. I don't know.

Q. Do you know whether any sum was deducted from the total which they found to be the earnings from the fifteen per cent on account of bad debts?

A. In Mr. Wilkinson's report to the Master, page 41, Item 6 shows that he deducted $1185.61 for bad debts.

Q. From what?

A. From the total gross amount taken in for tolls at Louisville and at check stations.

Q. For what period?

A. For the period 1908.

Q. Does he indicate how much of that was deducted on account of toll earnings from the fifteen per cent from the Louisville exchange?

A. He arrives at his figures by first considering the gross amount taken in for tolls; then deducts four items from that total and figures his fifteen per cent on the balance.

773 Q. Is one of those items bad debts, $177.84?

A. No.

Q. Well now, do you say that the accountants' report as to the amount the fifteen per cent should be is correct or the amount which you show the fifteen per cent came to, is correct?

A. I think my exhibit is correct.

Q. How do you ascertain what amount should be credited to the Louisville exchange on account of toll earnings at the Louisville exchange?

A. I don't understand the question.

Q. You have stated and your exhibit shows you have credited certain amounts each year as earnings of the Louisville exchange on account of tolls—money received from toll calls. What is your method of determining the amount so credited?

A. We have determined that just as we determine it with any other company. We take fifteen per cent of the gross tolls reported as going over the Cumberland lines.

Q. You mean fifteen per cent of the gross collections made on account of toll calls which are outgoing calls from the Louisville exchange and which are collected at Louisville, Ky.?

A. We have never considered collections at all; we have always figured the commission on the amount reported.

Q. Well, if I amend my answer by saying the amount
774 charged for toll calls, can you then answer it?

A. That is our system; provided, of course, that those tolls so charged go over the Cumberland Company's lines and are not subject to other commissions.

Q. If they go over the American Telephone and Telegraph Company's lines, how do you receive any pay, on what basis do you receive pay for the services of your employés in connection with that message?

A. Our contract with that company is to get fifteen per cent on tolls originating at Louisville, not to exceed ten cents per message. There is a small allowance made for different classes of messages and deductions for free messages. Throughout the territory for several months a calculation was made showing just exactly on that basis what commissions were due us, and the commissions were divided by the number of messages sent, and a flat commission of 10.21 cents arrived at, which commission for some years figures as high as ten per cent of the outgoing tolls and in some it has been less.

Q. Does the American Telephone and Telegraph Co. then pay you 10.21 cents for all messages originating over their lines in Louisville, Ky., and sent over its lines?

A. All messages for which it is paid.

Q. Now if a man on Main street, who has one of your subscribers' lines, desired to telephone to New York and calls up your exchange
over his subscriber's telephone, what would be the process
775 whereby he would procure his connection with New York?

A. I cannot testify as to Louisville. I can testify as to Nashville, where I am familiar with it.

Q. Well, what would be the process at Nashville?

A. The process at Nashville is for the operator answering the call, upon being advised that long distance is called, to connect him with long distance recording operator, who takes the call and secures the party for him.

Q. Is the office of the American Telephone and Telegraph Company in Louisville in the same building with the exchange of the Cumberland Telephone and Telegraph Co., at Louisville?

A. It is not in the same building.

Q. Is it at Nashville?

A. It is not.

Q. Would your toll operator in Nashville notify the operator at the American Telephone and Telegraph Company's office what was wanted in a case such as I have asked you about?

A. Yes, this would be the system, I think, throughout the country whether there was an American Telephone Company office in the town or not.

Q. And the operator at the American Telephone Company office would procure the connection with the party desired, and then notify the subscriber, would he?

776 A. The operator at the American Company office would pass the call along and when the party was secured, would call back through the Cumberland Company's exchange for connection.

Q. Now, when a subscriber on Main Street in Louisville, Ky., desires to talk with someone in Nashville, Tenn., what would be the process of connecting the two telephones?

A. The Main Street party upon asking for long distance would be switched through to the recording operator, who would take his order; from the long distance room the call would be passed to the next operator who, upon completing her duty, would call back and have connection established.

Q. Then, operators of your company, in your employ in the last case mentioned, in Louisville, Ky., would cause the connection to be made if it was made, would they?

A. They would assist in causing it to be made.

Q. And the Nashville operator would also assist, would she?

A. Yes.

Q. Whereas, in the first case mentioned, of a call to New York City, the operators in the employ of the American Telephone and Telegraph Co. would cause the connection to be made, would they not?

A. Other operators would; I don't know whether the American Telephone and Telegraph Company would.

Q. Operators other than those in your employ would, you mean?

A. Yes, several others.

777 Q. Now, have you separate rooms in your exchange at Louisville, Ky., for the use of your long distance or toll operators?

A. I presume so.

Q. Have you operators and employés who devote their time to nothing else except long distance messages or toll business?

A. We have operators who do that.

Q. Are they employed for that specific purpose?

A. While they are in the service in the toll room, they are.

Q. Have you any employés who are engaged in maintaining the toll lines exclusively in the City of Louisville?

A. None that I know of.

Q. Do the employés of your company in Louisville who maintain lines of your company in Louisville, do their work indiscriminately on exchange lines and on toll lines?

A. The question is too technical for me to give a positive answer about it.

Q. Are the employés of your company who are engaged in work connected with operating and maintaining the toll department of your business in Louisville, Ky., charged to the maintenance account of the Louisville exchange—are their salaries charged to the maintenance account of the Louisville exchange?

A. We have no toll department in Louisville, Ky.; the
778 exchange is operated as a whole, and some of the employés who are engaged in maintaining the exchange lines are sometimes engaged in repairing toll lines.

Q. Are their wages charged to the Louisville exchange operations?

A. Yes.

Q. Is that true of the employés whose services are required in connection with transmitting long distance messages?

A. Yes, the salaries of all operators in Louisville are charged to Louisville.

Q. Now you have in several hotels in Louisville, employés whose services are made use of in conection with long distance messages, have you not?

A. Their services are made use of in connection with all messages from the stations where they are located.

Q. Do you know anything of the arrangement of your telephone apparatus in the Sealback Hotel in Louisville?

A. Not personally.

Q. Is it not a fact that on the main floor or main lobby of the hotel, there are three or four pay stations of your company installed in booths, which have connected with them a slot machine apparatus and isn't it true that these booths or pay stations are used by guests and others at the hotel for all local calls?

A. I don't know; I am not familiar with the facts you
779 mention.

Q. Mr. Smith, have you completed with the papers which Mr. Warren furnished you yesterday?

A. I have not had an opportunity to look at them, but if you wish them, I will send for them.

Q. I should like to have them sometime tomorrow. Can you complete with them by eleven o'clock tomorrow morning?

A. I will give them to you then.

Q. When we adjourned yesterday I had asked you to ascertain what change you made in Jan'y 1908 in regard to charges which you had theretofore been making against the Louisville exchange for operating that exchange. Can you furnish me with that information?

A. I have examined by comparison carefully, the pay rolls for the

month of November 1907 and January 1908, and I cannot see that any changes were made in the classification of the pay rolls which involved the total expenses charged to the Louisville exchange, except that formerly a part of the manager's salary was charged to construction, and this was discontinued in 1908 as new work at that time became very quiet.

Q. Mr. Smith, Mr. Granbery has asked for an adjournment until Monday morning. In the meantime I should like for you, if you will, to examine your books and records and ascertain whether during the years 1901, 1902 or 1903 or at any time, any
780 credit has been given to construction account for any switchboard or any panels or sections of switchboard, removed from the Louisville exchange, or from the main office of the Louisville exchange.

At this hour, 12 o'clock M., an adjournment was taken until next Monday Morning, September 13th, 1909, at 9:30 o'clock.

781 MONDAY MORNING, *September 13th*, 1909.

The further cross-examination of Mr. H. BLAIR SMITH was resumed this morning, September 13th, 1909, at 9:30 o'clock, pursuant to adjournment.

A. I wish to make a correction. Mr. Blakey, you asked me in regard to this matter, and I said the switchboard explains itself. In reading the deposition over, I see that on page 64, I was asked the question, "What does that language mean that you have just read"—referring to a switchboard, and I answered, "I don't know that I could express it any clearer than it is in this invoice." Then the question, "Does it mean that the items going to make up the seventeen thousand dollars was an expenditure to increase the capacity of the main switchboard by adding thereto sufficient equipment to take care of 4800 subscribers' lines, and 200 outgoing trunk lines, 180 incoming trunk lines and 160 toll lines. Ans. I take it to mean that, since it states it."

Now, I would like to add to that, that the original maximum capacity of the main switchboard from this invoice seems to have been 4800 subscribers' lines, and that in putting on another section, this section must accommodate a switchboard for that many lines, although the section enlarges the capacity of the board only to the extent of allowing to be added thereto 200 outgoing
782 trunk lines, 180 incoming trunk lines and 160 toll lines.

Mr. BLAKEY:

Q. What was the capacity of the original switchboard?

A. I don't know, and I must say, that in answering the question I am doubtful even now as to whether my answer is entirely accurate, but what I wished to correct was, that we had added capacity for 4800 more subscribers' lines, for it did not.

Q. Mr. Smith, when we adjourned Friday, I had requested you to examine your books and ascertain whether during the years

1901, 1902, 1903 or any time, any credit had been given to construction account for any switchboard or any panel or section of a switchboard removed from the main exchange of the Louisville office. Did you procure that information?

A. I am unable to find from my records that anything of the kind was done.

Q. Now just before we adjourned you were also testifying in regard to any change in your method of charging up the salaries and wages of men employed in the district. Is it not true that prior to 1908 the entire salary of Mr. Hall, the district superintendent, was charged to the expense of the Louisville exchange?

A. That is not true.

Q. What portion of it then?

A. In securing the information to answer your question, I
783 took out the November 1907 pay rolls and on his pay roll I found the whole of his salary charged to what we term general account, and no part of it directly charged to Louisville.

Q. Do you know whether the entire salary of Mr. Hall was at any time charged to the Louisville exchange—expenses of the Louisville exchange?

A. I think early during his connection with the exchange it was so charged, and I believe it was correctly charged.

Q. Mr. Smith, I should like to see Voucher No. 705 for May 1907, also No. 205, May 1906?

A. I hand you May Voucher 1906, No. 205, and May 1907 Voucher, No. 705.

Q. Voucher No. 205 has as a part of it, which seems to have an item of $575.00 charged up either to Louisville expense or the Louisville construction. Will you please examine that and state what salaries are included in that part of the voucher?

A. This sheet shows salaries paid to the superintendent and manager.

Q. Who was the superintendent at that time?

A. Mr. George G. Hall.

Q. To what account was his salary charged?

A. One-half to operating, salaries and wages; one-fourth to maintenance, reconstruction; and ¼ to maintenance, current repair

784 Q. Was Mr. Hall superintendent of the district at that time?

A. I think so.

Q. Was all of that charged to Louisville?

A. It was.

Q. How about the other name appearing on the pay roll?

A. Mr. Reed, the manager. His salary was charged, one-half to maintenance, current repair; one-fourth to maintenance, reconstruction; and one half to construction, aerial.

Q. Was his salary all charged to Louisville?

A. Yes.

Q. Has he any duties outside of Louisville?

A. Well, his duty was in charge of Louisville and the little ex-

changes to which Louisville got service without additional charge, those little exchanges in the Louisville group.

Q. Did he spend a part of his time in Jeffersonville and New Albany?

A. Probably so.

Q. Anchorage?

A. He had general supervision of all those little exchanges.

Q. Jeffersontown?

A. Probably.

Q. Corydon, Ind.?

785 A. Not that I know of.

Q. West Point?

A. I don't just remember when West Point was put under Louisville.

Q. Are all of the salaries of those two men charged to Louisville, or are they charged differently now?

A. At the present time the whole of the manager's salary is charged to Louisville and the superintendent's salary is charged to general expenses.

Q. I now show you voucher No. 705, for May 1907, which represents an expenditure of $625, and ask you if the facts you have testified to about Voucher No. 205 are substantially true in regard to voucher No. 705?

A. Yes.

Q. What names appear on that pay roll?

A. This is the pay roll for the superintendent and the Louisville manager.

Q. Have you before you a copy of the exhibit filed with the direct examination of this deposition, in which you show the expenses of operating and maintenance of the Louisville exchange for the years 1905, 1906, 1907 and 1908?

A. Yes.

Q. What does that exhibit show to be the total general expenses for the year 1905?

A. $44,645.31.

Q. And what does the joint report show to have been the

786 total of the general expense for that year?

A. The joint reports does not include any uncollectable, which was included in my general expenses and with that amount, shows $40,476.83.

Q. What do you show to be the uncollectable for that year?

A. $1679.38.

Q. Now, what does your exhibit show to be the total of the operating expense?

A. $92,333.95.

Q. And what does the joint report show it to be?

A. $84,264.54.

Q. Which one of those do you now say is correct?

A. For eleven months of 1905 we incorrectly and through error charged to Louisville $30.00 per month, being the salary of a clerk

kept at that office for other purpose than for Louisville, so that $330 is included in my operating total, in error.

Q. Otherwise than that would you say that your total of operating expense is correct, and not the joint report?

A. Mine is according to the books and I believe the books are correct.

Q. Now, under maintenance repairs, what does your exhibit show to be the expenses under that head for the year 1905, Mr. Smith?

A. $49,151.17.

Q. And what does the joint report show it to be?

787 A. $49,819.14.

Q. Which of those items do you now think is correct?

A. The joint report is about six or seven hundred dollars more than mine, but I know of no reason to change mine.

Q. Now maintenance reconstruction. What does your exhibit show?

A. Mine shows $41,243.92.

Q. And what does the joint report show?

A. $41,051.02.

Q. Which do you now think is correct?

A. There is a difference there of about two hundred dollars, and I don't know of any reason to change mine.

Q. When did you begin separating maintenance repairs from maintenance reconstruction?

A. I think it was August 1st, 1904.

Q. And when did you cease doing that, if you ever ceased doing it?

A. Well, we ceased keeping separate accounts, January 1st 1908.

Q. What does your exhibit show as the total expenses for that year?

A. My exhibit shows, including uncollectable, $240,263.39.

Q. And the joint report shows how much?

A. The joint report excluding uncollectable shows $227,171.29. Please note, however, there is a big difference reported by

788 me and the revenue reported by the joint report, so that the net difference is not much.

Q. Now your exhibit shows how much as the instrument expense?

A. My exhibit shows $12,889.04.

Q. Do you know what your books show to be the instrument expense?

A. The books do not show this. It must be calculated on revenue.

Q. What does the joint report show as the proper amount to be charged up as instrument expense?

A. The joint report, reporting less revenue than I report, shows a less instrument expense. The joint report shows $11,559.76 and my report shows $12,889.04. You will note that my report shows balance of revenue $37,900 and some odd dollars and the joint report $31,652, or, about $6,250 less than my report.

Q. How much did you pay the American Telephone and Telegraph Company on account of this item?

A. The contract is to pay four and one-half per cent. of the gross revenue derived from the use of instruments.

Q. Read him the question.

A. For the whole territory?

Q. For the Louisville exchange?

A. My apportionment shows $12,889.04.

789 Q. Now, taking up the year 1906 what does your report show as the total of the general expense?

A. Including uncollectable it shows $50,725.02.

Q. And what does the joint report show it to be?

A. Excluding uncollectable it shows $47,218.52.

Q. What amount is added in your exhibit as uncollectable?

A. $1519.41.

Q. What does your exhibit show as the total operating expenses?

A. $87,950.73.

Q. And what does the joint report show?

A. $80,738.06.

Q. And which of those items do you now say is correct?

A. I find that in this year also that same clerk for three months at $35.00 per month, or a total of $105 included in Louisville, through error.

Q. With this exception then your statement as contained in your exhibit, is correct is it?

A. It is according to the books and I think correct.

Q. Now, maintenance repairs, what does your exhibit show as the total under that head?

A. $54,621.59.

Q. And what does the joint report show?

A. $52,796.93.

Q. Which of those items is correct?

A. Mine is according to the books of the company and I

790 believe correct.

Q. Now, maintenance reconstruction, what does your exhibit show?

A. $40,650.22.

Q. And what does the joint report show?

A. $40,626.07.

Q. Which of those items is correct?

A. There is a difference there of only $24, and I know of no reason to change mine.

Q. What does your exhibit show as the total expense for the year 1906?

A. $247,130.03, including uncollectable.

Q. And what does the joint report show to have been the total expense?

A. $233,898.28.

Q. Which of those items do you say is correct?

A. I know of no reason to change mine.

Q. Now, taking the year 1907, is there any practical difference between the total of the operating expenses as shown on your exhibit and that as shown in the joint report, as to general expenses?

A. There is a difference of about five thousand dollars.

Q. And yours includes the uncollectable, amounting to $2,366.94, does it?

A. Yes.

791 Q. And with that exception, which would you say is correct, the figures in the joint report, or the figures in your exhibit?

A. My figures are according to the books, and I see no reason to change them.

Q. Now, the operating expenses for that year, what does your exhibit show to have been the charges under that heading?

A. $85,851.46.

Q. And what does the joint report show it to have been that year?

A. $79,661.04.

Q. And which of those items is correct?

A. Mine is according to the books of the company and I believe them to be correct.

Q. Now, maintenance, repairs, what does your exhibit show to have been the item charged under that head?

A. $64,732.89.

Q. And what does the joint report show to have been the expenditure under that head?

A. $65,616.31.

Q. And which item do you now say is correct?

A. I believe mine is correct. It is according to the books of the company.

Q. Maintenance reconstruction as appearing on your exhibit for the year 1907, what is that?

792 A. $44,388.37.

Q. And what does the joint report show the amount to be, Mr. Smith?

A. $41,895.10.

Q. I notice the joint report does not include any item for rent, light and heat under this heading and your exhibit shows $628.24, I believe, opposite that item. How do you explain that discrepancy in the two statements?

A. My exhibit does show $628.24 but I don't see that the joint report goes into detail to show what it does include in those expenses.

Q. Have you a copy of Mr. Farnham's report?

A. Yes.

Q. Will you look on Exhibit No. 8 and see what his total for maintenance reconstruction for 1907 amounts to?

A. Mr. Farnham shows two totals.

Q. The total under the head of expenses, as adjusted by accountants for analysis, amounts to how much.

A. $41,895.10.

Q. And is that the amount which the joint report shows?

A. It is, I would explain that in this way, that it is impossible, as the expenses are incurred to make an apportionment of the space

used by the maintenance force between maintenance current repair and maintenance reconstruction, and in making up my
793 exhibit, it is probable that this apportionment was then made on the basis of other charges made. You will note that Mr. Farnham reports maintenance repairs, rent, light and heat, as adjusted by the accountants, at $2,393.39, while I report it at $1,556.65.

Q. Would you say then that the item charged up to expense for rent, light and heat appears on your books as charged up to maintenance, repairs. In other words, that the item appearing in your exhibit under maintenance repairs of $1,556.65 opposite rent light and heat and the item appearing under reconstruction opposite rent, light and heat, amounting to $628.24 both appear on your books as charged up to maintenance repairs?

A. For that year, and it is the case with the rent, light and heat of the maintenance department is charged direct to maintenance, current repair, and then at the end of the year apportioned.

Q. And you, in making up your exhibit simply apportioned it between those two general headings?

A. Yes.

Q. Now what do you show in your exhibit as being the total of the expense for the year 1907?

A. $260,126.33.

Q. And what does the joint report show it to have been?

A. My exhibit shows uncollectable included in expense
794 and the joint report does not. The joint report shows $246,598.61.

Q. And what was the uncollectable for that year?

A. As shown in my exhibit, $2,344.94.

Q. Well, with the exception now of the uncollectable, which would you say is correct; the items appearing in the joint report or the items appearing in your exhibit?

A. I believe mine is correct; it is according to the books.

Q. Now, for the year 1908, what does your exhibit show as being the total charged to general expense for that year?

A. Including uncollectable, $47,128.19.

Q. And what did the uncollectable amount to?

A. $3707.34.

Q. And what does the joint report show it to have been?

A. The joint report, which does not include the uncollectable, shows $42,076.75.

Q. Which of those items do you now say is correct?

A. My report or exhibit is according to the books of the company, and I believe to be correct.

Q. Under the head of operating expenses, what does your exhibit show to be the total for that year?

A. $79,621.18.

Q. And what does the joint report show that item to have been?

795 A. $75,440.28.

Q. And which do you now say is correct?

A. I find that there were clerical errors made and the deduction

of $160.60 made by the accountants is correct. Aside from this, my exhibit is according to the books of the company and I believe to be correct.

Q. Now, under the head of maintenance repairs, what does your exhibit show to have been the amount expended that year under this head?

A. My exhibit shows $67,029.57.

Q. And what does the joint report show it?

A. $54,705.91.

Q. Which of those items do you now say is correct?

A. I think mine is correct.

Q. Now, what does your exhibit show to have been the total under the head of maintenance reconstruction for that year?

A. $19,515.72.

Q. And the joint report shows how much?

A. $31,450.07.

Q. And which of those items do you say is correct?

A. I think mine is correct.

Q. Did you keep a separate account for the year 1908 as between maintenance repairs and maintenance reconstruction?

A. We did not.

796 Q. How did you then arrive at the $19,535.72 as the maintenance reconstruction?

A. We studied the reports and pay rolls and made a division therefrom.

Q. Your original books then would show how much as the total of both maintenance reconstruction and maintenance construction?

A. You are getting your names confused I think.

Q. Maintenance, current repairs, and maintenance reconstruction?

A. The total shown by the books is $86,565.29.

Q. And what does the joint report show as the total of both of these items for that year.

A. $86,155.98.

Q. From what books do you derive the total of the amounts which appear in your exhibit as the expense for these years about which you have just testified. Please designate the books and the titles of the books?

A. The books are subsidiary to the general ledger of the company. They are called by us, exchange, revenue and expense books.

Q. Now, have these books ever been balanced for the years 1907 and 1908?

A. You asked me the question before. I think the 1908 books were balanced while the accountants were here. The 1907

797 books have recently been balanced. The 1907 books while out of balance with the general ledger, were, I think, found to be not at all badly out of balance.

Q. Now haven't these books been changed a great many times since the first entries were made on them?

A. If any changes whatever were made in the books, they were made from the original entries.

Q. Have they, or not, been changed a great many times since they were made up?

A. If any clerical errors were found in them, they were changed.

Q. Do you know who furnished the data from which the facts contained in the bill which was filed in the Federal Court at Louisville, Kentucky, for the Western District of Kentucky, as of date December 4th, 1907, February 6th, 1909, and March 6th, 1909?

A. I take it that the data came from the auditor.

Q. Now, you will notice from the data in the bill filed December 4th, 1907, that the expenses for the year ending January 1st, 1906, are placed at $240,729.52. Is that correct?

A. The expense shown in my exhibit was $240,263.39. The difference is $466.13. I don't know whether the figures are copied correctly on the original bill, and if they were, just where
798 the difference comes in.

Q. The figures I read into my question are the correct figures as they appear in that bill?

A. They are as they appear in the copy I now have before me.

Q. Now, I wish you would turn to Mr. Farnham's report and say what he shows were the expenses for that year?

A. Will you please state what exhibit of Mr. Farnham's you wish me to refer to?

Q. Exhibit No. 8?

A. For the year 1905.

Q. For the year 1905. I refer to the first item on that exhibit?

A. The first item or the first column in Mr. Farham's exhibit shows expense $240,729.52.

Q. Now, turning to the bill filed February 6th, 1909, what does that bill show to have been the total expense for the year 1908?

A. The figures shown in the bill were given to the general counsel as explained to him at the time, before the books for the year 1908 were closed and balanced, and it was necessary for us to apportion as best possible the December figures, but I stated to him that I believed the results were correct and the best we could give him at the time.

Q. And what did they show?

799 A. The total expenses show as $226,727.94.

Q. And what does the bill filed March 6th, 1909, show as the total expense for that year?

A. $239,710.48.

Q. And what does your exhibit show to have been the total expense for that year?

A. $227,495.66.

Q. And was a change to the expense you have indicated, made on the books between February 6th and March 6th, 1909?

A. No.

Q. How did you happen then, on February 6th to give out a statement which your president swore to, showing that the total expenses were one amount and give out another statement, which your president swore to one month later, whicch showed an entirely different amount?

A. The statement made up in March includes a small charge for reserve for deferred maintenance. I don't know whether the bill previously filed specified that nothing had been included for this, but my exhibit and deposition filed in this case do clearly specify and state that I have included nothing for depreciation.

Q. Eliminating the amount for deferred maintenance, or deferred depreciation, what would be the sum of the other items included in the bill of March 6th, 1909?

800 A. The exact amount shown in my exhibit, No. 1, namely, $227,495.66.

Q. Then, there would appear on your books then, a difference of something like eight hundred dollars between February and March, would there, if the items were taken from the books?

A. As stated previously, the February statement was the nearest possible estimate we could get at that time, and the difference between those statements showing the estimated expense and the actual expense as shown in my exhibit and eliminating any reserve whatever, is $767.72. I wish to say the bill which shows the estimate, is that much less than the actual shown in my exhibit No. 1.

Q. Now, coming to the items of the two dates, as I understand your statement on direct examination, the bad debts as I understand your statement, are charged up as a part of the operating expenses, of the exchange, are they?

A. No, they are charged as part of the general expense.

Q. Charged as a part of the expense, in other words?

A. Yes.

Q. Now, when you charge up say two thousand dollars one year, for bad debts, and during the year some of those bad debts are not collected and not permanently charged off, do they appear the next year in the item going to make up bad debts?

A. We do not include any amount in bad debts until it
801 has *has* been charged off as worthless and the cashier of the exchange has been authorized to claim credit therefor, and the entry is made on the books.

Q. Do you carry that entry into the next year's expenses if it still remains on your books as bad debts?

A. We do not.

Q. I call your attention to the transcript of the record in the case of the Railroad Commission of Louisiana vs. The Cumberland Telephone and Telegraph Co., No. 20,850, which I referred to a day or two ago, and ask you if these questions, which I read, were asked you and if the answer which appear after these questions were made by you to those questions:

"Q. Then, as I understand you, if bad debts of one year amount to ten thousand dollars, you carry that same item—you charge it to expense for that year?

A. We charge it to expense at the time we consider it worthless.

Q. And it is charged up to that year?

A. Yes.

Q. Then you carry it over and charge it to expense the next year?

A. In some instances, that is correct.

Q. When it is paid, you do not?

A. If paid or not, we credit it to the year in which it is
802 earned; that is, the moment we earn anything it is credited to the earnings, and when we find we cannot collect it, we charge it to bad debts.

Q. Then you carry it over to the next year?

A. Sometimes."

Q. Were those questions asked you and did you answer in that way?

A. You have read from the book; what I stated in that deposition, I state now. The examination in that deposition was for the purpose of determining whether we included in our expense account for each year as bad debts, the accounts which could not be collected but which were earned that year. At that time, I explained that we could not determine what were bad debts for probably ninety days, sometimes longer, after the revenue was earned. At the time we determined that accounts were worthless, we charged them off and they are included in the year in which they are charged off as uncollectable. If at any time we are so fortunate as to recover any part of the amount which has been so charged off, it is credited to bad debts in the year in which it is reported as collected. That was the case at that time and it is the case now.

Q. Can you tell me when the company abandoned the plan of charging $6.50 for unlimited business telephones in the city
803 of Louisville?

A. The $6.50 rate was for three year contracts, and was abandoned as of November 1st, 1904.

Q. Now, on what basis do you justify your charges of $8.00 for an unlimited business telephone; $5.00 for a party line business telephone; $4.00 I believe for an unlimited residence telephone, and $3.00 for a party line, residence telephone. I don't mean as to the necessity for making earnings, but on what basis are your classes of charges for various classes of telephones made. Why do you charge for one class of telephone $8.00 and for another class of telephone $3.00?

A. I don't make the rates.

Q. Do you know the theory of charging more for one class of telephones than for another class?

A. I have never been instrumental in making rates.

Q. Read him my question.

(Question read.)

A. All I can say is, I have nothing whatever to do with the making of rates.

Q. Do you know why the company charges one rate for one class of telephones and another rate for another class of telephones?

A. Because, considering all facts it is proper; further than that I don't know.

804 Q. Who does make the rates for the company?

A. I think the president.

Q. Do you know how many operators they have in the different exchanges at Louisville?

A. Today?

Q. Yes?

A. No, but I can determine if you wish.

Q. Now, on page 78 of your original examination, you stated that the more people a subscriber can reach, the more advantage it is to him. That is true, is it Mr. Smith?

A. I believe the more people a subscriber can reach by telephone, the more advantage it is to him.

Q. On that theory would you say that the telephone company is entitled to charge more for the service it gives, according to the number of subscribers it has to its telephone exchange?

A. Are you asking me to theorize?

Q. You have theorized, I suppose you have, you have either theorized or stated a fact and I should like for you to carry it out to its logical conclusion, if you can?

A. I didn't understand the question when I first answered it. Of course a telephone system with a great number of subscribers, is entitled to receive more than a telephone system with a smaller number, for more than one reason.

805 Q. Would you say it was worth more per subscriber to a telephone subscriber to talk to one thousand other subscribers, than it would be to talk to only five hundred subscribers?

A. I stated that in my direct examination.

Q. And, on the same theory, would you say it was worth more per subscriber to each subscriber to be able to talk to ten thousand subscribers, than it would be to talk to five thousand subscribers?

A. It is worth more.

Q. Now, on page 36 of your direct examination, you were asked by Mr. Granbery to file a statement giving the name of every person as of January 1st, 1908, paying for exchange service in the City of Louisville, or to the Louisville exchange, and a similar statement with reference to April 1st, 1908, to which you answered you would do so, marking those as of January 1st, 1908, as Exhibit No. 5 and those as of April 1st, 1909, Exhibit No. 6. That question and answer would seem to imply that your exhibits Nos. 6 and No. 5, contain only the names of subscribers paying for exchange service. Does that list include the names of all subscribers irrespective of whether they are paying for service?

A. That list was intended to be an exact copy of the rental books for that exchange. The rental books are intended to show

806 everyone subscribing to the Louisville service.

Q. Irrespective of whether they pay for it or not.

A. Every one.

Q. Does that mean everyone who has a telephone connected with the Louisville exchange?

A. It includes everyone who can be classified as a Louisville subscriber. I know of no one whose name is in the directory who is not

on the rental books and of no one whose name was omitted from the lists filed as exhibits.

Q. Now, on page 28 of your direct examination you stated that some of your subscribers, such as the Southern Railway paid their rentals direct to the Nashville office. Do the names of those subscribers and the amounts they pay, appear in these exhibits?

A. They should.

Q. Will you compare those exhibits with the subscribers' list as to the Southern Railway which paid direct to Nashville and if any of them do not appear on those exhibits, will you cause them to appear on those exhibits?

A. I find in Exhibit No. 5 the Southern Railway Co. does appear. I will make the examination you request and let you know later.

Q. Now, do you know the number of telephones—actual telephone instruments—which are installed in Louisville and suburbs
807 which are directly connected with and a part of the Louisville exchange system?

A. I think all of the instruments which I have reported in my Exhibit No. 3 are connected with the Louisville Exchange.

Q. Do you know the number of lines entering each of the exchanges?

A. No, I do not.

Q. Does each subscriber having a direct line—does such line enter one of the exchanges?

A. If he is a subscriber to the Louisville exchange, it does.

Q. And if he is a subscriber to a party line then does he have a direct line in one of the exchanges or does he, together with the others on the line, have one line entering the exchange?

A. Party line subscribers to one line have only one line entering the exchange.

Q. What connection have extension sets and stations connected with private branch exchanges with the different exchanges of the city. I mean by different exchanges, Main, South, East and West?

A. An extension set is practically a second telephone on a direct line, being able to get central direct, provided that it is an extension set to a direct line station. There are also extension sets to
808 private branch exchange stations, which enable the user to signal the private branch exchange operator, just as from the main set. The private branch exchanges are stations which, as the name implies, are connected to a private branch exchange switchboard. These switchboards are connected by trunks to the exchange switchboards.

Q. Subscribers desiring to use extension set and desiring to use a station connected with the private branch exchange switchboard, use the same process, substantially, then, to reach the main exchange, do they?

A. No. If the extension set is attached to a direct line instrument, they can signal the central exchange direct. If such extension set is attached to a private branch exchange instrument, they signal the private branch exchange operator direct.

Q. In the case of the extension set it simply goes over the direct

line to which the extension set is attached, and in case of the station on a private branch exchange, the subscriber desiring to use the instrument which constitutes the set goes over the trunk line leading into the private branch exchange, does he?

A. Yes. You see, Mr. Blakey, anyone wishing to communicate with a Louisville subscriber goes through the same process if he has a private branch exchange instrument, to get his connection,
809 with the main office, as a subscriber to the South office goes through to get the connection to the same number of the main office.

Q. What I want to ascertain Mr. Smith, is the method of a subscriber having a station connected with a private branch exchange and the subscriber having an extension set. As I understand your explanation, the subscriber having the extension set talks over a direct line just as the original subscriber does. Is that correct?

A. The extension set is nothing more nor less than a second instrument attached to the same line that the first instrument is attached to, no matter whether that first instrument or main instrument is attached direct to a switchboard of the company and operated by the company, or whether attached to a private branch exchange switchboard not operated by the company.

Q. In the case of the extension set, he makes his own connection, and in case of a private branch exchange, the private operator makes the connection?

A. Not necessarily. There are a number of extension sets to private branch exchanges stations. In my office, for instance, I have a connection with the private branch exchange or extension set.

My stenographer has an instrument on his desk connected with the same line, and when I am rung, he answers. The extension set can be put on an instrument connected direct with one of the company's exchanges, or can be attached to an instrument at-
810 tached to a private branch exchange.

Q. And when it is connected to a private branch exchange, it is called, in your exhibit, a station, is it?

A. Whenever an instrument is connected to a private branch exchange, it is classified as a station.

Q. I notice in the exhibit you have filed, especially for the month of April 1909, which I believe is Exhibit No. 6, there are several hundred extension sets and possibly two thousand or more stations. Do those station or extension sets and stations go to make up the total number of subscribers which one of your subscribers shows you to have had about that time?

A. My exhibit shows the number of stations which can get service, that is, can call any other Louisville station and be called by any other Louisville station without additional charge.

Q. And that includes extension sets and stations?

A. It includes all instruments connected with the Louisville exchange.

Q. I assume then that means extension sets and stations?

A. It means extension sets, and private branch exchange stations.

Q. I notice your Exhibit No. 6 also shows a number of names,

after which appears the word "list" What do you mean by the word "list"?

A. Strictly, a list subscriber is one who has contracted to
811 to have an additional insertion made in the telephone directories, being already a user of a telephone instrument.

Q. Is the small sum—I mean, is he simply someone whose name is put in the directory and who is authorized to use the instrument of some other subscriber?

A. We term such a one a joint user.

Q. Then if Smith & Jones were subscribers to your telephone system, and their names appeared in your directory as Smith & Jones and each of them wanted their respective names, for instance, John M. Smith and Jim Jones, placed in the directory would that be termed what you say is a list—their additional names?

A. Yes, if their names were to be listed with the telephone used by Smith & Jones.

Q. Would that list appear as one of the number going to make up the total of subscribers?

A. No, it would appear in the telephone directory, but would not be counted as a separate instrument.

Q. Now, a joint user, I believe, as you have just stated, is some individual who desires to make use, jointly with some other subscriber, of a telephone rented to such subscriber. Is that correct?

A. Yes, and his business is not connected with the subscriber. That is, they are not partners in the same business, nor either representing the other.

812 Q. Now do the joint users go to make up the total of the number of subscribers as appearing in your exhibit?

A. A joint user is not considered a subscriber.

Q. Then, I assume that extra buzzers and bells which sometimes appear in this exhibit No. 6 are not classified as subscribers?

A. They are not.

Q. What are your charges for what you term lists?

A. My Exhibit No. 10 on sheet showing rates in effect in Louisville, Ky. under date of October 1st, 1907, shows the rate to be twenty five cents per month, net.

Q. And what is the charge to a joint user?

A. This same exhibit shows this as one dollar per month, net.

Q. And what is the charge for an extension set?

A. This same exhibit shows the extension set as $1.25 per month, subject to a discount of fifty cents per month if the rental is paid quarterly in advance. This, of course, applies within the exchange radius.

Q. Now, one of your exhibits shows the number of subscribers for the various years since 1900. Would you say that the same proportion of extension sets and stations were installed and in force during the various years for which you have given the number of subscribers, that appear in Exhibit No. 6, as of April 1st, 1909?

A. I cannot answer that without making an analysis.

813 Q. What would be your judgment on the matter?

A. I cannot guess, Mr. Blakey. I have such a tremendous

number of figures in my office that it is an impossibility for me to make guesses.

Q. Were those items of extension sets and stations included as subscribers for all the years for which you have filed a statement showing the number of subscribers for those years?

A. Yes.

Q. One of your exhibits shows the rates charged by you in New Orleans. I show you a book which has on its cover, "Telephone Conditions in New Orleans, La., being report presented by Special Committee of the New Orleans Board of Trade, approved April 8th, 1908" which seems to contain among other things, on page 25 an agreement with the Cumberland Telephone and Telegraph Company, signed by that company as of the 9th day of April 1908, and also as signed by the New Orleans Board of Trade. Will you please examine that paper purporting to be such agreement and state whether that agreement was entered into at that time?

A. I believe so.

Q. Is that agreement still in force and are the rates specified in that agreement still in force in New Orleans?

A. As I remember, there have been one or two changes in
814 the rates.

Q. What does that agreement show as the flat rate, unlimited service, for business telephones?

A. $10.50 per month, gross.

Q. And what discount is that subject to?

A. Fifty cents per month, if paid quarterly in advance.

Q. And what does that agreement show as the flat rate, unlimited service, direct line, for residence telephones?

A. $4.50 per month, gross.

Q. And that is subject to the same discount, is it?

A. Yes.

Q. And what does that agreement show as the charge or as the rental for pay stations?

A. This agreement shows direct line, only, five cents for each call, monthly guarantee $6.50 gross.

Q. And what does that agreement show as to the charges for private branch exchange service?

A. It shows three different classes of private branch exchange service.

Q. For unlimited service, what does it show?

A. Unlimited service, switchboard equipped for twenty lines or less, $5.50 per month, gross. Switchboard equipped for 21 lines or more, per month, $10.50 per month, gross; unlimited trunk lines, each, per month, $15.50 gross; telephone instruments in the
815 same building with the switchboard, each, per month, $1.50, gross; telephone instruments located outside of the building in which the switchboard is installed, will be charged for as follows; within one mile, circuit mileage, of private branch exchange, of the switchboard, each instrument, per month, $6.50, gross.

Q. Are all of those items subject to a discount of fifty cents per month?

A. Yes, if paid quarterly in advance.

Q. What does that agreement show as to the charge for extension sets, on a direct line?

A. Extension sets to business, direct line telephones, $1.50 per month gross; same for residences.

Q. The other two switchboard classes, or rather, the other two private branch exchange classes, are limited service, and measure service, are they not?

A. Yes.

Q. I call your attention now to page 85 of this report under the caption as follows: "The following table shows the exact number of telephones and telephone subscribers in New Orleans, together with the monthly revenue therefrom, as of date December 22nd, 1907." I will ask you how many stations appear under that head connected with private branch exchanges?

A. Two Thousand, four hundred and sixty-four.

816 Q. Now, on page 42 of your direct examination, you were asked this question, and answered it as follows, as appears from your deposition:

"Q. During 1908 what service did the subscribers to the Louisville exchange receive; I mean, excluding pay stations and measured service patrons?

A. They received unlimited service to all exchange stations connected to the Louisville exchange, New Albany, Jeffersonville and to subscribers to other exchanges in Jefferson county who paid a rental for Louisville exchange service. Those exchanges are Anchorage 42 subscribers; Harrod's Creek, 42; Jeffersontown, 36; Pleasure Ridge Park, 41; St. Mathews, 63. There are also some at Pewee Valley and West Point, and these two exchanges are outside of Jefferson County, and Sheapardsville.

Q. Now, do those subscribers in Anchorage, Harrod's Creek and the other towns named, who pay a rental for Louisville exchange service—does the rental so paid by them, appear as the earnings of the Louisville exchange?

A. It does not.

Q. Now, can you tell me what were the rates for the year 1908 from pay stations operated in connection with the Louisville exchange. I should also like to know what part of the earnings

817 of any pay station was paid to the subscriber as a commission or a proportion of the amount taken in by the pay station?

A. Pay stations take in revenue for local service and for toll line service, revenue to other company's points. Please specify just what you do want?

Q. How can you tell that a pay station takes in revenue for toll station service?

A. Whenever a call for a toll point is made from a pay station, the pay station is charged therewith just as a subscriber.

Q. And the person making the call, drops the coin just the same as he would if making a local call, does he?

A. Yes.

Q. I desire only the receipts from pay stations for local calls, and not the part that is credited to toll line service?

At this hour, 12:30 o'clock, P. M., a recess was taken until this afternoon at two o'clock.

818 H BLAIR SMITH, cross-examination, resumed at 2 p. m. Sept. 13, 1909, by Mr. Blakey, for the Defendant.

A. The gross revenue from Louisville pay stations for the year 1908, for Louisville exchange service—that is, the same service that Louisville subscribers get—was $25,802.53.

Q. Well, that included telephones in hotels, drug stores, and other business houses, as well as in residences, did it?

A. That included all revenue from every station which is known as a nickel-in-the-slot or pay station.

Q. And did not include long distance tolls?

A. Did not include long distance tolls. And does also include money which really does not come into slots, but which is collected at the hotels by the operators.

Q. It does include that?

A. Yes, I say that, gross.

Q. Now can you tell me how much is collected at hotels and places of that kind which is not paid into the nickel-in-the-slot machines?

A. My records do not show that.

Q. Does that include receipts from tenants in the various rooms of hotels?

A. I think so.

819 Q. How long would it take you to ascertain how much of that sum is collected from what is known as business pay stations, and how much is collected from what is known as residence pay stations?

A. It would require the analysis of the receipts for the 12 months for each of the several thousand stations.

Q. Do your reports from Louisville for each month show how much is taken in from each station?

A. They did not for the year 1908.

Q. Will they for any year?

A. Not any previous year.

Q. Do they at the present time?

A. They do.

Q. How long has that been true?

A. I think it was begun some time this year, just exactly what month I cannot say, but it is only for the last three or four or five months.

Q. Will you produce some of those statements in which the revenue from each station is shown?

A. Yes.

Q. You have furnished me, Mr. Smith, with six sheets showing, I presume, the receipts from six pay station telephones for one month; is that correct?

A. Yes.

Q. Now will you produce all of the sheets of a similar nature showing the receipts from pay stations for that month?

820 A. I can produce all that were sent in for that month, and all that are included in that month's revenue. You see some of these show that the collection has been made once in 32 days, and another one in 30 days.

Q. Will the ones you produce show what period the amount appearing in the books covered? What period is covered by the amount in the books?

A. Each slip shows that.

Q. How often are collections made from the resident pay stations?

A. The intention is to make the collection monthly.

Q. Suppose then you produce all the sheets you have for this month.

A. I can produce all that came in for the month of August.

Counsel for complainant suggests that it is probably best not to go into matters of this character since the filing of the bill until passed upon by the Master Commissioner. If the Master Commissioner wishes to take up the financial matters since the filing of the bill down to the time the proof is closed, it may result in lengthening the proof considerably and may result in a long time before the proof can be closed, and for that reason, until the Master Commissioner rules on it, complainant's counsel thinks it best not to go into it.

821 By Mr. BLAKEY, resuming examination:

Q. As I understand it, Mr. Smith, prior to March 6th you have no report showing the receipts from the pay stations separately?

A. The records for those are in the Louisville office, in detail, and not in the Auditor's office.

Q. Who has charge of those records in the Louisville office?

A. The Manager of the Exchange.

Q. Who is the particular book keeper who would compile those receipts and have under his immediate charge or control the records showing such facts?

A. I don't know.

Q. Now this total sum of $25,000.00, as I understand, is the gross receipts from the pay stations?

A. That is the amount of money that we found in the pay stations which had been deposited, for Louisville Exchange service.

Q. And how much of that was paid out on account of commissions to the various subscribers in whose places of business or residences the pay station was installed?

A. I don't know.

Q. Have you any way of ascertaining that fact?

A. By an analysis of the receipts, for whatever was paid out, which would take three or four days, I could determine.

Q. Is the item of commission paid out on account of these

822 pay stations receipts deducted from the earnings on account of these pay stations, or is it charged up as an expense item of the exchange?

A. We had two classes of contracts in regard to the pay stations: one returns to the pay station contractor fifty per cent of the local receipts in excess of his monthly guarantee; that excess which is returned is charged against Revenue. We also have a class of pay stations where the business man in whose house the pay station is located makes no guarantee, but gets ten per cent of the gross receipts. This ten per cent. we consider an operating expense, and it is so charged.

Q. Now you have some telephone stations, pay stations, which are denominated "four dollar guarantee stations." If the receipts for that station amounted to more than four dollars, is any part of it paid to the person in whose house the station is installed?

A. If the receipts for local exchange service are in excess of four dollars per month, 50% of the excess is returned to the contractor.

Q. And would that fifty per cent. which is returned to the contractor appear as a part of the $25,000 which you have referred to here as for the year 1908?

A. It does.

Q. Is that 50% charged up against expenses for that year?

A. It is not, it is a charge against gross revenue.

Q. Now I notice another class of business pay stations
823 that you have indicated on those exhibits you have filed as ten per cent. What does that mean?

A. I think I have explained that. It means that the person in whose house or on whose premises the station is located, receives ten per cent. of the contents of the box.

Q. Is there any guarantee at all on those ten per cent. phones?

A. No.

Q. If there is five dollars for one month deposited at that pay station, as I understand it you would take out the $5.00 and retain $4.50 of it, and give 50 cents of it to the subscriber—is that correct?

A. If the five dollars was from local receipts that would be the case.

Q. And would that five dollars appear as a part of the $25,000 which you have testified about for the year 1908, or would only $4.50 of it so appear?

A. $5.00 would so appear.

Q. And would that fifty cents paid to the subscriber be charged as a part of the expenses for that year?

A. It would.

Q. Now I notice another class here, in the residence pay stations, Guaranteed, $1.00. What does that mean?

A. Those stations were put in under old contracts, and the resident subscriber guaranteed one dollar a month. He paid five cents a call for the use of the service: if there was an excess in the box the company got the full receipts.

824 Q. Now I notice also under the head of residence pay stations, figures zero opposite the name of some subscribers, which I suppose indicates that nothing is guaranteed, is that correct?

A. That was a contract that antedated the dollar guaranty.

Nothing was guaranteed, but the company got full contents of the box.

Q. Now on those pay stations where the 10% was allowed, to the subscriber, was that 10% of all the receipts including the toll receipts, or only ten per cent. of the receipts exclusive of toll receipts?

A. The three slips which I have before me for the 10% each shows that there was some toll receipts in the box, and that no part of this was allowed as a commission to the pay station subscriber. I think this is regular.

Q. As I understood you, you said that no part of the receipts taken from these pay stations which was deposited for toll calls or long distance calls was included in the $25,802.53 for the year 1908?

A. That is correct.

Q. Now how are these sums collected from the pay stations? Who collects them?

A. We have collectors in the City of Louisville who visit them, open them in the presence of the party who is interested in them, and make a written report of the contents thereof, which report is signed by the two parties.

825 Q. What method has that collector of telling whether any part of a sum found in those pay stations is for toll calls?

A. The collectors have routed for them the pay stations, and they take the routes in routine order, and on the morning that they start off with a new route which they are expected to complete that day, they take with them the itemized toll bills showing what should be in the boxes for tolls.

Q. And do they collect the amounts in these pay stations which are deposited there from toll calls as well as the other coins in the boxes?

A. Yes.

Q. And to what account is the salary of these collectors charged?

A. Charged to Operating Salaries and Wages, Louisville.

Q. In this exhibit you have filed giving the total number of subscribers in Louisville, are these pay stations classified in that exhibit as subscribers?

A. Yes.

Q. Now is there among your records any statement showing the amount of capital stock apportioned to the Louisville exchange?

A. No, not that I know of.

Q. Is there any part of your capital stock apportioned to Kentucky at all?

A. Not on the books of the company.

Q. Have you any other records showing any such fact?

826 A. I do not recall any. Sometimes public bodies ask us to apportion capital stock on some theoretical basis, and then we attempt to do it for them; but then I don't think it means anything.

Q. Who does that?

A. I don't know.

Q. Do you do it?

A. I know it has been done; oh I have made apportionments of that kind for them sometimes on the basis of construction, sometimes on the basis of earnings.

Q. Now will you show me Voucher No. 454, September, 1905, voucher No. 773, December, 1906; voucher No. 517, August, 1907, and voucher No. 539, August, 1908?

A. I here hand you the four vouchers requested.

Q. Mr. Smith, voucher No. 454, for September, 1905, contains a statement from the Auditor of Kentucky, in which it seems that the capital stock of your company to the extent of $763,671.00 was apportioned to Kentucky; is that correct?

A. The statement you hand me, which is made up by the Auditor of Kentucky, shows that.

Q. Did you furnish the Auditor of Kentucky any report on which to base that statement?

A. I did not.

Q. Did anybody connected with your company?

A. I don't know.

827 Q. That is the basis on which you were assessed for taxation for that year, is it?

A. I believe so; in fact, that is the assessment.

Q. There is a slip attached to that voucher on which appears a number of names of towns in Kentucky, among others, Louisville, Kentucky. Who made up that slip?

A. That was made in my office.

Q. What is that intended to represent?

A. The voucher that you have handed me covers the amount that we paid to the State Treasurer at Frankfort, Ky., for the franchise tax assessed against the Cumberland company for taxes of 1905. This franchise tax is considered as a tax levied on all the business in Kentucky. The slip which you refer to shows names of exchanges in Kentucky, and the amount of the tax that is apportioned to each exchange.

Q. How much is apportioned to Louisville, Kentucky?

A. $550.45.

Q. On the basis of the total amount paid in taxes, what proportion of the entire amount is represented by the amount apportioned to Louisville?

A. Almost half.

Q. So that if the capital stock of the company in Kentucky is fixed at $763,671.00, about one-half of that should properly be apportioned to Louisville, or not?

A. We made our apportionment of taxes on the basis of the subscribers. Louisville has about half of the subscribers in the State of Kentucky.

828 Q. The other vouchers you have handed me are vouchers of substantially the same character of this voucher, are they only different in amount?

A. I believe so. They cover taxes for other years. I have not examined them critically since they were paid.

Q. Now I forgot to ask you, Mr. Smith, when we were going

over the construction items for the Louisville exchange, from what source the money was derived which was used in construction work for the Louisville exchange. Will you please tell me from what source that was derived?

A. You asked me all about that. I stated that by far the larger part of it was derived from sales of capital stock.

Q. Was all of it paid out of the general treasury of the company?

A. Yes.

Q. And I believe you said that the earnings of the company in Louisville had been exceedingly small.

A. I said for the past seven or eight years they have been practically nothing—the net earnings.

Q. Now you have been maintaining your property all over the entire system and paying a seven and eight per cent. dividend, have you not, for many years?

A. Yes.

Q. And you have accumulated over $3,000,000.00 surplus, have you not?

A. The books show it.

Q. Now has that money out of which you have taken care
829 of the depreciation, paid dividends and established a surplus, been earned from exchanges, or from toll lines?

A. From both.

Q. Have you earned as much as fifteen per cent. on your toll line business?

A. I don't understand the question: 15% net, or gross?

Q. Net?

A. I have never made any statements along this line.

Q. I show you again the pamphlet which I showed you this morning, which is entitled "Telephone Conditions in New Orleans, La.," and call your attention to page 58 of this report, and call your special attention to the following language used by the compiler of this report, who seems to be Mr. Henry Noble Hall, which language is as follows:

"The financial year of the company ends on the 31st of December, and at my request Mr. H. Blair Smith, Auditor, furnished me with a statement showing the earnings, expenses and net revenue of the New Orleans Exchange for the year 1906, which at the time of my visit was the last completed financial year. This statement is as follows:"

Now I call your attention to this statement, and ask if you furnished it to either Mr. Hall or any one else?

A. I believe that is a statement which I furnished Mr. Hall.

830 Q. How much does that statement show to have been the gross earnings of the New Orleans Exchange?

A. $592,303.68.

Q. And how much does it show to have been the gross expenses?

A. Including depreciation of plant, $567,701.94.

Q. That leaves a net revenue of how much?

A. It leaves a net revenue, after deducting depreciation, of $24,801.74.

Q. What was at that time the Construction account for the New Orleans exchange, which appears right after that?

A. $2,482,792.80.

Q. What percentage appears on that statement as the net revenue on the investment?

A. Ninety-nine one-hundredths of one per cent (.99%).

Q. I call your attention to the following statement on page 72 and 73 of this report:

"It appeared unfair that New Orleans should be made to bear the entire amount of the salaries of the District Superintendent and the Assitant District Superintendent of the Louisiana District, and I have deducted one-half from the amount thus formerly charged to the operation, maintenance and construction accounts. Mr. H. Blair Smith explained to me that he had already made the
831 distinction I suggested in the 1907 accounts, and that in the future the salaries of the District Superintendent and the Assistant District Superintendent should be apportioned fairly between New Orleans and the rest of the Louisiana exchanges."

Did you make that explanation to Mr. Hall?

A. I don't remember it now, but that is his wording of it, that is the way he expresses it, and I think Mr. Hall intended to make a fair report.

Q. Did you at that time apportion the salaries of the District Superintendent and Assistant District Superintendents between New Orleans and the rest of the Louisiana exchanges?

A. We charged all the apportionments throughout the territory at the same period.

Q. I believe you stated, in your direct examination, that you did not discriminate against the patrons of the Louisville exchange, that you treated them all fairly and in the same way, is that correct?

A. I believe it to be.

Q. Is that true in New Orleans, and was it true at the time this report was made?

A. I believe we have always dealt fairly with our subscribers.

Q. Well, I will ask you if Mr. Hall, when he embodied this language in his report, on page 90 thereof,—

832 "Those in authority here never seem to have realized, even in the faintest degree, that as employees of a public service corporation they were first and foremost servants of the public; on the contrary, they have, throughout, assumed an arbitrary and dictatorial tone in their dealings with their patrons. They have at times been lacking alike in the commonest courtesy, as well as in the most ordinary business tact."

Was Mr. Hall correct about that?

A. Mr. Blakey, you are quoting small extracts from the report which in themselves do not express the report. It would be well, however, in that connection, to state that the Superintendent of the Company at the time lost his position through investigations which

were afterwards made in regard to the manner that he had conducted the business.

Q. Mr. Smith, I would like to see some of the credit vouchers, or items, whatever you may term them, which show credits to the Construction account. It is practically immaterial to me which vouchers you show me, but I should like to have them for some time between April and December, 1902, some time during the year 1903, for 1904, for 1905 and for 1906. I suggest that we adjourn to the part of the building where these credit vouchers are kept, and simply select them indiscriminately for examination, if it meets with your approval.

833 A. I will have to hunt the vouchers.

Q. How long will it take you to find them?

A. For showing you a sufficient number for each year will probably take me the balance of the afternoon.

Q. Have you not a report that shows the number of the vouchers which have been credited to the Construction Account for each of the years I have indicated?

A. It shows net.

Q. Does it show the number of the voucher?

A. The books that we keep our Construction account on shows all voucher numbers.

Q. Does it show the voucher number of the voucher which indicates the credit to the construction account?

A. The main credits to the Louisville Construction account come in the Supply vouchers for instruments taken out. These vouchers were always made up net.

Q. They do not appear on your Construction account as credits, do they?

A. If the net result for a month is a credit, they do.

Q. I believe you have already said that there does appear on your Construction account credits to the Construction account for items other than those which come through the supply department, have you not?

A. Vouchers of the Western Electric Company, as an instance, might show debit items to Louisville, and just as we have brought out in this deposition, credit items, but the net result would

834 be debit. I take it that it is such as these that you wish to see, but it would take a specific examination of the voucher and the items therein to exhibit them to you.

Q. During the examination made by Mr. Farnham, of the Mutual Audit Company, he prepared what are termed his Construction papers, and those Construction papers show the number of the vouchers for the various years wherein any credit appears to the Construction account, and my only object in asking the question in the manner I did was to avoid what seemed to be your criticism under former questions, namely: that I was selecting specific articles for criticism. It seems, however, that the deposition will be unnecessarily delayed unless we ask for specific vouchers, and out of the seven vouchers for 1902 which appear at the Construction account I will ask for voucher No. 6305.

A. I have no voucher like that.

Q. Well, then Auditor's bill No. 6305, for September, 1902; also Auditor's bill No. 8466, for December, 1902, Auditor's bill No. 9197, for January, 1903, Auditor's bill No. 10570, for April, 1903, Auditor's bill No. 13962, for Sept., 1903, Auditor's bill No. 17621, for March, 1904, Auditor's bill No. 20,633, for July, 1904, Auditor's bill No. 27391, for May, 1905, Auditor's bill No. 28324, for June, 1905, Auditor's bill No. 33269, for January, 1906, Auditor's
835 bill No. 36842, for May, 1906. I think that is all.

A. And Mr. Blakey, you will recall that you asked me whether you had asked for vouchers at random, or whether you had selected them, and I stated that there was no doubt in my mind but that you had selected specific vouchers. You are now putting it in the shape of a complaint from me. Again, in my previous answers I called your attention to the fact that the whole of the Reconstruction account represents replacements, that is, represents the value of plant removed and substituted with other plant, and that this for the three years is as follows:

1905	$41,243.92
1906	40,650.22
1907	44,388.37
1908	19,535.72

I will get the bills that you request.

An adjournment was here taken until nine thirty o'clock tomorrow morning.

836 TUESDAY MORNING, *September 14th*, 1909.

The further cross-examination of Mr. H. BLAIR SMITH was resumed this morning at 9:30 o'clock, pursuant to adjournment.

A. In regard to Mr. Blakey's question, referring to expenses shown in my Exhibit for the year 1906, I wish to make this correction: I have examined some of the corrections made by Mr. Farnham, shown on his work sheet under miscellaneous items, amounting to $2464.74, and I find that these corrections are proper, to correct clerical errors, and I wish to correct my maintenance account for 1906 accordingly, making that for current repairs, $52,156.85 instead of $54,621.59.

Q. Now Mr. Smith, as to the auditor's bills about which I asked you yesterday, have you those convenient?

A. They are now here before you.

Q. Will you show me No. 6365 for 1909.

A. (Witness does so.)

Q. Will you examine this voucher and state how much, according to that voucher or bill, is credited to the construction account of the Louisville exchange?

A. Construction account is credited with $375.97.

Q. What is the total amount of the bill?

A. $401.45.

837 Q. What are the character of items represented by the credits going to make up the $375.97?

A. They represent mainly sale of junk, consisting of copper, lead, cable and zinc.

Q. Do the items going to make up the $375.97 represent the price which the copper wire, cables and other articles were sold for?

A. Yes.

Q. Does the bill show to whom those articles were sold?

A. The statement attached to the bill shows that the junk was sold to J. Hyman.

Q. Do you know whether he is a junk dealer in Louisville?

A. I do not, but presume he is.

Q. Why was the $375.97 represented in this bill credited to construction account?

A. The credit and the bill both come from the supply department. My explanation is that there was reconstruction going on and this junk came from worthless cable, and that the adjustment in the construction account required that this be credited to construction, aerial.

Q. Were the articles represented here, which are credited to construction account, articles originally used for construction
838 and charged to construction account of the Louisville exchange?

A. I think so.

Q. Did they cost more or less than the amounts appearing in those bills?

A. The new cable cost more, of course, than the junk.

Q. Then, according to that bill, before you, was the original cost credited as appears by that bill to construction, or only the sale price as junk?

A. This bill deals with nothing whatever except the salvage value of the stuff taken out of construction.

Q. Now, No. 8466, was any part of the total of this bill credited to the construction account of the Louisville exchange?

A. The whole of it was so credited.

Q. Are the items represented in that bill and the facts you have testified to about the former bill, substantially true as to this bill?

A. Yes.

Q. I should like to see Voucher or Auditor's bill No. 9197 for the year 1903?

A. (Witness produces same.)

Q. Was any part of this bill credited to the construction account of the Louisville exchange?

A. It was, the whole of it.

Q. What does it amount to?

A. $150.

839 Q. What does it represent?

A. The sale of mules at Lebanon, Ky.

Q. Are the facts in regard to this bill substantially as those in regard to the bill about which you have just testified?

A. Well, they are salvage of what was some good live stock.

Q. Do you know what the mules cost?

A. The bill does not show.

Q. Was anything credited to construction account except the price for which they were sold?

A. The bill does not show.

Q. I notice a letter attached to the bill; you will please read that letter into your deposition?

A. The letter is as follows: "We herewith enclose bill against J. E. Settle, Cashier, covering the sale of one span of mules sold to R. W. Wathen & Son, Lebanon, Ky., amounting to $150. The last work that these mules were used for was on the reconstruction of the Lebanon and Greensburg line, and the Lebanon and Bradfordsville line. These mules were purchased we presume about three years ago and we think while Capt. H. Brown was acting as construction foreman. We do not recall at present to whose account they were charged when purchased. Please send auditor's bill and oblige, very truly yours, C. L. Monroe, Chief Clerk.

840 The bill is approved by the purchasing agent.

Q. Now, No. 10570 for 1903. This seems to be a bill representing the sale to J. Hyman of old cable, $235.23. Was any part of that item credited to construction account of the Louisville exchange?

A. The whole of it.

Q. Are the facts in regard to this bill substantially the same as those testified to as to the bill about which you testified this morning?

A. Yes. You understand, Mr. Blakey, that in the rebuilding of a telephone exchange and especially an exchange like Louisville, the plant is usually enlarged at the time of rebuilding and a part of the cost of the rebuilding and enlarging is chargeable to construction and a part to reconstruction, and not only do these bills for the sale of salvage enter into the account, but the pay rolls and the new material issued.

Q. The next one is Auditors' bill No. 13,962 for 1903. This bill seems to be for four articles sold to Jacob Hyman, for a total of $253.38. Was any part of that bill credited to Louisville construction?

A. The whole of it.

Q. And are the facts in regard to this bill substantially the same as those in regard to the first bill about which you have testified?

A. Yes, and in regard to the one just testified about, above.

841 Q. No. 17621 for the year 1904. This bill seems to be a bill for three articles sold to J. Hyman, including lead, copper and iron wire, amounting to $324.69. Was any part of that bill credited to the Louisville construction account?

A. All of it.

Q. And are the facts in regard to this bill substantially the same as those in regard to the first bill about which you have testified?

A. Yes and the two previous ones also.

Q. No. 20633 for the year 1904. This seems to be a bill for lead

and cable sold to Jacob Hyman for $280. Was any part of that bill credited to the construction account of the Louisville exchange?

A. All of it.

Q. And are the facts in regard to this bill substantially the same as those in regard to the first bill about which you testified?

A. Yes, and the three previous ones also.

Q. No. 27394, for 1905. This seems to be a bill, itemized, for the sale of eight articles to J. Hyman for $688.05. Was any part of that credited to construction account of the Louisville exchange?

A. Yes, $660.46.

Q. And are the facts in regard to that portion of the bill
842 the same as the facts in regard to the first bill about which you testified?

A. Yes in regard to that part of the bill credited to maintenance, material, and the part to directory account. The same explanation also attaches to this bill which attached to the four previous to this one.

Q. No. 28324, for 1905. This seems to be a bill for $667.68 for articles of copper, lead, zinc and iron, and iron wire, sold to S. Webber & Son. Was any part of that credited to the construction account of the Louisville exchange?

A. Yes $650.68 to construction and $17.00 to maintenance account.

Q. And are the facts in regard to the $650.68 item credited to construction, substantially the same as the facts you have stated in regard to the first bill?

A. Yes and in regard to the five previous ones.

Q. No. 32269, for the year 1906. This seems to be a bill for lead, copper and zinc, sold to Jacob Hyman, total of $789.44. Was any part of that credited to the construction account of the Louisville exchange?

A. Yes, $769.64 to construction, and $19.80 to maintenance.

Q. And are the facts in regard to the $769.64 credited to construction account, substantially the same as those testified to
843 about the first bill?

A. Yes and as testified to in regard to the previous six items.

Q. The last one I have on the memoranda is No. 36842 for 1906. This seems to be a bill for articles sold to S. Webber & Sons for articles itemized as copper, lead zinc and iron, representing a total sale of $1142.35. Was any part of that credited to the construction account of the Louisville exchange?

A. Yes, $1135.35 to construction account and $7.00 to maintenance account.

Q. And are the facts in regard to that bill substantially the same as the facts stated in regard to the first bill asked you about?

A. Yes, and in regard to the seven previous ones. In looking up these, Mr. Blakey, I noted that they were all the same and I had the book for 1905 and 1906 convenient, and I picked up some other

credits from other sources, represented in the four vouchers, which I now hand you.

Q. One of the vouchers you have just shown me seems to be No. 501 for February 1905. Will you please state the amount of that voucher and whether any part of it was credited to the construction account of the Louisville Exchange?

844 A. The amount of the voucher is No. 170.85 and represents a private branch exchange switchboard of the cordless type, which was destroyed by fire. The original installation was charged to the Louisville exchange, and this is a credit to the construction account of the Louisville exchange.

Q. Do you know what the original cost of it was?

A. That is the original cost.

Q. $170.85?

A. Yes.

Q. And that is the amount that is now credited to the construction account?

A. Yes.

Q. Was that switchboard insured?

A. It was not.

Q. Does the cordless switchboard cost less or more than the other varieties of switchboards?

A. I think it is a cheaper board.

Q. Are there any papers in this voucher to show the number of stations attached to the switchboard?

A. Yes, there were four stations.

Q. I hand you Voucher No. 684 for August 1905, and will ask you if any amount appears in that voucher as having been credited to the construction account of the Louisville exchange?

845 A. This voucher represents credits to various construction accounts, construction, equipment, on account of subscribers' station equipment being destroyed by fire. There are three items credited to the Louisville exchange, construction $6.79 for No. 68 set; $14.84 for No. 68 set and pay station; $96.89 for six sets of instruments, pay station and booth.

Q. What does that No. 68 mean?

A. It is a description of the set, a code number, I think.

Q. Do you know whether those items appearing in this voucher were the original cost prices of the articles mentioned therein?

A. That voucher was issued to cover the cost of the apparatus.

Q. Do you know that as a matter of fact, or just know your system?

A. That is the system.

Q. Here is Voucher No. 710, September 1906, which seems to represent a total of $208. Will you explain that voucher?

A. This voucher credits Louisville exchange, construction, equipment, and charges Louisville maintenance, material, $148.00 and the supply account, Nashville, with $60.00: The explanation in the voucher is.—returned to Nashville, two private branch exchange switchboards, same having been returned to Nashville without being charged to Louisville, Ky. supply. Received at Nashville July

6th, 1906. Estimated value of these switchboards at present is $30.00 each, which amount is charged to Nashville supply
846 and the balance to Louisville maintenance, reconstruction.

Q. Would that imply that no part of the articles mentioned in that voucher was ever charged to Louisville?

A. It would not.

Q. How do you explain the language under there, same having been returned to Nashville, without being charged to Louisville, Ky., supply. What does that mean?

A. It means this, that when the switchboards were removed at Louisville that they were immediately shipped to Nashville and that they were not handled through the supply account at Louisville.

Q. It means that they were directly charged to Louisville without being charged through the supply department?

A. It means those switchboards were formerly in use in Louisville; that when they were taken out they had no use for them in supply at Louisville for the reason that the switchboards were worthless in their present condition, therefore, instead of putting them into stock at Louisville they were immediately boxed and shipped to Nashville to be utilized to the fullest extent at the general shops of the company in Nashville.

Q. When those switchboards were installed in Louisville, were they charged to construction account?

A. Yes.

Q. Is any part of this voucher now credited to construction account?

A. The whole of it is credited to construction account.

847 Q. How do you explain this language at the foot of the voucher then—"the balance to Louisville re-construction account?"

A. The balance represents the amount of deterioration in the switchboards. It is a well known principle in bookkeeping that every debit must have its credit and vice versa. We have given the Louisville exchange credit for the original cost of the switchboard and we must charge that cost to something; we therefore charged Louisville, maintenance reconstruction with the deterioration in the switchboard, and charged supply account, Nashville, with the salvage value of those switchboards—the salvage value plus the deterioration being equal to the original cost of the switchboards.

Q. Now according to this voucher it seems that the estimated value of these switchboards at present is $30.00 each, which amount is charged to Nashville supply. The balance to Louisville reconstruction. Would not the balance mean the difference between the $60.00 and the $208?

A. Yes.

Q. And was the balance charged to Louisville maintenance, reconstruction?

A. Yes.

Q. Here seems to be Voucher No. 710 for June 1906. Please explain what bearing that voucher has on the present line of proof?

848 A. This voucher is another one issued to credit construction, equipment accounts of various exchanges on account of losses in subscribers' station equipment, destroyed by fire. It shows a credit of $29.79 to Louisville for the loss of one No. 68 set and booth.

Q. Amounting to how much.

A. $29.79.

Q. Was that the original cost of the No. 68 set and booth?

A. Yes.

Q. Do you know that as a fact or simply know that your system is such that would be the case if properly entered up?

A. I am testifying because I know the system is that.

Q. Here is also Voucher No. 710 for June 1906, which seems to represent a total of $163.55. Please explain that voucher?

A. This is credit given Louisville, construction equipment account for one private branch exchange switchboard from the Kentucky Wagon Works, that amount being the original cost of the switchboard installed. Estimated value of the switchboard at the time it was returned, was placed at $20.00. The total of the switchboard was originally charged to maintenance, reconstruction at Louisville in June 1906, but in July 1906 a correction was issued crediting Louisville maintenance, reconstruction with $20.00 and charging supply account with $20.00, as that was the amount
849 of salvage in the board.

Q. Did I understand you to say when this switchboard was charged up to the Louisville account, it was charged up against maintenance account, when originally installed there?

A. No.

Q. Against what account was it charged when originally installed?

A. Construction, equipment.

Q. Mr. Smitih, I should like to have Auditor's bills Nos. 5284, 4321 for 1902; 52613 and 53208 for 1908?

A. (Witness produces same.)

Q. Mr. Smith, will you explain to me this auditor's bill No. 5284 for 1902?

A. The bill shows that it is made for the estimated cost of installing new instruments during June 1902, actual cost of which was charged to expense instead of construction.

Q. Does any credit appear in that bill to Louisville construction account?

A. Yes, a credit of $520.

Q. What does that $520.00 represent?

A. The bill shows it as a credit to Louisville construction account. The Louisville exchange for that month is reported as having lost 52 stations, net.

850 Q. And does this paper from which you first read in regard to the estimated cost of installing instruments during June 1902 have any bearing on the credit given to Louisville construction account of $520.00 for that month?

A. Yes.

Q. In what way have they any relation?

A. The bill is rendered charging construction ten dollars for each instrument gained, net, for the whole system.

Q. The next bill called for is Auditor's bill No. 4321 for 1902, which seems to represent items aggregating $10,800. Will you please explain whether any part of that item was credited to the Louisville construction account for that year?

A. $560.00 is credited to Louisville construction account from that bill.

Q. That is the same class of bill as the one immediately preceding it?

A. Immediately mentioned heretofore. You do not ask for an explanation of either of those bills; I presume you believe they are not in accordance with the previous testimony I have given and I would like to therefore state that those bills are for two reasons; I have stated before that the installation of private branch exchange instruments was charged to construction and you will recall also that these bills were rendered at just about the time we took over the Ohio Valley Telephone Company plant and it is more
851 than likely these instruments lost were instruments of the Ohio Valley Telephone Co. which were probably charged to construction.

Q. I will ask you Mr. Smith if I did not ask you, when the bill was first produced, to explain it?

A. I understood your request to be to please let you know what the bill showed and not the reason for the bill.

Q. Mr. Smith, you have also furnished No. 52316 for 1908. Will you please state whether any part of that bill is credited to the construction account of the Louisville exchange?

A. $251.66 of this is credited to Louisville construction account; $19.80 Louisville maintenance, and $44.62 to directory.

Q. The part that is credited to construction is derived from what source?

A. From the sale of some junk. Lead, copper and iron wire.

Q. Are the facts you testified to a short time ago, in regard to sales of junk, applicable to this bill as explained by you in regard to those bills

A. Yes, I testified to seven or eight similar bills this morning.

Q. I show you also bill No. 53208 for 1908 and will ask you to state whether any part of that is credited to the construction account of the Louisville exchange for that year?

852 A. $482.75 of this bill is credited to Louisville construction, aerial.

Q. What articles are represented by that credit?

A. The sale of some chestnut poles to the L. & N. R. R. Co.

Q. Is the amount for which the poles were sold only, represented by the credit?

A. The credit from the poles sold is $482.75, yes. You will note from this bill that this sale of poles netted the company a profit of $54.25 and that was credited to Louisville revenue.

Q. How do you ascertain that fact?

A. From the bill.

Q. Now, I notice the price of these poles is placed at $2.75, $4.50, $5.50 and $6.00 respectively for different poles, all of which are itemized as chestnut poles. Do you know anything about the cost price of chestnut poles?

A. I pass vouchers for the purchase of them.

Q. What are the prices, generally speaking?

A. I would have to refer to my records to get them. They cost different prices in different parts of the country. The profit on this individual lot was calculated from the invoice.

Q. Do you know that to be a fact?

A. I do.

Q. Did you do it yourself?

853 A. No, but there are papers in here that show it.

Q. Please point out to me the papers which show it in there?

A. There are the individual poles, showing the cars on which they were shipped.

Q. Had those poles ever been used in the Louisville construction account?

A. I think not.

Q. They were new poles?

A. New poles.

Q. I notice you have a credit here of $482.75, construction, pole lines, and $54.25, revenue, miscellaneous. Does that $54.25 appear as a part of your revenue or earnings for that year?

A. Yes.

Q. Do you also credit construction account with that amount, $54.25?

A. No.

Q. Mr. Smith, you have testified that all of the stock of the Cumberland Telephone and Telegraph Company has been paid for in cash. Will you produce the stock ledger for examination?

A. It is not in my charge.

Q. Is there such a book kept by the company?

A. Yes.

854 Q. Will you, or will you not, produce it?

A. I have no authority whatever over the book.

Q. Read him my question, Mr. Duke?

(Question read to witness.)

A. As stated, I have no authority over the book and cannot do so.

Q. How do you know that the capital stock of the company has been sold for cash?

A. I have never stated, as I recall, that the capital stock of the company was all sold for cash.

Q. Do you now say whether or not the capital stock, since your connection with the company, has been sold for cash?

A. I know that it all has not been sold for cash.

Q. Since January 27th, 1900, has any of it been sold for any consideration other than cash money?

A. I recall the exchange of share for share for stock of the Ohio Valley Telephone Co.

Q. Subsequent to that exchange of stock?

A. I do not recall.

Q. You mean you do not recall that one way or the other, or do you recall it has been sold for other than cash, Mr. Smith?

A. I do not recall any details except sales for cash.

855 Q. Have you any records in your office showing for what the stock was sold?

A. Yes, all capital stock transactions are on the general ledger of the company.

Q. Will that record show whether the stock was sold for par or less than par?

A. It will not show any sales at less than par; it will show why the stock was issued.

Q. What do you mean by, why the stock was issued?

A. For what consideration.

Q. Will the books in your office show—the original entries indicating how much was received for all the stock issued by your company since you have been auditor?

A. Yes.

Q. Will they show whether the amount received was received in money or whether it was received in stocks or bonds of other companies?

A. Yes.

Q. Was any of it sold for any consideration other than money?

A. Yes.

Q. Has any of it ever been so sold for other considerations than money, since the exchange of stock with the Ohio Valley Company?

A. I do not recall offhand. I will have to examine the books. (Witness retires to do so.) The total capital outstanding January 1st, 1908 was $1,695,700; we have since that date issued for

856 cash, at par, $16,625,000 of stock; for the purchase of other companies, $1,319,450; for a $60,000.00 account due to the American Bell Telephone Co., $40,000,000 of stock. Total outstanding, $19,680,150.

Q. Who furnishes you those figures?

A. I compute them myself, compile them.

Q. From what source?

A. From the general ledgers of the company.

Q. Who makes up the general ledgers?

A. The general book-keeper.

Q. Is he in your department?

A. Yes.

Q. Does the treasurer furnish him any data with which to make up his items?

A. The treasurer necessarily turns over to him his cash account showing receipts for the sale of capital stock.

Q. So then, the data which the general bookkeeper makes up his accounts from, is received from the treasurer?

A. Those in regard to the sale of capital stock come from the regular cash book in the treasurer's office.

Q. You stated the other day what the company had paid in the way of dividends for the last few years, and also what the market stock was worth now, its price. I now show you an issue of the Nashville American of Friday, September 10th, 1909, and call your attention to the article appearing under local financial, and will ask you to read that into your deposition and state whether the facts contained in that article are substantially correct?

857 Mr. GRANBERY: While I was not present on a former day during the taking of this deposition, counsel for the defendant interrogated the witness in regard to the capital account of the company, the market value of its shares of stock and other similar questions. This matter was up during the progress of the examination of the books of the company by the accountants, Mr. Farnham of the Mutual Audit Company desiring to go into the capital of the account, thereupon the matter was submitted to the Master Commissioner at Louisville, and he ruled it was not competent or proper, and it is so stated in the report of Mr. Farnham, and I object to any further questions in regard to these matters until the Master Commissioner overrules his former holding, and certainly until this matter is submitted to the Master Commissioner for his ruling.

Mr. BLAKEY:

Q. Mr. Smith, the article in question states that the price of the Cumberland Telephone Company stock jumped from 146 bid with 148 and 150 asked, with offerings very scarce, referring to the market for Cumberland Telephone Company stock on
858 the 9th day of September 1909. Do you know whether that statement is correct?

A. I guess so.

Q. The article also states that the sudden advance in the stock was caused by the directors of the Cumberland Telephone Company today, that was, September 9th, 1909, authorizing a distribution of a large block of American Telephone and Telegraph Co. stock among the shareholders of the company on the basis of two per cent of their holdings. Can you state whether or not that is true?

A. I have seen it in the papers.

Q. Is it, or not, true?

A. I believe it is.

Q. Did the directors at the same meeting authorize the payment of the regular two per cent quarterly dividend in addition to the distribution of the American Telephone and Telegraph Co.?

A. I have heard that they did.

Q. The article in question also states that the distribution of the stock of the American Telephone and Telegraph Co. is equivalent to a cash dividend of 2.8 per cent. Can you say whether or not that is correct?

A. It is correct, I believe.

Q. What other dividend will in the ordinary course of affairs

be declared by the Cumberland Company during the year 1909 if any?

859 A. The directors of the company determine that.

Q. Are the dividends declared as of the first of January or as the 31st of December, or have dividends been declared heretofore as of the first day of January or the 31st day of December?

A. They have been declared sometime in December before the end of the month, payable January 1st.

Q. And have they been made payable quarterly heretofore?

A. Quarterly dividends have heretofore been paid.

Q. Now, I believe the distribution of the stock of the Cumberland Telephone and Telegraph Co., was derived by the Cumberland Telephone and Telegraph Co., from the East Tennessee Telephone Co., was it not?

A. I believe the newspapers say so.

Q. Do you know whether or not that is true?

A. I understand that it is.

Q. For what did the East Tennessee Telephone Company owe the Cumberland Co.?

A. For advances in cash mainly.

Q. Is the East Tennessee Telephone Company operated by the Cumberland Co.?

A. It has the same officers.

Q. Is the stock of the East Tennessee Telephone Company owned by the Cumberland Co.?

860 Mr. GRANBERY: I insist that no further questions along this line shall be answered by the witness until the Master Commissioner has ruled upon this matter.

Mr. BLAKEY:

Q. Mr. Smith, I hand you what purports to be a report of the Cumberland Telephone and Telegraph Co. for the month of June, and six months ending June 30th, as compared with former six months and will ask you if that statement correctly shows what it purports to show.

Mr. GRANBERY: That being for the entire system and not for the Louisville system, I shall have to ask that the matter be referred to the Master Commissioner.

Mr. BLAKEY: In order that the Master Commissioner may properly rule on it, I ask you to file it until such time as he directs it to be struck from the files.

Mr. GRANBERY: I suggest that you hold the paper until such time as the Master Commissioner rules upon it, and if he rules in your favor, I shall be very glad to put the witness back on

861 the stand in order that you may ask him that or any other questions the Master Commisisoner rules may be competent and proper.

Mr. BLAKEY: My only object in asking that it be at present tendered is in order that the Master Commissioner may intelligently

rule on the question. The question itself is of no consequence, unless it is accompanied by the paper exhibited.

Mr. GRANBERY: I object to it being put in the record and I am sure you agree with me that you do not want it in the record if it be incompetent matter; and for that reason I suggest that we let it stand aside until such time as we can appear before the Master Commissioner.

Mr. BLAKEY: All right, that is entirely agreeable.

Q. Now Mr. Smith, in connection with the two annual reports about which you testified a few days ago, I neglected to ask you what were the total earnings of the system for the year 1907.

Mr. GRANBERY: I desire to interpose the same objection to
862 that matter, not having been present when the questions referred to were asked the witness, and if I should have been present, I should then have interposed objection. I do it now, and ask that the matter be referred to the Master Commissioner in connection with other matters concerning which a difference of opinion has arisen between counsel as to the relevancy of it.

Mr. BLAKEY:

Q. Mr. Smith, I desire also to have you state what your twenty-sixth annual report shows to be the total expenses for the year 1907 and the total of the resources for the year 1907. The total of the earnings for the year 1906, total of the expenses for the year 1906, and the total of the resources for the year 1906, all of which I suppose may be certified, as the former question.

Mr. GRANBERY: Certainly.

Mr. BLAKEY:

Q. Now, earlier in the deposition Mr. Smith, you stated that the toll and exchange construction were kept separate in the City of Louisville; I should like to have you exhibit your record showing this fact?

A. I stated that we had not charged to the Louisville exchange the cost of constructing the toll lines; that we had kept a
863 separate toll construction account by routes. I will have to get the books. Will you please state for what years you want the books, as there are a number of them, or whether you want them all.

Q. You might first produce the books for the years 1901, 1902 and 1903?

(Witness produces books referred to.)

Q. The book you have presented here shows toll line construction. Is there any part of it which deals with toll lines going out of Louisville?

A. The book which I have presented, shows the accounts for the year 1901, charges and credits, to toll line construction. If any construction out of Louisville was done during that year, this book

shows it. This book shows the account for the Louisville-Carrolton toll line.

Q. Amounting to how much?

A. The construction added for the year is something over $4500.00.

Q. Is that one of the toll lines which you detailed during the progress of your cross-examination as one of the lines going out of Louisville?

A. I don't remember it specifically but in my cross-examination I gave you the names of all lines going out of Louisville from a record in the engineering department.

Q. If that is not one of the lines then, it would be con-
864 nected with one of the lines which you did give me, outside of Louisville?

A. The name itself may not correspond with the exact name of the line I gave you. The lines given you in the previous examination, were those which described the direction that the toll lines out of Louisville took.

Q. Have you any way of telling whether any part of that $4500 was expended inside of the corporate limits of Louisville?

A. An analysis of the vouchers might show it.

Q. Can it be determined from an examination of that record which you have before you?

A. It cannot.

Q. Now if a toll line going out of Louisville carries the wires of exchange subscribers also, is it all charged to toll line construction or is it divided?

A. If the toll route was built for the purpose of toll lines, it is charged to toll line. If afterwards, exchange subscribers are placed on the pole route, the cost of the wires would be charged to aerial construction of Louisville.

Q. And if the poll route was originally built for subscribers' lines, to what account would it then be charged?

A. If the pole line was originally built for subscribers' lines—
865 and it would be well to state that the development of the Louisville exchange was exceedingly limited at the time we began building toll lines out of Louisville—the pole line would be charged to exchange construction

Q. I call your attention to pages 202 and 203 of your deposition and ask you to examine the question there dealing with toll lines going out of Louisville and will ask you to state whether there seems to be such a line going out of Louisville as the Louisville and Carrolton toll line?

A. The line in my deposition is stated as a route from Louisville to Worthville, Ky.

Q. Is Worthville nearer Louisville or farther from Louisville than Carrolton?

A. Worthville seems to be a junction point. It is nearer Louisville.

Q. Then can you tell whether any part of that money was expended inside of the corporate limits of Louisville?

A. I can by an examination of the vouchers, probably.

Q. Will you see if any other item is charged up that year for construction of toll lines going out of Louisville?

A. There is a line called the Louisville and Edgefield Junction line, that is, a line down the L. & N. R. R. to Edgefield Junction, ten miles out of Nashville.

Q. What amount was charged to construction of that line for that year?

A. About $40,000.00.

866 Q. Are the same facts true, substantially, in regard to that item that there were in regard to the other item about which you have just testified?

A. Yes.

Q. Is there any other item charged up to a similar account?

A. Louisville and Jeffersonville, $205.42.

Q. Do you know where that item was expended?

A. Between Louisville and Jeffersonville, Ind.

Q. Are there any other items?

A. Louisville and Jeffersontown, about one thousand dollars.

Q. Where was that item of expenditure incurred, if you know?

A. The record before me does not show.

Q. Do you know whether any part of it was expended inside of the corporate limits of the City of Louisville?

A. The record does not show.

Q. Are the facts in regard to that item substantially the same as the facts in regard to the first item about which you testified?

A. Yes.

Q. Are there any others?

A. Louisville-Frankfort, something over fifteen hundred dollars.

867 Q. Are the facts in regard to that substantially the same as the facts in regard to the first item?

A. I think so.

Q. Are there any other items?

A. There is a circuit strung known as the Nashville, Henderson and Louisville line, going to Louisville via Henderson, Ky., and the items charged in the year amounted to about $1200.00.

Q. Any others?

A. Louisville-Taylorville, items amounting to about seven thousand dollars.

Q. And, are the facts in regard to that item substantially the same as those testified to in regard to the first item mentioned?

A. Yes.

Q. Are there any other items?

A. There is a small charge of $53.00 to the Louisville and Goshen line. Also, Louisville-Bardstown, $300; those seem to represent the charges for the year 1901.

Q. Now, have you any record showing what routes various toll lines take, what streets they follow going out of Louisville?

A. No, I have absolutely nothing in regard to that.

Q. Do you know whether any of these items showing construction of toll lines, was for re-construction work?

A. The items I have called you are all new construction.

868 Q. If the part of the construction work on toll lines in the corporate limits of the City for the last nine years had been in the way of replacing former lines of poles on which the toll lines were carried, would such cost be charged to construction of the toll lines?

A. No, it would not be charged to construction at all.

Q. Are the entries representing the other lines of toll line construction for the years other than 1901 in the books which you have produced, of substantially the same character as the ones you have testified about?

A. The entries are similar and these entries are similar to those which were examined by the Mutual Audit Co., going to show the construction account of the Louisville exchange itself.

Q. And is that true of all of the years, 1900 to 1908, inclusive?

A. I think so.

At this hour, 12:45 P. M., a recess was taken until this afternoon at two o'clock.

869 Cross-examination of H. BLAIR SMITH resumed Tuesday, Sept. 14, 1909, at 2 p. m.

By Mr. BLAKEY, for the defendant:

Q. Now Mr. Smith, taking up this item of four and a half per cent. paid the American Telephone Company for the transmitter and receiver, I notice that you quote from and make a part of your deposition some of the language contained in the report of Messrs. Dougal C. Jackson, Wm. H. Crum and Geo. W. Wilder, made in 1907 to the Chairman and Members of a Committee of the City Council of Chicago. Have you a copy of that report?

A. Yes.

Q. I show you a pamphlet, and ask you if that is a copy of that report?

A. I believe it is.

Q. I will ask you, in addition to what you have already read into your deposition, to read the paragraph beginning on page 45 at the words "The Chicago Telephone Company reports" down to the beginning of the next paragraph on page 46.

A. (Reading:) "The Chicago Telephone Company reports that it had in use and in stock during the year 1903 an average of nearly 195,000 telephone sets in its entire area, and we estimate that over 150,000 of these were on account of the Chicago business.

870 These telephone sets, each comprising a transmitter, receiver and induction coil are worth approximately, $3.00 per set, and are furnished and partially maintained free to the Chicago Telephone Company, by the American Bell Telephone Company, under its contract. The depreciation on these is large, and it is generally considered that their average life does not exceed

a period of between six and ten years, so that the depreciation allowed should be between ten and sixteen per cent. A maintenance figure of 3½ per cent. per year is small for the part of the American Bell Telephone Company. Interest, insurance and taxes will probably cost 8½ per cent. more. Taking an average of 12% for depreciation, making due allowance for the scrap value, and allowing 8½% for interest, insurance and taxes, of which 2½% allowed is for the latter two items, and 3½% for maintenance, makes a total annual item of cost to the American Bell Telephone Company for furnishing these pieces of apparatus to the Chicago Telephone Company that amounts to 24% of their first value of three dollars per set. As the Chicago Telephone Company in the Chicago business has now (Jan. 1, 1907) more than 131,000 telephones in actual use, we assume that our estimate of an average of 150,000
871 complete telephone sets in use and in stock during 1906 is approximately correct, though we have not had time to verify this figure. At three dollars per set the total value of these 150,000 sets is $450,000.00, and 24% of this amount is $108,000.00, which is a fair payment to the American Bell Telephone Company for furnishing these instruments. This leaves a balance of approximately $174,000.00 in the license account."

Q. Now what is the total of $108,000.00 and $174,000.00?

A. $282,000.00.

Q. I call your attention to page 62 of this report, and especially to the third line of the second paragraph on that page, and ask you to state what the Commission gives as the estimated earnings per year on 132,000 telephones in Chicago?

A. The report reads, in part, as follows:

"We estimate that the present telephones 132,000 will earn $6,336,000.00 per year."

Q. And how much would 4½% on that total earnings amount to for the year?

A. 4½% of that amount is $285,120.00.

Q. Now what per cent. does $108,000.00 bear to $6,336,000.00?

A. About 1.7% (One and seven tenths per cent).

Q. I show you the Report on the Telephone Conditions in New Orleans, La., which was shown you a few days ago, and
872 will ask you to read into your deposition the last paragraph on page 64 of this report.

A. This Report reads, in part, as follows:

"It may be stated as a general proposition that the rental charged for the instruments by the American T. & T. Co. is about twice the amount that would suffice to give a fair return. In 1906 the amount paid for instrument rental was $26,418.76 on a total average number of 12,339 instruments, or a little more than $2.14 per instrument. Admitting that the total annual item of cost to the American T. & T. Co. for furnishing these telephone sets, each containing a transmitter, receiver and induction coil, is 33½% of their original cost, which is stated to be $3.00, it will be seen that under this contract something in excess of $14,000.00 is paid by the Cumberland Company over and above what may be strictly considered as a fair

rental charge. But under this contract, in addition to the rental of the instruments as above set out, the company gets the expert advice and assistance of the parent company's engineers, etc. This includes working specifications for switch-board installations, line and conduit work, cable construction, building material, etc.
873 Bulletins are also supplied treating of engineering practice and operating methods, which summarize the experience and knowledge acquired by the various Bell companies. Special studies are continually carried on by the engineers of the American Bell Telephone Company, and that company maintains a well equipped laboratory in Boston, where tests and investigations are made for the benefit of the subsidiary companies. All of this service is rendered without extra expense to the Cumberland Company, and is paid for through this so-called Instrument Rental account."

Q. Does the American Telephone and Telegraph Company furnish any building material to the Cumberland Company, except such as the Cumberland pays for in other ways than through this 4½%?

A. It does not.

Q. To what extent does the Cumberland Company carry insurance on its Louisville plant?

A. Generally speaking, it carries insurance on its central office equipment, its buildings, its rents or income.

Q. If a fire occurs, for instance, at Callahan's Warehouse, where a private branch switchboard or exchange is located, and the company is unable to collect its rent for the use of the instruments and the swichboard for thirty days or fifteen days, does insurance cover that item?

A. We have never insured any private branch exchange
874 switchboard in Louisville, that I know of.

Q. How about the rentals for that which you fail to collect from your customers on account of fires?

A. The rental insurance which we carry I think is entirely on central office switchboards, or would be the loss which would be entailed through the destruction of a central office switchboard.

Q. Do you mean all the exchanges, East, South, West and Main, when you say Central?

A. Yes, sir.

Q. Then if one section of the city was destroyed by fire, putting out of commisison 500 telephones, and the central office not affected by the fire, and still you were to lose your rentals for thirty or sixty days, would your insurance cover that loss?

A. No.

Q. Do you have any insurance against destruction of wires or poles by cyclones or sleets?

A. No.

Q. Mr. Smith, you have been recently publishing a great many bulletins in the Louisville papers, which seem chiefly to be intended to counteract the effect of publications made in one of the Louisville papers wherein the Louisville paper in question seems to be attempting to show that your company are charging exorbitant rates; to what account are those bulletins charged up?

A. Any advertising which the company does is charged to
875 operating, advertising and canvassing.

Q. At the place where the advertising is done?

A. Yes.

Q. Will you state how much it has cost the company during the last six or seven months to have these bulletins published?

A. That has nothing to do with the period that we are in. I don't know; I will have to investigate.

Q. Will you ascertain, and tell the stenographer, before the deposition is closed?

A. Will you please specify exactly what bulletins you mean?

Q. I mean bulletins wherein copies of what the Committee from the Board of Trade reported to the Board of Trade, copies of letters from Mr. Caldwell, President of the company, to Mr. R. W. Knott, of Louisville, copies of replies to letters sent by Mr. Knott to Mr. Caldwell, copies of criticisms of Mr. Knott and his paper, over the signature of Mr. Caldwell, copies of extracts from statements made by Abraham Lincoln, and all such similar items which have appeared in the shape of bulletins or otherwise, in the various Louisville papers during the last 5 or 6 months.

A. Will you specify from what date to what date?

Q. I should say from February 1, 1909, to Sept. 14, 1909.

A. I think it will be at least thirty days before I can get that, because we will not get the September figures in for some time.

876 (Exhibit No. 22.)

Q. I should like to see voucher No. 478, for September, 1907, and voucher No. 751, for February, 1907?

A. I here produce said vouchers.

Q. I show you voucher No. 751, for February, 1907, which seems to represent a payment of $2,500.00. Will you please explain that voucher?

A. The voucher shows the payment of $2,500.00 to H. S. McCutcheon and Eli T. Brown, as retainer fee for legal services.

Q. To what account was that voucher charged?

A. That voucher was originally charged to the Legal general account, but later charged to Louisville exchange.

Q. When it was first charged to the Legal general account, was it so charged for the year 1907?

A. Yes, sir.

Q. And was the Louisville exchange charged up with a proportion of this $2,500, under the heading of general expenses?

A. That was the original method.

Q. Was that done in this instance?

A. It was.

Q. Now when was the correction made and the charge made to Louisville?

A. The correction was made in June, 1909, the president stating that the original charge was an error.

877 Q. Was it then charged to the Louisville account, Louisville expenses for operating the Louisville exchange, conducting the Louisville exchange?

A. It is charged on our books to Louisville general expense, in June, 1909.

Q. And does it appear now as one of the expenses for conducting the Louisville exchange for the year 1909?

A. It does, on our books.

Q. Has any credit been made on your books for the year 1907, for the portion of this voucher which was charged under the head of general expenses for the year 1907?

A. 1907 accounts will not be charged on our books one way or the other, but the full correction will appear in 1909.

Q. Then, as I understand it, no credit will be given on your books for the year 1907 on account of the fact that this voucher is taken out of the general expense and placed into the Louisville expense for the year 1909?

A. Our books show a less charge to Louisville in the year 1907 than it should properly have received.

Q. Where were those services performed, if you know?

A. I don't know.

Q. Do you know what they were for?

A. Nothing more than what the voucher shows.

Q. Do you know where Eli Brown and Harvey McCutcheon live?

A. I do not. The address on the voucher is Coker Flats,
878 Louisville.

Q. Do you know where those two men practice law?

A. I do not know them.

Q. Do you know, as a matter of fact, that neither of them practice law in Louisville?

A. I do not; I don't think it makes any difference.

Q. Now I show you voucher No. 478, for September, 1907, which seems to be for $323.35. I will ask you in whose favor that voucher is drawn, and to whom the money was paid, represented by that voucher, and to what account it was charged?

A. The voucher represents a payment which was made at Louisville, Kentucky, on a bill rendered against the Cumberland Telephone & Telegraph Company, by the Louisville Board of Trade. It is receipted by Mr. James Buckner, Superintendent, and is for the services of Mr. W. J. Munster.

Q. Was Mr. Munster the accountant who made the investigation of the books at the request of the Board of Trade at Louisville, as testified to in your direct examination?

A. Mr. Munster made an examination of our accounts for the Louisville Board of Trade.

Q. Is this bill representing the charges made by him for the investigation about which you have testified in your direct examination?

A. It seems to be a bill for his services and expenses, which was paid by the Board of Trade to Mr. Munster, and which we paid to the Louisville Board of Trade.

879 Q. Now to what account was that item charged?

A. This account was charged to Operating incidental, Louisville, Ky., Exchange.

Q. Have you a copy of the report made by Mr. Munster to the Board of Trade as the result of that investigation?

A. Not individually.

Q. Can you produce it for my inspection?

A. I will try to get it for you tomorrow.

Q. Now, Mr. Smith, can you produce any records showing over what streets in Louisville, Kentucky, your company has lines of poles and wires used in connection with the Louisville exchange?

A. I have absolutely nothing to do with that. I have never seen such a map, and would have no use for such records.

Q. Do you know whether any such records are kept?

A. I do not.

Q. Have you records showing the roads over which your toll lines are placed?

A. We have the general direction of the toll routes, as shown in my cross examination.

Q. Have you any maps showing these routes, showing where the poles are located, and over what section of country they extend?

A. I have a printed map which is gotten out with the financial statements each year, but nothing in further detail than that.

880 Q. That just shows the towns to which the toll routes extend, does it not?

A. Yes, I have no use for anything further.

Q. If there are any such records, who would have charge of them? Any such records as to Louisville, or any maps showing the lines of poles or wire?

A. They would be in the department of the General Manager.

Q. Now you have spoken in your direct examination about residence and business centers changing; do you know whether the residence or business centers of Louisville have changed in the last nine years?

A. I do not. It is an unusual city if such is not the fact.

Q. Where is the home office of your company?

A. Louisville, Kentucky.

Q. How long has it been in Louisville, Kentucky?

A. About two years.

(The witness here obtained the copy of the report of Mr. Munster, and tenders it to counsel.)

An adjournment was here taken until to-morrow morning at nine-thirty o'clock.

881 WEDNESDAY MORNING, *September 15th*, 1909.

The further cross examination of Mr. H. Blair Smith was resumed this morning, September 15th, at 9:30 o'clock, pursuant to adjournment.

Mr. BLAKEY:

Q. Mr. Smith, I call your attention to pages 69 and 70 of your deposition, wherein you spoke of this report of Mr. Munster, and will ask you to look over what you said there about Mr. Munster's report and state whether you intended to approve of Mr. Munster's re-

port as being a correct statement of the company's affairs, as found by him?

A. I reiterate what I said there.

Q. Did you intend to approve of this report when you made that statement contained in that part of your deposition?

A. The report as a whole is fairly accurate. Mr. Munster makes several errors in principle and application.

Q. Now on page 7 of the report Mr. Munster gives a number of items, the first of which is excess valuation of Great Southern, Ohio Valley and East Tennessee companies, $432,144.07. I will ask you whether that item is represented in the capitalization of your company?

A. The amounts which he shows on there, I think are represented in the capitalization, but they are not what he terms them.

882 Q. Does the amount of $432,144.07, which I have just mentioned, represent the excess appearing on your books of the purchase price of those three companies more than the Cumberland Telephone and Telegraph Company paid for those three companies?

A. There is no excess on the books.

Q. The item says, the excess valuation of these three items; does that mean in excess of what was paid for them?

A. I don't know what Mr. Munster intends for it to mean, but there is no excess.

Q. Now I notice another item a little lower down, on the same page, 1347 shares of East Tennessee bought for $49,568.12 taken on to books at $80,820, or an excess of $31,251.88. What does that item represent or what is your explanation of that item?

A. I don't know that I am familiar with it. I have never made a special investigation of that item, but I am satisfied that there is no excess on the books.

Q. Does that $80,820 referred to in that item, represent a part of the capitalization of the company?

A. I do not understand that that item has anything to do with the capitalization.

Q. Did you pay for those 1347 shares of East Tennessee Telephone Company stock with money or with the issue of

883 stock?

A. I do not recall the transaction.

Q. I notice another item on the same page, part of excess value of supplies as per inventory over book value, $75,000. Does that item of $75,000 represent a part of your capital stock?

A. It does not.

Q. I call your attention to page 12 of the report and especially to the third literary paragraph appearing on that page and will ask you to read that paragraph into your deposition if you will?

A. This paragraph, I believe, is in relation to the whole company and it states: "As it is claimed that the company's plants are now in prime condition and that all of the subscribers' stations are equipped with the highest type instruments, it may be difficult to see why from 5.74 to 7.5 per cent of the original cost of the property should annually be contributed out of the earnings to cover wear

and tear and decay as proclaimed by telephone people, not in their statements to their stockholders, or investors, but when the matter of franchise and rates for service is up for discussion."

Q. Now, I call your attention to page 16 of this report and especially to the statement on that page where Mr. Munster says that of the total subscribers to the Ohio Valley system when
884 sold or acquired by the Cumberland Telephone and Telegraph Co., 2221 were equipped with metallic circuits, and ask you whether that statement is correct, just at the bottom there?

A. From memory, I cannot answer, but I guess it is correct. I think they were all in Louisville.

Q. Now on the same page Mr. Munster states "In 1900 the amount of construction for Louisville only, out of the total of $1,114,582.81 acquired from the Ohio Valley Telephone Company's entire property was fixed at $845,293.72. Do you know where Mr. Munster got those figures?

A. Mr. Munster had full access to the books; I did not audit his report for him or assist him in compiling it.

Q. I call your attention further to page 17 of the report and especially to the paragraph in the middle of the page, beginning, "I endeavored to verify" etc., and will ask you to read that paragraph into your deposition?

A. It reads, "I endeavored to verify the construction charges from the original vouchers, but found that thoroughly impracticable as much of the charge being labor I could not distinguish labor for reconstruction from same for construction, except in so far as the superintendent in charge would designate on the pay roll or voucher. The same also applies to materials. Had reconstruction or repairs been erroneously charged to reconstruction, it would have increased the profit in Louisville. Had proper charge to construction
885 been diverted to reconstruction or repairs, it would have diminished the profit and also the investment on which the profit for the Louisville territory is computed. Such erroneous distribution would not therefore affect the question at issue to a very serious extent."

Q. I call your attention to page 20 of this report, in which the receipts from exchange service, together with the average number of telephones for the year 1906 for the cities of New Orleans, Louisville, Nashville and Memphis appear, and will ask you to state what the average number of telephones were for that year in those four cities and what the receipts were for exchange service for those four cities for that year?

A. New Orleans, average stations 12339, gross receipts from exchange service, $570,501.32; Louisville, average stations 9800, gross receipts from exchange service $279,844.49; Nashville, average telephones, 7551, gross receipts from exchange service, $286,290.03; Memphis, average telephones 7440, gross receipts from exchange service, $263,310.62.

Q. I call your attention to page 33 of the report in question and ask you to read into your deposition the last paragraph appearing on that page being the paragraph beginning, "In the statement of results", etc.?

A. It reads: "In the statement of results in Louisville, I have credited the full amount received from toll line service over
886 the Cumberland Company's lines originating in the City of Louisville to the latter city's revenues, and the distribution sheets also show such credit. My opinion is that it should be so credited. I asked the auditor of the company to give me a written explanation of the reasons why only a portion of such revenues should be credited as shown by the statements rendered to your committee, and herewith hand you his reply."

Q. Is that reply to that report or connected with that report in any way?

A. This reply is not attached to this report and was not attached to it when the copy was secured from Mr. Munster.

Q. I call your attention to page 34 of this report and especially to the paragraph near the bottom of the page which reads in part, "My opinion is", etc., and ask you to read that part of the report into your deposition?

A. "My opinion is that the most productive part of the company's business is the toll lines. The total cost of construction of these, to December 31st, 1906, is shown as $4,465,286.35 out of a total investment for construction on that date of $22,624,781.24."

Q. Now as I understand, Mr. Smith, no part of the capital stock of your company has been apportioned to Louisville.

A. No. In reply to your questions the other day, I find that the telephones connected to the Louisville exchange whose rentals
887 are paid at Nashville, or elsewhere than to the Louisville exchange, are, for the Southern Railway, one for the Nashville, Chattanooga & St. Louis Railway, and two for the American Telephone and Telegraph Co., all of which are shown in Exhibit No. 6, and the revenue derived from those telephones is included in the Louisville gross revenue shown on the books of the company and in my Exhibit No. 1.

Redirect examination.

By Mr. GRANBERY:

Q. Notwithstanding the fact that Mr. Munster credits the entire toll line receipts at Louisville as earnings of the Louisville exchange, what does he show the net earnings of the exchange to have been for 1906?

A. In calculating the ratio of net earnings to investment in Louisville for the year 1906, Mr. Munster considers the book cost of the exchange property only, and shows the ratio as $5.48 per cent.

Q. Does he show the net profit for any other year besides 1906?

A. Yes, for 1904 and 1905.

Q. What does he give it at for those years?

A. On the same basis, for 1904, 6.34 per cent; for 1905, 4.908 per cent.

888 Q. How much does he allow for depreciation?

A. He allows nothing except the reconstruction actually spent.

Q. I will ask you to state whether you have endeavored from day to day in auditing your vouchers and entering them upon your books, to correctly state the facts and classify the expense as it should be, on your books?

A. It has always been an earnest endeavor on my part to do so.

Q. Have you ever been dictated to or controlled by any officer or any part of the management of the company, Mr. Smith?

A. I have not in any particular.

Q. Have you, from time to time conferred with other officers and employés of the company with respect to items that were not clear as to how they should be charged or entered?

A. I have and have always done my best to impress this upon those under my supervision.

Q. You were asked about the tax reserve of four thousand dollars for taxes, and I believe you stated you would get the information. Have you done so?

A. I have.

Q. Will you attach it as an exhibit to your deposition?

A. I will file it as Exhibit No. 17.

Q. What is the amount of that tax, actually paid?

889 A. The amount is $9,791.24. The books of the Ohio Valley Telephone Company showed the reserve carried forward as only $4,000.00.

Q. Mr. Farnham in his report makes complaint that full access to the records of the company were not given him. What have you to say in regard to that?

A. I have this to say, that everything pertinent to the investigation was given him freely and without reservation.

Q. Do you recall any information that he asked that he did not obtain?

A. In two instances, he asked in writing for certain information and we replied to those inquiries in writing.

Q. Are those the only requests in writing, for information which he did not obtain?

A. They are the only requests which I received.

Q. Will you attach those as Exhibits No. 18 to your deposition?

A. Yes, all of them.

Q. Mr. Farnham states that certain books and accounts asked for were not kept and that the accounts and records had not been kept up to the standard of other public service corporations?

A. As to the books asked for and not kept, I will state that such as are shown in my replies, are the only ones asked for and

890 not kept, and I do not know of any possible use that could have been made of these. As to the standard of our accounts, I have this to say, that they are equal or superior to the accounts of any other telephone company operating a like property. My accounts are examined annually, critically, and I have never yet failed to be complimented upon the condition of the accounts and records.

Q. Mr. Farnham undertakes to set out what in his opinion would be the increased net revenue if the rates at Louisville were reduced.

I will ask you to state in what respect, if any, the expenses of the company would be reduced by the reduction of the rates?

A. The expenses would be reduced to the extent of four and one half per cent on the reduction in gross revenue, and that is the only reduction in expenses which I believe would be attained.

Q. Would there be any increase in expenses?

A. Yes, I am certain that the expense of collection would be greatly increased, for the reason that now a discount is given for payments in advance, at the office. The reduction in rates would force us to discontinue giving this discount.

Q. Defendant's counsel has read from the report of Mr. Hall, involving telephone conditions in New Orleans, La., with reference to the condition of the company's employés in that city, and
891 he quoted from page 90 a paragraph. I will ask you to read what is said by Mr. Hall in the second paragraph on page
93 in connection with this very same matter?

A. It reads, "That the necessity for an entire reorganization of the business in New Orleans is fully recognized by the general officers of the company, may be gathered from the fact that they have placed the best man in their employ in absolute control of the situation here, and that he has already started in to revamp the system from top to bottom. I look upon this as a very great step towards better service and towards the assumption of the cordial relations which should exist between a public service corporation and its patrons."

Q. To whom does he refer in that paragraph?

A. He refers to Mr. Ben S. Reed, who was for several years manager of the Louisville, Ky., exchange.

Q. When did Mr. Reed leave the Louisville, Ky., exchange to go to New Orleans?

A. I think it was the first part of 1908.

Q. Now various other questions have been asked you in regard to that report. I will ask you if you have a copy of it, and if so, please file it as exhibit to your deposition?

A. I will. I file it as Exhibit No. 19.

Q. Mr. Farnham undertakes to deal in his report with
892 the increases of the capital account of the company from time to time. From what source did he get that information?

A. I think he got his information from a copy of the company's charter, which was printed, and which was filed in this case as an exhibit.

Q. When the officers of the Cumberland Telephone and Telegraph Co. were made officers of the Ohio Valley Telephone Co. in June, 1899, what policy was pursued with respect to expenses and dividends.

Q. The general, or management, expenses of the company were very greatly reduced immediately.

Q. About how much?

A. About eight thousand dollars per year, and the payment of dividends was stopped.

Q. Now, was any dividend paid by the Ohio Valley Telephone Company after June 1899?

A. No.

Q. What policy if any did the company pursue with reference to developing that property?

A. The development began immediately by large sums of money being spent to increase the capacity of the plant, to widen its scope, and the rates for service were reduced and a number of new classes of service were offered the people.

Q. How many employés are there in the auditing department under you?

893 A. About seventy-five.

Q. You spoke of the manager's salary at Louisville being charged to the Louisville exchange, and other items, to which exceptions have been taken. I will ask you to state why in your opinion this is proper?

A. It has been our custom to charge labor where it was used, and this has been done in connection with Louisville, but the Louisville exchange has more expert supervisory officers and employés than the little exchanges have. The Louisville exchange has not at this time and at no other time, incurred any item of supervisory expense to give this supervision to the smaller exchanges in the Louisville district, but, on the other hand, the little exchanges in the Louisville district were built for the benefit of Louisville, and would not have been built except for the fact that the Louisville exchange was in existence and belongs to us. The Louisville public demands an up-to-date first class, and high class service, and in order that this service may be rendered to metropolitan Louisville, it has been necessary to make the management of Louisville and the exchanges in the suburbs of Louisville a unit, and for this reason, they were placed under the Louisville management. Each of the exchanges near Louisville has the same pay roll it would have if it were not under the supervision of Louisville.

894 Q. Then, it has been the purpose of the management to have co-operation and harmony between the Louisville exchange and the little exchanges immediately contiguous, by placing the entire property under the jurisdiction or control of the Louisville management?

A. That is the reason.

Q. How close to Louisville are these little exchanges located?

A. I think they are all within twenty-five or thirty miles, and those that are this distance from Louisville, I think, are very few.

Q. Leaving out Jeffersonville and New Albany, which are immediately across the river from Louisville, where are the bulk of the other little exchanges located?

A. In Jefferson county.

Q. Is that the same county in which the City of Louisville is located?

A. Yes.

Q. Do you know of any lines carrying toll lines exclusively between Louisville and any of these little exchanges?

A. I do not.

Q. What is the construction, with reference to toll lines and exchange lines, in this area?

A. The pole routes bear both toll circuits and exchange circuits.

Q. How many toll circuits radiate from the Louisville
895 exchange?

A. Eighty, and a number of these circuits are those which are used in giving services from the Louisville subscribers to subscribers at the surrounding exchanges who pay a rental to secure it, the service being given without additional charge to Louisville subscribers.

Q. You mean, used for exchange service for Louisville subscribers?

A. Yes.

Q. Mr. Farnham speaks in his report of an agreed appraisal of the physical properties of the Ohio Valley Telephone Company by the parties to the consolidation; is that true?

A. No, I never heard of any such thing before.

Q. Mr. Smith, I will ask you to state if you have made a memoranda of the inconsistencies or errors in the report of Mr. E. W. Farnham, and if so, I would be glad if you would point them out?

A. I note in Exhibit 1B that Mr. Farnham adds to the book value of the real estate secured from the Ohio Valley Telephone Company the sum of $21,233.25. But in all other statements in regard to the value of the Louisville real estate, he does not add this increase. As an instance, in Exhibit No. 11, he attempts to show the operation of the real estate, but pays no attention at all to his increased cost.

896 Again, in Exhibit 1B he adds $6850.37 to the book value of the supplies in stock. As a matter of fact the supplies were issued as bought, as near cost originally as possible. The company would not have paid more for the supplies than they stood in the accounts at.

Then Mr. Farnham in his Exhibits 1, 1A and 1B carries unearned rentals on the books as an asset. It is impossible for this account to be an asset.

In Exhibit 1B he considers franchise valuation of $100,000 as a current asset, and considers no part of it chargeable to Louisville in his attempted valuation of the Louisville plant.

In his Exhibit 1A he seems willing to allow the actual cost in cash of the Ohio Valley stock to the Cumberland Company to go in as a part of the cost of the plant, but is unwilling to consider—although Cumberland shares were swapped share for share for Ohio Valley shares—that the Cumberland stock was worth just as much as the Ohio Valley stock cost.

In Exhibit No. 7 for the four years, he makes clerical errors in regard to the gross toll revenue earned at the Louisville exchange. Under item one he includes the total of the revenue claimed as shown by the books of the company for Louisville and these totals include A. T. & T. originating commissions, C. T. & T. Co.
897 messenger fees and A. T. & T. Co. messenger fees shown on this exhibit as items 2, 3, and 4; the amounts in Item 1 also

contain for the years 1905 through 1907, the earnings from telegraph companies in Louisville, and he includes these also in his exchange earnings just as they are included in the joint report.

For the four years he makes errors in Exhibit No. 7 to the amount of $19,671.92. Inasmuch as Exhibit No. 20 and Exhibit No. 9 and 15 are prepared from this information as a basis, they necessarily are affected and are wrong.

Exhibit No. 15 for the years 1905 to 1908, as prepared by Mr. Farnham does not show gross earnings as shown in the joint report, page 4, but from the joint report totals for the different years, he has deducted what he terms toll revenue. Inasmuch as the instrument expense is calculated on the basis of gross revenue derived from telephone earnings, the instrument expense which he has used is not correct, as it is the same instrument expense which was calculated and shown in the joint report, page 5, on a basis of the gross earnings shown in the joint report on page 4.

Q. Now Mr. Smith, Mr. Farnham in getting the construction account for the years 1900 to 1904, deducted $38,755 per annum, or a total of $193,775, as appears on Exhibit No. 4. How does he arrive at this?

A. His figures are arrived at by adding together the amounts
898 shown as reconstruction, item 5 page 5 of the joint report, and dividing the total for the four years 1905 to 1908 by four. Then, through an amount of reasoning shown in his report, he says that as this amount of reconstruction was done during the last four years, that he thinks it is proper to consider that this amount was done also during the first five years. He does not consider the fact that reconstruction during those first five years was charged as a maintenance expense and is already shown in the expenses on the books.

Q. Now does he deduct anything from the construction account for the years 1905 to 1908 inclusive?

A. No similar deduction.

Q. For those five years, 1900 to 1905, regardless of whether reconstruction was included in the maintenance, or separated, would it be an expense of conducting the business?

A. It certainly would, and would be so charged.

Q. Ought it to be deducted from the construction account?

A. It should not.

Q. What is that reconstruction expense?

A. It is the expense incurred to replace the parts of the plant which have become worn out or antiquated and consequently, useless.

899 Q. Now, when you replace any part of the property that is worn out or antiquated, does that increase your capital account in any way?

A. It does not.

Q. Does Mr. Farnham consider any part of the supplies carried in stock at Louisville or the general ware-houses of the company as a part of the capital employed for the benefit of the Louisville exchange?

A. He does not.

Q. Does he include any cash?

A. He does not.

Q. How does he treat the cost of the real estate?

A. He treats the cost of real estate as something entirely foreign to Louisville, showing in his gross earnings, no rental charged therefore and omitting from the value of the property employed in conducting the Louisville business, the amount of its cost.

Q. On page 27 Mr. Farnham says the ordinary maintenance of the buildings is charged to operating expenses of the exchange. Is that so?

A. The ordinary maintenance of the building is charged to what we term real estate expense, and no part of it has been shown in the operating expenses shown on Mr. Farnham's report or the joint report.

Q. How does the company treat the real estate in its accounts?

900 A. In order that each department of the business, and each locality, may be charged up with the approximate cost of owning the real estate, we have heretofore charged to operating expenses a fair rental on the cost of the real estate and apportioned this rental to such departments or sections. The rental has been so fixed that the exchange would absorb the taxes and the insurance on the properties.

Q. What about depreciation of the buildings and the repairs?

A. The depreciation and repairs of the buildings have not been charged against the exchange or the properties, but have been considered as a part of the rental charged for the use of the buildings.

Q. How does Mr. Farnham apportion the toll expenses to the exchange expenses?

A. He charges what he considers the operating expenses for salaries and wages on an estimate made by him, and I think the balance of the general and operating expenses he apportions on a basis of gross toll collections to total gross exchange revenue and toll collections.

Q. Is this a correct basis?

A. It is only a theory and by no means plausible. I consider that the two classes of expense are so closely and minutely interwoven that there is an impossible separation either for the purpose of operation or maintenance.

901 Q. Mr. Farnham in his report deducts from operating expenses all reconstruction expense, explaining that this is chargeable to reserve. Does he create any reserve or provide any reserve to which this expense can be charged?

A. In his Exhibit No. 15 he shows a net revenue, for instance for the year 1908, of $151,612.74, and in his exhibit he makes no mention whatever of having included nothing in expense to cover the actual cash paid out for reconstruction during the year; nor does he include five cents even in these expenses to create a reserve to care for the reconstruction of the properties. On page 17 he states, in part, as follows: "Whereas a certain portion should have been

charged against earnings each year for reconstruction," and on page 27, under the heading of reserve account for reconstruction, he states "As this is an account which contemplates a reserve to be set aside each year from the net earnings for the reconstruction of the physical properties, as may be required, it should be treated only in connection with earnings account." He has failed in Exhibit No. 15 to so treat it.

Q. Mr. Smith, I will ask you to state what is the construction account for 1904, 1905, 1906, 1907 and 1908 on your basis, after revising your exhibits so as to take out the errors that you admit exist in your report?

902 A. My average construction for those years agrees then with the average shown by the joint report, page 3, and Mr. Wilkinson's, page 55; the amounts for each of the years are as follows: 1905, $1,536,010.38; 1906, $1,640,918.86; 1907, $1,695,866.65; 1908, $1,704,075.94.

Q. What does Mr. Farnham's report show for the same years?

A. Mr. Farnham's Exhibit No. 15 shows two items. One he terms book cost of plant, and the other, the value of the plant.

Q. What are those?

A. The book cost of plant corresponds very closely to the figures given by me for myself, for the joint report and for Mr. Wilkerson's report; but what he terms the value of plant is as follows: 1905, $1,212,127.46, or about $354,000 less than is shown by the others; for 1906, $1,301,252.61, or about $339,700 less than is shown by the others; for 1907, $1,322,023.03, or about $373,800 less than is shown by the others; for the year 1908 $1,317,671.20 as the value of the plant, or about $387,000 less than shown by the others. By the value of plant, Mr. Farnham means only the telephone exchange, excluding the real estate, supplies in stock and the cash on hand.

Q. What do the figures in your exhibit and in the joint report and Wilkinson's report include?

903 A. The figures which I have just given for my report, the joint report and Wilkinson's report, are made up in the same manner, excluding the real estate, supplies on hand and cash on hand.

Q. Now, taking the earnings for 1905, I will ask you to state what the gross earnings are on your exhibit, after having made the corrections that you admit to be proper, and those shown by the joint report, those shown by Wilkinson's report and those shown by Farnham's report?

A. In giving this I will exclude net rental for real estate.

Q. You mean, for all of the reports?

A. Yes.

Q. Now, in giving these figures are they all made up including the same items?

A. Yes.

Q. Go ahead then?

A. For 1905, Exhibit No. 1, revised, which is my statement, gross earnings $268,019.80; joint report, pages 4 and 5, $269,823.38; Wilkinsons, the same as the joint report; Farnham, $259,556.15.

Mr. Farnham, by the way, has excluded what he terms earnings of the toll department. If he includes these earnings, his figures will be the same as those for the joint report and for Wilkinson's report.

Q. Now, state in the same way the total expense for those
904 years?

A. In giving the total expense, I will explain that Mr. Farnham excludes any charge whatever as maintenance reconstruction, and neither his figures nor mine, nor the others, include anything for depreciation. Exhibit No. 1, my report, shows, total expenses $238,254; the joint report, and Wilkinson's report, show $227,171.29; Farnham shows, $158,545.35.

Q. Now, what is the balance of revenue on the same basis, for that year?

A. Exhibit No. 1, my report, with no deduction for depreciation, shows $29,765.80; the joint report and Wilkinson's report, with no deduction for depreciation, show, $42,652.09; Farnham, with no deduction for reconstruction or depreciation, shows $101,010.80.

Q. Now what per cent. of profit, on the same basis, is shown?

A. Exhibit No. 1, my report, shows 1.92 per cent.; the joint report and Wilkinson's report, show 2.72 per cent.; Farnham shows, using his value of plant and deducting nothing for depreciation or reconstruction, 8.333 per cent.

Q. Now, have you made up statements for the other years in the same manner as the one you have just testified about with respect to 1905?

A. I have similar statements for the years 1905, 1906 and 1907.

905 Q. Will you file such statement as an exhibit to your deposition?

A. I will file it as Exhibit No. 20.

Q. Now, taking up 1908, I will ask you if you have made up a statement showing the information on Exhibit No. 20, as well as other information?

A. I have.

Q. What does the net profit appear at on your report, the joint report, Wilkinson's report and your report for that year, 1908?

A. The per cent. of net profit to average plant employed, (shown on this statement as item one), with nothing deducted for depreciation, is as follows: Exhibit No. 1, my statement, 5.89 per cent.; the joint report and Wilkinson, 6.36 per cent.; Farnham, with nothing deducted for reconstruction or depreciation, and calculated on what he terms the value of plant, 11.5 per cent.

Q. Now Mr. Smith, on your basis, deducting seven and one half per cent. for depreciation, or rather, the difference between seven and one-half per cent. on the average cost of the plant for the year and the actual amount expended on reconstruction, it shows a profit of how much for the year 1908?

A. It shows a deficit.

Q. Now Mr. Wilkinson uses seven per cent. as a basis. What does the result of his figures show on that basis?

906 A. Shows a balance of $20,455.27.

Q. About what per cent. is that to the average cost of plant?

A. A little over one per cent.

Q. Now the joint report does not deal with the question of depreciation at all, does it?

A. It does not. It states that the accountants could not agree on this at all.

Q. Does Mr. Farnham deal with depreciation?

A. He suggests no basis.

Q. I believe that all of the reports and your exhibit, agree that the loss in revenue resulting from the rates proposed in the ordinance from those actually in force, amount for the year 1908 to $49,721.76. Is that correct, Mr. Smith?

A. Yes.

Q. Now, deducting the net savings in instrument rental would make the net reduction in revenue how much?

A. $47,484.28.

Q. Now, what would be the balance of revenue after deducting the net reduction under the rate ordinance on your basis and on the basis of the joint report, Wilkinson's report and Farnham's report?

A. On the basis of my report the deficit would be increased to the extent of $47,484.28; as the joint report does not deal with
907 depreciation, I can only say its net revenue would be reduced by the $47,484.28; on the basis of Wilkinson's report, there would be a deficit in revenue. If we deducted the net reduction in revenue caused by conforming to the schedule of rates in the City ordinance, from what Mr. FFarnham terms as balance of revenue, it would leave the amount $104,128.46, but, from this balance, nothing whatever has been deducted for reconstruction actually done, or depreciation accrued.

Q. Suppose you deducted from that amount of $104,128.46, the exact amount spent for reconstruction, what would that leave the apparent net earnings on the basis of Mr. Farnham's report?

A. The balance, $72,678.39.

Q. So that if Mr. Farnham had deducted from what he calls net profits, the actual amount he says was expended that year in reconstruction, it would leave as net profits for that year, $72,768.39?

A. Yes, if the reduction in rates was applied.

Q. Now, what is included as a net rental from the Louisville real estate by each of the reports and your exhibit?

A. I show net rental, $11,707.52; Wilkinson shows the same sum; to put it on the basis shown by Mr. Farnham, we must deduct from this, what he shows in Exhibit No. 9 as taxes and in-
908 surance chargeable to real estate, $3,023.77, leaving the net real estate rental for all real estate in Louisville, $8,683.75.

At this hour, 11:30 o'clock, A. M., at request of Mr. Blakey, a recess was taken until this afternoon at two o'clock.

909 Redirect examination of H. BLAIR SMITH, resumed Wednesday, Sept. 15, at 2 o'clock, p. m.

By Mr. GRANBERY, for the Plaintiff:

Q. Mr. Smith, have you prepared a statement for 1908, showing the Construction account, of earnings and expenses, the balance of revenue, and depreciation on average plant?

A. Yes.

Q. Will you attach it, as Exhibit No. 21?

A. I will.

Q. I wish you would point out the differences on that exhibit between the results of your exhibit No. 1, the joint report and the separate report of Mr. Wilkinson, and the report of Mr. Farnham, taking first the Construction account.

A. The average of the Construction account in my report, for the year 1908, is $1,704,075.94.

Q. Now is that your revised statement?

A. Yes.

Q. After allowing the credits that have been pointed out by the accountants, and to which you have agreed?

A. Yes.

Q. Does that include any real estate?

A. It does not.

Q. Now proceed.

A. Mr. Wilkinson's report shows the same amount, and these two reports agree with the joint report. Farnham's Report, Ex-
910 hibit #15, shows Average book cost of plant, $1,701,900.93.

Q. Do you know where the difference between Farnham's report and the others is?

A. I think it would probably be in the method of determining the average for the year, for the reason that in his joint report he agrees with Mr. Wilkinson as to the book value of plant; but in Farnham's Exhibit #15 he also shows what he terms "value of plant" as $1,317,671.20.

Q. Now how does he arrive at that valuation?

A. He arrives at that valuation by first following a method of his own in determining what the Louisville plant should be charged with at the time the Ohio Valley Telephone Company was taken over; he then deducts from the Construction account for five years, from 1900 to 1904, inclusive, something over $193,000.00, stating that this should be taken out of Construction and put into Expense.

Q. Does he anywhere allow this amount in Expense?

A. He does not figure the expenses for the years 1900 to 1904 inclusive, but in figuring his expenses for the years 1905 to 1908 inclusive, he does not show, in Exhibit #15, any reconstruction costs as expense, and yet he does state that the $38,755.00 per annum or $193,000 for five years should come out of Operating expenses.

Q. Yet when he comes to fix the value of the plant, he deducts those amounts from the Construction account?

A. Yes.

911 Q. What is the difference in gross revenue for the year 1908?

A. Using a similar basis, my statement shows $324,026.75; the joint report shows $325,838.30. Mr. Wilkinson, in his individual report, shows the same amount of gross revenue; Mr. Farnham, in exhibit #15, shows gross exchange revenue, from which he has deducted what he terms Revenue from Toll Department, as $314,275.52.

Q. So that the difference between the joint report of the accountants showing the gross revenue of the exchange and Farnham's report showing gross revenue of exchange consists in Farnham taking out of the gross revenue what he terms "toll revenue"?

A. Yes.

Q. That makes a difference between the joint report and Farnham's report, in gross revenue for 1908, of how much?

A. About $11,600.00.

Q. Now what are the gross expenses for 1908?

A. As shown by my report, $223,307.72. Joint report, $217,395.53. Wilkinson's report the same amount as the joint report; Farnham's report, in which he has deducted what he terms "toll expense," and also maintenance reconstruction expense, from the revenue expense in the joint report, shows $162,662.78.

Q. Or a difference of how much between Farnham and the joint report?

A. About $55,000.00.

912 Q. Of this amount how much is maintenance reconstruction?

A. $31,450.07.

Q. Mr. Smith, taking the Construction account as agreed to by yourself, Wilkinson and the joint report, and adding to it the real estate in Louisville, what is the total cost or value of the exchange property?

A. $1,864,917.36.

Q. Leaving out depreciation, please state what per cent. of profit was earned by the company in the year 1908, on the rates in existence during that year, including all expenses of real estate as expenses of the exchange, not allowing any earnings from the real estate in your earnings account

A. The figures on this statement are made on a little different basis. They show the ratio of the balance of revenue, nothing deducted for depreciation reserve, to the average plant, excluding real estate.

Q. What does it show?

A. My exhibit shows 5.89 per cent. Joint report, 6.36 per cent. Wilkinson, 6.36 per cent. Farnham, he having omitted any reconstruction expenses, and his plant also being considered at what he terms its value—which is considerably below the book cost, which was used for the other per cents—11.5 per cent.

Q. If you take Mr. Farnham's so-called real value of the plant, add to it his value of the real estate, the sum total is how much?

913 A. Using Mr. Farnham's so-called value of plant, and adding to it the book cost of land and buildings which I do not find at any point disputed, the total valuation of this property used at Louisville, is $1,478,512.62.

Q. Take the gross receipts, as allowed by Mr. Farnham, they are how much?

A. $314,275.52.

Q. His gross expenses are how much?

A. $162,662.78.

Q. And the difference is?

A. $151,612.74.

Q. He does not allow in his expenses the actual amount spent on reconstruction?

A. He does not.

Q. How much is that?

A. The joint report shows it $31,450.07.

Q. Then if that is a proper item to allow as an expense, it would reduce his net balance by that much, would it?

A. Yes.

Q. Then what would his net balance be?

A. $120,162.67.

Q. On that basis, what profit would he show, for 1908?

A. The item of $120,162.67 does not include in it any balance of revenue from the real estate.

Q. Well, what is the balance of revenue from the real estate?

914 A. That balance of revenue, after deducting the expenses and taxes shown in Farnham's exhibit No. 9, these expenses and taxes having been heretofore eliminated from the expenses of Louisville exchange, the net revenue from real estate rental is $8,683.75.

Q. Which should be added to the $120,162.67

A. Yes, making $128,846.42. This amount is 8.69 per cent. of what Mr. Farnham terms "value of telephone plant," shown in his Exhibit #15, plus book cost of Louisville land and buildings.

Q. If you add to Farnham's so-called real value of plant the exact amount actually spent on reconstruction which he deducts from the cost of the property, what per cent. of net earnings would he show for 1908?

A. 7.7 per cent.

Q. You include in that construction his so-called valuation of the exchange of $1,317,671.20, and real estate, $160,841.42?

A. Yes, and the deduction made in Farnham's Exhibit #4, of $193,775.00, making a grand total of $1,672,287.62.

Q. On that basis, taking out the net loss of revenue on the rentals as shown by the rate ordinance, what per cent. would the company have earned for 1908?

A. The net loss in revenue caused by putting into effect the rate ordinance would be $47,484.28. We arrive at this by taking

the gross loss shown in the joint report and deducting there-
915 from the reduced rental for the instruments. The result would be 4.86 per cent.

Q. In regard to this item of 15 per cent. allowed the exchanges for operating the toll lines, how many companies does the plaintiff company connect with under these terms?

A. By actual count, more than one hundred.

Q. And each of these companies handle the toll line business backward and forward for these companies for 15 per cent. of the tolls collected by these companies?

A. Yes, either that, or we handle the business for them on the same terms.

Q. So far as you know, is that the usual basis of connection between companies?

A. It is the basis that we have always followed, and the basis followed with us by the long distance company.

Q. Referring again to your Exhibit #21, in which you show that on Mr. Farnham's basis the profits of the exchange for 1909, issuming the ordinance rates to have been in effect, would be 5.502 per cent., upon what basis do you reach this conclusion?

A. By using, his value of plant, the amount which Mr. Farnham terms Value of Telephone plant, and adding to it only the cost of Louisville land and buildings.

916 Recross-examination.

By Mr. BLAKEY, for the Defendant:

Q. Does your company operate in Atlanta, Georgia?

A. No.

Q. Does it operate in Georgia at all?

A. No.

Q. If some one desired to telephone from here to Atlanta, Georgia, over whose line would the message go?

A. I think it would go over the line of the American Telephone & Telegraph Company the whole way.

Q. Where are these hundred companies you speak of?

A. Throughout the States of Indiana, Kentucky, Tennessee, Mississippi, and Louisiana.

Q. Is the East Tennessee Telephone Company one of them?

A. Yes.

Q. Are there any others which bear the same relation to the Cumberland that the East Tennessee Telephone Company does?

A. We all connect.

Q. Read the question to him. (Question read).

A. As I state, we all connect, and interchange toll service, one with the other. There are no other companies, however, included in the one hundred in which the officials of this company are the officials of the other company.

Q. Are there any others in which the Cumberland owns stock?

917 A. No.

Q. Are there any others which have toll lines?

A. Yes.

Q. Do all of them have toll lines?

A. No.

Q. How many of them have toll lines?

A. I can ascertain that for you, if you would like—probably one-third of them.

Q. The others simply operate in a particular community or town or village, do they?

A. Yes.

Q. And are all of these hundred companies about which you speak, companies the majority of whose stock is owned or controlled by the American Telephone & Telegraph Company?

A. None of them are so controlled, that I know of.

Q. Does the American Telephone & Telegraph Company have stock in all these hundred?

A. I think in none of them.

Q. Are they what is known as "independent" telephone companies, or Bell telephone companies?

A. They are independent telephone companies.

Q. Well, there is a Bell system of telephones, and an Independent system of telephones, are there not, in the United States?

A. I believe there are systems designated as that; the exchanges of the telephone companies to which I refer are those which
918 were built and are owned I think entirely locally.

Q. Do you receive messages and transmit messages over any telephone system known as the Independent System of Telephones, or affiliate with the Independent telephone systems?

A. The hundred or more companies that I have just mentioned are in themselves independent.

Q. I understand, they are independent from your company, but are they what is known as the "Independent," or "Home" telephone system, in contradistinction to the "Bell" system?

A. They are not competing companies, if that is what you mean.

Q. That is not what I mean; I mean are they affiliated with or associated with what is known as the Bell system of telephones as contradistinguished from the Independent or Home system of telephones?

A. These companies that I refer to are independent in their management, and I believe some of them have the word "home" in their titles.

Q. The Western Electric Company makes the apparatus largely that is used by the Bell system of telephones, does it not?

A. Yes; it is the largest telephone manufacturing establishment in the world.

Q. And there is another factory which makes apparatus
919 which is furnished to the Independent system of telephones, what is known as the Independent or Home system of telephones, is there not?

A. There are several.

Q. Do the hundred companies about which you have testified procure their apparatus or use the character of apparatus that is manufactured by the Bell, or by the other?

A. Both; it does not make a bit of difference, as far as we are concerned, which they use.

Q. What I want to know is, which do they use?

A. They use both. I really imagine that the majority of them use what is known as the Independent apparatus.

Q. Now how much did you say was the percentage of earnings on the amount invested in the plant according to your figures, as to the amount invested, and as to the expenses for the year 1908?

A. The percentage which I gave was this: from gross revenue I deducted gross expense, including maintenance reconstruction, leaving $100,719.03; the ratio which this sum bears to the average cost of plant as shown by me, is 5.89 per cent. (5.89%).

Q. Now how much do you say should be set aside for depreciation, to take care of the necessary decay in the plant?

A. Our company has always adhered to the 7½% basis, believing that that sum is required for reconstruction and depreciation.

920 Q. And you say that amount should be set aside each year, to take care of the decay in the Louisville plant?

A. I think that is entirely proper.

Q. And on what figure should that 7½% be calculated?

A. It should be calculated on the book cost of plant.

Q. And what is that?

A. $1,704,075.94, this being the average book cost for the year 1908.

Q. You do not figure that on the real estate and buildings at all then?

A. We have not done so.

Q. Do you think it ought to be done that way?

A. Real estate is a much debated matter. It should not be figured on the value of the land, and it is a question as to whether it should be on buildings; I know that many companies consider that it should.

Q. What do you say about it?

A. I think it would be safe to do it.

Q. Then 7½ per cent. on the $1,704,000 would amount to how much?

A. About $127,000.00.

Q. And what are the net earnings for 1908, according to your figures?

A. The net earnings, before this depreciation is deducted, are $100,719.03 on the plant, excluding real estate.

Q. How much was spent for that year, in the way of depre-

921 ciation?

A. My statement shows $19,535.72.

Q. And that deducted from the amount which should have been set aside for that year amounts to how much?

A. It leaves a balance unexpended of $108,269.97.

Q. And the difference between the net earnings, then, and the amount which should have been set aside in addition to what was used for depreciation, was how much?

A. A deficit of $7,550.94.

Q. So that for the year 1908, according to your figures, then, the company should have been made to earn $7,000.00 more than it did, and also a sufficient amount to pay a dividend, or reasonable return on the value of the amount invested in the plant, should it?

A. Yes.

Q. And how much, in your opinion, should the company be allowed to earn as a return for the amount invested in its plant?

A. About ten per cent.

Q. And how much was invested in the plant?

A. In the telephone plant, $1,704,075.94.

Q. Should it have been allowed to earn a return on the value of the real estate, also?

A. It should.

Q. And adding those two items together makes a total of how much?

922 A. Adding the average cost of the plant for the year, and cost of real estate, makes $1,864,917.36.

Q. Was that the total amount invested in the plant in Louisville on which you should be allowed to earn an income?

A. I think to that should be added the average value of supplies carried for the benefit of Louisville.

Q. How much did that amount to, for the year 1908?

A. About $44,000.00.

Q. That makes a total of how much, added to the last figures you gave?

A. A little over $1,900,000.00.

Q. And ten per cent, on that is how much?

A. $190,000.00.

Q. And adding the $7,000.00 figure which was the deficit in depreciation, would make how much?

A. Well, in order to get a proper comparison, you should consider the net real estate rental, which you have not yet considered.

Q. Well, just answer my question, will you?

A. I cannot answer it properly, because in the cost of property you have included real estate, but in the revenue you have not included the net rental from real estate.

Q. Well, you can tell me what $190,000 and $7,000 make, can you not?

A. Yes sir, $197,000.

923 Q. Now should the revenue from real estate be deducted from that amount or added to it, in order to ascertain what amount you should be allowed to earn?

A. It should be deducted from it.

Q. How much was the income from the real estate?

A. $11,707.52.

Q. And that deducted from the former figure leaves how much?

A. About $186,000.00.

Q. And that is the amount that you say the company should have earned in addition to what it did earn, in Louisville?

A. Yes.

Q. Now what were the total gross earnings for the year 1908, from revenue and miscellaneous items, credited to exchange earnings?

A. $324,026.75, as shown by me.

Q. What percentage of increase over that amount would the $186,000.00 make?

A. About 57 per cent.

Q. Then you say that your rates in Louisville should have been increased 57 per cent. in order to earn what you were entitled to earn for the year 1908?

A. I should say that the gross revenue should be greater.

Q. They would have to be increased 57 per cent. in order to earn that amount of money, would they not?

A. It would not be my problem to consider just how to increase that revenue.

924 Q. Now take the year 1907, according to your figures what was the net revenue for that year?

A. The net revenue, nothing being deducted for depreciation, was $58,965.79 and in that no net rental from real estate is included.

Q. Add to that amount, then, the revenue from rentals and real estate for that year, will you?

A. The total is $72,005.55.

Q. What will 7½ per cent of the value of plant amount to for that year?

A. 7½ per cent. of the average plant for that year, $127,189.95. But there was expended on reconstruction, $44,388.37, leaving a balance for reserve of $82,801.58.

Q. What amount did you take as the value of plant, for that year?

A. $1,695,866.65.

Q. What is the difference between the $72,000 and the item of $82,000 you have just given?

A. $10,800.00.

Q. That is a deficit?

A. Yes.

Q. Adding to the $1,695,000 which you have just named the value of the real estate and supplies for that year makes a total of how much?

A. I would have to approximate the real property and the supplies. I have not the figures before me. We will take the same as for 1908, if you have no objection. We have approximately

925 the same total, $1,900,000.

Q. And ten per cent of that amount is $190,000.00?

A. Yes.

Q. And adding the $10,800.00 which you mentioned awhile ago as the deficit, to that amount makes a total of how much?

A. About $200,000.00.

Q. What were the actual revenues for that year, 1907, from exchange earning and other items—incidental items?

A. $316,747.18, as shown by my statement, Exhibit #20.

Q. That includes toll charges, does it not?

A. Yes.

Q. Deducting the toll earnings from the gross earnings leaves a balance of how much?

A. Deducting the toll earnings earned by the exchange from the gross earnings for the exchange leaves about $303,500.00.

Q. And how much percentage increase would the $200,000 be over this amount of $303,500?

A. About 66 per cent. There are two ways, of course, to get net revenue; one is to increase the gross earnings; the other to reduce expenses. We have done our utmost to reduce expenses, as far as I know and believe.

Q. And what were the net balances of revenue for the years 1906 and 1905?

926 A. On the same basis the net revenue for 1906, arrived at by taking the difference between the gross revenue and gross expenditures, is $49,815.45, and for 1905, is $29,765.80.

Q. Mr. Smith, I am not a sufficiently good accountant to know whether I have asked the question I desire to ask. I therefore ask you if for the year 1907 the company would have to earn about 66 per cent. more than it did earn in order to increase its earnings $200,000.00?

A. Are you asking that in regard to the whole company, or in regard to the Louisville plant?

Q. In the Louisville exchange. You have said that $200,000 is about 66 per cent. increase over $300,000; I now ask if in other words that means that the company would have had to earn about 66 per cent. more than it did earn in Louisville in order to furnish $200,000 more?

A. In order to earn $200,000 more than it did earn, it is necessary to increase the gross revenue by that amount or to decrease by that amount the expenses, or by an increase in one and decrease in the other, to that extent.

Q. Now in the figures you made and the percentages you gave under your redirect examination, in so far as those figures and percentages pertain to the Farnham report, is it not true that no toll earnings were taken into consideration at all?

927 A. Mr. Farnham eliminated what he termed Revenue from Toll Department, and also what he termed Expenses of Toll Department.

Q. And did you, in giving your percentages based on his report, follow the eliminations he made in this respect?

A. Yes.

Q. Now as to the percentages which the various earnings would show, those percentages were based on what the joint report shows as the amount appearing on the books as having been expended for construction, were they not?

A. Not as regards Mr. Farnham's figures.

Q. But as regards the others?

A. Yes.

Q. Now as to the repairs on the buildings in Louisville, you have carpenters and repair men generally in the employ of your company in Louisville, have you not?

A. I think so.

Q. And when a door needs hanging or a window pane is broken out, or a bell cord on a window is broken, or a door-knob is broken, or a piece of floor needs repair, or what not items of that nature are required to be done, does some one of your men in your regular employ there do that character of work?

A. In a matter of that kind I imagine we would treat that exactly as a tenant would do if he were in the building of another, simply have it done and the expense would be so small that we would not recognize it; but when it comes to a matter that amounts to anything why it is done and charged up to real estate expense, as the
928 report of Wilkinson will show amounts from anywhere from $1,500.00 to something over $2,000.00 for each of those years.

Q. You mean by anything that amounts to anything, such as painting and overhauling?

A. I mean painting and overhauling of the building would be charged against the Real Estate Expense account.

Q. But the incidental repairs such as I have mentioned and those of a similar nature, would be done by the men and no separate account kept of it and no charge made against Real Estate Expense at all for that?

A. When purchases are made, or withdrawals of supplies are made, such are charged, for the purpose for which used, but if there were a pane of glass to cost 25 or 50 cents broken out, the glass would be bought and charged to Real Estate Expense and probably some employee at Louisville would put it in on his regular time and it would be charged to maintenance.

Q. Now you filed some exhibits showing rates which were charged in different cities over your system; were those rates as to Memphis, Tenn., and Nashville, Tenn., and New Orleans, La., in force in 1906 and 1907?

A. All of them were except the residence rate for Memphis. This rate, of $3.50 became effective January 1, 1907.

Q. What was it prior to that time, at Memphis?

A. Three dollars.

929 Q. Now this statement you have filed as your Exhibit No. 17 were the taxes represented in this statement all taxes assessed after the last day of August, 1899?

A. No.

Q. Please indicate which were assessed prior to that time?

A. I cannot indicate that without referring to the payments.

Q. I notice the caption says "Statement of Taxes of Ohio Valley Telephone Company, Kentucky Taxes, assessed on or before September 1st, 1899 and paid after January 1st; Indiana taxes for the year 1899, paid after January 1, 1900." Will you please file another exhibit with your deposition, or attach to this exhibit a paper showing what taxes represented in this Exhibit No. 17 were assessed prior to August 1, 1899?

A. You understand, of course, that the Government tax is assessed after that date.

Q. You may eliminate the Government tax.

A. I will do so.

Q. Mr. Smith, without causing you to go to the trouble of getting all of these items, I will ask you to state whether you know about the taxes assessed and appearing in this exhibit on the plant located in Louisville, or Jefferson County, whether any of that was assessed prior to the first day of August, 1899?

930 A. I think the four items of Jefferson County, $1,853.75, City of Louisville, Tangible, $2,115.76, Real Estate, $771.39, and City Franchise of $3,370.91, were assessed as of Sept. 1, 1899, and would have been paid, or must have been paid, whether or not within ten days o fthat date the property had been destroyed.

Q. The property was not destroyed was it?

A. It was not.

Q. And that was for the year ending August 31, 1900?

A. It is the assessment which was made as of Sept. 1, 1899.

Q. For the succeeding year?

A. I believe it is called taxes for the succeeding year but it must be paid.

Q. And is that all the items appearing on that exhibit as taxes paid on the plant and property of the Ohio Valley at Louisville, Kentucky?

A. If I understand your question correctly the items which I enumerated are all of the taxes on property located in the County of Jefferson.

Redirect examination.

By Mr. GRANBERY, for the Plaintiff:

Q. Mr. Smith, has Mr. Warren been present from the beginning of your cross examination, at every session, aiding and assisting counsel in the cross examination?

931 A. He has been present always, aiding and assisting the counsel.

Q. Has he examined the books and records referred to in the cross examination?

A. He has, every one.

Q. Is he the same Mr. Warren who was assistant to Mr. Farnham in making his investigation on behalf of the Mutual Audit Company?

A. Yes.

Further, this deponent saith not.

H. BLAIR SMITH.

Subscribed and sworn to before me this 29 day of September, 1909.

[SEAL.] BUFORD DUKE,
Notary Public.

932 *Exhibits to Deposition of H. Blair Smith, Auditor, in Case of C. T. & T. Co. vs. City of Louisville. Taken at Nashville, April* 14, 1909.

Exhibit 1. Louisville Earnings & Expenses, 1905 to 1908.

Cumberland Telephone & Telegraph Co.
(Incorporated.)

JUNE 24, 1909.

The Mutual Audit Company, Mr. E. W. Farnham, General Manager, Nashville, Tenn.

DEAR SIR: Replying to your letter of June 21st asking me to give your representative, Mr. Warren, access to our "private journal and ledgers," I beg to advise that we have no books of this name or of this nature.

This matter was fully explained to your Mr. Warren this morning in the presence of Mr. Wilkinson.

Yours very truly, H. BLAIR SMITH, *Auditor.*

O.

1124 (Copy.)

The Mutual Audit Company,

E. W. Farnham, General Manager.

AT NASHVILLE, TENN., *June* 21, 1909.

Cumberland Telephone & Telegraph Company, Mr. H. Blair Smith, General Auditor, Nashville, Tenn.

DEAR SIR: We are now checking General Expense and General Account in the General Ledgers and as soon as through with that check, we wish to make an examination of your private journal and ledgers. At this time a joint check of the accounts above mentioned is being made. As soon as this is completed, please arrange for the examination of the private and individual books as above.

I am leaving this with Mr. Warren, my chief in charge, and I am obliged to go North for a few days.

Yours very truly, E. W. FARNHAM,
Representing the Defendants.

Memorandum.

Before noon June 23 1909 Mr. Caldwell and Mr. Hume were in the room used by Mr. Farnham and assistants. Mr. Farnham out of town. Mr. Warren, upon being questioned, stated they had executed Mr. Farnham's orders in full, that they had no further orders to carry out, and as far as he knew were through. This letter handed to me after this conversation.

H. B. S.

Cumberland Telephone & Telegraph Company.

(Incorporated.)

NASHVILLE, TENN., *June 12th*, 1909.

Mr. E. W. Farnham:

Replying to yours of the 11th, asking for information together with records of the Engineer's Department, embracing the number of poles and other equipment of various kinds in the Louisville exchange, I desire to state that the Company does not keep any such record, and, therefore, it will be impossible for me to furnish you with this information. This inventory, if it should be made would be constantly changing from day to day and therefore, the Company has felt that the expense of making such inventories and keeping them corrected from day to day renders it wholly undesirable.

Yours very truly, H. BLAIR SMITH, *Auditor.*

E. W. Farnham, General Manager.

AT NASHVILLE, TENN., *June* 11, 1909.

Mr. H. Blair Smith, General Auditor, Cumberland Telephone & Telegraph Co., Nashville, Tenn.

DEAR SIR: In line with our investigation now being made under the order of Court and the Special Master, we desire to be furnished with the detail information shown below, together with the records of the Engineer's Department covering same, to wit:

City of Louisville Exchange.

No. of poles in standard lengths.
Miles of Copper wire—different guage separate.
" " Iron wire " " "
" " Cable—noted by number of pairs.
No. of cross arms.
" " Insulators.
" " Brackets complete.
" " Braces.
" " Anchor rods.
" " Guys—Rods and wire.
" " Cable boxes.
" " Conning towers.
" " Roof jacks.

In giving the cable data, please state the Lin. Ft. each 25 pr. 50 pr. 100 pr. and 200 pr. cables.

No. Positions in local exchange, branch exchanges to be enumerated separately.

No. Positions in Toll department.

Lin. Ft. underground conduit, and class of cables therein, No. and pairs.

Yours truly,

E. W. FARNHAM,
Representing the Defendant.

New Orleans Board of Trade, Ltd.

Telephone Conditions in New Orleans, La.

Being a Report Presented by a Special Committee of the New Orleans Board of Trade, Approved April 8th, 1908.

New Orleans, 1908.

1159 *Mr. Hall's Report.*

NEW ORLEANS, *Jan. 14th,* 1908.

To Crawford H. Ellis, Esq., Chairman, and Members of the Telephone Committee of the New Orleans Board of Trade, Ltd.

GENTLEMEN: Pursuant to your instructions, I have diligently inquired into and made careful investigation of: First, telephone conditions in New Orleans as compared with other cities in the United States; Second, the rates charged and service given by the Cumberland Telephone & Telegraph Company to its patrons here; and, Third, the advisability of a dual system of telephones in New Orleans. I beg leave to hand you my report:

I deem it fair to all parties to state that when I entered upon this investigation I was firmly convinced, in my own mind, that at the present stage of political development in this country, it is to the best interest and advantage of large cities that public services, especially those involving the use and tearing up of the streets, be furnished by private enterprise controlled and regulated by municipal authority.

Throughout my inquiry, I have approached each and every problem in a spirit of absolute impartiality and fair play; I have striven to mete out even-handed justice to the various conflicting interests concerned. In gathering the facts, I have labored to get at the truth, and, to that end have employed whatsoever of ability I possess, and the experience gained in sixteen years of newspaper work. Starting without any expert knowledge of Telephony, hampered neither by traditions nor preconceived ideas, I endeavored to
1160 view every question with an unbiased mind, and believe that the conclusions at which I have arrived will stand the test of logic, and that the facts I am able to present will prove incontrovertible.

In order to equip myself for my task, I read all the latest works dealing with telephone questions, and made a careful study of the various reports of municipal and legislative bodies that, within the past few years, have investigated telephone conditions in other cities. Reports and Court Records bearing upon the telephone question in New Orleans have received my most careful attention, and I retraced the history of the telephone in this City ever since its introduction by Mr. W. H. Bofinger, in 1877.

I obtained a number of statements from officials, past and present, of the Telephone Company here, concerning the business in New Orleans, and, in order to satisfy myself as to how local conditions compare with those in other cities, I prepared a comprehensive list of queries, which I sent to all the principal telephone companies throughout the United States. I was thus successful in obtaining detailed information as to telephone conditions in Greater New York, Chicago, Philadelphia, St. Louis, Baltimore, Boston, Cleveland, San Francisco, Cincinnati, Detroit, Buffalo, Pittsburg, Milwaukee, Washington, Newark, Minneapolis and St. Paul, Los Angeles, Louisville, Kansas City, Indianapolis, Providence, Rochester, Toledo, Columbus, Denver, Memphis, Portland, Nashville, Omaha, Scranton, Syracuse, Dayton, Fall River, Grand Rapids, Albany, Reading, San Diego, and Trenton.

Furthermore, I wrote to the Mayors of the above cities asking their opinion on the advantages or disadvantages of a dual system of telephones, and requesting copies of ordinances and
1161–1162 reports dealing with the subject under consideration. I also invoked the aid of the Press, and asked the City Editors of the leading papers throughout the country to co-operate in getting information as to the quality of the service in other cities. A large number responded, thus placing me in possession of valuable information as to the number of calls per diem made by telephone users in other cities, and the number of connections completed by the companies.

More than five hundred letters have been written and received by me in the course of this inquiry, and I have sought the opinions of men connected both with the Bell and the Independent Companies. From some of the statements made, I am forced to the conclusion that it is dangerous to take as facts, the uncorroborated assertions of telephone experts. The antagonism existing between the rival telephone interests passes the bounds of ordinary commercial or industrial competition, and many statements made are not only conflicting but utterly irreconcilable.

When I had classified and examined the replies received to my queries from the various telephone companies, it became abundantly apparent that, in so far as the fixing of telephone rates is concerned, comparison with other cities is worse than useless—it is absolutely misleading. There are no two cities in the United States where conditions are sufficiently similar to warrant comparison. It is a fact beyond dispute that the question of telephone rates is purely and essentially a local one; and is controlled by four factors: First, the cost of the plant; Second, the cost of operation and maintenance;

Third, the amount of taxes and dues paid to the City; Fourth, the rapidity of depreciation, due to the climatic conditions.

* * * * * * *

1163 *The Telephone as a Public Utility.*

It would be more correct to say the Telephone as a public necessity. Imagine a community suddenly deprived of the power of speech; and try to realize the horror of their predicament. Recall that each individual was only capable of conversing with those in his immediate presence, and could be heard but a very short distance. Then you will understand the value of an invention which extends, almost without limit, the carrying power of the human voice, and enables man to speak with man from one end of a City to another, or over vast tracts of country, as privately and as clearly as if both were in the same room.

No other means of communication is as satisfactory as the Telephone. Although the art is still almost in its infancy, it has already superseded the telegraph for all distances under one hundred miles, and in larger cities, it is gradually taking the place of the mails, both for business and social communications. To the busi-
1164 ness man it is indispensable, it places him in direct touch with his customers and enables him to cater to their needs, without their having to come to his store. The telephone is scarce less valuable in the home, as it commands all the resources and conveniences of a great city, facilitates social relations, and in emergencies, when every second is of moment, raises the fire alarm or calls the doctor.

Without taking into consideration the enormous saving of time and worry, the telephone pays for itself in car-fares and postage alone; and the value of its services is so entirely out of proportion to the cost at which they can be profitably rendered, that the telephone has come to be looked upon as a natural convenience which every man is entitled to make use of as freely as of the mail and transportation services. In a word, the Telephone is a public utility, the service of which is of unquestioned and primordial necessity to the well-being of the community.

I am clearly of opinion that a corporation rendering a public service of such a nature should be subject to proper public control; that its acts and doings should be so regulated as to best subserve the public inconvenience; and that its rates should be fixed as low as is consistent with a fair return on the investment. By a fair return, I mean such as will attract the capital necessary to satisfactorily and fully develop the business.

It is true that great hardship is thus laid upon the men who were the first to see the value and appreciate the utility of the invention. These men had faith when others doubted and scoffed; they took the risk, invested their own money, and the money of their friends, in the telephone industry, and now that they have made it a public utility, and have rendered it indispensable to their fellow-men, they

are told that their profits must be strictly limited; that the
1165 control of the structure built up by their life work must ultimately pass into the hands of the public, and that they are to get nothing for the risk taken and the service rendered to the community at large. This is the plain English of it; but in these matters, the greatest good of the greatest number must be the ultimate aim, and seeing how absolutely indispensable the telephone is, I am unshaken in my belief that corporations rendering such public service (telephone and telegraph companies) should be regulated by duly constituted authority until such time as the Federal Government is prepared to take them over and run them in connection with the Post Office Department, of which they are a natural development.

But it is evident that this right of public control which is vested in the people, as the fountain head of all authority under a Republican system of Government, must be used to safe-guard and not to violate the rights of private individuals; especially is this so in the case of persons who undertook the hazardous task of developing an invention from an ingenious mechanical device or scientific toy into a service of public utility.

The Telephone as a Business.

Taken as a whole, the telephone business in this country has not been anything like a complete success. There have been innumerable failures, large and small. Competition has been very keen, and not always honest; in many instances, promoters have swindled the public in telephone ventures; distrust has been created; the financial interests of the country have lacked confidence in the business; and, notwithstanding the fact that the telephone is a public utility,
1166 savings banks, trust companies and other like institutions do not invest money or trust funds in telephone securities,—one of the reasons for this being that the assets could not be turned to any other use than that for which they were originally intended.

This brings home the fact that the appliances, plant and structures of a telephone company are of a very unstable nature. The property is essentially perishable, easily damaged, and deteriorates very rapidly. The industry has not yet reached a point of stability, and costly appliances are frequently being superseded by other inventions, and have to be discarded long before they are worn out; radical changes are continually being made in construction methods and in equipment, and all these things have contributed to make the telephone business, taken as a whole, an extremely hazardous one. If a telephone company should cease to do business, it would not be able to salvage more than about 20% of the original cost of construction.

In some respects, the telephone business is paradoxical and unlike any other. For instance, in ordinary business and in such public service corporations as gas, electric light, water, etc., the greater the number of patrons, the cheaper per unit can the service be furnished. With the telephone the exact reverse is the case, and the more tele-

phones are connected with an exchange, the more the cost per telephone increases. As the number of subscribers connected with an exchange increases the value of the service to each individual subscriber increases likewise. It is clearly of greater value to be able to talk with 5000 than with 500, and as the opportunity increases the use increases also. Each subscriber uses his telephone more often per day on an exchange of 5000 than he would on an exchange of 500, and it may be stated as a fact that the cost
1167 of operating for each telephone in any exchange increases as the value of the service to the individual subscriber augments.

This is susceptible of very clear demonstration. An operator can only answer a given number of calls a day, whether she be working in a large or small exchange. Five hundred connections per day is stated to be a fair average. Now in an exchange of 500 subscribers, where each man uses his telephone four times a day, there will be 2000 calls, and four girls will be able to do the work, or one to every 125 subscribers. If in an exchange ten times as large, with 5000 subscribers, each one uses his telephone, say, two and one-half times as often, the average number of connections per subscriber will be ten a day, or an aggregate of 50,000 a day. This will call for the services of 100 operators, or one for every 50 subscribers. This illustration is purposely exaggerated,—but it makes the point clear.

Furthermore, the cost of switch-boards increases per unit line, with the addition of subscribers. The unit equipment costs say about $5.00 per line for the 500th subscriber, and nearly ten times as much for the 5000th. In other words, the cost of a switch-board per unit increases greatly with the added capacity.

This peculiarity of the telephone does not seem to have been sufficiently apprehended by the pioneers in the business, and, throughout its development, new problems have continually arisen that have been solved, or are still being worked out by the aid of experience, which has been dearly paid for both by the telephone companies and the public.

Business Methods Experimental.

Even to-day, the telephone business is being conducted in a manner which, to a certain extent, is tentative and experimental.
1168 New methods are continually being tried out, and efforts are being made to rectify the many errors of the early days, when every consideration of business policy and commercial prudence was made subservient to the necessity of introducing the new invention and educating the public up to the use of the telephone. It is hardly credible to what lengths the telephone companies went in their anxiety to install telephones. In the first place, they voluntarily undertook to do the interior wiring of their subscribers' houses, and this has now become a well-established practice, and is looked upon as an expense inherent to the telephone business.

Then they put their business on a subscription basis, by the introduction of flat rates. They charged their patrons so much for the rental of the transmitter and receiver, and nothing for the actual communications made. This policy is responsible for the fact that

the greater part of the public looks upon the instrument hanging on the wall as constituting the sole expense to the company, because it is what they are actually asked to pay for; whereas, it is only the instrument indispensable to the sending and receipt of messages, each and every one of which entails a fixed and certain cost upon the company.

A strictly flat rate telephone charge to all patrons is every bit as unfair as a similar charge for gas or electric light would be. No one will deny that it would be absurd to charge a fixed rate per year for gas burners, regardless of the quantity of gas burned. Before electric meters were perfected, incandescent lamps were charged for at a fixed rate, which, as in the case of the telephone to-day, was lower for residences than for business places. It is pointed out in the report of the Chicago Special Telephone Commission that as long as this unfair and unbusinesslike method was in vogue
1169–1171 electric lighting remained a luxury. With the advent of charges for actual consumption (that is measured rates) electric light came within the reach of the great proportion of people who now use it.

To illustrate my meaning more forcefully. The flat rate for all patrons whereby a fixed sum is charged for the use of the telephone instrument irrespective of the number of messages sent, is like conducting a restaurant on the plan of hiring a knife and fork to each customer at a fixed rate which would be the same whether a man had the run of the entire kitchen, or only ordered ham and eggs.

Now that the Companies have come to see the injustice of charging a patron who uses the telephone five times a day the same price as one who uses it fifty, they are making great efforts to introduce limited service and measured rates, which go to the other extreme and charge only for the messages sent, and nothing for the hire of and convenience in having the instrument itself.

To my mind, the proper way to charge for telephone service is to fix a flat rate for the privilege of connection with the exchange, and for the hire of the instrument itself, and then to charge a given sum for each message sent. The charge for connection with the exchange should be sufficient to cover interest and sinking fund charges on the investment of fresh capital represented by each additional subscriber, and the charge per message should be governed by the traffic and expense of the exchange.

* * * * * * *

1172–1180 Extension sets are another draw-back to good service; they are but Party Lines under another name, the only difference being that the several telephones on the same line are situated in the same building and paid for by the same subscriber, instead of being situated in separate buildings and paid for by different subscribers in the same street or block.

* * * * * * *

1181 *Cumberland Co.'s Earnings and Expenses.*

From my examination of the Cumberland Company's accounts, I was able to obtain exact information as to their earnings and ex-

penses in New Orleans. The financial year of the Com-
1182–1193 pany ends on the 31st of December, and, at my request, Mr. H. Blair Smith, Auditor, furnished me with a statement showing the earnings, expenses and net revenue of the New Orleans Exchange for the year 1906, which, at the time of my visit, was the last completed financial year. This statement is as follows:

Financial Statement.

New Orleans, Louisiana, Exchange, Year 1906.

Earnings:		
Rentals	$570,501.32	
Proportion Tolls earned by Exc	16,582.26	
Miscellaneous	5,220.10	
		$592,303.68
Expenses:		
General (including taxes)	$94,776.20	
Operating	129,402.51	
Maintenance	104,912.05	
Reconstruction	91,335.01	
Depreciation	115,544.39	
Instrument Rental	26,418.76	
Bad Debts	5,313.02	
		$567,701.91
Net Revenue		$24,801.74
Construction		$2,482,792.80
Per cent. of Net Revenue to Investment		.99

* * * * * * *

1194 To the above statement, I took the following exceptions:

First. That only fifteen per cent of the toll receipts in New Orleans were credited to the Exchange, notwithstanding the fact that in the bill of complaint filed in the United States Circuit Court, in the case of the Cumberland Telephone & Telegraph Company vs. The Railroad Commission of Louisiana, the Cumberland Co. averred that it was and is not possible to separate the expenses incurred in giving toll service from the expenses incurred in giving exchange service for the reason that the two are so interwoven that they cannot be separated. In this bill of complaint, it is stated that:

"The same poles carry exchange subscribers' wires and toll line wires; the local managers of the different exchanges care for and supervise the construction and maintenance of toll lines as well as of exchange lines; the same operators are engaged in giving connections for toll service and exchange service; the same accounting departments in each exchange are engaged in looking after the accounts of both classes of business; the same linemen, troublemen and other employees are engaged in caring for and repairing both

the exchange and toll lines; the rent, light, heat items are not capable of being separated between the two classes of business, and it results that while the receipts from the two classes of business can be accurately separated, the expenses of giving service cannot be separated, nor is it desirable that they should be separated, for the reason that it would entail a very great increase in the cost of maintaining each class of business."

1195–1200

This being the case, I think it right and fair that New Orleans should be credited with her full share of toll receipts, less coupon discounts, and charged with the resulting increase in instrument rental, and with depreciation on her pro-rata of toll line construction, which construction pro-rata should be added to the Construction account of the New Orleans Exchange.

* * * * * * *

1201 In the Telephone Report of the Merchants' Association of New York, special consideration is given to what constitutes a reasonable margin of profit for a telephone company, and I beg leave to quote their views on the subject. They say:

"The Telephone business demands a continuous accession of fresh capital to satisfactorily serve the public. Having in view the importance to the public of constant improvement and expansion and the greatest possible efficiency of telephonic service, as well as the necessity of offering an attractive investment to new capital to provide for such expansion, it is the opinion of this committee that to provide a fair return on capital actually and necessarily invested and a proper allowance for contingencies, 10% margin above operating outlays is a reasonable and proper margin in the telephone business. In the various movements hitherto made for the limitation by law of telephone profits, wherever the permissible percentage of profit has been dealt with, this margin has been accepted as a proper one. It has also been specified by law in the case of some other public service corporations."

1202–1219

This conclusion was acceded to by the New York Telephone Company, and I have no hesitancy whatever in endorsing it as just and equitable in the case of the Cumberland Telephone and Telegraph Company here.

* * * * * * *

1220–1254 Competition does undoubtedly improve the service; both companies strive to please their patrons and are courteous and attentive. Prices are reduced, often to wholly inadequate figures, and the rival companies try, by selling a public utility below cost, to force one another from the field. This far, the public appears to be getting the best of it; but from the start the utility of the telephone as a public service is impaired and after the first years, when it is clear that the business is not giving financial returns, fresh capital is impossible to obtain, the very maintenance charges cannot be met, extension is impossible, and "re-organization" ensues. As the struggle has progressed, the service has been getting worse and worse, and the public is made to feel the disadvantages of competition.

* * * * * * *

1255 *How Some Companies are Promoted.*

The whole history of the independent telephone movement demonstrates that the very great majority of independent companies have been furnishing service at rates much too low to make the business continuously profitable, and at the same time provide for future growth and replacement. Indeed, it can be positively stated that every attempt to cut telephone rates to a lower figure than that justified by the experience of companies having outlived the reconstruction period has ended or must end disastrously.

Not only have the rates been too low to pay fair returns on the actual money invested, but too often the companies have been financed in a manner that from the start precluded the possibility of profitable operation. Fortunes have been made in the building of competing telephone plants, and fortunes have been lost in operating them.

In considering the organization of a new telephone company, one must never lose sight of the fact that the construction, maintenance and operation are so linked together as to be inseparable, and an honest telephone company must be all these three things in one. The construction of a telephone plant is never complete. Every new subscriber entails fresh construction. The plant must be maintained and cared for out of the money received for services rendered by the operating department. The three departments are interwoven and interdependent, and must stand or fall together.

But one of the reasons which have brought about so many failures of independent telephone companies is that promoters have found that the best way to get quick returns, is to make a profit on the construction of the plant, and they certainly deserve great credit for the clever manner in which they secure their end.

1256 An application is made to the City Council for a franchise which the investing public generally regards as something of great value but which after all is merely the permission to do business. The rates proposed to be charged, always lower than the prevailing charges, are limited in the franchise and the promoters claim that under them they will be able to make liberal profits.

Canvassers are then sent out after subscribers to the new system—which is not yet built—and advantage is taken of the agitation to get people to sign iron-clad five-year contracts. Then the construction company is formed. It is directly or indirectly controlled by the promoters, and bonds far in excess of the cost of construction are issued, together with an equal amount of stock. These securities of the telephone company are turned over to the construction company and the plant is erected.

Sometimes the plant is good; sometimes bad. To the public it always looks good because it is new. Operators are keyed up to "top notch" and not infrequently the new concern gives extraordinarily fine service from the start. The public is called upon to witness that the promoters have made good and kept all their promises.

Up to this nothing has been done to interest "local" capital. The

EXHIBITS

NOT

FOR

MICRO -

FILMING

stock and bonds of the company, turned over to the construction company in consideration for the plant—the exact cost of which will never be known to the public—are now unloaded by the construction company people, who give out that they are only in the construction business and are seeking but a ten per cent profit. The bonds are offered at par, or less, with stock thrown in as a bonus. Civic pride and a public spirited desire to support home industries do the rest.

1257–1259 Local bankers, merchants and financiers generally fall over each other to buy the bonds, especially if the promoters have waited till the first operating year is completed and have published a statement of earnings and expenses showing that the interest on the bonds has been met and that profit is available for distribution as a dividend.

But as soon as the construction company has unloaded its securities and taken its profits, the service begins to fall off and the profits begin to dwindle. If the number of subscribers increases at all rapidly, rates have to be raised, but it is rarely that more than the operating expenses can be met. By the fifth year the reconstruction period has arrived and the holders of the securities realize that the so-called profits of preceding years were not profits at all, but should have been spent on maintenance or put aside for reconstruction. Besides, no depreciation fund has been formed, and one of three things is bound to happen. The property goes to the bond holders, or preferred stock is issued, or a receiver is appointed. Within ten years every cent invested by local capitalists has been lost, and the plant has either been lost also, or enough new capital has been invested to double the original cost.

* * * * * * *

(Here follow Exhibit 20 and Exhibit 21, marked pages 1260 and 1261.)

1262 *First Deposition.*

CUMBERLAND TELEPHONE AND TELEGRAPH COMPANY
VS.
CITY OF LOUISVILLE, KENTUCKY.

The further taking of depositions in this cause was resumed this morning, September 20th, 1909, at nine-thirty o'clock, pursuant to adjournment.

Present, Mr. Wm. L. Granbery, Solicitor for Complainant; Mr. C. B. Blakey, Solicitor for Defendants; and Buford Duke, Stenographer and Notary Public.

JAMES E. CALDWELL, called on behalf of the Complainant, being first duly sworn, deposed as follows;

Direct examination.

By Mr. GRANBERY, for Complainant:

Q. You are the president of the complainant company, are you Mr. Caldwell?

A. Yes sir.

1263 Q. When did you first become connected with the Cumberland Telephone and Telegraph Co., the present company?

A. In 1885.

Q. What was your position then?

A. Director and member of the executive committee.

Q. What was your next position?

A. President and general manager.

Q. How long did that continue?

A. I was president and general manager until about three or four years ago, and since that time I have been president.

Q. Have you devoted your time and attention to the telephone business since 1885?

A. Yes sir, I have given it my attention since 1885.

Q. At the time you first became connected with the company, it was a small affair, was it?

A. Yes sir, had something less than four thousand subscribers.

Q. Aside from the consideration with the Great Southern Telephone Company and the Ohio Valley Telephone Company, have all the properties of the complainant company been built up under your direction and supervision?

A. Yes sir.

Q. Have you made a study of the telephone business, the cost of construction, the best methods of construction, the economics to be practiced in operating and maintaining the properties, the

1264 question of rates and how the rates should be adjusted in the different exchanges and different communities, and the question of depreciation, and the amount necessary to rebuild the properties from time to time?

A. I have given all of those subjects the best thought I was capable of, for many years.

Q. The Ohio Valley Telephone Company was consolidated with the Cumberland Telephone Company in January 1900? Had that property been purchased at any time prior thereto?

A. A part of the capital stock was purchased in June of the year previous.

Q. How long had negotiations been pending for the purchase of that stock prior to its actual purchase?

A. I think it extended over a good part of a year. At any rate, negotiations were pending for quite a while before it was actually consummated.

Q. Who represented the complainant company in the negotiations and purchase of that stock?

A. I did.

Q. I believe it has been shown that the stock cost some of it a dollar forty, and other parts, a dollar forty one. Is that your recollection?

A. Yes, that is correct; that was the price paid for it.

Q. Did anybody connected with the complainant company,
1265 or any other person receive any commission or advantage in any shape, form or fashion in the purchase of that property or stock?

A. No sir, not a cent.

Q. You were elected president immediately upon the purchase of that stock of the Ohio Valley Telephone Company, were you?

A. Yes sir.

Q. What policy was pursued by you from the time you became president of that company, until its consolidation with the Cumberland Telephone and Telegraph Co., in January following?

A. We immediately cut down the expenses; the general office expenses, chief executive officers' salaries and we trimmed the expenses in very way we could; we modified the rates, all except one class of rates, is my recollection. There was a rate made for a three year contract, which we did not disturb, but all the others were modified and additional classes of service at attractive rates, were made, with the hope and expectation of stimulating the business and popularizing its use in the community of Louisville. I don't know that outside of Louisville there was much change made in the matter of rates, for, indeed the properties outside of Louisville—or you might say, indeed, Louisville comprised so wellnigh the whole of
1266 Ohio Valley Co. The City of Louisville showed a very small growth. In other words, the growth was abnormally small, and an effort was made to bring it up, develop the business there to something like the proportion that we thought it should be, and as had been done elsewhere.

Q. Was the necessity for this extension of the business in the City of Louisville apparent before, and at the time of this purchase of the property?

A. It was, quite so.

Q. Was it recognized by the owners of the property prior to its sale?

A. Yes, they stated that they recognized that the business should be considerably expanded, that that would call for a very considerable increase in the facilities and very much greater outlay of capital, and very much greater extension of facilities in every direction, not only of the Louisville exchange proper, but of the Louisville trade district, that is, the territory in and around Louisville should also be developed if Louisville itself was to show a proper growth in telephone development.

Q. Do you recall about how much the executive officers' salaries were reduced from June 1899?

A. I do not remember the figures, Mr. Granbery, except it was a very material reduction that was made.

Q. Were any dividends paid on the stock after June 1899?

1267 A. No sir, there were no dividends paid, the whole revenues were devoted to meeting the development and growth and extension of the business.

Q. Now in the development and extension of a telephone exchange or of a telephone property, does it require additional capital to meet this growth and expansion and extension?

A. Absolutely so, it is imperative.

Q. Was then the situation with respect to the Ohio Valley Telephone Company in Louisville in January 1900, different from that of June 1899, so far as the development of the telephone property was concerned?

Objected to by Defendant because leading and suggestive.

A. It was materially different.

Q. Now, a part of the capital stock of the Ohio Valley Telephone Company was not purchased in June 1899 by the complainant company. How was that handled?

A. There was a part still left in the hands of some individuals and a part in the hands of the American Bell Telephone Co. The stock held by those parties came into the consolidation and received stock in the consolidated company instead of taking cash therefor.

Q. Now it appears that the same premium on that stock was charged in the books of the company at the time of the consolidation that had been paid on the other stock purchased in

1268 June 1899. Was that correct and proper, Mr. Caldwell?

A. Yes, in order to equalize the holdings, it was the proper way to make the entry.

Q. Upon what basis were the properties of the Ohio Valley Telephone Co., taken over into the books of the consolidated company in January 1900?

A. They were taken over on a basis of their actual value, and that value was arrived at, as my memory serves me, in its cost, what it had originally cost. That is to say, its value, represented by the purchase for cash of a good part of its capital stock. The value, in other words, placed upon that stock was represented as the net value at that date, of the property. When the consolidation took place it was arrived at by adding the values that had accrued since

the date of original purchase, down to that time. The Ohio Valley Telephone Co. properties were therefore to be put in and were put in, at their value, on that date.

Q. What was the market price of the Cumberland Telephone and Telegraph Co. shares, as compared with the Ohio Valley Telephone Co., shares?

A. They were right together, right at a dollar forty.

Q. Was there any added market price, or anything added to the market price in order to purchase a controlling interest in the Ohio Valley Telephone Co. stock; or was the price paid for a controlling interest, the same as the market price of shares
1269 sold on the open market?

A. It was the same price, there was nothing added. That was considered the market price of the stock and it was bought on that basis. In other words, that stock was bought by me, representing this company, from Mr. Speed and Mr. Clark, representing the parties on the other side, and the parties stood in the proper relation to each other, that is, they were trading at arms length; there was no community of interest, they had no interest in my side of the bargain, and I had none in theirs, and we were endeavoring to arrive at what was the true, fair and actual value of the property.

Q. Now, between the purchase of this stock in June, 1899, when you became president of the company, until the consolidation in January, did you familiarize yourself with the properties of the Ohio Valley Telephone Co.?

A. I did, yes sir, I made a very close study of it and a very careful inspection of it, and gave it every possible attention.

Q. I will ask you to state whether or not the values placed upon the properties in the books of the consolidated company in January, 1900, was the fair value of the property of the Louisville exchange?

A. It was a fair and actual value.

Q. Now, at the time of the purchase of this stock of the Ohio Valley Telephone Company, did it own the buildings in
1270 which the central exchange was located?

A. No sir, the Ohio Valley Company did not own the buildings at the time this stock was purchased. That was owned by Messrs. Speed and Clark, I think as individuals. I know they had an interest in it. I am quite sure that Mr. Speed and Mr. Clark, one or both of them, owned that as private property.

Q. State whether or not it was desirable or advantageous or necessary in large exchanges of that character for the company to own the building in which is located the central office apparatus?

A. Yes sir, it is considered very necessary, for the reason that a very large amount of permanent property has to be attached and located therein, and the necessity for owning the building is therefore apparent, as the cost to move or transfer this property would be too great to hazard a chance on.

Q. Well, would it be practicable to move an exchange headquarters and central office apparatus in a city of the size of Louisville or an exchange the size of the Ohio Valley Telephone Co., exchange, having the underground system as that company had?

A. It would be impractical to literally take the interior equipment and transfer it to a new location and continue the service. The way it would have to be done would be to buy a new
1271 outfit, install it in the new location and when that was ready, to transfer the service thereto, taking down and dismantling the old property and dispose of it in such manner as would be possible.

Q. Did you realize the necessity of purchasing the land and buildings in which the central office equipment was located?

A. Yes sir.

Q. Did you buy that property for the Ohio Valley Telephone Company?

A. I did, and immediately, in connection with the trade for the stock.

Q. Something has been asked the auditor in this case in regard to a twenty-thousand dollar note that the Ohio Valley Telephone Company made payable to your order about that time. Do you have any recollection of this transaction?

A. Yes, my recollection of it is, that was the cash money payment. That represented the cash that was paid on the purchase of that property, for the terms were that so much would be paid in cash, one fifth, I think, and the balance be paid in four annual installments. In order to borrow the money to make that cash payment, I endorsed the note and got the money out of the bank. In other words, I incurred the *the* obligation of an accommodation endorser of the Ohio Valley Telephone Co. for twenty thousand dollars.

1272 Q. Did you at that time, or at any other time, get any benefit, directly or indirectly, from the execution of that note?

A. Not one cent.

Q. Did you ever profit in any way by any of the transactions had with the Ohio Valley Telephone Co.?

A. Not the slightest, except from the salary I drew as an executive officer after the trade was made, or as a stockholder in the Cumberland Telephone and Telegraph Co. in common with all the other stockholders. I never received one penny of personal profits out of the transaction.

Q. Did you at any other time endorse the paper of the Ohio Valley Telephone Co.?

A. I think I did.

Q. Why was this?

A. In order to support its credit, and to get money to help its business.

Q. Have you done the same thing for the Cumberland Co., in the past?

A. Yes sir, I was a steady endorser of it for years, for at one time my credit was better than theirs. It is different now, and it is unnecessary, as it can get all the money it needs, on their own paper, but I, for years, endorsed its paper and at one time I think

I was endorsed to the extent of five hundred thousand dollars, on their paper in various banks of the country.

1273 Q. Did you ever individually or personally profit by any of these endorsements?

A. Not one cent; not as much as a copper.

Q. Have you, other than your salary as an officer of the Cumberland Telephone and Telegraph Co., or of the Ohio Valley Telephone Co., ever received any benefit or any profit that any other stockholder did not receive in the company?

A. Not a cent.

Q. Now what was the reason, in a general way, why you, as the president of the Cumberland Telephone Co. and its other officers and directors, desired to purchase the Ohio Valley Telephone Company property and consolidate it with the Cumberland Co.?

A. A study of the business revealed very plainly and promptly the fact that for a company to be at all self-sustaining, that it would have to be correspondingly useful to the communities. To do that, it would have to be extensive, at any rate to the extent of supplying as near as possible the requirements within the trade districts of the cities that it served. Indeed it was seen that it would be highly desirable, if not necessary, to extend this solid, compact and comprehensively through the section of country that these cities did business with. Our effort was to solidify the trade districts

1274 of the Ohio and Mississippi Valleys, a section of the country that had traded and intercommunicated intimately with each other from their earliest history. That, I say, was plainly a desirable and a very necessary thing to do, in order that the company, as I say, might furnish facilities sufficiently comprehensive to meet the requirements of the largest and most important commercial operations or the commercial operations of these cities, in a thorough and reliable way.

Q. Had that same general idea prevailed in the consolidation of the Great Southern Telephone Co., with the Cumberland Co.?

A. Yes, that was in furtherance of that same policy.

Q. Now, with the Ohio Valley Company and the Great Southern Companies consolidated, the company stretched from Louisville straight through to the Gulf of Mexico, through the Ohio and Mississippi Valley territory?

A. Yes, it had a solid, unbroken territory of its own from the Ohio River through to the Gulf of Mexico, following the Ohio and Mississippi Rivers, and most of their tributaries.

Q. Now what policy was pursued in the control and management of the Ohio Valley Co., after June, 1899, and after the consolidation in January succeeding, with reference to developing the telephone business in and around the city of Louisville, and in the trade area of Louisville?

A. The most active and persistent efforts were made in that

1275 direction, steadily and continuously.

Q. Has that been kept up to the present time?

A. Yes sir it has.

Q. Have the various exchanges owned by the complainant com-

pany been connected together with toll lines throughout its territory?

A. Yes, that whole territory is connected, solid and substantial and in a saturated way, with toll line connections.

Q. All with lines and properties owned by the Cumberland Company?

A. Yes sir.

Q. Now then anyone using the toll lines in Louisville to reach any point in the territory in which the complainant company does business, whose toll lines would they use, Mr. Caldwell?

A. They would use the complainant company's toll lines.

Q. When do they use the toll lines of the American Telephone and Telegraph Co.?

A. When they have occasion to communicate with points beyond the territorial area of the Cumberland Co.

Q. Is that the only time they use the American Telephone Co. lines in Louisville?

A. Yes unless perhaps in times of storms and breakdowns, when they would be given the benefit of any connections that
1276 would reach the points desired.

Q. Has any of this development, either locally or throughout the trade area of Louisville, been done at the solicitation or request of the business interests of the City of Louisville?

A. It has, for we let it be understood among the business men of Louisville that such would be our policy and it would be our desire and pleasure to meet their requirements and that we would gladly receive any suggestions from them, and they accepted that invitation and almost continuously we receive suggestions and requests from them for extensions and developments in various directions, in order to meet their requirements and wishes.

Q. I will ask you to state what policy has been pursued with respect to the building of the exchange in Louisville and the additions thereto from June, 1899, to the present time?

A. They have been with a view to being, first, permanent and of the very best character; next, with reference to the growth of a city the size of Louisville and importance of Louisville, giving evidence of its future.

Q. What would you say with respect to the economics practiced in adding to this exchange from time to time, in the purchase of material and in the construction work?

A. We practice the very greatest economics in every way we are capable of.

1277 Q. What degree of skill and business judgment has been exercised in these additions and extensions of the Louisville exchange?

A. All that we possessed and had in our employ and that represented men who had been making a study of the business for years, indeed, making it a profession and were considered highly competent to conduct its affairs.

Q. In looking back over the period of time covered, I will ask you to state whether or not from the experience now had by you

in the business, whether this exchange could have been increased and extended and expanded in a more economical way, or with better judgment than it was developed and expanded?

A. I don't think it could have been done any better. I see no change that would be made in it, if we were to go over it again.

Q. Now with respect to the expense of operating and maintaining the properties, and reconstructing the Louisville properties, what has been the policy of the company with respect to economies?

A. We have practiced every economy that we were capable of, for the men who were developing its affairs were interested in the results as stockholders, and in addition to that, had their business reputations at stake and all of those forces were working
1278 freely and fully, so that every incentive was to practice economies and show the very best possible results.

Q. Has any effort been made by you or anyone else connected with the company, to your knowledge, to increase the construction account or decrease the earnings, or increase the expenses on the books of the company, other than to show the exact facts?

A. None whatever. The effort has been to show the facts as they are, and as they should be.

Q. What is the way in which an exchange in a city the size of Louisville grows and expands, practically?

A. It grows in proportion to the population, and you may say grows in every direction, providing the schedule of rates and the facilities are offered in a proper and normal way. That is to say, an exchange should grow or should accommodate the entire community in some way or other, and if it does this, then the growth would be well nigh universal, for it is possible for everyone to have need of telephone facilities except deaf mutes, and in some form or other, everyone who can talk, will at times have occasion for and actually use a telephone system.

Q. Can the plant ever be considered a completed property?

A. No sir, not as long as the communities grow.

Q. Is this an inherent condition in the telephone business different from other public service concerns?

1279 A. It is, and for the reason that every customer has to have special and you may say, private facilities provided therefor, with the possible exception of transient customers who use the public stations. In other words, every subscriber has to have some private equipment, and therefore a certain amount of capital, devoted to his service or use, in order that he may be in position to use the system.

Q. Would there be a difference between an exchange that had been built from time to time as the business necessities required, and an exchange that should be built say at the present time in the same city in which the exchange had been built through a period of years?

A. Yes, there would naturally be a difference.

Q. Now, I wish you would explain the difference between those two exchanges?

A. The exchange that would be built at the present time would

have the benefit of all the knowledge that had been gained by the predecessor and the study that had been made of the experience of the world in the art and might be able to practice some economies, but they, in part, might be offset by the economies that were taken advantage of by the first construction. Indeed, if an exchange were built today, it would have to have an eye to the future, it would have to consider the growing needs and requirements of the
1280 city, and so, there might not be so very much difference after all, between the one built that way, and one that had been built meeting the requirements from time to time as they presented themselves, for some economies could be served in that, that could not be in the other.

Q. Now if an exchange should be built in Louisville, say as of today, I presume it would take probably a year or more to complete that exchange before it could be used in giving service, is that correct?

A. Yes, that would be so.

Objected to by defendant, because leading and suggestive.

Q. Now is it, or not, possible or probably that by the time that exchange built upon plans matured today was ready for service, that the necessities of the business would require a re-arrangement of the plant by the time it was ready for operation?

A. Well, at any rate it would likely be found that immediately after it was put in operation that the demands upon its service would come from and lead it into directions and operations that it had not been able to forecast.

Q. I will ask you to state whether or not it is necessary or proper that future business be anticipated and facilities provided
1281 prior to the offering of the new business?

A. Yes, for the reason that it requires quite a length of time to provide additional facilities on an exchange and the customers could not be expected to wait so long a time for the service; hence, it is not only necessary but it is practiced in all companies which expect to meet the public requirements, to keep a certain surplus reserve of facilities always on hand, and as they are used up, to provide others, so that they will be able to meet the demands promptly, and any other method would leave the service open to very grave criticism and reflection, for the old customers have an interest in having new ones connected, have an interest quite as important as the new customer, for every new customer gives an additional value and opportunity to all the old subscribers.

Q. What would be the result, practically, if the company should not provide facilities for future growth before such new business was offered, but should wait until the new business was offered before undertaking to provide the facilities necessary to serve the new patrons?

A. Well, as it would often require a year in which to provide additional facilities, it is quite plain what a disappointment it would be and how far short a company would fall of meeting the public

requirements, for the customers usually desire the service at
1282 once, and certainly could not be expected to wait longer than a very few days. They rather expect to have the facilities supplied to them within twenty-four or thirty-six hours, and they have been accustomed to that so long, that it is now recognized as a fixed condition. If, therefore, conditions should arise that would make delay in providing service longer than this, the company would be considered as wholly inadequate, and indeed, open to the criticism of being a rather poor affair.

Q. Is there any appreciable difference in providing facilities and giving a reliable trustworthy service, over providing facilities and giving a service less reliable in the same place?

A. There is a very great difference. The test of service or when you are giving good service, the whole question of the character of the construction is involved, and in order to give good service, the matter starts with the construction, the character of the construction and the scope of it. These, indeed, are prerequisites to giving a good telephone service, reliability and extensiveness. The rapidity with which the operators answer the calls is really the last and least important consideration. As I said before, the first consideration is the reliability of the apparatus the party is going to use, whether it will stand up and be ready at all times to give the service; next, how far reaching and extensive are the facilities. These two are the main considerations in giving good service. After these are
1283 provided, then the rapidity with which the calls are answered by the operators comes into consideration. In other words, if you have not a reliable system and have not an extensive system, it matters not how fast the operators may be able to answer the calls if they cannot execute them after they are answered.

Q. Has the complainant company constructed its plant in Louisville with reference to offering a reliable and trustworthy service to its patrons?

A. It has done so, and also with reference to giving an extensive service.

Q. It has been testified in this case that the Louisville exchange has cost this company, excluding its real estate, about one million, seven hundred thousand dollars. I will ask you to state whether or not in your opinion that property is worth the amount that it has cost, at the present time?

A. I think it is worth every dollar there stated.

Q. I will ask you to state whether or not it could be reproduced or duplicated for a less amount of money?

A. I do not think it could. I am quite confident that it could not.

Q. Coming down to the question of rates or charges for service, upon what basis or theory are telephone rates for exchange service, based?

A. They are based upon the theory of offering facilities to the entire community, with reference to the cost to the
1284 company, and with reference to the use and value of the service to the customers; these, so far as my study and observations go, are the leading considerations.

Q. Now what policy was persued by you and your associates with reference to rates in the Louisville exchange from June, 1899, and in what respect if any did that policy differ from the policy pursued by the former owners and managers of that property?

A. The former owners had two rates. They had one business rate, that is to say, they had a rate for private or direct telephones, and a rate for private or direct residence purposes. We endeavored to make a variety of rates which would meet the requirements and wishes of every phase of the community. Our effort was to put the service within reach of everyone in the community. We adopted schedules of rates that were not only a modification of the direct or private business service and the private or direct residence service, but public stations, party-line stations, measured service, and, in the greatest variety, and extending this service not only to the suburbs but well out into the country around Louisville, extending toll line facilities in every direction out of Louisville, so as to offer that community the very greatest sort of value and expansiveness in the telephone service, we extended it to farmers, market
1285 gardeners, dairymen, summer residences, etc., and we endeavored to reach every class and kind of business and individual.

Q. Now just here, it has been stated that it is not practicable to separate the cost of the exchange inside and outside of the corporate limits of the City of Louisville. Is that in your opinion true or not?

A. It would be true.

Q. Now is it practicable to separate the expenses inside and outside of the city of Louisville?

A. Absolutely not.

Q. Now, if such a thing should be done, would the expense per subscriber or the net profit per subscriber inside of the corporate limits be greater than the net profit per subscriber outside of the corporate limits, taking into consideration the construction account inside and outside of the city limits?

A. Well, in all likelihood, the profit would be larger on the subscriber inside.

Q. Why is that?

A. The amount of wire that would be used to supply the service to the one inside would be shorter on an average.

Q. Now, what about the conditions of building on the inside and on the outside of the corporate limits?

A. The conditions of building would be heavier and greater inside, very much greater than outside.

1286 Q. In your opinion is it fair to take the total exchange and figure the construction account and expenses and receipts, disregarding the corporate limits, in making the statement of the exchange?

A. It is, I think that is the proper way to make it.

Q. Is that the only practical basis or method of doing it?

A. That is the only way I know of.

Q. Now it has been testified, or rather stated, by Mr. E. W. Farnham representing the Mutual Audit Co., that the complainant

company conducts its toll line business and exchange business as a separate and distinct business. Is this true or not?

A. No sir, it is not. It keeps a separate and distinct account of its income from each source, that is, the receipts that come directly from those two sources, as it does of its income from its various customers, showing that received from each subscriber.

Q. What about the construction account?

A. It cannot separate its expense, but the construction account of the two is kept separate.

Q. What bearing has the toll line service on the exchange service?

A. It has a very direct and beneficial effect on the exchange, by reason of the fact that the customer has right at his hand,
1287 facilities for putting him in contact with people at very remote distances. He can communicate with the least loss of time to himself. In other words it is a very great convenience which he has right at his elbow, and which adds very considerably to his estimate and opinion of his exchange service.

Q. Taking the city of Louisville, does each and every subscriber for exchange service in the City of Louisville have the right and privilege of sending and receiving toll line messages from other individual stations?

A. Yes, with the possible exception of some who decline to pay their messages or something of that sort, but the rule is that that facility is open alike to everybody.

Q. Now I will ask you to state whether or not that is included in the price that is charged the subscriber for exchange service?

A. Yes, that is taken into consideration when the rates for service are made up. In other words, an exchange with fine toll line connections would make a more valuable useful and extensive service to a customer, and therefore it would command a higher price than an exchange without such facilities.

Q. Now are the expenses of giving that kind of an exchange service greater than they would be without these additional facilities?

A. They are.

1288 Q. Do the exchange subscribers have the privilege of receiving and sending toll line messages from their individual stations at the same rate they would pay if they should go to the central office and send a toll message or receive a toll message?

A. Yes, just the same.

Q. Now the expenses, you say, of giving that kind of service is greater. Will you please explain in what respect, taking first the central office apparatus?

A. The central office apparatus has to be connected with the toll line facilities and employés to attend thereto, and operators in answering calls therefor, all of which adds to the expense of an exchange operated under those conditions.

Q. In figuring the proportion of the toll line earnings to be allowed the exchange for handling the toll line messages, it has

been stated that fifteen per cent of the gross tolls are allowed the exchange. Do you regard that as reasonable and fair?

A. I do, I think that is equitable and fair.

Q. I will ask you to state how extensively is that percentage recognized as being equitable and fair throughout the United States?

A. There are some exceptions to it; some places it is some-
1289 what higher, and some places it is lower, but that is the practice, wellnigh universally.

Q. Is that percentage the amount that is received and charged by the complainant company from its various connecting companies?

A. That is the rule it follows in dealing with its connections.

Q. How many companies would you say this compony connects with on such a basis at that, throughout its territory?

A. It must be a very large number, Mr. Granbery. I am guessing, of course, but it must be anywhere between eight hundred and a thousand, maybe something more than that.

Q. Would it be practicable or feasible to separate accurately the expense occasioned in Louisville by the toll lines and the expense occasioned by the exchange with respect to toll line business, receiving and sending toll line business?

A. No sir that could not be done, except by incurring such expense as would likely eat up the whole of the toll line business.

Q. However accurately this might be separated, state whether or not there would still be left any element of judgment and opinion as to where certain items of expense ought to be placed, whether on the toll line business or the exchange business?

1290 A. Yes, there would still be left an element of approximation and estimate. To say that it could be done accurately, it could not be done.

Q. Is this fifteen per cent basis the one arrived at through experience and study of the business throughout the country?

A. Yes, that is the general practice.

Q. Do you know whether or not experts have undertaken to separate these expenses so as to get the exact amount that should be awarded to the toll lines and to the exchanges?

A. I have heard that such efforts have been made without success and my own knowledge of the business causes me to believe it could not be done. I have studied on it a great deal and discussed it a great deal, and have never seen how it could be at all practicable.

Q. Coming now to the question of reconstruction. Is that an expense of conducting the business?

A. Most assuredly so.

Q. Is there any difference so far as the question of expense is concerned, between reconstruction and current repair?

A. No, they are both expense.

Q. In reconstructing the property, are you adding anything to the original cost of the property?

A. Not unless you actually improve the quality of the structure.

Q. Well, in replacing parts of the plant that have either become antiquated or decayed, and replacing that with a like structure, are you adding anything to the cost of the plant?

1291

A. No sir, you are simply maintaining it and keeping it up.

Q. How is this reconstruction of a telephone plant taken care of practically?

A. The current breaks, those that occur from day to day and from time to time, are taken care of and called maintenance.

Q. What do you call that?

A. I say, we call that maintenance. When it has to be taken down in quantities or sections, and renewed, we call that reconstruction. It might be said that maintenance represents retail repairs, and reconstruction represents wholesale repairs or renewals.

Q. Now it appears that parts of the Louisville exchange have been reconstructed year by year. Can all of the necessary reconstruction or rather all the actual decay and depreciation of the plant be taken care of year by year?

A. No sir.

Q. How is that done?

A. Not except by providing a reserve fund for future contingencies. That is to say, it would be folly to undertake to go out and actually do the work on the property every year, which would be latent and unnotic-able, but the proper way would be to retain out of the earnings a sufficient amount to take care of the future renewals in a large way, and in a wholesale manner, contingencies that would arise and occur over a series of years and what would not occur daily or even yearly.

1292

Q. What per cent of the original cost of a telephone exchange in the City of Louisville is necessary to be set aside out of the earnings, in order to provide for the renewal of the property from time to time as the same decays or becomes worn out or out of date?

A. It will not be found very far from ten per cent. It might be something under that and it might be something more, but between seven and a half per cent and ten per cent, is, in all likelihood, the amount that will be found necessary, and these estimates will necessarily vary, and will be varied, from time to time as experience is gained.

Q. That is your best judgment at the present time?

A. Yes sir.

Q. And as the result of twenty-five years' experience in the business?

A. Yes sir as the result of twenty-five years' experience and study, which I have made, that is my best judgment, somewhere between seven and a half per cent to ten per cent. It would not be safe to go under seven and a half per cent, and I don't think necessary to go over ten per cent.

Q. Now, does the character of construction vary the per cent necessary to be set aside for depreciation?

1293

A. Yes. I am basing that, though, on a first class construction.

Q. The more solid and permanent the construction is, the less would be the depreciation, is that correct?

Objected to by defendant, because leading and suggestive.

A. That would have some bearing, but in addition to that, the permanent condition of the city's growth in which an exchange is located has a very great bearing on it; the character of streets, their width and construction, all have a bearing on it. In other words if a city has to do a great deal of shifting of its public constructions, then the matter of maintaining a telephone plant in conformity therewith, becomes necessary.

Q. Is there any very great difference between the amount of depreciation necessary to maintain and care for the reconstruction of a first-class, well-constructed plant, as compared with its cost, and that of an inferiorly built plant, costing much less?

A. The inferior plant would, of course, cost more money to keep it up than a substantial one.

Q. The per cent of its capital account would be greater than the per cent of the capital account of the better constructed plant. Is that correct?

A. Yes sir.

1294 A. *Yes sir.*

Q. Am I to understand that this question of per cent of the actual cost of plant necessary for depreciation, depends upon the character of the construction, and the local conditions to be encountered?

A. Yes sir, that is true.

Q. It has been stated by the accountants in this case, that the net reduction in the gross exchange receipts in Louisville under the rates prescribed in the ordinance involved in the controversy, would amount to $49,000 per annum, and that the expenses would be reduced about three thousand dollars, in other words, four and one-half per cent paid for the use of the instruments and other things in connection with the contract with the American Telephone and Telegraph Co., would reduce the net loss by four and one half per cent on the receipts. I will ask you to state whether or not the expenses of conducting the exchange and giving that service would decrease correspondingly at all?

A. I don't think it would decrease any. I do not see where there would be any reduction in the total expenses.

Q. Now if the increase in subscribers should be had on the reduced rates, what would be the result to the complainant company?

A. Well, if you increase your subscribers you would be compelled to increase your facilities, and your capital account.

1295 You would be compelled to increase your operating force to take care of the greater number of calls that would go over the system; you would have to encounter certainly a shifting of customers from one class of rates to another, which expense you would be certain to meet but you do not know what it would be. The growth that would take place in that, you could not tell whether it would be on the maximum or the minimum, or in what direction

in the city it would be found; it would all be a matter of speculation, so that to forecast the future on that, is a matter of speculation and doubt.

Q. Has anyone without experience in the telephone business the right to hazard an opinion upon this subject?

A. I cannot for the life of me see that it would be one that would be entitled to consideration. A guessing match is one in which all can take part, but that is what it would be, if uninformed or inexperienced people were to pretend or attempt to forecast results of that nature.

Q. What experience have you as the chief executive of the company, had in the past ten years in the City of Louisville on reducing the rates?

A. We have tried and experimented with every conceivable class and kind of rates, and every theory of rating that those that were best qualified to talk on the subject, have suggested, we have tried,
and our experience there was that every one of them proved
1296 disastrous, disappointing and a failure. In other words, we
had poorer results—until this last series of rates which we inaugurated some two years ago—they show a betterment of conditions, the others all showed worse, so that it was not a matter of theory, but it has been a matter of actual experience with us in the City of Louisville.

Q. Now I will ask you to state what in your opinion will be the result if the rates prescribed in this ordinance shall be put into effect in Louisville, basing that opinion upon actual experience you have had in operating that particular plant for the past ten years?

A. My opinion is that we would have to provide a considerable additional capital outlay; that we would get little or no additional gross revenue, certainly we would not get more than would be offset by the additional expense. My deliberate opinion is, it would be a very losing and disastrous experiment.

Q. Would it be disastrous to the users of the service in Louisville, as well as the company?

A. Everything that affects the company's earnings has a bearing upon the customers. That is to say, it has a bearing upon the character of service it can give to the customers, and that, after all, is what I assume the people want; they are not out simply wanting telephone bargains, but they are looking for telephone service. They, quite naturally, want that service at the best bargain at which it can be had, but nevertheless as I say they are not out looking for
telephone bargains, but as a first consideration they are look-
1297 ing for telephone service, and the earnings bear an important
part on that. In other words, the ability of the company to keep up and maintain and provide service is of the very greatest importance to its customers and when its revenues are depleted, it necessarily would have an effect upon its ability to provide this service.

Q. How is a telephone property successfully financed?

A. By an increase, from time to time, of its capital stock, has been found the only practical way. Where bond issues have been resorted

to, one issue clouds and interferes with subsequent issues, but where additional shares of stock are made and they all stand on the same basis, as they do stand on the same basis, the one issue does not take precedence over or destroy the standing of the next issue, but on the contrary, they rather have a tendency to aid each other, and hence that has been found to be the most practicable and satisfactory, and I may say, the only practical way to finance a telephone system.

Q. Is it necessary that a telephone plant or system either, continually increase its capital account or increase its construction account?

A. Yes, for the reason that it is necessary to meet the growth. The growth is continued and continuing; it is no let up, but on the contrary continues to grow and unless the company meets this growth, its usefulness becomes impaired or lessened and it at once is on the down-grade instead of the upgrade. It must go
1298 forward continuously, it must meet the public requirements and to do this, it must have continuously additional capital.

Q. Now, what effect does the earnings of the company have upon its ability to increase its capital account from time to time, to get this necessary fund for increasing its construction?

A. The whole question comes right there. Unless the company is on a profitable basis and is doing a business that is profitable, it has no credit and it is necessary for it to have credit. Therefore, in order to attract new capital, it must present sufficiently attractive profits to cause people to put their investments in the telephone business rather than in some other line of business, and, of course, unless it can show a profit in its business it cannot possibly influence or attract capital to it. That is the key to the whole financial problem.

Q. What per cent. of net profit is a telephone property entitled to make, in your opinion?

A. It ought to return an actual cash return on its investment of ten per cent. When the hazard and uncertainty of the business are concerned, ten per cent. on the money is not at all unreasonable, and fair, but in other words, it should pay that actual dividend to the stockholders or that rate of interest on the money that is provided to make the development.

1299 Q. What profit do business men in theCity of Louisville and in that community expect to make upon their actual capital employed in their business year by year?

A. I am quite sure they expect a return around that amount and in certain classes of business they expect more.

Q. What per cent. of profit do public service companies in Louisville expect to make on the actual money invested in the business?

A. I think they expect to make something like that or hope to do so.

Q. Is anything less unfair and unjust to those who have invested their money in the business?

A. I think it is.

Q. Is that the opinion held by business men, and men of affairs in the City of Louisville.

A. I think it is.

Q. Mr. Caldwell, it is stated in the answer to the bill in this case that the company has been extremely arbitrary and that its conduct in this respect led to the formation of another telephone company in the City of Louisville. I will ask you to state whether or not that is true?

A. I don't think that there is one word of truth in that, or any foundation for such a statement.

Q. What policy has the company pursued with respect to conducting its business in the City of Louisville from the time
1300 it commenced doing business there until the present time?

A. Its very first act, in modifying its schedule of rates, showed the consideration and desire it had for the public's patronage. Its attitude towards all its customers is that of the greatest consideration and respect; it keeps standing in its directories continuously a notice to the public, exactly contrary. The following notice stands in the printed directories of the City of Louisville and has been there continuously for years and speaks for itself, to-wit:

"This company sincerely desires to give the best service possible, and to this end will spare no expense, and will thankfully receive any suggestion calculated to give any more satisfactory results. We employ great numbers of people to keep up the system, and are prepared to attend to any needed repairs on the shortest notice, and if any are unduly delayed or neglected, it is the fault of someone who is drawing pay to attend to such matters, and if reported promptly will be quickly remedied.

Uniform courtesy and politeness is an imperative rule of this Company, and any infraction thereof will receive prompt attention if reported by letter or telephone to the general offices.—James E. Caldwell, President."

1301 The company sincerely desires, and at all times has desired, all the business it could profitably procure. It has realized that its attitude towards the public could be no different from that of commercial people generally, which is a sincere desire to please its customers and have them in a friendly attitude, and if any one representing it has been arbitrary or pursued a course different from this, he has not reflected the policy of the company at all, but, on the contrary has violated its express rules and instructions. With reference to the building of the opposition exchange at Louisville it was a promoters' scheme pure and simple, with the hope and desire of making a profit in the building of it, in bringing out issues of securities to sell to uninformed people which they succeeded in a large measure in doing. That was the real basis and the reason for building the opposition exchange in that city.

Q. What do they say now with respect to the various rates which they themselves fixed on which to operate that plant?

A. The people who are now operating it state boldly that it was a mistake, that the rates are wholly insufficient and inadequate, and unless they can increase those rates that ruin is bound to follow.

Question and answer objected to by defendant, because hearsay.

A. Mr. Helm Bruce, as representing the Home Telephone Co. in Louisville, said in a public meeting in my presence that those were facts, in as emphatic and pronounced language as he
1302 could command, and stated that in his opinion anything less than an average rate of seven dollars per month would be insufficient to provide the class of service that was expected and desired in that city.

Same objection by defendant.

Q. I will ask you to state whether or not you adopt the allegations of the bill in this case as a whole, as a part of this your deposition?

A. I do.

Q. And I will ask you to state whether or not you especially adopt that part relating to a history of the controversy between this company and the Board of Trade of Louisville?

A. I do.

Q. I will ask you to state whether or not there was any effort whatever to mislead or deceive either the members of the Board of Trade or the Directors of the Board of Trade or the committee of business men appointed by the Board of Directors of the Board of trade to investigate this company's affairs in the City of Louisville.

A. There was not, absolutely, but on the contrary, every facility was affor-ed them, every question was answered truthfully and freely and every effort was made to familiarize and acquaint them with the true facts and to the very best of our ability, and in the very best of faith. We were dealing with men of the highest order and we dealt with them accordingly.

1303 Q. It has been developed in the auditor's deposition, on cross-examination, that this company paid the expense of the expert accountant employed by that Committee to make that investigation. Will you state the circumstances under which this bill was paid?

A. It was brought to my attention that the Board of Trade at Louisville—perhaps through its Secretary Mr. Buckner stating that that body was rather close pressed for funds, or rather, perhaps, had limited funds at its disposal, and that the payment of these expenses were somewhat of a hardship on it, and asked if we would not recognize that it would be a fair thing all around for us to reimburse them, which we did, and they rendered a bill in detail for their expenses and it was paid in the usual course of business.

Q. Was this before, or after, the report of the committee had been made?

A. This was some time afterwards.

Q. Was anything said about the payment of this bill or the expenses, prior to the report of the committee?

A. Not a word, it was not discussed or referred to.

Q. What was the character of the gentlemen composing this committee?

A. They were men of the very highest type in that community or any other. They were the foremost men of the city.

1304 Q. Did any of them have any interest in the complainant company?

A. Not the slightest.

Q. Have any of them to your knowledge, or so far as you have heard, ever complained that any fraud was practiced upon them or that they were misled in any way?

A. Not the slightest intimation have I heard from any of them of any such nature, but on the contrary in an investigation that was made by some of the same gentlemen and others of the Board of Trade perhaps a year and a half after that, reiterated and confirmed that report, or, rather, sustained it and gave it as their opinion that their findings were correct, and that certainly this company had lived up to the whole contract in good faith.

Q. I will ask you to state whether or not the company's affairs in the City of Louisville, since June 1899, have been honestly, prudently and skilfully and economically conducted?

A. They have, to the very best of our ability.

Q. Now, it is stated in the answer that the complainant company was not only not willing to have its affairs investigated by the city authorities prior to passing the rate ordinance, but that after consenting that the defendant might investigate its properties and examine is books and inspect its physical properties, that the

1305 company then declined to permit the city to do so. Is there any truth in that statement?

A. This company has at no time objected to impartial and competent people examining its affairs. It has never raised an objection thereto; it has never raised the slightest objection at any time to that class of examination, and has not offered any objection or impediment whatever to it.

Q. Did you authorize any representative of the company or any counsel of the company to offer full and free access to the records of the company for investigation, to any of the city authorities, prior to this rate ordinance being adopted?

A. Yes, they were instructed to allow them that at any time and there has never been the slightest objection to competent people and fair people making such examination at any time, by anyone that had any interest in it.

Q. Of what value is a comparison of telephone rates in different cities?

A. Merely as only one of the dozens of items that might be considered, is about all, an approximation.

Q. What are the differences of rates of the two companies giving service in Louisville?

A. On the same class of service, the one is very nearly double the other.

Q. What class of patrons would be affected by the reduc-

1306 tion in rates, to conform to the rates prescribed in the ordinance in controversy?

A. All of our patrons would be affected, but the large and heavy users would get the greatest benefit. That is to say, those who are now employing and use from us the highest and most expensive

class of service, and making the greatest use of that service, would get the greatest reduction. In other words, they would get a reduction of two dollars a month, whereas the small and unimportant user would get a reduction of fifty cents a month, or in other words, the biggest users gets four times the reduction of the other.

Q. Have any two rate ordinances passed by the City of Louisville in the past few years, had the same rates?

A. No, I think not; I think they have all differed.

Q. State whether or not it is true that the larger the number of subscribers to an exchange, the greater is the expense, per subscriber, of rendering the service?

A. That is true, and that it is true is abundantly attested by the fact that throughout the world, wherever telephone service is given, whether it be by the Bell interests in the United States or the opposition interests in the United States, or individuals in foreign countries or the Governments in foreign countries, they have one and all universally recognized the truth of that principle.

Q. I hand you a pamphlet which purports to answer the question why telephone companies charge more for service in large
1307 exchanges than in smaller exchanges, and I will ask you whether or not you have read that pamphlet and whether or not you agree with it?

A. I have read every word of it more than once and I do agree with every word printed in it. I think it sets forth the reasons very clearly and properly.

Q. Will you attach it as Exhibit No. 1 to your deposition?

A. I will, and do attach it as Exhibit No. 1 to my deposition.

Q. Do you recall how many rates ordinances the City of Louisville has adopted or proposed, in the last five years?

A. I do not recall the precise number but there have been a great many, and they have been numerous.

Q. What have been the reasons if you know, for these various ordinances?

A. I think that some of them, perhaps, were inspired by another telephone company there; I think that in the main however, they have grown out of the dissatisfaction which the community in Louisville has with regard to its telephone situation, for competition has never proved anything other than an irritating circumstance in the telephone business—I mean by that, it has proved irritating to the community for the popular or superficial opinion or idea is that you rent a telephone, that is merely the habit of thought, and is far from correct. What the individual and the community de-
1308 sires is telephone facilities and that is the facility to communicate with other individuals, and as far as possible, with every individual with whom he may have acquaintance or occasion to transact any business what-oever. Quite in the nature of things, that sort of a facility is blocked and impeded and hindered by two or more concerns attempting to do the same thing, for instead of promoting the growth of such a facility, they are really endeavoring to divide the communities into as many different camps or in as many different groups, so that to get a complete service, each indi-

vidual would have to equip himself with the facilities of each system, not only pay their respective rates, but be worried with the operations attending the use of more than one apparatus or machine, so to speak. Irrespective of the price, the irritation is great and continuous, by reason of the fact that a certain degree of friction is engen-ered when trying to get practical, daily results out of the telephone situation, but, when to this is added the necessary expense, which has to be in some form or other paid it produces great dissatisfaction, so that no telephone company or system is looked upon as agreeable and satisfying by people that are in such a situation and the various ordinances which have been passed and experimented with by the city authorities, have in a very large measure been the outgrowth of that state of affairs and an effort to try to cure the difficulty but the difficulty is inherent in the fact that there
1309 is competition in a business where competition is destructive of the service instead of beneficial.

Q. Are the expenses greater or less under competition in telephone service, than without competition?

A. The expenses are greater, for the business does not flow in a normal way. The community, telephonically speaking, does not act in a normal way.

Q. And this produces abnormal expenses?

A. Yes sir, it does produce abnormal expenses and abnormal conditions.

Q. Private branch exchange service is one kind of service that is given in Louisville, is it?

A. Yes sir.

Q. The private branch exchange rates in New Orleans were proven in the cross-examination of the auditor. How do those private branch exchange rates compare with rates for similar charges or rates in Louisville?

A. They are very much higher.

Q. You mean the rates in Louisville are lower than those — New Orleans?

A. Yes what I mean is that the rates in New Orleans are very much higher than those in Louisville for that same character of service.

Q. Mr. Caldwell, what effect would the adoption of the rates prescribed in this rate ordinance have upon the company's
1310 business in Louisville?

A. I think it would be very disastrous.

Q. Would it have any effect other than the mere reduction of the company's revenues at that point?

A. Yes, it would necessarily have an effect on its credit and therefore have an effect upon its ability to meet its requirements generally. It would certainly affect its ability to raise new money or new capital.

Q. What about the various little exchanges built in Jefferson County outside of the corporate limits of the City of Louisville. How did they come to be built?

A. They would never have been built but for the benefit and ad-

vantage it was thought would accrue to the Louisville exchange, they are satellites pure and simple, of Louisville.

Q. State whether or not it was in pursuance of the policy of extension and saturation with reference to the Louisville exchange, that these, or any of these, little exchanges were constructed?

A. It was entirely in pursuance of that policy.

Q. What about the free service to Jeffersonville and New Albany, from Louisville. Is that given to the Louisville subscribers without any charge?

A. Yes, they get free service to the Jeffersonville subscribers and New Albany exchange subscribers, for which they paid a toll charge at the time we purchased the Ohio Valley Company. In
1311 other words, our predecessor, the Ohio Valley Company made a toll charge for every message that went to those respective points, which service we give free to Louisville subscribers.

Q. What would you say as to the value of the service given to the Louisville patrons now as compared to the service given to them when this purchase was made in June 1899?

A. There is no reasonable comparison to make. At that time they were confined very largely to the corporate limits of the City of Louisville, they had access to certainly not more than three thousand subscribers, and as I say, they were practically inside of the corporation, where they could be reached otherwise with some convenience, whereas the exchange now, not only covers all of Louisville, but Jefferson County, and this free service extends into Indiana, and the toll facilities added, and the saturation added, so that they have facilities which were not in existence at that time at all, and it renders what they get more valuable. In other words, for their subscription now, they get far in excess of what they received at that time. It is no exaggeration to say it is equivalent to four times as valuable.

Q. Now, how do the prices they pay now compare with the prices they paid in June 1899 and prior thereto?

A. With the exception of one rate of $6.50 per month for three years' contract, everything else is less.

1312 Q. The toll lines radiating from Louisville, do they extend in any direction from Louisville beyond the exchange area before getting into the exchange radius of another exchange?

A. I do not know that any of them do. It is practically one exchange meeting the other; lines connecting the subscribers to the Louisville exchange, practically reach and lap over on the pole routes carrying the subscribers to the exchanges in the nearby towns; the whole section is literally interlaced.

Q. Mr. Caldwell, counsel for the City, in the cross-examination of the auditor has asked him to file a statement of the expenses of advertisements in the Louisville papers from some time early in the present year to September 14th, and asked to what account those expenses were charged. Do you know anything about those advertisements?

A. I do.

Q. At whose instance and direction were they inserted in the newspapers?

A. Mine.

Q. And for what reason?

A. In order to keep the public properly informed with regard to controversies and matters pertaining to the business, that they might have some knowledge of the facilities, and that they might have some explanation of statements and charges that were
1313 made against the company. In other words to keep its patrons and the public generally, properly informed so that the truth would be known, and that the company would not be put in a prejudiced and harmful attitude and that its customers would not be led to believe that they were improperly treated or ungenerously or unfairly treated, for, quite naturally if they had conceived such an opinion, it would have influenced their patronage and action towards us, very materially.

Q. Were there any peculiar conditions in Louisville which in your judgment necessitated these advertisements?

A. There were peculiar conditions which rendered it very necessary and very desirable.

Q. Please state them?

A. The city authorities in their declarations, made statements with regard to our rates and earnings, calculated to make it appear that they were unreasonable and unfair, and the further effort was made to make it appear that we had practiced a fraud and imposition upon the Board of Trade of Louisville, and that that body had repudiated us in a manner to indicate we had practiced a gross fraud and deception upon them. As none of these things were true, we thought it was advisable and necessary to counteract any such impression, and the only way we could do this was by means of advertisements through the newspapers as we had no newspapers of our own, so we adopted that means of putting the facts be-
1314 fore the public, and it was a necessary protection of the business and a necessary expense to incur and it should properly be charged to the expense of conducting the business.

Q. Is there anything further you desire to state in regard to any of the matters in controversy?

A. No sir there is nothing that occurs to me that I have not stated.

Cross-examination.

By Mr. BLAKEY, for Defendant:

Q. Mr. Caldwell, is the property on Jefferson Street in Louisville, occupied by your main exchange more valuable or less valuable now than it was when you purchased it?

A. Well, I do not know Mr. Blakey, I am sure. I suppose there has been no material change made in it.

Q. What was the inducement that led you to pay one hundred thousand dollars for that property?

A. Well, it was considered worth the money and that was as low a price as we could get on it.

Q. Was that one hundred thousand dollars which you agreed to pay and which you say you did pay for that building, in any

manner a part of the consideration for the stock which you purchased from Mr. Clark and Mr. Speed?

A. They were not put together at all; the prices were made separate and distinct, and in all likelihood the two hung
1315 together somewhat. The house was needed for the business, and how they regarded it, I do not know, but I felt that it was very necessary to have that property.

Q. Do you remember how much you paid for their stock?

A. I think I paid Mr. Clark and Mr. Speed a dollar forty one, and agreed to pay to any of the balance, a dollar forty.

Q. Do you remember how much stock they had?

A. No, I do not remember what it was exactly, but it was approximately a control in the company. If not an actual control, it was very close to it.

Q. Isn't it a fact that the one hundred thousand dollars paid them for this real estate and building was in excess of the value of the real estate and was paid to them in order to induce them to sell their stock at a dollar forty one?

A. No sir that was not the case, for the price on the stock was made before the price on the building.

Q. Was that considered at all between you and Mr. Speed and Mr. Clark?

A. How do you mean.

Q. Was it ever discussed between you that you would pay a price of one hundred thousand dollars for the building on the condition they would put the price on the stock at a dollar forty one?

A. No. They made the price, as I say on the stock, before the price on the building was mentioned, and after the price was made on the stock, we then took up the question of purchasing the building and the price was made on that.

1316 Q. How much did they first ask for their stocks?

A. I think the negotiations started at perhaps a dollar fifty or a dollar sixty.

Q. Now when you became president of the Ohio Valley Telephone Company, did you draw a salary as president of the Ohio Valley Company?

A. Yes sir, I did.

Q. Did you also draw a salary as president of the Cumberland Company?

A. Yes sir, I did.

Q. Was your salary as president of the Cumberland Telephone and Telegraph Company decreased after you became president of the Ohio Valley Company?

A. No sir, it was not.

Q. Now I believe you have said that you have never derived any profit or benefit that any other stockholder in the Cumberland Company has not derived on account of any endorsements or loaning your name to the Cumberland Company. Is that correct?

A. Yes sir, that is correct.

Q. Now in speaking of this trade district which you say is essential in order to round out your company, I will ask you if it is not true

that the City of St. Louis is more intimately connected with the district from St. Louis to New Orleans, than is Louisville?

A. No sir, that is not true.

1317 Q. Isn't it a fact that more wholesale houses and more business is done by merchants and manufacturers all throughout your territory, or throughout the territory wherein your company extends, with St. Louis than there is with Louisville?

A. No sir that is not true; nothing approaching it.

Q. Is there any business at all to speak of between Nashville and Louisville?

A. Yes, a great deal. Louisville and Middle Tennessee have always had quite a business with each other, and do today.

Q. Does your company enter St. Louis at all?

A. No sir.

Q. Does your company enter Atlanta, Ga.?

A. No sir, it does not.

Q. Is not Atlanta more intimately associated with this district you have mentioned, than Louisville?

A. No sir it is not.

Q. Now, coming to the question of the theory on which your rates are established, I want to ask you if you establish the rates which your company charges?

A. I have more to do with it than anybody else and have a very considerable control and latitude in that respect.

Q. Now will you explain the theory on which you establish a rate of eight dollars for a direct business telephone and four dollars, or four dollars and a half for direct residence telephone?

1318 A. The elements that enter into that condition, are use and value. The character of the message which are handled over the lines of the business man's telephone are of very much greater importance and there are a great many more of them than those over the residence line. The business man uses his line to sell goods to the residence subscriber, and thereby makes the residence customer, if not directly, indirectly, pay a part of his telephone expense, so that every element of justice and fair dealing requires that he pay a very much higher rate than the residence customer and the fact is that that practice is universal. There has never been a time that I recall, since 1885, when there was not a material difference made between the business and residence subscribers by everybody that had anything to do with the making of rates.

Q. How about the cost of operating the various classes of telephones. What part does that play, if any?

A. There is a larger cost in operating the business line than the residence line, but it is in all likelihood a larger cost of construction, to equip a residence telephone than that of a business house, by reason of the fact that it requires a longer line on an average to reach the residence than it does to reach the business house, which is usually there in the congested center of the city proximate to the exchange, but the daily use that is made of the system by the

1319 business man is far in excess of that made by the residence.

Q. Is the additional cost of operating a business line

affected in any manner except in so far as it requires more operators in the exchange to take care of the calls?

A. Yes, the battery cost would be involved and the wear and tear on the apparatus would be greater. In other words, it is, after all, the use of the system that a man pays for and desires to use, and that is what he does use and hence the use of it is not only the value, but is the expense occasioned.

Q. The apparatus installed in the exchange to which the subscriber's telephone is attached, and the apparatus in the subscriber's office are the only parts of the system that would be affected by this additional cost, are they not?

A. No sir.

Q. What else?

A. You mean the additional expense?

Q. Yes.

A. As I said when one uses his telephone he puts in motion the whole interior apparatus. You may say, he puts in motion the whole telephone machine; it is there subject to his use and he uses it. In the use of that, the initial start is at his own telephone, but in order to meet his wishes and requirements, as I say, the whole machine is more or less brought into requisition and hence the greater use that is made of the telephone, the greater use is made of the whole extensive apparatus.

1320 Q. Is the battery or electric expense connected with the Louisville exchange a matter of small cost, comparatively or a matter of considerable cost?

A. It is one of the items of expense. It is not an overshadowing one, but it is a substantial one.

Q. What would you say that battery expense amounted to per month in Louisville?

A. It would be a matter of impossibility for me to hazard an opinion on it, Mr. Blakey.

Q. Is there anybody connected with your company that knows this fact?

A. I don't know whether there is or not, anybody that has worked that out. I have never seen any such figures. I do know that the battery outfit is a substantial and expensive arrangement and it requires constant supplying and that it enters into the expense as a material and substantial item.

Q. Now, you say in establishing rates, one of the considerations is also the use to the customer. Do you mean by that, that the customer should pay more according to the number of subscribers with whom he is connected?

A. Yes, I mean to say he ought to do it as a matter of justice, and I mean to say further, it is the only thing that influences him, that he is influenced entirely by the use and value to him; the cost to us does not influence him. The use and value only influence him and it should influence him and it should influence us, for it is just and right.

1321 Q. Is there any more cost connected with maintaining the pole line and the wire to a business house than to a residence?

A. I expect there is more the other way, by reason of the fact that it is, on the average, longer. That is to say, I expect there is more expense of that nature connected with the residence telephone than to the business house, for, on an average, the lines to the residences are longer than the lines to the business houses.

Q. How much would you say it costs in the City of Louisville per year to operate a direct business line and how much to operate a direct residence line?

A. Well, sir, I do not know.

Q. What would be your idea about the difference of the two?

A. The operation?

Q. The entire expense?

A. I should think in the matter of expense there would be a difference—I am just guessing at this as an offhand opinion,—I suppose it would be anywhere from ten to twenty per cent, maybe more.

Q. Ten to twenty per cent for business than for residence?

A. Yes, but that might be altogether too high when you get to the actual expenses of it, but I think that is perhaps correct. I feel that it is so.

Q. Then, the class of service and not the cost of operating or furnishing the service is the material point in determining
1322 rates?

A. It is one of the material points and a very material point.

Q. Is it the most material point?

A. I expect it is the most material point for the reason forces have played, and do play on this rate making that are entirely outside of the law making authorities, for, as I have said before, the customer only considers the use and value to him, and that cannot be overloked when it comes to supplying it.

Q. Then, would you say that the $3.00 party line rate which you furnish in Louisville for residences was a rate less than the cost of furnishing the service?

A. I don't know that we are putting out any rate that is less than cost of the service; it is not our intention to do so. We are not able to state that definitely, but it is not our intention, and we do not think we are doing so.

Q. If it costs only twenty per cent more to operate a business telephone than it does to operate a residence telephone and the three dollar rate is a profitable rate, then, the operating expense of the business rate would be at a profit of about five dollars per month, would it not?

A. Well, perhaps some of them might be, but I have not made any such calculation and I do not know. I am simply taking it as a hypothetical matter, but even if it were so, the parties that are using the service are still getting such a phenomenal bar-
1323 gain out of it, that it is no sort of injustice as respects the various customers, for, as I have shown before, that is, by applying actual results, they charge it on to their goods as a part of their cost, and thereby charge it up to these residence customers

when they sell them goods; so, these residence customers actually pay for part of their service. The business man does not stand that expense, for as I say, he charges it up to his customer as an expense of doing business, and requires the consumer to pay it, whereas the residence customer would not do such a thing, he not only does not do it, but has no power or opportunity to do it.

Q. Now, what class of service did you install when you took charge of the Ohio Valley Company which the Ohio Valley Company did not have?

A. We installed party-line service of various kinds and measured service, public stations, private branch exchanges, and a great variety of services which they did not have.

Q. Didn't the Ohio Valley Telephone Company have private branch exchanges?

A. I do not recall that they did, or if they had any, it was so insignificant that it did not leave any impression on my mind.

Q. Didn't they have party lines.

A. No sir they did not.

Q. No party lines?

A. None that I recall, none in the city.

1324 Q. How long did you maintain the measured service?

A. We maintained the measured service down to the time competition sprang up.

Q. That was in 1901, wasn't it?

A. Whenever it was, but you cannot maintain a measured service against an unlimited service, where a competitor is furnishing unlimited service at a flat rate, it is impossible to maintain and put out and make practical, what is known as a measured service. That is to say, a measured service is where they pay for each message that is sent. In other words, the flat rate competition drives out and destroys a per message rate.

Q. Do you know for what capacity your exchange is now installed or equipped in Louisville?

A. No sir I do not, but I should say that it ought to be somewhere between twenty five and thirty per cent more than its present subscribers.

Q. Do you think it is that much?

A. I think so. I think it ought to be. I should hope to find it that way.

Q. You say it costs more per subscriber to operate a telephone with ten thousand subscribers than it does with five thousand subscribers. How much per subscriber?

A. I cannot tell you that accurately. It is a matter of approximation. Those fine points are too fine to be worked out but

1325 there is a material and a substantial difference between them.

Q. You have exchanges in your system which have grown from five thousand to ten thousand subscribers, haven't you?

A. Yes.

Q. Have you investigated the question to ascertain how much additional cost there was when the growth had reached ten thousand?

A. No sir, because there have been so many different conditions

that have set up in the interum, that it would make such a calculation a mere matter of entertainment.

Q. Who wrote the article which you filed and made a part of your deposition on this subject?

A. I have not the slightest idea sir. I simply ran across it as a printed article, and I have not the slightest idea from whom it emanated.

Q. Did you write it yourself?

A. I did not.

Q. Did anybody connected with your company?

A. No one connected with my company and no one of my acquaintance or know.

Q. You don't know whether any one of your company or connected with your company, wrote it or not?

A. I know they did not.

Q. How do you know that?

A. Because if they had, I should have been certain to have
1326 known of it.

Q. Would you have been certain to have known it if Mr. Granbery wrote it?

A. I most certainly would have known it?

Q. What if he didn't tell you?

A. I would have in any event have recognized his style in it, for I am familiar with his manner of writing, and the information he had on that subject.

Q. At any rate you don't know who wrote it?

A. I do not, but I know it is an ably written document and covers the facts splendidly. I should have liked to have been the author of it; I should have taken some pride in being able to get out such an article or to have known we had someone in our employ who could have written it.

Q. Now, where does the increase in the cost of operating a telephone begin, with reference to the increase in subscribers?

A. Well, sir, it begins right at the instrument, the minute he takes it off the hook. In other words, the first time he puts his hand on the thing, it starts right there and never ends.

Q. You mean if your exchange is equipped with five thousand subscribers, and it costs two dollars and a half per subscriber to operate that telephone and system, that if you got five thousand and one, it would cost more than two dollars and a half?

1327 A. As I say, it starts from that time and starts right at the time the man puts his hand on the telephone, for the reason, apparent and directly and easily observable, that the use which the subscribers make of the exchange increases as the exchange grows, and it is the use that is made of this great machine that makes the expense, the using it, the wearing of it and the service that is rendered in every way.

Q. Now, if you had one hundred operators, an exchange equipped for five thousand subscribers and they could operate for one more?

A. Yes, they might couple one more, but it is like loading an elephant or a wagon, there is a time when it can not take any more,

and something else has to be provided, and just where that point is, it is judgment and arithmetic that determines it, for this matter of operating is a matter of mathematics now and is not a hazard or guess.

Q. Can you tell when it begins?

A. It begins when an operator gets more calls before her than her capacity. In other words an operator is gauged by the number of calls she can answer per hour, and when those calls increase beyond that that necessitates an increase of help and facilities, increase in operators and increase in apparatus necessary for the operator to perform the service.

Q. Well, if each operator could handle a hundred lines, and every time you added another hundred lines you had to add
1328 another operator, there would be no additional cost per subscriber in that respect?

A. If that were the case, but it is not operated that way. An operator handling a hundred lines, a certain number of messages coming over them, when you add a hundred more lines instead of there coming say a thousand messages over those lines, there come twelve hundred messages or fifteen hundred messages, then the number of lines before that operator has to be cut down, and she has to be relieved, because those respective lines are used so much more heavily than before, and their use is rendered heavier by reason of the fact that other lines have come in and are operating and using these lines, and they have access to, and do use these added lines.

Q. Do you know how many operators you had when you took over the Ohio Valley Company?

A. No sir, I do not.

Q. Can you make an approximate estimate of it?

A. It would be a guess and I do not carry those things in my mind; they are matters of record and I do not pretend to burden myself with matters that are of record.

Q. Can you have that ascertained?

A. Yes, I can give it to you correctly and will do so with pleasure.

Q. Will you also ascertain how many operators there were at the beginning of the year 1904.

1329 A. Yes, I will do so with pleasure.

Q. Will you also ascertain how many operators there were on the first of January, 1909?

A. Yes sir.

Q. And the first of January, 1907?

A. Yes sir.

Q. And the first of January, 1908?

A. Yes sir.

Q. Now in the business say of an electric light company, I believe it is conceded that the more business that is done at the same rate, the more net profit there is. Do you know whether that is true?

A. I think it is so considered. I think the usual rule of wholesale principle applies in electric lighting, but it does not apply in telephony.

Q. Will that wholesale principle which applies in electric lighting, apply to the item of maintaining the property of a telephone company?

A. I don't know just how that might be; it might and it might not. The difference in the use of the service is quite different, and the carrying of a current along a wire does not seem to produce any wear and tear on it, whereas the manipulation of the apparatus, as in the telephone company, does produce additional expense and additional wear, so that in the case of telephones, it would be different and greater.

1330 Q. So far as the employés who are engaged in keeping the property in a workable condition, would you say the wholesale proposition about which we have been talking, would apply?

A. In so far as those engaged in maintaining the property outside, that is, the poles and wires and cables, the individual lines, that is to say the number of messages carried over an individual wire outside, that wire would not be affected by the number of messages going over it, whether it was few or many, but the apparatus at each end of that wire and all the interior connections at both of the termini of it would be affected, and they constitute a very large part of the value.

Q. Now as to the officers and general employés around the office, such as general manager and cashier and clerks?

A. There would be a great many of those overhead charges that would not be affected necessarily and apparently.

Q. And I believe you said you had no way of telling how much it costs to operate a telephone in the City of Louisville?

A. I intended to say, that I do not know what it would cost to operate the respective classes of service offered to patrons in the City of Louisville, but we do know what it costs us to operate the exchange as a whole.

Q. You say it costs from ten to twenty per cent more to operate business than residence telephones——

A. I gave that as my opinion, that I thought it would cost something like that more, to operate a business telephone than

1331 a residence telephone. I stated that as an offhand opinion, and so reiterate it.

Q. But you don't know how much it costs to operate a residence telephone?

A. As an actual fact, I do not know what it actually costs to operate the various classes we give in the City of Louisville or any other city where we do business.

Q. Is there any way to determine how much are the expenses for operating a residence telephone in the City of Louisville including not only operating expenses, but general expenses and maintenance?

A. I don't think there is any practical way to tell the expense of operating any class of residence service or any class of business service in the City of Louisville. They are all hung together in one mass and we can only tell what it costs as a whole.

Q. Is there any distinction between operating a party line residence telephone and a direct residence telephone?

A. Yes, I think there is.

Q. What distinction is there and what causes it?

A. The party line is where two or more parties are using the same apparatus or a part of the same apparatus, and their calls are, on an average, less or fewer than those who operate a private line, so that there is some difference there.

Q. Is there any difference in so far as the direct cost of
1332 operating, eliminating the question of maintenance?

A. The two customers would necessarily, as they are using a greater portion of the same wire, would contribute to its maintenance, whereas the one holding the private wire would have to provide the maintenance.

Q. I say, eliminating the question of maintenance and dealing solely with the expense which you place under the head of operating expense, would there be any material distinction between the cost of operating the direct residence telephone and the party line residence telephone?

A. Yes, I think there is a difference in that.

Q. Where would that come in?

A. Because the subscriber having the party line does not use it on an average as much as the one having the private or direct line.

Q. That would be the only distinction?

A. That would be the main distinction.

Q. What other distinction would there be?

A. As I said before as in the case of the business telephone and the residence telephone, the same principle would apply there, that is to say, the expense runs right on through, by reason of the greater use made of the one than of the other.

Q. Well, what would you say about the percentage of increased cost in so far as party line residence telephone and direct line business telephone is concerned?

1333 A. Oh, along about in the same increased proportion that the other is. That is to say if it was something like twenty per cent on the other, there would be an additional increase as between the party line and the direct business line.

Q. Now, you spoke of the subscribers in Louisville having exchange service to the New Albany exchange, free of charge. Have the New Albany subscribers access to the Louisville exchange free of charge?

A. Not unless they pay the Louisville rates. Those who do not pay the Louisville rates do not have that service free.

Q. When they do pay the Louisville rate, is any part of the receipts from that exchange credited to the Louisville exchange?

A. No, sir.

Q. Then the same is true about Jeffersonville?

A. Yes, that is true.

Q. Do you know how many subscribers in Jeffersonville and New Albany pay the Louisville rate?

A. I suppose there is a sum total of half a dozen or a dozen, perhaps.

Q. Will you ascertain that fact and place it in your deposition?

A. Yes, I will do so. (Ex. No. 3).

Q. Now you say all the exchanges in the neighborhood of Louisville were built up in order to help Louisville?

A. I do sir.

1334 Q. How about the exchanges out in the States, such as Shepardsville, Taylorsville, Winchester, Shelbyville, Carrollton, Eminence and places of that kind? Why were they installed?

A. Some of them would have been built and installed on their own business. That is to say, with the hypothesis that they would have paid of themselves. Shepardsville, however, was not one of those.

Q. Now, New Albany and Jeffersonville exchanges were built at the time you purchased the Louisville exchange?

A. Yes, they were in existence at that time; we did not build them, but simply enlarged and extended them.

Q. Does the company earn any money on these exchanges around Louisville, about which you have spoken?

A. On those little, small exchanges, it may earn a little something, but nothing to speak of.

Q. Where does the Cumberland Telephone and Telegraph Co. earn its money?

A. Well sir, it earns it out of something like a hundred and eighty or a hundred and ninety thousand subscribers and hundreds of toll customers scattered over a territory from the Ohio River to the Gulf of Mexico about a thousand miles in one direction and four hundred in another.

Q. Does it earn it primarily from the larger cities or from the little towns?

1335 A. It hopes it earns some from every one of those customers. If its service in serving any of them is at less than direct cost, it is because of some direct benefit it would contribute towards the balance of them that would make it undesirable to discontinue it, but the effort has been to try to make every tub stand on its own bottom, but quite in the nature of things we feel that the larger cities do, and ought, to provide a larger profit on the layout than the smaller ones, for the reason that the facilities are so much more valuable in every way to such communities than it can possibly be to the smaller ones, and for the further reason that these larger communities draw their prosperity and sustenance from these small communities, as I say, makes it in every reason and justice why they should pay a larger per cent than the smaller ones, and we make the effort to have it that way.

Q. Now what large places do you operate in outside of Louisville, Nashville, Memphis and New Orleans?

A. Evansville is another considerable city that comes in there, but they constitute the large cities we do business in.

Q. What is the rate you charge at Evansville for direct business line?

A. Five dollars a month.

Q. Do you know how many subscribers you have there?

A. Between five and six thousand.

1336 Q. Do you earn as much as eleven per cent on your Evansville exchange?

A. I do not know sir how that would be: I should hope we did.

Q. Do you earn as much as eleven per cent on your Nashville exchange?

A. I hope we do.

Q. Do you know whether you do or not?

A. No sir I don't know that as a fact.

Q. Do you earn as much as eleven per cent on your Memphis exchange?

A. The same thing, I hope we do but I do not know it to be a fact. I do not think we are earning as much at any of these places as we are entitled to earn.

Q. Now as a business proposition which is the more important; to set aside a fund to take care of depreciation or to pay dividends to the stockholders?

A. Well sir, in the importance of it, you may say they are equal. If you do not pay dividends to your stockholders, you are coming to a speedy end; and if you do not take care of your maintenance, you will come to the same end. So, I do not know that one is more important than the other. They have both got to be done if the business is to be perpetuated.

Q. If you do not take care of your maintenance your property ceases to exist?

1337 A. Yes, if you don't take care of your maintenance your property will go to ruin, and if you don't take care of your stockholders, they will go to ruin.

Q. Is it more important then to have your stockholders in a good humor or to have your property in good condition and intact?

A. One is just as important as the other; I consider both absolutely necessary.

Q. Is it more important to have the property intact and the stockholders dissatisfied than to have the stockholders satisfied and the property ruined?

A. As I said before, I think they are both important and absolutely necessary, one as necessary as the other.

Q. If you don't keep your property intact you cannot pay dividends?

A. No sir, and if you don't pay dividends you cannot meet your growth, and if you do not meet your growth, you will come to an end. So that from any view you want to take of it, from the viewpoint of the public necessity or interest or the viewpoint of the administration, one is just as necessary as the other and they are both indispensible.

Q. Well, if the company earns sufficient to take care of depreciation and the necessary new capital to put into new construction, but did not earn enough to do that, and also pay dividends, which

would you say would be the best policy to pursue, to take
1338 care of your depreciation and the new construction or pay dividends and take care of the new construction?

A. I would say in that sort of a condition, it would be necessary to set right about to do both or quit and do it speedily.

Q. Do you know what dividends the Louisville Street Railway Company earns on its stock?

A. No sir, I have not the slightest idea.

Q. I believe you said public service corporations usually earned ten per cent?

A. I thought I said they hoped to do it, and desired to do it. I intended to put it that way.

Q. Do you know that the Louisville Street Railway Company does not earn but four and one half per cent a year and its stock sells for more than a hundred dollars a share or more than par?

A. No sir.

Q. Do you know what the Louisville Gas Co. earns on its investment?

A. No sir I do not.

Q. On what basis do you make your statement then that these companies expected to earn or should earn ten per cent?

A. Because of the expressed opinion of individuals and the well nigh universal expression on that subject. Those who put
1339 money in those things, have the feeling that that is what they ought to receive.

Q. Do you know of any street railroad company that earns ten per cent?

A. Well, that would depend entirely on what you call earnings, whether it was on what it was capitalized at, or what it cost, or what amount of money was put into it. All those things would have to be brought into question, for all street railroads that I know anything about, are different from the telephone properties I am connected with and the difference would have to be explained.

Q. Do you know of any railroad that has any trouble getting money to conduct its business and extend it?

A. Yes.

Q. What company?

A. This street railroad company has had a good deal of trouble from time to time in getting money.

Q. They have gotten it?

A. Well, they have gotten it one way and another, with a great deal of reorganizations and receiverships.

Q. If the management of public service corporations could get all the money they wanted, it would take a very ordinary man to manage them, would it?

A. Yes, if things came easy, it would not take any great ability to do things.

1340 Q. Now, you spoke of these rate ordinances or certain rate ordinances which had passed the Louisville City Council. Do you know of any ordinance ever passing the City Council of Louisville which attempted or in any way purported to affect the

rates of the Cumberland Telephone Company, except the ordinance passed in 1907, and the ordinance which is now being questioned by your company?

A. I do not know that any others were actually passed; a good many of them were up for very serious consideration, and a great deal of effort made in that direction. I do not know just how many of them went through or actually passed, but certain it is they have had a great many under consideration.

Q. How many were ever under consideration?

A. Well, they had one under consideration just before they passed this last one; it was in the form of a new ordinance to bring out a new company, which was only a month or two prior to the one they passed, and the schedule of rates in that was different from the one they did pass, and then some years ago they had, it seems to me, some others up. I am carrying it as a general impression that it has been a pow-wow in Louisville City politics ever since I have had anything to do with it or heard anything about it, either in the form of new opposition telephone company or rate regulation for this or that and new franchise for this or *or*
1341 that or cancelling the franchise of the other one, or revoking it.

Q. Now, you say one of these ordinances was inspired by the Home Telephone Co. Can you give any logical reason why the Home Company should want your rates reduced?

A. Well, I could not tell just how that might be, I do not pretend to say. In the*y* beginning they would not have wanted it, but I think they now recognize that it would be somewhat beneficial to them, for the reason that when a customer comes to add up and discover they have to pay a sum total of money to get telephone service, that if they could get our service at a good deal less, it would thereby tend to cause those customers to continue their patronage with the other company. In other words it would have a tendency to make them patrons of both, rather than having a tendency to make them discontinue one or the other.

Q. If you had lower rates would not you be more of a competitor for the Home Company than you are now?

A. No sir, I do not think that would, unless we made rates lower than theirs.

Q. Don't you know that practically all the subscribers of the Home Telephone Co. are subscribers to that company because they get cheaper rates than you charge?

A. That is not true, for the reason that a great many people are patronizing both of us, they still patronize us, paying our
1342 rates and yet patronize the other concern, paying them their rates, so they do not get that only because of cheap rates, they get it because of the fact that they have some customers that patronize them exclusively, making it necessary or desirable at any rate, on the part of business people who reach the whole community, to have to take both of these services, and they do not take it because the rate is cheap, but because they wish to reach the customers patronizing the other company exclusively.

At this hour one o'clock P. M., a recess was taken until tomorrow morning at nine-thirty o'clock.

1343 TUESDAY MORNING, *September 21st*, 1909.

The further cross-examination of Mr. JAMES E. CALDWELL was resumed this morning, September 21st, 1909, at 9:30 o'clock, pursuant to adjournment.

Mr. BLAKEY:

Q. Now Mr. Caldwell, coming to this Board of Trade report about which you have testified and which is made a part of your bill in this case, I understood you to say that the Board of Trade report was based on an investigation made by the Board of Trade. Is that correct?

A. Yes sir, that is correct.

Q. And that the Board of Trade was not deceived in any way by the Cumberland Telephone and Telegraph Co., in reaching the conclusion it did reach?

A It was not.

Q. Now did you represent to the Board of Trade that your real property in Louisville was worth in the neighborhood of a hundred and fifty or a hundred and sixty thousand dollars?

A. Our real estate, do you mean by that?

Q. Yes, your real estate and improvements?

A. Well sir, I do not know what particular figures were presented by me, but whatever figures I presented were true and correct.

1344 Q. Did you represent to them that the figures appearing on your books at that time, as representing the value of your real property, was the value of your real property?

A. Yes, I would say that I did.

Q. And did you at the same time tell them that you were returning that real property for taxation in the City of Louisville for less than one half of the amount you were seeking to earn money on?

A. No, there was no discussion by me with the Board of Trade of taxes at all.

Q. Then to the extent that you were representing to them that you were entitled to earn on a hundred and fifty thousand dollars of property and were valu-ing your property for only seventy-five thousand dollars for taxation to that extent your representations to the Board of Trade was a deception?

A. I did not make any deceptive representations to the Board of Trade or anybody else.

Q. Did you represent to the Board of Trade that you were charging as a part of the expense of conducting the Louisville exchange, rent for the real estate and improvements in the City of Louisville aggregating about eight per cent on the book value of the real property and in addition to that was plac-ing in your operating expenses of the Louisville exchange, the taxes and insurance on that real property?

A. I did not go into the details myself with the Board of Trade or the figures, but I did afford the Board of Trade
1345 every opportunity to examine every book and voucher in this office and it did select an expert accountant to represent it, and do that very thing, and he did perform that service and every book and paper in this office was freely submitted to his inspection, and they had that report in their possession, and made their report after that examination had been made, so that they had access to every item or fact or figure in connection with this business that was available to me.

Q. Do you know how long that accountant was at work here?

A. I do not, but he was here long enough to satisfy himself.

Q. Did you represent to the Board of Trade that you were not discriminating among your subscribers in the City of Louisville?

A. If the question was brought up I would have said so, for such was the fact. We were not intentionally practicing any discrimination whatsoever and if any such circumstances as that occurred, it was an inadvertance, and wholly unintentional and far from being the policy of the company.

Q. Did you represent to the Board of Trade that the costs of toll lines outside of the City of Louisville was charged up as a part of the Louisville exchange?

A. As I have said before, I did not go into the detail of figures with the Board of Trade, but they themselves had their own expert accountant to do that for them.

1346 Q. Did you represent or have anyone represent to the Board of Trade that the cost of operating the toll lines in the City of Louisville, was charged up to the operating expenses of the Louisville exchange?

A. As I said before, all those matters were procured by the Board of Trade Committee through their expert accountant in their own way, and such information as they desired, was placed fully and freely at their disposal, and they made such use of it as they saw fit.

Q. Did you represent that the purchase of material for the use of the East Tennessee Telephone Co. in Paducah and other places over Kentucky, was charged as a part of the construction account of the Louisville exchange?

A. I answer that and repeat the answer I made to the question before.

Q. Now the report of Mr. Wilkinson, and the report of Mr. Farnham, show that your total expenses of operating the Louisville exchange for the year 1905, was $227,171.29, whereas Mr. Smith, your auditor, says and the report of Mr. Munster, who examined the books for the Board of Trade at that time, found that according to your books, the cost of operating the entire exchange for that year was $240,729.52. Is it true that you represented to the Board of Trade that it did cost more than two hundred and forty thousand dollars to operate your exchange for the year 1905?

A. All of those facts and figures were brought out by an
1347 expert accountant selected by the Board of Trade; he was given the free and full access to every book and paper he

desired in this office, and any representations made on that subject, were made by him. There certainly was no effort or intention to falsify or deceive or to practice any sort of deception upon anyone, and no one was attempting to do so and none was done.

Q. Well, if you did represent to the Board of Trade that it cost $240,000, whereas as a matter of fact it didn't cost but $227,000, didn't you deceive the Board of Trade about that?

A. I want to reiterate that any insinuation that I made any sort of improper statements or representations to anyone is wholly and absolutely untrue, has no foundation anywhere and no excuse whatever for resting such insinuation upon.

Q. Now please read him my question, and I will ask him to answer my question if you will?

A. By God, you had better not ask your questions too insinuatingly, for there is a limit to things and I will be God damned if you can not reach it mighty quick with me.

Q. Now, for the year 1905, the joint report shows that the operating expenses for that year were $227,000; the report of Mr. Smith, your auditor, shows them that year at $240,000. If Mr. Smith reported or represented to the Board of Trade that $240,000 was expended that year, whereas as a matter of fact, only $227,000
1348 was expended for operating that business, then is it not a fact that the Board of Trade to that extent was deceived at the time it made its report?

A. Such a circumstance would not imply deception at all. Where accountants make up their accounts like that, large accounts would naturally and it would be no unusual circumstance whatever to show slight variations in results. If Mr. Smith made up figures, he undoubtedly believed them to be true, and I myself would have believed them to be true, but if he did make any errors it is no more than human beings are accustomed to do, and that is all there is of any such circumstance.

Q. Now, when we come to 1906, Mr. Smith states and you swore to it in the bill which you have filed in this case—which the Cumberland Telephone and Telegraph Company has filed in this case, that the expenses for the year 1906 were in the neighborhood of $217,000; the accountants who examined the books say that the expenses were only $233,000. Now if Mr. Smith represented on behalf of the Company, to the Board of Trade, that it cost $217,000 to operate the company in Louisville for the year 1906, and if it is true that it only cost $233,000, then isn't it a fact that the Board of Trade was deceived to the extent of that difference?

A. I repeat the same answer that I made to the question above.

1349 Q. Now you say you paid this voucher because the Board of Trade asked you to pay it, after the work was done?

A. That is true.

Q. Now if the accountant had ascertained the facts and made the report which Mr. Farnham of the Mutual Audit Co. has made in this cause, would you have paid that voucher?

A. It would depend entirely upon the circumstances.

Q. Are you willing to pay Mr. Farnham's expenses for this examination that he has made of your books?

A. No sir, we are not.

Q. What is the difference between the two propositions?

A. From the reason that it is approached in a different way, and Mr. Farnham's employés appeared to be nothing but time servers, wasted the time of his employer while here, they loafed around this building, and around the city, and their whole work could have been done by competent people in far less time than they consumed. In fact I myself brought the matter to a conclusion by stating to his representatives that they were frittering away their time and doing nothing but killing time, apparently to pile up a bill of expense against the City of Louisville, and I should not, under any circumstances recognize any such bill as being legitimate or reasonable or proper, for a moment.

Q. Why were you so greatly interested in whether they frittered away their time and spent the money of the City of Louis-

1350 ville?

A. It got to be such a nuisance here and such a nuisance in the whole situation and it was an abomination, for I do not like to see waste occur anywhere.

Q. Do you know how long they were here?

A. Well sir, they were here weeks and weeks.

Q. They were here less than two months, weren't they?

A. They were here many, many weeks, and were here a much greater length of time than there was any excuse for, and it is a scandal of the worst nature.

Q. Did you know that your attorneys positively refused to allow the City of Louisville to send experts here to examine your books until an order was gotten to that effect?

A. I don't know that it was true, unless they would object to certain character of people being sent here.

Q. Did you know then at that time what character of people the City was going to send here?

A. No, but I had a suspicion they would not be people who were seeking the truth and nothing but the truth for an honest and impartial report.

Q. On what basis did you found that suspicion?

A. It was the manner in which the proceedings were being had.

Q. What was that manner

A. In every conceivable way one could judge of the actions of other people.

1351 Q. Well, indicate some one thing on which you base that suspicion?

A. As I stated before it was based upon every circumstance that came under my observation in connection with the manner in which this case was being treated and handled.

Q. Had the City of Louisville up to that time done anything except pass an ordinance fixing the maximum rates which your company might charge in the City of Louisville?

A. It had done sufficient to cause me to have that fixed opinion.

Q. Well, indicate what it was; you have made an intimation here that the City of Louisville was going out of its way to do something of a suspicious character and I insist upon you saying what it was?

A. It was the manner in which the ordinances before the council were frames up and treated; the manner in which they were publicly given in the newspapers; the manner in which the city's representatives approached this subject and they all indicated that there was more politics than justice that was being sought to be arrived at, and that in that circumstance did not certainly indicate that the proceedings were being had with a view of getting at the truth and justice of the situation, but to seek for some special advantage or hangnail to make a sensation out of.

Q. There are two prominent political parties in Louisville, are there not?

1352 A. I suppose there are sir, as there are two in the United States.

Q. Isn't it a fact that both political parties in Louisville and the newspapers representing both political parties, are demanding and insisting that the rates of the Cumberland Company be lowered?

A. That may be entirely true; I don't know how that is.

Q. How can any political use be made of it then, any political issue be made of it?

A. The political use was in this, that the parties were perfectly willing to utilize this by driving down the business of this company, breaking it down and showed conclusively that they had no scruples in doing so.

Q. Now, do you know anything about the refusal of the Cumberland Telephone Co. to permit the representatives of the City of Louisville to examine the physical property and inspect the physical property of the company in Louisville?

A. No sir I do not know that anything of that kind has been done, for the physical property in Louisville is in evidence and can be seen by anyone and everyone. It is not a thing that can be hid den at all.

Q. Were you advised by your lawyers or were you advising with them in connection with their refusal to permit the City's representatives to inspect the physical property of your plant?

1353 A. As I said before, there was no refusal to permit anyone to inspect the physical property in Louisville, as the property is there and can be seen by anyone and everyone that wishes to see it.

Q. The switchboards cannot be inspected by anybody that wants to, can they?

A. No, perhaps they cannot.

Q. Do you know of your own knowledge that your attorneys did refuse or did not refuse, to permit the City's representatives to inspect the physical property in Louisville?

A. I do not know that he did, but if he did do so, it would have been a very wise precaution to take.

Q. Why?

A. For I do not think any such examination would have been

made in good faith, with a desire to seek the truth, but would have been done with the hope and desire to promote their political aspirations, in hunting for something that would have been seized upon as a pretext to make a noise about and create prejudice against this company and damage its interests.

Q. Now coming to this matter you testified about yesterday in regard to the bulletins you have caused to be published in the Louisville papers, I call your attention to a letter dated July 28th, 1909, addressed to the Editor of the Louisville Post, Louisville, Ky., and will ask you if you wrote a letter on that day to the Editor
1354 of the Louisville Post?

A. I wrote him a letter and I suppose the one you refer to is the one I wrote him. At any rate, I had it published.

Q. Will you procure a copy of that letter and read it into your deposition?

A. I will.

Q. I also call your attention to a letter of July 31st, 1909, addressed to the Editor of the Louisville Post, signed by you, and will ask you to read that letter into your deposition?

A. I wrote the Editor of the Louisville Post on July 22nd, 1909, copy of which I file, and wrote him another on July 28th, 1909, published on August 7th, copy of which is herewith attached, and another one on July 31st, published in the same paper, copy of which is herewith attached.

Q. I will ask you to read into your deposition the letter of July 22nd, the letter of July 28th and the letter of July 31st, 1909?

A. I just included them in the previous answers and herewith file

Q. Will you read them into your deposition?

Q. Will you read them into your deposition.

A. Yes. The letter of July 22nd, 1909, reads as follows:

"JULY 22, 1909.

To the Editor of the Louisville Post, Louisville, Ky.

1355 DEAR SIR: In your issue of the 21st instant you have an editorial under the headlines of "Telephone Combination and Rates", in which appears the two sentences follows:

'Fifty-one per cent of the stock in the local telephone company is owned by the American Telephone and Telegraph Company or some of its subsidiaries.

'It is this stock, which represents nothing except a license from the owners of patents long expired, that makes it necessary constantly to increase the rates in order that these securities may earn enough to make them attractive to the speculating or investing public of New York and the East.'

I am quite sure when you penned these sentences you realized the gravity of your statements, for if such a statement was true it would leave this company and its officials in a most contemptible attitude, and unworthy of the respect or consideration of the very dogs.

A committee of your citizens, to-wit: Messrs. Marion E. Taylor, William R. Belknap, Atilla Cox, George Gaulbert and Logan C.

Murray, looked into all of these questions and made a report
1356 which was exactly contrary to the statements you have made. They took time and patience, went to expense and employed skilled people to get information for them; whereas you have done none of these things, but have made a statement, sweeping and offhand, exactly contrary to the report which they made. Therefore, this statement of yours is just as great a reflection upon these fellow-citizens of yours as they are upon us.

As I say, you have made this statement without any sort of an investigation, for if you had done so, even the most superficial investigation would have shown you that the statements which you have made are outrageously false in every particular. The fact then stands out that you have made a most libelous and outrageous statement without any foundation in fact.

The natural and inevitable conclusion in all such circumstances is that whoever would perpetrate such an act is utterly destitute of morality, honor or integrity. If, however, you have been imposed upon, and have been laboring under some real misapprehension, and if you do have any regard for decency and honor, you will promptly undo this slander by retracting it in as public a manner as is possible.

(Signed) JAMES S. CALDWELL,
President."

1357 The letter of July 28th, 1909, is as follows:

"JULY 28, 1909.

"To the Editor of the Louisville Post, Louisville, Ky.:

DEAR SIR: On the 22nd instant I wrote you a letter calling your attention to libelous statements which you had made with regard to this company, giving you an opportunity to correct the same and make the amende honorable.

I have received no reply to my letter, but instead of showing a disposition to correct this great wrong which you have done, you publish another editorial in your issue of the 27th, making statements which are grossly misleading, and all tending to do this company further damage. So that your purpose is now quite plain—that you are not trying to find the truth and state the truth, and the whole truth, but you are trying to manufacture any sort of damaging statements against this company.

Now, as we gave you an opportunity to correct your statements and make the decent amend, which you have not done, but on the contrary, have shown a maliciousness and a disposition to inflict further harm and injury, we shall therefore give you an opportunity
1358 to prove your assertions in court.

Yours truly,

JAMES E. CALDWELL, *President.*"

The letter of July 31st, 1909, reads as follows:

"JULY 31, 1909.

To the Editor of the Louisville Post, Louisville, Ky.:

DEAR SIR: At the time I wrote you on July 28, I had not consulted with lawyers, believing that there must be ample provision in the law for such gross wrong and malicious statements as you had been making. I am now advised by our attorneys that I am mistaken, and that we have no remedy at law against you?

While this saves you from any loss of money, it does not save you from loss of character and standing as a man, or of appearing as a coward as it is quite plain that when you wrote these slanderous statements you did so knowing that you were not running any risk of being reached and held responsible therefor.

Any form of assassination is despicable and contemptible to all decent people, and all men of refinement and sense of honor consider commercial assassination just as vile as personal assassination,
1359 and this is what you are practicing on this company.

You were not fair enough to publish my letter of the 22d instant, and it is very probable that you will not publish this one.

Yours truly,

JAMES E. CALDWELL, *President.*"

Q. Now, when were those letters first published in the Louisville papers?

A. I don't know what was the date of their first publication, but it was soon after they were written perhaps two or three days after the first letters were written.

Q. And this is another publication of them in the paper of August 7th?

A. Very likely, perhaps it is a reiteration. In other words, a republication of the same letters.

Q. Do you know whether or not they were ever published subsequent to this date or any times other than the two times you mention?

A. I expect they were published oftener than that. Any way, it was the intention to do so.

Q. Now, I show you a letter of September 8th, 1909, addressed to the Editor of the Evening Post dated September 8th, 1909, addressed as above, appearing in the Louisville Herald of Sun-
1360 day, September 12th, 1909 and will ask you if you wrote that letter to the editor of the Louisville Post, and if so, read it into your deposition?

A. I did write that letter dated September 8th, 1909, to the editor of the Louisville Post and published it on September 12th, and it is as follows:

"SEPTEMBER 8, 1909.

To the Editor of the Evening Post, Louisville, Ky.

DEAR SIR: There is no important public utility, and few important private businesses that are not maligned by a certain class

of so called journalists, just as you are doing the Cumberland Telephone and Telegraph Company.

The most praiseworthy administrators of our Government have been likewise attacked. Even the martyred patriot Lincoln suffered from them, for in chronicling such exasperating experiences in connection with his administration, the following language was used:

"He is of a pestiferous class of reckless sensation writers for an unscrupulous set of journalists, who misinform the public mind. Scarcely one of them has regard for truth, and nearly all make use of their positions to subserve selfish, mercenary ends. This forger and falsifier is a specimen of the miserable tribe."

1361 And I reproduce it because it so exactly fits you.

Yours truly,

JAMES E. CALDWELL, *President.*"

Q. Now, in your letter of July 28th, 1909, you refer to a letter of July 22nd, to Mr. Knott, Editor of the Evening Post, and you state in this letter of July 28th, as follows:

"Now as we gave you an opportunity to correct your statements and make the decent amende, which you have not done, but on the contrary have shown a maliciousness and disposition to inflict further harm and injury, we shall therefore give you an opportunity to prove your assertions in court. Yours truly, James E. Caldwell, President.

Was the object of that letter anything except to threaten Mr. Knott with suit for libel?

A. The letter explains itself, and meant exactly what it said.

Q. Is that the object of it?

A. As I said, the language is perfectly plain and can be understood by anyone reading it, and meant exactly what it said.

Q. Do you think that a letter threatening an editor of a paper with libel suit, and the publication of such a letter is a proper charge to the expense of conducting exchanges in the place where the editor happens to live?

1362 A. I think under the circumstances that brought that about it was an eminently proper expense to incur.

Q. Now in your letter of July 31st, you state in substance that at the time you wrote your letter of July 28th, you had not consulted with your lawyers and since that you have been advised by your attorneys that you were mistaken and that you had no remedy at law agaainst the editor of that paper and you also cause that letter to be published, and according to Mr. Smith, your auditor, charged to the expense of conducting the Louisville exchange. Do you think such a letter as that is calculated to advance in any wise the best interests of the community in which your exchange is operating, or the best interests of your company in that vicinity?

A. Yes, for it would certainly indicate to anyone who read those letters, that they would not tamely sit by and allow their business to be misrepresented and assaulted and the grossest sort of misstatements made about it calculating to damage it, and that they would do whatever was necessary to refute any such slanderous things

and make it as emphatic and public as they knew how, so that the public itself would see that it was contradicted and contradicted in as emphatic a manner and in as public a manner as they know how.

Q. In your letter of September 8th, 1909, which you have read into your deposition, you seem to liken the Cumberland Tele-
1363 phone and Telegraph Company to Abraham Lincoln. Was that your intention?

A. Yes, it was very much in that respect that he was maligned by slanderous newspaper writers, very much as Mr. Lincoln on occasions found himself or his administration, for it seemed that they had that character of newspaper writers in that day, just as they have now, and that they pursued their accustomed nefarious practices then as they do now, and that it seemed to be as desirable to brand them and expose them in the proper light then, as it is now.

Q. And you say in this same letter as charging Mr. Knott with perjury or falsifying——

A. I quoted that sentence exactly as it is there; he was certainly falsifying and he was certainly a forger of improper statements.

Q. Now, I should like to know whether the Cumberland Telephone and Telegraph Company ever sold any stock at above par?

A. No sir, it never sold any stock above par.

Q. Has it ever sold any below par?

A. No sir, I mean by that statement, that the company has never put out any issue of stock to its stockholders at above or below par, for that is what the law requires and in all of its capital stock issued and put out they put it out at par, for money, with the exception of those that were made in the consolidations and acquiring of properties.

1364 Q. On January 1st, 1907 and January 1st, 1908, and January 1st, 1909, you made to the directors and stockholders an annual report, which has been published and I should like to have you file a copy of those three annual reports as a part of your deposition, if you will do so?

A. I will do so, marking them Exhibits Nos. 4, 5 and 6.

Q. How much of the stock of the Cumberland Telephone and Telegraph Co. is owned by the American Telephone and Telegraph Co.?

A. About fifty-two per cent. of it.

Q. How much of that stock was originally issued for a consideration other than money?

A. About one half of a million dollars.

Q. What was that consideration?

A. That was for their patent rights and contract relations.

Q. Now I see by the papers that the Cumberland Telephone and Telegraph Co., distributed among its stockholders a few days ago, $380,000 of the stock of the American Telephone and Telegraph Co. How did the Cumberland Telephone and Telegraph Co. acquire that stock?

Mr. GRANBERY: Mr. Caldwell, that is wholly irrelevant to
1365 the issues in this lawsuit and in order that the record may not be encumbered with such matters, I suggest that that

question be left unanswered until the Master Commissioner can rule on it, he not being present at the taking of this deposition.

Mr. BLKAEY:

Q. Has there been any consolidation between the Cumberland Telephone and Telegraph Co., and the American Telephone and Telegraph Co.?

A. None whatever.

Q. Are there any conferences or have there been any conferences looking towards such a consolidation?

A. There has been talk off and on on that subject between me and them for twenty years, and there is nothing more definite now than there was nineteen years ago.

Q. Have you in your possession, the last annual report made by the American Telephone and Telegraph Co.?

A. Yes sir, I have their reports.

Q. Will you file that and make it a part of your deposition?

A. Said reports are in regular printed form and are accessible to the public generally, and I have one. That is the only thing I do have on that subject and I very cheerfully file it as requested, as Exhibit No. 7.

Q. I believe you stated on yesterday that you had not made
1366 any profit other than the ordinary stockholder had made, out of your dealings with the Cumberland Telephone and Telegraph Company stock and properties?

A. Yes I did state that.

Q. Do you know anything about the Southern Telephone Development Co.?

A. Yes sir.

Q. What was the Southern Telephone Development Co.?

A. It was a company owned by the Cumberland Telephone and Telegraph Co.

Q. What was its object?

A. Its object was to promote the financial operations of the Cumberland Telephone and Telegraph Co.

Q. Was its object to purchase the stock of the Cumberland Company?

A. It had for its object the promotion of the financing of the Cumberland Co.

Q. Did it purchase any of the stock of the Cumberland Company for the Cumberland Co.?

A. It purchased stock of the Cumberland Company for itself.

Q. For the Southern Telephone Development Co., or for the Cumberland Telephone Co.?

A. For the Southern Telephone Development Co.

Q. Did the Cumberland Company furnish it any money with which to purchase that stock?

A. The Cumberland Company owned the company out-
1367 right, that is to say, it owned all the capital stock, or well-nigh all the capital stock of that company, and the South-

ern Telephone Development Co. therefore used its own money in making these purchases.

Q. Didn't the Cumberland Telephone and Telegraph Co. furnish it with $195,000 with which to purchase stock?

A. It bought all the capital stock of the Southern Telephone Development Co., and paid that money therefor, and of course, after the stock was bought and the money paid in, the money was the property and assets of the Southern Telephone and Development Co. to do with as it saw fit, and it used that money in purchasing the stock of the Cumberland Company.

Q. Do I then understand you to say that the $195,000 was not furnished by the Cumberland Telephone and Telegraph Co. to the Southern Telephone Development Co.?

A. I have stated that $195,000 was for the purchase of stock in the Southern Telephone Development Co. at par value for that amount of stock, and that this money went into the treasury of the Southern Telephone Development Co., subject entirely to the disposition of its officers, and that I do know of my own knowledge that they used that money in the purchase of Cumberland Telephone and Telegraph Co. stock.

Q. Was that what the Southern Telephone Development Co. was formed for?

1368 A. It was formed to promote the financial interests of the Cumberland Telephone and Telegraph Co. in any way that it could.

Q. Was stock in the Southern Telephone Development Co. issued to the Cumberland Co.?

A. Yes, and went into its trea-ury.

Q. Do you knew whether a part of that $195,000 was used to purchase Cumberland Telephone stock?

A. I think all of it was.

Q. I meant to continue my question and ask whether any part of that $195,000 was used for the purchase of Cumberland Telephone and Telegraph Co. stock from a syndicate of men composed of you, Mr. Williams and Mr. Landis and others, known as the Williams syndicate?

A. A part of that money was used to buy stock from a syndicate as you describe.

Q. And were you one of the members of that syndicate?

A. Yes sir, I was.

Q. And was that stock sold at a premium and did you profit by that sale?

A. That transaction was represented by other parties on both sides; I was, in a sense, a stockholder in it and received my share of the profits as the other members of the syndicate, and it was so bought by the Southern Telephone Development Co. and afterwards sold by them at a profit, and is worth more money today than it was when it was purchased.

1369 Q. Do you know what premium was paid on that stock purchased from the Williams Syndicate?

A. About twenty per cent; about a dollar twenty or a dol-

lar twenty-one, somewhere along there, and the stock today is worth over a dollar forty, and was worth more than a dollar twenty a very short time after it was purchased, and a good part of it was sold at a premium above that.

Q. Was there any occasion for the Cumberland Telephone Co. to sell stock, if it had plenty of funds on hand with which to take care of and conduct its business and extend its lines as required?

A. No, sir, if it had plenty of funds to do that, there would be no occasion to put out additional stock. That was why the issues were put out, to meet the growth and extend the business of the company.

Q. Have you in your possession any circulars issued by Mr. Goulding Marr, a broker of Nashville, dealing with the Cumberland Telephone and Telegraph Co. stock?

A. No, I have not, not that I know of. I have received a great many of them, but they usually go into the waste basket as I do not keep any file of such matters.

Q. I show you a paper which seems to be such a paper as I have just spoken of, issued by Mr. Goulding Marr of Nashville, Tenn., and will ask you to look over that paper if you will and state whether that was issued by the authority of the Cumberland Telephone and Telegraph Co.?

A. Such a paper would not require the authority of the
1370 Cumberland Telephone and Telegraph Co. These are public figures and public facts, and Mr. Marr could make use of them as he saw fit, and he did, although the company would not object to such a matter and would be very pleased to see it go out.

Q. Can you ascertain the facts and figures in that paper, whether they are correct and state whether they are or not?

A. I have not examined them carefully and critically, but I have no doubt but what they are correct.

Q. I will ask you to file that paper and make it a part of your deposition?

A. I will do so, as Exhibit No. 8.

Q. Mr. Smith has testified about a voucher for $2500 paid during the year 1907, to Mr. Harvey S. McCutchen and Mr. Eli Brown, which expenditure was at the time charged up to general expense, and which in July or August 1909, under your instructions, was charged to expense of operating the Louisville exchange. Do you know anything about that voucher or the reason for making that change?

A. I do not recall the circumstances particularly, but I would say that fees were paid to attorneys at Louisville, would be a very proper charge against the business of the company, and we would not be paying any fees we did not think were legitimate and right.

Q. If Brown & McCutchen both live in places other than
1371 Louisville, and do not practice law in Louisville, then on what theory would you charge the item to Louisville?

A. I suppose the services they rendered were in connection with Louisville.

Q. Do you know what services were rendered?

A. Legal services, I suppose; they are lawyers, and I know of nothing else they would be doing for us.

Q. How was your attention called to it in 1909?

A. I do not recall the circumstance.

Q. Could you tell if you had the voucher to look at?

A. I do not know whether I could or not. I would be willing to look at the voucher and see.

Q. Could I get you to send for Voucher No. 751, which is the voucher in question, for the month of February 1907?

A. I find in the files the voucher you refer to, and it shows that $2500 was paid to H. S. McCutchen and Eli T. Brown, February 22nd, 1907, with a memorandum in my handwriting, "should be charged to Louisville." It is made out to H. S. McCutchen and Eli T. Brown Cok Flats, Louisville Ky., and is a regular voucher for attorneys' fees, and is included in quite a number of vouchers, all paid in the regular course of business.

Q. Do you know why that specific expenditure was required?

A. No sir I do not. I have not a doubt but what it was just as regular as all the other attorneys' fees we are paying, which
1372 constitute a very large item in our business.

Q. Do you know what Messrs. McCutchen & Brown did for the Louisville business?

A. I do not; I suppose they handled some litigation up there, looked after it, and aided in litigation up there; we have had a great deal of it there and still have a good deal of it, unfortunately, and it was necessary to employ lawyers and to pay them, which we do.

Q. What litigation have you had there other than the two suits you have brought yourself, recently?

A. I do not know sir, I do not recall that, but it is in my mind that we have had a good deal of litigation, threatened and pending, and damage suits.

Q. Col. David W. Fairleigh is your local attorney there, isn't he?

A. Yes sir.

Q. Now, I notice a memorandum attached to this voucher which reads, "Smith. This should be charged to Louisville, J. E. C." Is that your memorandum?

A. Yes sir that is my memorandum.

Q. Do you know when you made that memorandum?

A. I do not sir, I suppose I made it when the voucher came to me.

Q. Now, I notice at the bottom, June 1909, Voucher No. 5570 made to correct distribution of this voucher. Was this memorandum made in June 1909, this memorandum of yours?

1373 A. As I say, I do not remember sir; it might have been, but if that voucher were presented to me now, I would make such a memorandum on it, for I think that is where it belongs.

Q. Do you recall that it was presented to you and that you made this memoradum in June, 1909?

A. As I say, I do not remember when it was presented to me, but if it were presented to me fresh now, I would so consider that was where it should be charged.

Q. If you don't know what the services were, for where they were rendered, what is your reason for believing that they should be charged to Louisville?

A. Mr. McCutchen stays at Louisville and has been looking after a great many things there for us, and I do not know of any other services, do not recall any services outside of Louisville that he would be making that bill for. In other words, it is my belief that that is where it belongs, that the bill is correct, and that is where it should be charged.

Q. Has not Mr. McCutchen for years been representing your company at different times in matters over the State and in connection with legislative bodies and city councils other than Louisville?

A. Mr. McCutchen has been our attorney or has represented us as an attorney for a great many years; in fact, I believe he stated that we were his first client when he began the practice of his
1374 profession of law at Russellville, Ky. He has looked after a great deal of litigation for us and feels extremely friendly towards the company, has looked after its interests whenever a circumstance presented itself, and often-times without any consideration, but of course, whenever he has appeared in his professional character as a lawyer, we have paid him, and done so regularly, and he has represented us, as I say, in litigation in various parts of the State, commencing at Russellville.

Q. Is his home at Russellville now?

A. His home is at Louisville now, I understand, and so understood for some years. He may claim Russellville as his legal domicil, but Louisville is where he resides and this voucher was sent to him at Louisville, where I understand his office was, Cok Building at that time. It may not be there now, but at any rate, he has an office in Louisville.

Q. Do you know he has an office in Louisville?

A. I understand that is his place of business; that is what he tells me.

Q. Do you know that the Cok Flats or Building is an apartment house?

A. I did not; I do not know that.

Q. Mr. McCutchen is now one of the present Railroad Commissioners of Kentucky, isn't he?

A. I don't know that; I know he was at one time, I don't know whether he is now or not; I know Mr. McCutchen is a regu-
1375 lar practitioner of law and has been for a good many years, is a very good one and a very honorable gentleman, and stands as high as any man in Kentucky, and comes of one of the very best families in Kentucky.

Q. Now, speaking of the depreciation fund which you say is a part of your operations. What is done with the depreciation fund?

A. Well sir, I don't think there has been anything done with it in Louisville, for we have not made enough money to set aside any depreciation fund there.

Q. What is done with it generally?

A. It is preserved for the care of the property.

Q. In what is it invested?
A. It is invested in cash and supplies and working capital.
Q. Invested in the plant?
A. Invested in cash, and supplies and working capital.
Q. Cash, supplies, etc., are placed in the plant?
A. Cash is kept in the treasurer's drawer and in bank, and supplies are kept in the ware-house and when they are drawn from, and that put into the plant, they are charged to it.
Q. Have you in Louisville, Ky., or here, any map or any data from which you can determine over what routes your lines of poles and wires extend in the City of Louisville?
A. I don't know of any such map; I have never seen one.
1376 Q. Isn't it a fact that you have all of your poles in the City of Louisville numbered?
A. No sir that is not true.
Q. Is that true out over the toll line system?
A. They are not numbered on the toll routes.
Q. Do you mean to say your company does not then know how many poles it has, or over what routes its poll lines extend?
A. I think the company would have no trouble in identifying any and all of its property, but I do not know myself how many poles it has.
Q. And don't know just what routes it has?
A. I do not.
Q. Have you any records showing what routes it has in the City of Louisville?
A. I do not.
Q. Do you know anything about a business machine or piece of machinery or instrument which telephone companies use, and whereby they can locate trouble on various parts of their routes?
A. Yes, there are instruments that can do that, is my understanding.
Q. Do you use those instruments in your business?
A. I think we do. I think we have all the best, scientific appliances for handling the business.
Q. Is it possible to use such an instrument as that, unless
1377 you *you* know over what routes your lines extend and where the poles are located, and what their numbers are?
A. The man that would be handling it would know that; I myself do not handle it and therefore do not know, but the men who are handling it would know it and know it accurately.
Q. Do you know how many lines there are connected with the main exchange in the City of Louisville?
A. No sir, I do not.
Q. Is there any record of that kept anywhere?
A. I suppose there is, but I don't know. It is a matter I have no knowledge on, but I am quite confident that we have no trouble in ascertaining that fact. It is a fact that could be easily determined by an investigation of the apparatus itself.
Q. You don't know yourself, then, how many lines extend or are connected with any of the exchanges in Louisville, I suppose?

A. No sir I do not, that is attended to by men that are employed for the purpose and I think they are performing their duties properly.

Q. Do you know whether the exchange in the City of Louisville makes use of what is known as multiple switch board system?

A. Yes, it does.

Q. Is there any part of your capital stock apportioned to
1378 Louisville?

A. There is no part of the capital stock specifically apportioned in the way you refer to, I suppose. A part of it is invested there, a goodly part of it.

Redirect examination.

By Mr. GRANBERY.

Q. Mr. Caldwell, referring to the voucher for $2,500, I will ask you to examine it and state whether it was a regular voucher check paid through the bank as all other vouchers or voucher checks are paid?

A. Yes, it is a regular voucher check for retainer fees and legal services for 1907.

Q. Does it appear to have passed through the General Counsel's office and approved by him?

A. Yes, passed through the General Counsel's office and duly approved.

Q. Is there anything unusual or peculiar about the voucher in any way?

A. Nothing at all.

Q. What was your salary as president of the Cumberland Telephone and Telegraph Co., in June 1899, prior to the purchase of the stock of the Ohio Valley Telephone Co.?

A. My recollection is that it was ten thousand dollars a year.

Q. Now, after the consolidation, what was your salary?

1379 A. My recollection is, it was twelve thousand dollars.

Q. What was your salary during the time you were president of the Ohio Valley Telephone Company?

A. I think it was at the rate of two thousand dollars a year.

Further this deponent saith not.

JAMES E. CALDWELL.

Sworn to when given and subscribed before me on this the 29th day of September, A. D. 1909.

BLUFORD DUKE.
Notary Public.

By Mr. GRANBERRY: At the conclusion of this deposition, the complainant rests its case.

1380 EXHIBIT 41.

Caldwell's Deposition.

In answer to the question, "Why do the Telephone Companies charge more for service in large Exchanges than in small Exchanges?" the following reply was made by a practical Telephone man:

Nearly every one is familiar with the fact that Telephone Companies charge more for service in large cities than in small cities and towns, but many do not understand why this is necessary, and some believe that the charges for service should be reduced, rather than increased, as the telephone exchange grows in number of subscribers.

The general public assumes that the telephone furnished each subscriber is the unit of cost of the commodity which the Telephone Company is selling. It is natural that it does not understand why the company charges more for telephone service in an exchange with a large number of telephones than in an exchange with a small number, and asks why the telephone business differs in this respect from practically all other businesses. This question, while quite generally propounded, is asked under a misapprehension or without due consideration of the real facts.

It can be demonstrated that as an exchange grows, the cost of furnishing under any particular class of service the unlimited use of the entire system, or plant, to each patron increases, and that an increase in the charge made therefor is necessary. It can also be demonstrated that at the same time the cost per unit has decreased, and that the charges based on any reasonable unit of measurement will show a reduction.

In an exchange with a small number of subscribers the cost of the plant is not very great and its construction is simple. The switchboard is inexpensive and easily maintained, not requiring the service of an expert. The poles are small, and the cables, if any,
are not only small, but of short length. No underground
1381 construction is necessary. As the exchange increases in size, these conditions gradually change and in due course of time it is necessary to have underground conduits, underground cables, multiple switchboards, power plants, and supervisory apparatus of many kinds, and the employment of experts at a greater rate of pay becomes necessary.

To illustrate: A switchboard for an exchange of three hundred lines or less can be purchased at from $1.50 to $3.00 per line, while a switchboard with a maximum capacity of ten thousand lines, but equipped for only six thousand lines, and with fifteen sections installed, would cost about $120,000.00 or $20.00 per line, and one fully equipped for ten thousand lines and twenty-five sections installed, which would be necessary to operate that many lines, would cost about $250,000.00, or $25.00 per line. Thus it will be seen that on this one item alone the cost in a very large exchange is ten times greater than in a small exchange. This is on one item, and illus-

trations could be made comparing the cost of underground conduit and cable, underground distribution in the central part of the city, interior block distribution in the suburbs, the cost of real estate, of taxes, of salaries and wages, of damage and compensation, of bad debts, forced reconstruction or replacement due to abnormal growths or requirements of the city. In fact, practically all items of furnishing service in a large city increase as compared with the cost of similar items in a small town, and, when the unlimited use of the entire plant is furnished at a flat rate, this rate must necessarily be larger per station as the city grows and as the exchange grows, and it should not be overlooked that the value of the service to the patron increases just as rapidly.

The preceding paragraphs discuss the cost of furnishing unlimited telephone service in a large exchange as compared with the cost of furnishing unlimited telephone service in a small exchange.

Consider this question from another standpoint and agree upon some unit of measure of the commodity which the Telephone Company is selling. It will then be seen that, just as in other classes of business, in furnishing telephone service it costs less per unit
1382 the greater the volume of business. It may be safely said that there is probably no other business in which the cost of production per unit and the price charged per unit decreases more rapidly as the volume increases.

When one buys coffee, tea, flour, or sugar, it is readily understood and accepted that the purchases are made by the pound. In buying electric light, the consumer knows he is getting it at so much per kilowatt. In buying gas, he knows that he is getting it at so much per thousand cubic feet. When traveling by train, the charge is so much per mile. In fact, when buying anything except telephone service, the purchaser and the seller both recognize a unit. The Telephone Company does not sell the telephone on the wall, in the office, or the residence, neither does it rent it to the subscriber. In any exchange where there is a flat rate for the unlimited use of the entire plant, the company places this plant, consisting of switchboards and Central Office apparatus, underground conduit, cable, poles, wires, etc., all at the subscriber's disposal, and places the instrument in his office or residence in order that the subscriber may be able to avail himself of the different uses of the plant, as his necessities may require.

Several suggestions as to the unit, or basis, of measuring what the Telephone Company sells and what the subscriber purchases are submitted, in order that it may be clearly seen that the selling price, if based on any one of these units, is smaller in a large exchange than in a small one.

First. Consider the number of miles of wire constructed and maintained for the use of the subscriber at a flat rate per month, taking, if you please, the use of 1,000 miles of wire per month as the unit. Assuming that there are two miles of wire per telephone as a fair basis, an exchange of 2,500 telephones will require 5,000 miles of wire to connect them with the Central Office. If the charge for a special line telephone is $5.00 per month, it will be seen that

the rate charged for the use of the wire is $1.00 per month per thousand miles of wire.

If this exchange grows until there are 5,000 telephones connected with it, and if the average amount of wire for each telephone is still two miles (as a matter of fact the average length of wire
1383 for each telephone will have increased), it will require 10,000 miles of wire to connect all of the telephones with the Central Office. If the rate is still $5.00 per month for a special line telephone, the rate charged is 50 cents per month per thousand miles of wire, or just 50 per cent. as much as was paid for the service when there were only 2,500 stations connected with the exchange.

If the same exchange increases to 8,000 telephones and still has an average of two miles of wire per telephone (which is less than will be the case in actual practice), there will be 16,000 miles of wire, and, if a rate of $5.00 per month is charged for a special line telephone, the subscriber will pay only 37½ cents per month per thousand miles of wire, or only three-eighths as much as he paid when the exchange had only 2,500 telephones in operation.

This reduction in the nature of things cannot go on indefinitely, and the time comes when the Telephone Company cannot furnish all of the wire, now amounting to many thousands of miles, at the same price it furnished all of the wire when there were only a few thousand miles. The net results of a Telephone Company's operations will easily convince any reasonable man that it cannot furnish the use of 16,000 miles of wire at the same price it furnished the use of 5,000 miles. It can, however, furnish it at very much less per thousand miles, and it will not be necessary to charge three times as much for telephone service when the company has 16,000 miles of wire in use as it was necessary to charge when it had only 5,000 miles of wire in use.

Second. If the cost of the telephone plant is taken as a basis for making charges and $1,000.00 is considered as the unit, upon this basis the charges continually grow less and less per unit as the exchange grows. In other words, the cost of the service to each subscriber is not increased in the same proportion as the investment in the plant is increased.

To illustrate: Assume that an exchange with 5,000 telephones can be constructed and put into operation for $500,000.00. If the Telephone Company furnishes to each subscriber at $5.00 per
1384 month the unlimited use of a plant costing $500,000.00, this is at the rate of $1.00 per month per $100,000.00, or one cent per month per $1,000.00. When the exchange has increased to 10,000 telephones and the investment has increased to $1,000,000.00 (or more), the unlimited use of the million-dollar plant at a rate of $6.00 per month for a special line telephone is very much less per unit of $1,000.00 than it was when the exchange was smaller, as stated above. It is now 60 cents per month per $100,000.00, or six-tenths of a cent per month per $1,000.00, instead of one cent as before, or 40 per cent cheaper.

Third. Consider the number of telephones with which the subscriber can talk for an unlimited flat rate per month as the basis

of charge for the service. Assuming 5,000 telephones and a charge of $5.00 per month for special line service, it will be seen that the charge is $1.00 per month for each 1,000 telephones with which the subscriber can be connected. With 10,000 telephones and a flat rate of $6.00 per month, the charge would be 60 cents per month per 1,000 telephones, or 40 per cent. cheaper than the rate charged when there were only 5,000 telephones.

Fourth. Another unit for computing the charge made, and one accepted by many experts, is the message mile; that is, the transmission of one telephone message for a distance of one mile. In a small town, with a small number of subscribers, say 100 or less, the distance between each telephone is not very great and the distance traversed by each conversation is small. On account of the small number of people with whom the subscriber can talk in a small exchange, the number of calls per telephone per day is also small. When the second one hundred telephones are added, each of these subscribers has the opportunity to talk to the first one hundred and also to ninety-nine of the second one hundred. As the exchange grows, so does the town or city, and, in a large city with a large number of telephones, the subscriber is enabled to talk to many people at a very considerable distance. In this way the average number of miles traversed by a telephone conversation is, in a large exchange, much greater than in a small exchange. Statistics
1385 from a number of small exchanges, as well as a number of large exchanges, of one of the Telephone Companies of this country indicate that the average length of wire for each subscriber in a small exchange is less than 1.2 miles, while in an exchange of 10,000 or 12,000 telephones the average is 3.4 miles of wire.

In a given city the average length per line is 2.3 miles. The average length of line used for each telephone conversation is twice this figure, or 4.6 miles. The average number of daily conversations per telephone is eight, including Sundays. This figure multiplied by the length of line used for each conversation, 4.6 gives 36.8 message miles per telephone per day, or 1,104 message miles per telephone per month. The average rate per telephone in this exchange is $4.24 per month. This gives a cost per message mile in this exchange of thirty-eight one-hundredths of a cent.

On the other hand, an average of ten small exchanges of the same company, chosen at random, having an average rate per line of $2.28 per month, shows an average length per line of .8 miles, and the average length of line per conversation is twice this, or 1.6 miles. The average number of daily conversations at these ten exchanges is 4.1 per telephone, including Sundays. This multiplied by the length of line per conversation, 1.6, gives 6.56 message miles per line per day, or 196.8 message miles per line per month. The subscriber pays $2.28 per month, as stated above. This gives a cost per message mile to the subscriber of 1.16 cents. Compare this with .38 cents for the city above referred to in which a large exchange is operated. It is seen that the average cost per message mile to the subscriber in the larger exchange is only 35 per cent. of what it is to the subscriber in the smaller exchange, although

the average rate per station per month at the smaller exchange is scarcely more than one-half that at the larger exchange.

It will, we believe, be apparent to many, upon reflection, that the unit of cost in furnishing telephone service is not the station, or telephone instrument on the wall, and also that the cost per unit decreases as the exchange grows, provided the true comparative unit is used.

The following illustration may make the meaning entirely
1386 clear: Suppose a 600-ton sailing vessel could carry boxes of articles, running 100 pounds to the box, between certain points, at 80 cents per ton, or 4 cents per box, and that a 3,000 ton vessel could carry the same articles at 40 cents per ton, if packed in 500-pound boxes, but not in 100-pound boxes. The rate per ton in the large vessel would be only one-half of what it was in the small vessel, yet the 500-pound boxes would cost 10 cents each, or two and one-half times as much as the smaller boxes in the smaller vessel. It would certainly be wrong to say that the cost of service in the larger vessel was the higher merely because the cost per box was higher. The true unit of camparison is the ton, and, based on that, the larger vessel gives the cheaper rate per unit of service performed.

Unfortunately, in the telephone business there are a large number of fixed charges irrespective of the amount of service performed, and the most of these tend particularly to increase with the size of the exchange, so that it is impossible for a Telephone Company to sell service at large exchanges in small enough quantities (to carry out the simile—to have it packed in small enough boxes) to make the initial price as low as in a very small exchange, even when a specific charge is made for each message over a certain number.

Among these increasing costs are:—

Investment.—In a large exchange the average investment per station is greater than in a small exchange, and past experience shows that this will continue certainly up to twenty-five or thirty thousand telephones operated in one city. This investment is represented by property of two classes: Central Office equipment and station equipment, and the construction necessary to connect the station equipment with the Central Office. In a small exchange smaller poles are used, carrying a few cross-arms and mostly open wire with a little cable, and no underground conduit or underground cable and no interior block distribution. Also an inexpensive switchboard will answer every purpose, costing not more than $4.00 per line for a switchboard of 300 lines or less. When there are more than 400 stations, multiple switchboards should be
1387 substituted. Above five hundred, they are necessary in order to furnish efficient service. As the exchange grows, naturally the town or city grows, and a different class of outside construction as well as inside construction is then necessary. For instance, it becomes necessary largely to substitute underground conduit and underground cable for aerial pole lines and substitute multiple switchboards for single section switchboards, and this renders the investment of large sums of money necessary. For

instance, a fifteen section switchboard equipped for six thousand circuits will require more than ninety thousand spring jacks with wires soldered to each of them, and in each section with positions for three operators there will be over six thousand spring jacks with wires soldered to them, and other complicated and costly apparatus. In each individual section of a main switchboard equipped for six thousand lines with fifteen sections, installed, in each section of which would terminate four hundred lines, there would be sixty-four hundred spring jacks, or an average of sixteen spring jacks to each line instead of only one spring jack to each line, as would be the case in a small switchboard, and the cost of a large multiple switchboard, including the necessary Central Office apparatus, averages from $15.00 to $25.00 per line as against less than $4.00 per line in a small office.

The cost of the outside plant is also much greater per station, due both to the greater length of the line, the increased cost of building the line, and to other conditions. The cost of station wiring is also greater in a large exchange than in a small exchange, due both to the larger houses and the greater length of interior wiring, and due to the fact that the houses are on an average finer than in small towns, thus requiring more skilled workmanship for interior wiring than is necessary in a small town. This increased investment, varying from about $40.00 per station in the smallest exchanges to $140.00 per station in some of the largest exchanges, renders an increased rate per station absolutely necessary in order to maintain the property in a high state of efficiency and to earn a reasonable return on the investment.

1388 Operating.—At an exchange of three hundred subscribers or less a chief operator and other non-productive forms of labor are not needed. When the size of an exchange requires five operators or more, a chief operator must be employed, and, when the exchange has grown to such size as to require a multiple board and a large number of operators, then a chief operator, assistant chiefs, monitors, supervisors, information operators, trouble clerks, and other non-productive labor is required.

The duties of a chief operator can well be understood by a layman. The duty of a supervisor consists of walking up and down behind a certain number of operators, helping out when any one of them is overloaded, and seeing that they perform their duties in accordance with the company's rules and regulations. The monitors are seated at desks equipped in such manner that they can observe the service rendered the patrons, and can quickly note imperfections; and they render valuable assistance in furnishing efficient service in a large exchange. Trouble clerks are to answer calls from subscribers reporting telephones out of order, make out trouble slips with such information as they can get as to the nature of the trouble and to forward the same to the Maintenance Department for correction of the trouble. The duty of the information operators is to answer calls from subscribers who desire to ask questions, such as "Has So-and-So a telephone? What is their number?" and hundreds of other questions which subscribers wish to

ask the operator answering their call, but which would seriously interfere with the performance of her regular duties if she attempted to make reply. This would largely reduce her efficiency as an operator, and thus render many more sections of switchboard necessary, adding largely to the cost of the plant and to the cost of furnishing the service, and information operators are in the interest of economy and for the benefit of the subscriber. None of this nonproductive labor adds to the revenue, but does add to the cost per station of furnishing the service in a large exchange as compared with a smaller exchange.

1389 In large exchanges multiple switchboards (that is, numbers of sections each containing the entire number of lines) are necessary, in order that the answering operator may be able to call any subscriber from her position, and in very large exchanges more than one switchboard is necessary, the number varying according to the number of patrons to be served, and, when the second board is installed, then trunking switchboards become necessary, which adds still further to the cost and complication of the apparatus. This renders necessary efficient and trained operators and the closest supervision, and is one of the reasons why supervisors and monitor operators are necessary, and, due to the trunking between the various offices or switchboards in large exchanges, the average number of calls which can be handled by an operator is reduced, thus handling less stations to each operator.

Maintenance.—The cost of maintenance per station from many causes increases as the exchange grows. The Central Office plant is more intricate, and subject to many troubles requiring experienced men. The average length of the lines is longer and therefore more likely to be interrupted, and their greater length consumes more time of the linemen to make repairs. The station equipment is more costly on account of the character of the interior wiring demanded in more costly houses. The average investment, being very much greater per station, naturally calls for the setting aside of a larger sum for replacement. All of the material composing the various parts of the plant, from the Central Office through the cables and open wire to the subscriber's station, deteriorates and must be completely replaced every few years, averaging from seven to twelve years, according to the location and character of the plant. Of course, current repairs are made with regularity, and begin immediately after the construction is completed, but with these repairs replacement eventually cannot be avoided. A telephone plant can very well be compared with a suit of clothes; the clothes can be cleaned, pressed, and repaired, and for quite a while will look and wear about as well as they did the first day; but, if the clothes are continuously worn, no amount of pressing and repairing will obviate the necessity of eventually discarding them and getting a new suit.

1390 Engineering, etc.—The larger exchanges demand engineering talent of a higher grade than the smaller ones and take a larger proportion of time per station of the general officers of a company in looking after their vicissitudes.

Discontinuances.—The proportion of discontinuances to new installations is much greater at the larger exchanges than at the smaller, owing to the more stable character of the population at the latter. This element adds greatly to the expense for the reason that not only is the proportion of discontinuances larger, but they are of a more expensive character, due to the higher cost of interior wiring in the larger cities, as stated under Investment. Therefore, as the exchange grows, this element rapidly assumes great importance. Also a large proportion of idle line wire results, which it is not wise to remove, but which adds to the idle investment, upon which returns must be earned by the active investment to avoid insolvency.

Other Idle Investment.—It is necessary to provide a large proportion of facilities in advance of demand at large exchanges, owing to the fact that in small towns the degree and direction of growth can be much more accurately predicted.

Taxes.—Taxes are higher per station in large exchanges than in small ones. This is due to several causes. The investment per station being greater, the ad valorem tax naturally increases and the tax rate is usually higher, and frequently there are special taxes in large cities, and too often in such amounts as to create a hard-ship or unreasonable burden on the business.

Rent, Light and Heat.—The expenses under this account are greater per station in large exchanges than in small ones, and this is easily accounted for. Not only is realty more valuable, rendering higher rents necessary, but, due to the large costs of Central Office apparatus and the great importance to telephone patrons of providing as far as possible against cessation of service on account of fire, expensive buildings are quite necessary, and any Telephone Company operating large exchanges that did not recognize this would not be performing its duty. A casual examination of a telephone building in almost any large city where multiple
1391 switchboards have been installed will demonstrate this fact and convince the patron of the wisdom of this increased expense.

Cost of Labor.—As is well known, the cost of living is greater in large cities than in small towns. This fact reflects itself in the payroll and demands higher salaries for the same degree of efficiency.

Many other illustrations could be given showing that expenses of almost every kind increase as an exchange grows, and at frequent periods entire replacement of a substantial part of the plant becomes necessary in order to meet the situation, and with each of these changes additional investment and increased expense follow. It is safe to say that Telephone Companies earnestly wish that this was not so. However, the value of the service to the patron increases in greater proportion.

The question of the value of the service to the subscriber is interesting and important. In no other business does this value play so small a part in the mind of the purchaser. Usually, price depends upon a combination of cost to seller and value to buyer. In the real estate business it depends almost wholly on value to buyer. Recent computations show that, if one-half of all telephone connec-

tions be assumed to be of a social nature and useless from an economic standpoint, and if it be further assumed that the average value of the time of the telephone user is $900.00 per year and the average time saved for one man twenty minutes per business message (all of these being conservative assumptions), then the average value per telephone to the user is more than five times the average revenue per station to the Telephone Company. This refers only to the value of the time saved and added to the productive force of the country, and does not include any direct monetary saving, such as messenger fees, car-fare, etc.

The great excess of value over price is more marked at the larger exchanges than at the smaller. The average value of the time of the user is greater in a large city than in a small town, and the amount of time saved by each message is greater, due to the greater distances to be traversed. Conservative figures place the aver-
1392 age value of the time saved per business message at ten small exchanges at three cents and at ten large exchanges at twelve cents. These figures, dealing with values only, assign no value to the social and trivial conversations, estimated at one-half of the whole number, although such conversations have some value to the user, which is greater at a large exchange than at a small one, and the cost of handling a conversation is the same to the company, irrespective of its value.

The value of the service to the purchaser becomes important as an element of rate making only when, the average rate necessary to run the business at an adequate profit having been determined, the question arises as to the proper differentials to produce this average rate, to be made between the charges for the different classes of service (Business or Residence; Special Line, Duplex, or Party Line; Unlimited or Message Rate, as the case may be). It is a physical impossibility to state the exact relative cost of each of these classes of service. Even if an accounting system were practised which was sufficiently complex to differentiate the direct cost of each, there would be no reasonable method of apportionment of the fixed and the general charges of the company. In determining these differentials, therefore, recourse is taken to the relative value of the service of each class to the user; and since this can be told within narrow limits from the results of past experiments, taken in connection with the present known conditions, the result is an equitable and fair distribution of charges, leaving them well within the value to the user, and imposing no undue burden upon any one class of business

1393 EXHIBIT #3. J. E. C.

Number of subscribers in Jeffersonville and New Albany paying Louisville rate September 23rd, 1909:—
Jeffersonville, 5 subscribers and 2 trunk lines.
New Albany, 19 subscribers and 1 trunk line.

1396 *Report of the Directors.*

NASHVILLE, TENN., *January* 21, 1907.

To the Stockholders:

We take pleasure in presenting herewith the twenty-fourth annual statement of the Cumberland Telephone and Telegraph Company, and give below the Treasurer's report, showing the result of operations and the financial condition of the Company on December 31, 1906:

Operation, Years 1905-1906.

Earnings.

	1905	1906
Exchange service	$ 3,126,128 19	$ 3,643,657 95
Tolls	1,372,405 23	1,548,550 47
Private lines	1,621 99	1,557 62
Real estate	45,451 37	50,515 04
Other sources	110,815 93	140,563 68
	$4,656,422 71	$5,384,844 76

Expenses.

General expense	$ 357,021 34	$ 396,131 71
Operating expense	989,629 28	1,150,022 50
Maintenance, reconstruction, etc.	1,622,744 43	1,889,330 59
Real estate and miscellaneous expense	7,576 92	11,922 79
	$ 2,976,971 97	$ 3,447,407 59
Earnings over operating expenses	$1,679,450 74	$1,937,437 17
Taxes	$ 160,108 23	$ 191,433 32
1397 Interest	160,058 29	213,567 33

1398 The figures indicate a healthy and substantial gain in both gross and net earnings. The growth in exchange service and toll service were both quite large. The net gain in subscribers was 23,924, making the total number of subscribers at the close of the year 165,190. This gain was several thousand more than in any previous year in the history of the Company. For many years it was the practice to systematically canvass for new subscribers, but this was discontinued in January, 1905, and therefore this gain in the past year represents the spontaneous and voluntary action upon the part of the public, giving the best illustration of the popular preference for the service rendered by your Company.

The best engineers have raised their estimates of the normal growth and possibilities to be expected in the business—so many unique possibilities can be realized, and are being realized by an intelligent and liberal use of the telephone in connection with commercial affairs, and the social use seems to be almost unlimited; none of which, however, seems insurmountable, but, quite the contrary, the engineering and mechanical talent grows quite apace, if not in advance of public requirements.

To keep up with and make preparation to meet the growth and expansion caused your directors, at a meeting on the third day of January, 1907, to authorize an increase in the capital stock 1399 equivalent to twenty per cent of the amount then outstanding, to be due and payable in quarterly installments during the year 1907. This, when taken, will make the present authorized capital of the Company fully taken up and paid for.

The following figures will perhaps give a clear idea of the growth of the Company during the past year, and from these figures conclusions are reached as to the probable requirements for the coming year:

Total number of poles purchased during the year.....118,681
Cross-arms purchased during the year.....298,381

New exchanges were opened and equipped during the year at the following points:

		No. Subscribers.
	Athens, Ky.	68
	Auburn, Ky.	94

New Orleans, La	1,470	13,195
Owensboro, Ky	137	1,226
Paducah, Ky	527	3,131
Shreveport La	240	1,879
Vicksburg, Miss	119	1,367

The number of lineal feet of cable purchased during the year was	1,607,024

931 miles of toll pole routes were added, with 8,151 miles of wire.

The number of exchange messages handled daily averaged	1,534,000
Total exchange messages for the year	480,142,000
Total number of toll messages for the year	4,692,577

The Company owns and occupies buildings of its own in twenty-one cities. New buildings were built or acquired at the following places during the year:

Jackson, Tennessee.

Memphis, Tennessee—one branch office.

Nashville, Tennessee—two new branch offices, new shops and new warehouses.

New Orleans, La.—three new branch offices.

Chattanooga, Tenn.—one new branch office.

1400*b* It is with sincere regret that we call attention to the loss of Mr. George R. Knox, one of the Directors of the company, who died in the latter part of the year. Mr. Knox was one of the charter stockholders of the Company, and took an active and lively interest in its affairs up to the time of his death. His loss is keenly felt and very greatly deplored.

While the capital account of the company has grown from year to year, the number of stockholders has grown even larger, and in greater proportion. On the first of January, 1906, there were 989 registered stockholders, holding an average of 136 shares each; on January 1, 1907, there were 1,260 stockholders, holding an average of 134 shares.

The books and accounts in the main office were audited by competent auditors during the year, and found to be correct; also the various exchanges and branch offices of the Company.

It is very gratifying to be able to state that the great rank and file of the employés of the Company were found absolutely straight and correct, and this report cannot be closed without again paying tribute to the enthusiasm and support of the officials, representatives and employés generally.

For the Board of Directors.

JAMES E. CALDWELL, *President.*

CUMBERLAND TELEPHONE BUILDING.
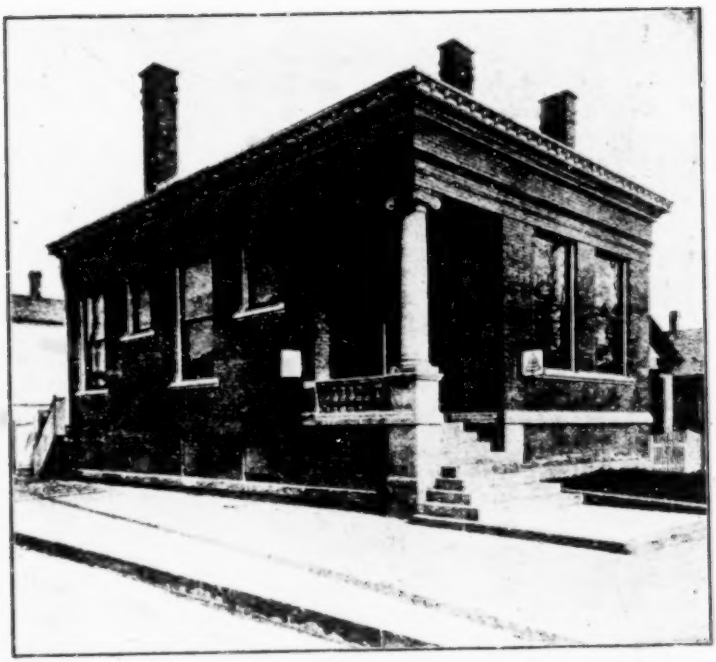
NEW ORLEANS, LA.

While the figures show a substantial surplus earnings over and above the dividend paid, yet, neither the surplus earned nor the rate of dividend paid is sufficient; it is not a sufficient profit or a just reward for the capital and enterprise that has been put forth to develop a new and novel art, for the hazard that was assumed and the necessity that for many years prevented the payment of more than 4 per cent on the capital. If the business should have proven a failure, the loss would have been well-nigh complete, as the money was invested in a class of property that could not be converted; and, on the contrary, if the art was developed, and it has been developed to a point where it is now referred to as a necessity, it indicates the great value that has been produced, and hence some extra reward should be received for the money and the enterprise that has been put forth to bring these results about; therefore, every consideration of justice demands that the rates and earnings be increased and improved, and justice and fairness calls for a still further advance and improvement in the net profit, to the end that the capital that has been honestly invested and faithfully employed during these years to bring to success so useful and valuable a facility should have a greater return paid thereon than the present rate of dividend.

Early in the year an increase in the capital stock was made; coincident with the date for payment thereof indications all foreshadowed financial disturbances, causing the directors to apply the proceeds of this increase of stock towards reducing the floating indebtedness, and a discontinuance of extensions and development as much as possible. This did not stop all extensions, but to an extent which left only such development as was quite necessary and advisable. This let-up in construction enabled the management to economize to some extent in expense of operating, and to effect reforms in rating, which have already shown some improvement in earnings, and should show still further improvement with succeeding months. This policy also put the Company in position to go through the panic without embarrassment or inconvenience.



In this connection it is pertinent to call attention to the underlying strength of our business. "Talking" is undoubtedly the strongest of human impulses, indeed the great-

CUMBERLAND TELEPHONE BUILDING.
EVANSVILLE, IND.

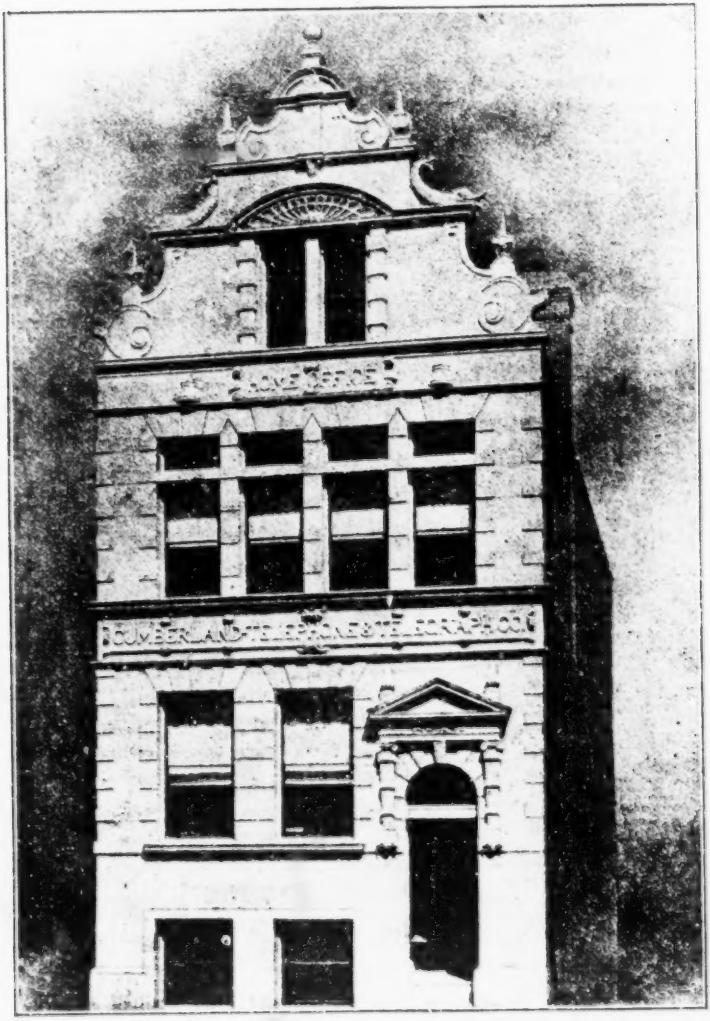
est of human necessities, and the development of the dual telephone facilities, "Local and Long Distance," places at the public's disposal a facility to promote this desire of such a convenience, and so reasonable that its use is on a constant ascending scale. Every circumstance seems to promote its use—even panics call forth increased use thereof—and a comparison of the earnings of 1893 and in the last half of 1907, show that, during the months when the strain was most intense, the use of the Company's facilities were taxed to their uttermost. Even "hard times" and political agitation bring on more "talk"—that which the telephone is designed to meet. The political agitation—we may say the political reign of terror sweeping over the country—has brought our business in for its share of attention. This has undoubtedly frightened off some who were inclined to invest in our securities—it has naturally caused uneasiness among our stockholders. The hostile attitude of the public authorities, and the fierce attacks of the newspapers, both formidable and at times quite menacing, producing more or less litigation, and calling forth more or less adverse legislation from state and city authorities. It must be borne in mind, however, that this state of affairs has existed in a minor degree for more than twenty years, but up to the present, however, not a single successful point has been scored against this Company along these lines, and this for the reason—not on account of any shrewdness or popularity of its officers or directors, except in so far as they have never permitted or engaged in any unsound financiering or manipulations—that these facts no court, legislature, city council or board of trade has ever been able to break down or overcome, viz.: that the capitalization of the Company was absolutely sound and honest—not one bit of water or inflation therein; that its expenses are as low as possible; that its development is extensive, indeed in many ways admirable; character of construction first-class; rates only sufficient to return a rate of dividend that cannot be criticised—indeed, none have ever intimated that a higher rate up to 10 per cent. could be deemed too much—considering, as they must, the economy, the great use and value of such a system, reaching as it does every city, town and village, most every post-office, and a large percentage of the farmers in an area extending from the Ohio River to the Gulf of Mexico, a

POOR COPY

CUMBERLAND TELEPHONE BUILDING
NEW ALBANY, IND.

thousand miles long by four hundred miles wide. Such facts as these have caused the courts of all the states to pronounce in its favor—the highest courts in Tennessee and Kentucky to refer to it in such language as follows:

"The object and purpose of the Company and all such companies is to do the best work possible, and keep in touch with the people and their interests."



* * * *

"The Cumberland Telephone, with its local and intrastate connections, has become one of the most important agencies of social and commercial life, the loss of which would be felt keenly, possibly in every neighborhood of the state."

The question of rates will always be a subject of controversy; during the life of this company it has come up in every conceivable form. During the early part of 1907 it was found necessary and proper to advance our rates in the city of Louisville. This action was promptly challenged by the Board of Trade of that city; and their handling of the question was so enlightened, and such an advanced step as to make it noteworthy, indicating the enlightenment of that community, and giving assurance that no real anxiety need be felt over all this agitation and political hue and cry. As a result of the conference had between the officers of this Company and the Directors of the Board of Trade of said city, it was agreed to leave the whole question of rates in Louisville to a committee of five of their prominent business men, all users of our service, and whose rates were affected; articles of agreement were drawn up and duly signed; the committee was named as follows:

W. B. Belknap, Wholesale Hardware,
Attilla Cox, President Columbia Trust Co.,
George Gaulbert, Wholesale Drugs,
Logan C. Murray, President American National Bank,
Marion Taylor (Chairman), Wholesale Liquors.

These gentlemen, not one of whom was ever interested directly or indirectly in this Company, employed an expert accountant and made a thorough investigation, and reported unanimously that our rates and actions were reasonable, fair and justified. Their report was adopted by the Board of Trade, and is being lived up to by them in the best of faith. An example has here been set that in that community their

CUMBERLAND TELEPHONE BUILDING
HOPKINSVILLE, KY.

foremost men will take the time, and can be implicitly trusted in dealing with questions which mean an increase in their own expenses.

Competition is cutting a sorry figure; all of the fair promises claimed by the promoters in this line have been exploded; from one end of the country to the other it is a tale of woe—by business people forced to a double patronage, and by those who have been duped into putting their money into the ill-starred ventures.

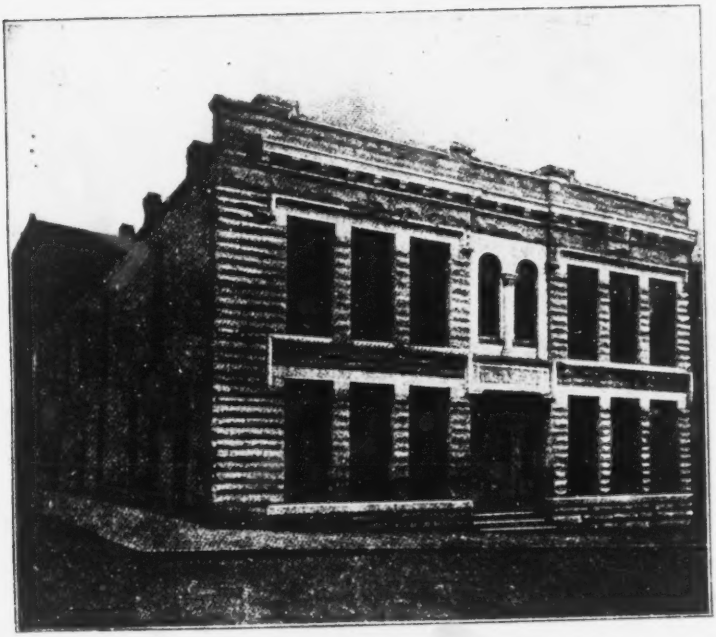
The following extract from a recent report instigated by the Board of Trade of one of the prominent cities in the country tells the whole story and conveys the idea complete:

REGULATION BY COMPETITION.

"To the examination of this most important branch of my investigation I have devoted much time and study.

"The telephone is, in its very essence, a means of intercommunication, just as much as the postal service. No community would, for a moment, tolerate a dual postal system under which the letters entrusted to one company could not be delivered to the patrons of its competitor.

"A single telephone system promotes general intercommunication. A dual system renders thorough intercommunication impossible. A dual system of telephones divides the population of a city into two camps, and the individual users must either be content with half a service, or must pay, if not a double, at least a greatly increased cost.



"Where there are two telephone systems, the business man is almost obliged to take both. * * * * * *

"The same reasons which are urged for the introduction of a second telephone company would apply just as forcibly to the introduction of a third or fourth. If the arguments of those who advocate dual systems are pushed to their logical conclusion, the more telephone companies a city could boast of, the cheaper prices would become and the more perfect the service would be, and the greater the development of the use of the telephone. The mere prospect of half a dozen companies simultaneously enjoying the privilege of tearing up the streets and planting miniature forests of unsightly poles throughout the residence district reduces this proposition to an absurdity, and yet the inconvenience would only be proportionately greater than that of having a dual system."

The Company's finances are in such a condition that it will be able to take care of its growth during the ensuing year without any necessity for increasing the capital stock, or the issuance of any bonds.

For the Board of Directors.

CUMBERLAND TELEPHONE BUILDING
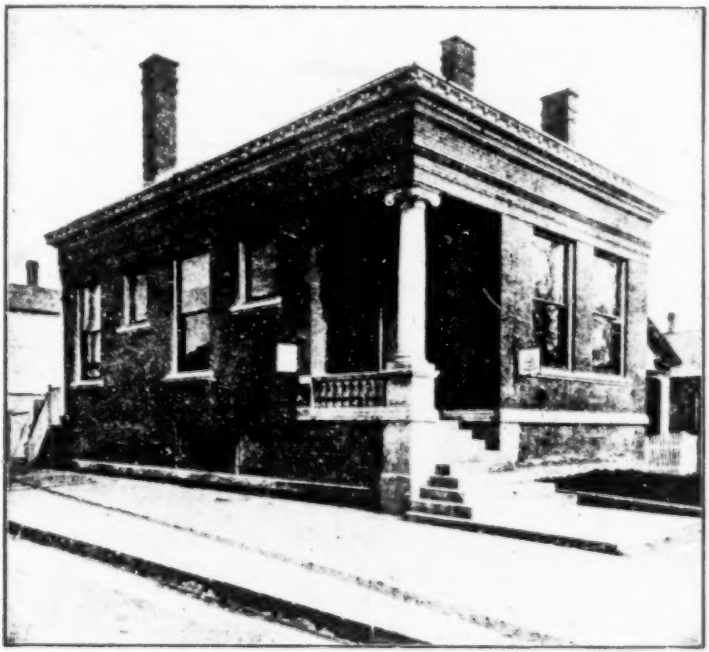
NEW ORLEANS, LA.

The use and convenience of the telephone is so well known to the public that further effort in that direction is not considered necessary, but the most steady and persistent effort has been put forth to improve the service in every way and maintain it at a high state of efficiency.

All legitimate new business in the territory has been promptly cared for, and the Company is in position to continue to do so; and the fixed policy, which will be steadily adhered to, is to maintain the property and improve the service in every way possible, to meet the legitimate growth of the business promptly with the best type of apparatus known to the art, and to keep squarely abreast with the improvements in apparatus and methods as they are developed from time to time.

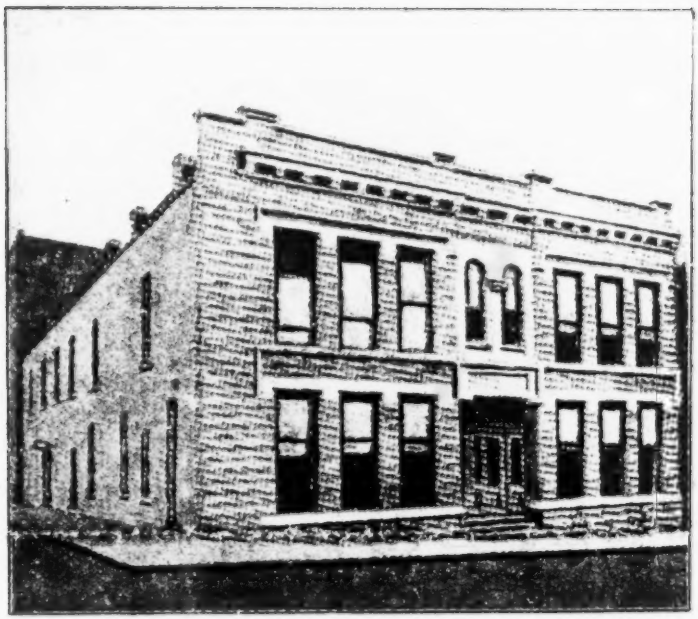
The management feels a keen sense of gratification, and hereby expresses its high appreciation of the loyal and hearty support of its employes and representatives as a whole. It is to this state of affairs that the Company is indebted for its best results.

Respectfully submitted,



For the Board of Directors.

JAMES E. CALDWELL,



President.

Howe, Charles Eustis Hubbard, William Lowell Putnam, Thomas Sanders, Sylvanus L. Schoonmaker, Nathaniel Thayer, Theodore N. Vail, John I. Waterbury, Moses Williams.

1433 *Report of the Directors of American Telephone and Telegraph Company.*

NEW YORK, *March* 16, 1909.

To the Stockholders:

Herewith is respectfully submitted a general statement covering the business of the Bell system as a whole, in addition to the report of the American Telephone and Telegraph Company, for the year 1908.

Bell System in the United States.

Subscriber Stations.

The number of stations at the end of the year operated directly by the associated companies which constitute our system in the United States was 3,215,245, an increase of 179,712. In addition to this number, there were 1,103,144 exchange and toll stations connected to our system by our toll and long-distance lines, but operated by local coöperative and rural independent companies or associations having sub-license or connection contracts. Adding also our telephones employed for private line purposes, there was a total of 4,364,629 stations connected to the Bell system as against 3,839,000 stations at the close of the previous year, an increase of 525,629 stations.

1434 Wire Mileage.

The total mileage of wire in use for exchange and toll service was 9,830,718 miles, of which 1,220,126 were added during the year. These figures do not include the mileage of wire operated by sub-licensees.

Traffic.

Including the traffic over the long-distance lines, but not including sub-licensees, the daily average of toll connections was about 463,000, and of exchange connections about 18,500,000, as against corresponding figures in 1907 of 494,000 and 18,130,000; the total daily average for 1908 reaching 18,963,000, or at the rate of about 6,106,000,000 per year.

Plant Additions.

The amount added to plant and real estate by all the companies, excluding sub-licensees, constituting our system in the United States during the year 1908 was:

For exchanges	$15,824,000
For toll lines	8,812,600
For land and buildings*	2,000,600
	$26,637,200

Plant Additions of Previous Years.

The amount added in 1900 was $31,619,100; in 1901, $31,005,400; in 1902, $37,336,500; in 1903, $35,368,700; in 1904, $33,436,700; in 1905, $50,780,900; in 1906, $79,366,900; and in 1907, $52,921,400, making the grand total of expenditure upon these properties during the nine years $378,472,800.

* Not including a large amount of real estate purchased from the American Telephone and Telegraph Company during the year.

1435 Maintenance and Reconstruction.

During the year $39,736,700 were applied out of revenue to maintenance and reconstruction purposes.

The total amount of maintenance and reconstruction charged against revenue for the last six years was over $186,700,000.

The result of the appraisements and studies on depreciation given below establishes the fact that our charges against revenue for maintenance and reconstruction are conservative and on the right side.

It would not be wise or good policy to reduce our maintenance until we have accumulated enough surplus to provide for and make possible any change of plant or equipment made desirable, if not necessary, by the evolution and development of the business.

In the meantime the public is getting the use of the surplus and reserve without being called on to meet charges on securities issued against it.

Permanency of Plant.

There exists much misunderstanding as to the permanent value of a modern telephone plant. Originally exchange plants were open wire construction, largely on house-top fixtures and to a certain extent on poles. The central offices were in leased buildings, seldom fire-proof, the equipment was of various types and standards due to the rapid improvement or development then taking place.

Now the central offices in all the principal centres and in many of the less important are in fire-proof buildings built for the purpose and owned by the companies.

From these offices radiate the underground conduits connecting the central offices with each other and the various districts of the exchange territory. Through these subways the wires are
1436 run in cables of copper wire, sheathed with lead covering.

The extensions of these lines are open wire, generally copper, or aërial cables strung on pole lines of substantial construction. The various cities and exchange territories are connected by means of pole lines of substantial construction, on which are strung for the most part copper wires. As fast as improvements in transmission methods make it possible, underground construction for long-distance trunk lines is being done. There are now underground conduits and cables between New York and Philadelphia, Chicago and Milwaukee, and a substantial part of the way between New York and Boston.

Of the total mileage of exchange wires over 57 per cent is underground. Of the total value 84 per cent is copper and 16 per cent iron. Of toll wires 91 per cent is copper and only 9 per cent iron.

All the subways and pole lines are built, with few exceptions, under franchises which are actually or in effect permanent; the larger pole lines for a considerable part are built over rights of way actually owned by the companies, which were acquired at a cost of some $8,000,000, and could not now be acquired at many times that outlay, if at all.

The central office and sub-station equipment are uniform, and all

of the highest standard. Each year shows a marked improvement in both durability and permanency of standard.

Depreciation.

Studies have been made during the year to determine the actual rate of depreciation which should be provided for.

Figures from actual experience could be made for pole lines, iron wires and most of the central office and sub-station equipment, but underground conduits, copper wires, and cables must still be ascertained from experience.

1437 Of the total value of the telephone plants owned by the American Telephone and Telegraph Company and associated companies:

Real estate constitutes..... 9%
Underground conduits and cables.....20%
Copper wires and aërial cables on poles.....18%
Pole lines not including wires.....26%

$8,000,000 of this represents ownership of rights of way over private property.

Iron wires..... 4%
Central office and sub-station equipment.....23%

As to the depreciation of property, real estate is standard and established.

Underground conduits can be classed with real estate, or rather with permanent construction on long-term ground rents.

Cables and copper wires have shown very small depreciation, and experience has not yet established a definite rate; there is, however, a net scrap value of 40 per cent.

Iron wires have a life of from eight to fifteen years.

Pole lines have a life of from ten to sixteen years.

Central office and sub-station equipment have a depreciation dependent on their character, the condition in which they are maintained, and on the policy of renewal or replacement by new or improved apparatus.

Construction for the Current Year.

Estimates of all the associated operating companies and of the American Telephone and Telegraph Company for all anticipated requirements for 1909 have been prepared. Maximum expenditure in each case has been agreed upon, and all who are responsible for the expenditures are working in entire accord with these agreements and understandings, and it is believed that the results will be, as they were in 1908, well within the limits fixed.

1438 Associated Companies.

Financial Condition.

The associated operating companies of the United States (not including the American Telephone and Telegraph Company) com-

menced the year with a reasonable indebtedness, which has however been substantially reduced. The obligations of those companies to other than the American Telephone and Telegraph Company decreased for the year $2,709,000, while the cash on hand increased at the same time $2,295,000—a net improvement in condition of $5,004,000.

During the year the Western Electric Company decreased its indebtedness $6,225,000 and decreased its cash $1,194,000, making a net improvement of $5,031,000 for that company.

The total improvement of our associate operating and manufacturing companies in the United States was thus over $10,000,000, bringing the current and floating indebtedness of all the associated companies well within the limits of current operations.

Physical Valuation of Telephone Plants.

For the purpose of determining the relation between the physical plant and the capitalization, a valuation of the exchange, toll and long-distance line plant included in the Bell system in the United States was made in 1907. The valuation was based on the replacement cost of the existing plant. This appraisement gave our plants a value $35,000,000 in excess of the obligations outstanding against them.

No new valuation as a whole has been made, but several valuations of all or parts of the plants of several of the associated
1439 companies have been made either by or under the direction of public authorities.

In every case has the valuation so made exceeded the valuation as carried on the books.

If to this variation be added the value of patents, franchises and rights of way, the position and strength of the business must be conceded.

The following statements will show the book value of plant, outstanding obligations existing against it, and the growth and financial condition of the associated companies.

Bell Telephone Companies in United States.

American Telephone and Telegraph Company Not Included.

Comparison of Earnings and Expenses, 1907 *and* 1908.

(Duplications Excluded.)

	1907.	1908.	Increase.
Gross Earnings	$120,753,200	$127,117,200	$6,364,000
Expenses: Operation	48,731,600	49,083,800	352,200
Maintenance	34,665,700	37,204,200	2,538,500
Taxes	4,510,700	5,173,600	662,900
Total Expenses	87,908,000	91,461,600	3,553,600

Undivided Profits.	6,613,600	7,076,600	463,000

*Decrease.

1440 *Combined Balance Sheet,* 1907 *and* 1908.

(Duplications Excluded.)

Assets:	Dec. 31, 1907.	Dec. 31, 1908.	Increase.
Contracts and licenses.	$8,800,200	$8,107,600	*$692,600
Telephone Plant	447,284,600	475,034,600	27,750,000
Supplies, Tools, etc.	16,238,700	14,858,500	*1,380,200
Receivables	39,961,200	36,359,400	*3,601,800
Cash	6,435,300	8,730,400	2,295,100
Stocks and Bonds	22,642,300	23,450,400	808,100
Total	$541,362,300	$566,540,900	$25,178,600
Liabilities:			
Capital Stock	$348,129,400	$375,891,600	$27,762,200
Funded Debts	37,115,300	39,649,800	2,534,500
Bills Payable	92,615,100	85,179,300	*7,435,800
Accounts Payable	19,415,500	17,205,500	*2,210,000
Total Outstanding Obligations	497,275,300	517,926,200	20,650,900
Surplus	35,125,200	34,491,500	*633,700
Depreciation Reserves.	8,961,800	14,123,200	5,161,400
Total	$541,362,300	$566,540,900	$25,178,600

*Decrease.

The decrease in "Surplus" account is due to a change in the dividend dates of several companies—bringing them within the quarter and year in which the earnings are made; and also to charging off all uncollectible and a large amount of doubtful accounts.

Entire Bell System, Including Canada.

American Telephone and Telegraph Company and Associated Holding and Operating Companies in the United States and Canada, Not Including Connected Independent or Sub-Licensee Companies.

We submit a balance sheet and earnings and expense statement of the Bell Telephone business as a whole, eliminating all
1441 duplications and showing the figures and results as if operated by a single company.

In addition to the above, there are associated or connected with and forming a part of the system for all purposes of communication, some 7,700 independent or sub-licensee companies operating over 1,100,000 stations, and representing an aggregate investment of capital which a few years since would have been considered ample for the whole country, probably over $100,000,000 in all.

Comparison of Earnings and Expenses, 1907 *and* 1908. (*All Duplications, Including Interest, Dividends and Other Payments to American Telephone and Telegraph Company by Associated Holding and Operating Companies, Excluded.*)

	1907.	1908.	Increase.
Earnings:			
From Exchange Service	$90,782,300.	$95,847,700.	$5,065,400.
From Toll Service	36,291,600.	37,600,100.	1,308,500.
From Other Sources	5,933,000.	6,568,600.	635,600.
Total Earnings	$133,006,900.	$140,016,400.	$7,009,500.

Accounts Payable	25,190,000.	20,386,200.	21,605,700.	3,584,300. *
Total Outstanding Obligations.	490,533,400.	563,352,700.	607,804,300.	117,270,900.
Surplus	24,473,700.	32,737,600.	31,759,600.	7,285,900.
Depreciation Reserves, Plant	11,839,900.	15,227,800.	20,728,500.	8,888,600.
" " General	22,786,900.	15,579,700.	19,751,800.	3,035,100. *
Total	$549,633,900.	$626,897,800.	$680,044,200.	$130,410,300.

* Decrease.

The figures represent all the outstanding obligations belonging to the public, and the property which is represented by those outstanding obligations.

Particular attention is called to the decrease in "Supplies" and "Bills and Accounts Payable," which still include the $25,000,000 1910 notes of the American Telephone and Telegraph Company and the $6,000,000. 1909 notes of the Western Telephone and Telegraph Company,—a total of $31,000,000. less $4,403,000. already purchased.

The "Surplus" account is after charging off patents, all discounts on notes and bonds of the past, and all uncollectible and a large amount of doubtful accounts.

1441*b* The business of the Western Electric Company, like that of all other manufacturing companies, has shown a shrinkage for the year—not entirely, however, from the same causes.

The business of the Western Electric Company outside of that with the American Telephone and Telegraph Company and associated companies shows a slight increase over 1906—the year of the largest aggregate business of the company.

The year's business would have shown a manufacturing profit sufficient to have provided for all charges if the company was expected to do only the amount of business equal to that done last year, but under an organization such as is necessary to care for the increasing business of the last five years and for the prospective business of the next five years, and after charging off even more than the usual depreciation, showed a loss.

We, after careful consideration, thought it would be far cheaper to maintain in its entirety the organization than to undertake to reconstruct it, particularly when we take into account the very large surplus of the company on the books, and the much greater actual surplus.

The latter part of the fiscal year ending December 1, 1908, showed a decided improvement and it is expected that the current year will be satisfactory to all.

The work of moving the manufacturing department from Chicago to Hawthorne, Ill., is proceeding as rapidly as possible, and the real estate in Chicago is on the market for sale. This property, which showed on the books of the Company at $2,700,000, has been appraised by the Chicago Real Estate Board at $3,755,000, and offers have been made for part at more than the appraisement.

The financial condition of the company was never better. Quoting from the annual report:—

1442 "The quick assets (cash on hand and accounts and bills receivable) were $16,467,859 at December 1, 1908, or 43.5 per cent. more than all the payables (including current accounts) $11,477,033."

American Telephone and Telegraph Company.

The earnings of the year as shown by the statements on pages 29 and 30 show a decided improvement over last year and every previous year.

The net revenue was $18,121,707.26, out of which dividends of 8% were paid, amounting to $12,459,156.00, leaving a surplus of $5,662,551.26.

With no improvement, our dividend and other charges for the current year, including the increased dividend charges which would be due to the conversion of the outstanding convertible bonds into stock, if all were converted, would be provided for, leaving a handsome surplus. If the returns of the first two months are any indication, the current year will show the continued improvement shown in past years.

Share Capital.

There were outstanding in the hands of the public at the close of the year 1,584,766 shares of capital stock. There were 26,370 shareholders with an average holding of 60 each. 26,213 shareholders held less than 1,000 shares each,—an average of 43 each; 153 shareholders from 1,000 to 10,000 each, with an average holding of 2,140 each; and four 10,000 or over each, holding a total of 121,516 shares.

1443

Convertible Bonds.

The balance of the $150,000,000 convertible bonds were taken by the bankers who bought the first $100,000,000. These became convertible beginning March 2, 1909.

With the proceeds, the financing of our company for all current operations, including our financing of the associated companies, is completed for 1909 and 1910. This, of course, includes the payment of the $25,000,000 5 per cent. notes due in 1910, and also provision for the $6,000,000 5 per cent. Western Telephone and Telegraph Company's notes due in 1909.

Future Financing.

As to future financing, it is believed that it will be possible to so organize that a great part, if not all, of our semi-urban and rural expenditures can be financed locally and a considerable part of all other financing. This will reduce the necessary demands on the American Telephone and Telegraph Company for current operations to an amount which can be very easily taken care of.

American Telephone and Telegraph Company's Relations to Associated Companies.

The relations of the American Telephone and Telegraph Company and the associated companies are not generally understood. The American Telephone and Telegraph Company is primarily a holding company, holding stocks of the associated operating and manufacturing companies. As an operating company it owns and operates the long-distance lines, the lines that connect all the systems of the associated operating companies with each other.

1444 In addition to these two functions it assumes what might be termed the centralized general administrative functions of all the associated companies.

The Bell system is one system telephonically inter-connected, inter-communicating and inter-dependent. This is such a system that any one of over 4,000,000 subscribers can talk with any other one within carrying power of the voice over wires, the only exception being that the Pacific Coast and the Middle Rocky Mountain region are not yet connected.

This system was built up under this policy and its continuance as a system depends on the continuance of the policy.

In the telephone business development is continuous. As conditions enlarge and change, new methods develop. The whole business suggests changes and stimulates inventions, and opportunities for improvements are frequent.

If each separate exchange or group of exchanges had not been assisted and directed in the development and introduction of these new ideas, methods and inventions, there would now be as many systems, as many methods of operating as there are separate companies. This would have made impossible the organization which now gives the Bell system that universality and preponderance on account of which no matter how many other systems may exist, every one of any commercial or social importance must have connection with the Bell system.

The same generalization runs through many departments. The companies are so organized, or fast becoming so, that every department continues through the local administration to the central administration of the American Telephone and Telegraph Company.

The American Telephone and Telegraph Company owns and maintains all telephones. It also owns either directly or
1445 through the Western Electric Company all patents.

It has a department which was organized at the very beginning of the business and has continued since, where is to be found practically everything known about inventions pertaining to the telephone or kindred subjects. Every new idea is there examined, and its value determined so far as the patent features are concerned.

The Engineering Department takes all new ideas, suggestions and inventions, and studies, develops, and passes upon them.

It has under continuous observation and study all traffic methods and troubles, improving or remedying them.

It studies all construction, present and future development or extension schemes, makes plans and specifications for the same, and gives when desired general supervision and advice. It has a corps of experts which, in addition to the above work, it as all times at the service of any or all of the separate companies.

When it is considered that some of these questions involve the permanency, duration and usefulness of a telephone plant costing millions of dollars, and changes costing hundreds of thousands, some idea of its importance can be formed. To give an illustration: one group of patents covering inventions which seemed likely to be useful and economical in the service was purchased by the company.

These inventions were developed into operating apparatus and put into use. While this cost hundreds of thousands of dollars, placing it beyond the scope of one operating company, the saving already accomplished to the associated companies runs into the millions.

A large staff has been and is continuously engaged in the consideration of disturbances arising from transmission and other lines carrying heavy currents, and in many cases that any telephone system can even exist in the vicinity of such lines is due to
1446 the constant and continued attention given this subject.

Every new trouble, and there are many, comes before this department. When settled there, it is settled for all. This has established a commercial, operating and plant practice not only for our own associated companies, but for others of high standing throughout the world.

All devices or inventions submitted receive the most thorough and painstaking investigation, and it is safe to say that there has as yet been no instance where any invention, system or method, rejected by the Patent and Engineering Departments of the American Telephone and Telegraph Company has ever had any permanent success when used elsewhere.

The Manufacturing Department creates and builds the equipment and apparatus which have been adopted. In this way throughout the whole grand system will be found standardization and uniformity. This is not any handicap on improvement or development of the art, for, on the contrary, every suggestion or idea, and there are many, has abundant opportunity to be tested, which would not be possible otherwise. No one of the companies could by itself maintain such an organization, and it would be fatal to any service to introduce or try out undeveloped ideas in actual service.

In the Legal Department all the big and general questions are looked after. It forms a clearing house in all legal matters for all the legal departments of the separate companies to which assistance and advice are given on all questions of general scope.

In the administration all questions which affect all companies, all questions between the associated companies, and the general policy and the general conduct of the business, are considered and close touch and relationship maintained with all
1447 parts of the system. Experts on every subject connected with this business are continually at work on old or new subjects and ready at call to go to the assistance of any of the companies. In short, the great work and substantially all the expenses of the American Telephone and Telegraph Company are involved in this "Centralized General Administration," taking care of all those matters which are common to all companies, or which if taken care of by each company would mean multiplication of work, effort, expense without corresponding advantage or efficiency.

To sum up, quoting the words of the representative of a large stockholding interest in one of the associated companies: "The contract relation with the American Telephone and Telegraph Company is the biggest asset this company has."

Criticism of Independents.

We have been criticised to some extent for our policy of publicity so far as it concerns the so-called "Independents." There has not been sufficient distinction between the "Independents" and the "Opposition" in the minds of the public. We have no quarrel with either. With many of the Independents we are working in complete harmony and for all practical purposes our system is part of theirs and their system part of ours. In fact it is expected and believed that a large part of the development in the semi-urban and rural territory can be done much more effectively and satisfactorily through independent local companies operating with us through or under connecting contracts or sub-licenses.

We can be called antagonistic only because we try in the protection of our property to expose and correct the misleading statements and impossible promises put out by would-be franchise vendors or mistaken company organizers, or mistaken associations
1448 for public protection, or when we call attention to the fact that what we claimed would happen, has happened.

In view of our preponderating interests in the telephone business of the country, we think it is due to ourselves to at least call attention to misleading statements, to promises in prospectuses impossible of fulfilment, and to advertisements offering to the public securities at large discounts, promising large prospective dividends, issued to build exchanges in which service is to be given at impossible rates.

If all who are interested in honest corporate securities would take the trouble to educate the public and exhibit courage enough to denounce all such misleading efforts, there would be a much more healthy condition.

In all controversies as to rates, franchises, etc., in all hearings before public bodies, our representatives have been confronted with such promises—statements as to what interests other than the Bell were doing—assertions that if it were not for watered stock or other methods of milking the public, rates could be reduced, or the business conducted at a profit on much more favorable terms to the public. All that experience has taught was as nothing before the promises of franchise vendors and manufacturers' agents. Established business and property were put in jeopardy with the result that there are many instances where the public has on its hands a partially duplicate exchange with partially duplicate subscription costs and no one has benefited except the promoters of the schemes.

There is now a decided tendency on the part of the public to favor consolidation wherever there are two exchanges. A great difficulty in the way is that, as a rule, much of the duplication of plant cannot be utilized for many years, if ever.

Gradually the public is becoming convinced that—quoting from last year's report—

1449 "Two exchange systems in the same community, each serving the same members, cannot be conceived of as a per-

maneney, nor can the service in either be furnished at any material reduction because of the competition, if return on investment and proper maintenance are taken into account. Duplication of plant is a waste to the investor. Duplication of charges is a waste to the user."

General.

In submitting this report, we wish to call your attention to two things which indicate the stability of the company and property.

One is the wide dispersion and small average holding of the shares—including the shareholders in the associated and connected companies, there are over 70,000 shareholders in the Bell system. From January 1 to March 2, the date of bond conversion, the shareholders increased about one hundred per week.

Another is the stability of the business, year after year shows an increase, no matter what the prevailing business conditions. There has, it is true, been a slight decline in the rate of increase in exchange earnings, and the toll line business has given some indication that conditions were not normal, but even in that there was an increase in earnings.

This stability and the position that the Bell system holds is due very largely to the policy and conditions under which it was developed, not alone to the telephone.

A telephone—without a connection at the other end of the line—is not even a toy or a scientific instrument. It is one of the most useless things in the world. Its value depends on the connection with the other telephone—and increases with the number of connections.

1450 The Bell system under an intelligent control and broad policy has developed until it has assimilated itself into and in fact become the nervous system of the business and social organization of the country.

This is the result of the centralized general control exercised by the company, the combination of all local systems into one combined system developed as a whole.

Nor could the development have been made in any other way. If the business had been developed by different organizations—each absolutely independent of and unrelated to the others—each little system would have been independent and self-contained without benefit to any other. No one has use for two telephone connections if he can reach all with whom he desires connections through one. Through the development of the Bell system, the relation and benefit as a whole have been considered. The policy has been to bring together all units which contribute to the value of the whole. The demand for facilities is seldom found waiting in these days for the facilities to come. The demand is created by the existence of the facilities. This is particularly true of the telephone service. It took courage to build the first toll line—short as it was—and it took more to build the first long-distance line to Chicago.

If in the early days the immediate and individual profit of the

long-distance toll lines had been considered, it is doubtful if any would have been built.

There are no other countries where the telephone service occupies the same relation to the public. Elsewhere narrow control and a policy of restriction have prevented its full development. Whatever is good in those systems has been adopted from the practice in this country.

There has been oftentimes comparison between the rates of this and other countries. The average rate of this country taking all classes of service and conditions into consideration is
1451 about the same as the average rate of all other countries.

There may be no maximum rates in other countries equal to some in this country, but on the other hand, there is no such maximum value given. Cheapness is relative to value, not to price. Value in telephone service depends on development, extent of system, certainty and promptness. Promptness and certainty mean operators and facilities sufficient to meet the maximum demands. It means constant and close attention on the part of attendants, sufficient in number to immediately care for any of the many troubles inherent in everything connected with the service from both outside and inside, the troubles which seem to develop and multiply with the development and increase of the business. Promptness and certainty in meeting maximum demands mean idle operators when the demand is less; it means a small average use of operators and facilities.

In any given time a certain possible use—number of connections or messages—expressed in units of service can be given by any fixed number of operators with certain given facilities. If in any given time these possible units of service are not availed of, they are lost—they pass away with the time.

Promptness and certainty therefore mean that each message, connection or other unit of actual service availed of must bear the expense of a number of unused possible units not availed of. If, instead of the immediate or prompt service of this country, the service as it exists in most other countries were in vogue, the cost would be reduced, but to a much greater extent would the value be reduced. Delayed service—service which keeps a line of customers waiting, so that there need be no loss of units of service, would reduce to a minimum the number of operators and given facilities, and all that creates cost.

Instead of waiting and idle operators and facilities, there would be waiting, idle and patient, customers.

1452 We do not think the American public desires this kind of service.

During the year we have had many questions before the courts, state commissions and other public bodies. We have met them in a spirit of absolute frankness and candor. The results have been on the whole satisfactory, and the treatment we have received has been fair and considerate, and we have found an evident desire to ascertain the real conditions and to meet them fairly.

While during these discussions the anxiety of the officials of our

companies has been keen, their attention distracted from the ordinary operations of business and the work and expense incurred in furnishing information and in attendance have been great, we believe that through this work and through our policy of publicity, our relations with the public are closer, the public mind is better informed, many erroneous impressions and opinions have been corrected, and that the public is beginning to recognize and admit—what the "Bell system" as conducted by the American Telephone and Telegraph Company stands for to the community at large.

For the directors,

Executive Offices, Nashville, Tenn.

Capitalization.

Capital Outstanding	$19,680,150
Surplus and Reserves	4,979,194
Bonds	1,000,000

History.

The Cumberland Telephone & Telegraph Company was chartered in the year 1883, under the laws of the State of Kentucky, and its headquarters were established in Nashville, Tennessee. For twenty-six years the Company has an unbroken record of quarterly cash dividends, beginning in 1883 at the rate of 4% per annum and now paying 8%, and since its organization has built up one of the largest and strongest telephone properties in the country.

Territory Served.

The Company controls the Bell telephone exchanges throughout a large and most prosperous territory in the South; it has a complete network of toll lines of its own, extending from Louisville, Ky., to New Orleans, La., having exchanges at Evansville, Louisville, Memphis, Nashville, Chattanooga, Knoxville and New Orleans. Its numerous exchanges also cover the entire States of Tennessee, Kentucky, Mississippi and Louisiana, besides parts of Illinois and Indiana, a territory 1,000 miles long by 400 wide. This territory represents one of the richest agricultural sections in the Union, promising a much greater and more rapid growth, both in wealth and population, than that of the Northern States, which are more fully developed.

Franchise.

Over 90% of all its franchises are perpetual and unrestricted. It has unlimited and unrestricted franchises in Louisville, Nashville, Memphis and New Orleans. It has a thirty-five year franchise in Evansville which has thirty-three years yet to run. Notwithstanding their enormous money value, none of the Company's franchises are carried on their books as an asset.

Growth.

The growth of the Cumberland Telephone Company for the past ten or twelve years has been most remarkable. Back as far as 1897 the capital was only $1,695,700.00, with a surplus of $166,144.54, and a total number of subscribers amounting to 10,635. The stockholders received dividends at the rate of 4% per annum. At the present time the capital is $19,680,150.00, surplus and undivided profits $4,979,194, total number subscribers 187,259, and is now paying dividends at the rate of 8% per annum.

Up to the present date, this Company has paid in dividends to its shareholders the total sum of $9,235,750.00, besides laying aside a surplus and undivided profits amounting to $4,979,194. It must be remembered, too, that for more than half of this period of time the Company was working on an average capital of only about $4,500,000.00.

1461 The following table gives the remarkable growth of this Company in condensed form:

Year.	Capital.	Surplus, reserve and undivided profits close of year.	Net earnings for the year.	Rate of dividend.	Exchanges in operation.	Subscribers close of year.	Range in market price of stock.	
							High.	Low.
1897	$1,695,700 00	$166,144 74	$220,849 46	4%	53	10,635	76	50¼
1898	2,875,000 00	419,731 72	326,937 96	5%	88	19,655	98	69
1899	3,459,200 00	663,851 57	439,681 88	6%	137	30,751	134	98
1900	6,017,700 00	1,329,572 60	517,061 07	7%	232	57,080	132	102
1901	7,261,200 00	1,600,803 12	638,062 68	7%	289	78,915	140	129½

Panic Proof.

The fact that the earnings of the Company justified an increase in dividends from 7% to 8% per annum, beginning October 1, 1908, reflects great credit on the managers and officers of the Company, especially when it is remembered that just at this particular time most all other corporations were still suffering from the effects of the panic of 1907, quite a number having reduced their dividends, while many discontinued paying altogether. It was thoroughly demonstrated all through the panic year of 1907 that telephone properties (Bell Licensed) when properly managed suffer less during times of depression than most any other class of business. During the months of October and November, 1907, right at the worst time of the panic, the toll and rental receipts of the Cumberland Telephone Company were $1,019,000.00 as compared with $918,000.00 for the same period of time the previous year, showing a gain of $101,000.00, notwithstanding the hard times. The fact that the telephone business is done practically on a cash basis is another safeguard towards protecting its earnings during times of depression.

To Investors.

In calling your attention to this stock as an investment I have endeavored to impress you with its growth and increasing earning power. The stock has a broad market, having over 1,600 shareholders distributed over thirty-nine different States, and is listed on the Boston and New Orleans stock exchanges, besides being traded in actively by brokers in Nashville, Louisville, Memphis and Chicago. Among bankers and investors, generally, the stock ranks as a high grade, safe investment; there being only $1,000,000.00 of bonds on the property, it is owned by the stockholders and not bondholders. If interested I will be pleased to give you the very closest market quotations. Today the market ranges from 126 to 129. On its present dividend basis of 8% the stock will net the investor:

6 per cent at 133⅓.
5½ per cent at 145½.
5 per cent at 160.

GOULDING MARR, *Broker*,
214 *Union Street, Nashville, Tenn.*

1462 J. E. JAGOE, called on behalf of Complainant, being first duly sworn, testified and deposed as follows:

Direct examination.

By Mr. GRANBERY, for complainant:

Q. State your name, age, residence and occupation?

A. Age thirty-three years; I live in Nashville; I am employed in the plant department of the Cumberland Telephone and Telegraph Co. as assistant superintendent of plant.

Q. Who is your superior?

A. The general manager.

Q. Does he perform the duties incumbent upon the superintendent of plant?

A. He is acting superintendent of plant.

Q. And you are his assistant, in that department?

A. Yes, sir.

Q. Is there anyone between you and the general manager or are you next to him in the work?

A. I am next to him.

Q. Where were you educated Mr. Jagoe?

A. I finished my education at the Christian Brothers' College in Memphis, Tenn.

Q. What experience have you had in the telephone business?

A. Ten years, active.

1463 Q. What has been your department or branch or part of the telephone business, what have you been engaged in?

A. Mainly plant work.

Q. Are you familiar with the properties of the complainant company?

A. Yes, sir.

Q. What are your duties as assistant superintendent of plant?

A. To supervise all construction and plant work done by the company, to determine the cost of it, to establish units of cost, to distribute all plant expenses and to advise with the engineering department on all proposed work.

Q. Are you familiar with the complainant's telephone plant in the City of Louisville?

A. Yes, sir.

Q. Have you made a special study of that plant recently?

A. Yes, sir.

Q. When did you begin that study?

A. In the middle of January.

Q. And it has continued up to the present time?

A. Up to a few days ago.

Q. Now I want you to state what is the value of that plant and give the different quantities of material upon which you base your statement?

Mr. BLAKEY, for defendant:

Mr. Master, you will remember that the complainant has closed its case, its evidence in chief in this case. The depositions
1464 of its auditor, and president, were taken to establish the facts which were referred to you for investigation. Thereupon the defendant introduced its evidence, completed the taking of depositions to establish its contention as to the various matters referred to you for investigation. The defendant in doing this employed, at a very great expense, three experts on the valuation of plant, and they went into detail as fully as they could, and testified as to the value of that plant. Now the question asked here is not in rebuttal of what those men stated, but is to establish what the complainant was compelled to establish on direct testimony. The result of this testimony now, I assume, would be that the defendant would have to begin over again and take its proof over again, to answer the case that is

made now, and which should have been made in the first instance, and of course such a course of testimony would be interminable, and when the defendant gets through answering the case complainant makes now, the complainant would be—on the same theory that he is now allowed to testify, to come in and state all over again its case, and so we will never reach an end.

1465 It seems to me when the complainant has once introduced proof on all the questions it thought were pertinent to matters under investigation, that should be the end of its direct proof, and it should not now be permitted to come in and establish a case which it did not establish at the outset. It took no proof at all at the outset to establish the value of its plant.

Mr. GRANBERY, for complainant:

Counsel is in error in assuming this is original testimony. It is strictly in rebuttal of the testimony he has sought to develop by his experts. He is also mistaken in assuming there was no direct proof as to the value of this plant in our original testimony. It was stated by the president most emphatically that this property could not be reproduced, for, and was worth more than the amount claimed for it in the bill.

Now, if counsel will simply be a little patient, he will find before we get very far that this is rebuttal evidence and is intended to show the expert testimony which he has introduced as to the value of that plant, is not worthy of serious consideration, when the

1466 explanation of it is made.

The MASTER:

I will let the witness answer. I think the more light that can be thrown on the basic question, of the value of the plant ought to come in, even at the last minute, as far as the Master is concerned, and would be glad to hear any proof on that point that is pertinent. That is one of the serious points in the case.

Mr. GRANBERY, for complainant:

I might also call the attention of the Master to the fact that the order of reference requires you not only to report the value of the plant at the time the bill was filed, but at the time his report is made, and therefore I assume this would be competent as original testimony going to different matters in answering that inquiry as to the present value of the plant, when making his report.

The MASTER:

Go ahead with the testimony.

Exception *preserved* by defendant.

Mr. GRANBERY, for complainant:

Q. Now you may answer the question?

A. We have in Louisville 13,870 poles, which I designate

1467 as local poles, valued at $23.92 each. In this pole classification I have included the cross-arms, bolts, lag screws, washers,

brace-threetimes pipe bracers and strap bracers, brackets, foot blocks, anchors, guy clamps, guy hooks, guy shins, pins and nails, the poles themselves, guy stubs, pole steps, cable arms and guy wire. I value these at $23.92 each, making $331,770.40.

We have 21,154.5 conductor miles of aerial cable and this classification includes all the cable which is strung on poles, the messenger to which it is fastened, the cable clips and the tie wires, sleeves, paraffine, compound and solder used in splicing the cable, the bolts and fasteners used in terminating the messenger and the cable boxes with the protectors, which are used in terminating the cable, wires, bridle rings and apparatus used in distributing it. The value of this I place at $20,418 a mile, making the valuation of aerial cable $431,953.35.

We have 5548 miles of aerial wire and in this classification I include the wire which is strung on poles in order to serve subscribers, the insulators, the solder and paste used to connect the wires, and I value it at $13.8853 per mile, making the valuation of the aerial wire, $77,035.87.

We have 438,803 duct feet of conduit, valued at 38.829 cents per duct foot. In this classification we include the conduit itself, the cement, sand, gravel, brick, steel rods, I-beams, angle irons, traps, cable hangers, the iron pipe-bands, lag screws, pipe plugs go-
1468 ing to complete the conduits and manholes. I value that at 38.829 cents per duct foot, making the value of the conduit system $170,384.21.

We have 18,626.3 conductor miles of underground cable, and in this classification we include all cables underground, the sleeves, solder, paraffine, compound and other materials used in splicing and connecting these cables, pot-heads and terminals at the distributing boxes, the boxes with their protectors, the wool-covered cable which connects it to the main frame, and we value that at $15,512 per conductor mile, making a valuation of underground cable of $288,942.50.

The Central Office equipment, which includes all switchboards, commonly known as A boards, and B boards, distributing frames, the intermediate frames, the wire-chief's testing apparatus and all the apparatus from the horizontal side of the main frame inward, in each central office which we value at $32.90 per subscriber, making the valuation $309,102.93.

We had on the 22nd day of February 1910 I think the date was, 9,395 subscribers' stations. Included in the subscribers' station equipment, the private branch exchanges, the subscribers' instruments, the interior wires, interior block wires, the drop wires, the booths, coin collectors, pay station apparatus and special fittings used in connection with that class, we value at $19,622 per station, making the value of this class of plant $184,351.04, or a grand
1469 total of all the plant in Louisville of $1,793,540.30.

Q. Does that include the entire value of the exchange plant, exclusive of real estate, office furniture and fixtures, working capital, supplies on hand, teams and tools?

A. Yes, sir.

Q. Mr. Jagoe, do you know that you have got the correct number of poles in that exchange?

A. Yes, sir.

Q. How did you arrive at the poles you allotted to the exchange in contradistinction to the poles you allotted to the long distance lines?

A. I had the poles in the Louisville exchange counted and classified. First, those poles which carried only exchange lines. We have 12,584 of that class. Second, poles which carry both local and toll lines and we have 1815 of that class. Third, those which carry toll lines only and we have 1129 of that class. And then poles which are used as guy poles, and we have 404 of that class. The guy poles were not included in my total of exchange poles at all. The poles which carry toll lines only, were not included in our count of such poles. The 1815 poles which carried both classes of wire, were divided route by route in proportion to the number of circuits of each class, toll or local, carried on each route. By following out that proportion for each route we arrive at the conclusion that 1286 of those poles could properly be called local and 529 toll.

1470 Q. Suppose there were no toll lines in Louisville, would those 1800 poles carrying both classes of wire, have to be there to carry the local subscribers' lines?

A. They would.

Q. But you have divided them in proportion to the number of circuits of each class?

A. Yes, sir.

Q. Now, what character of poles are used in that exchange?

A. We have chestnut poles, creosoted pine poles and red cedar poles.

Q. I believe Mr. Polk stated that we had a few cedar poles and the remainder were chestnut poles. What have you to say to that?

A. Mr. Polk did not make any inspection of the Louisville plant, and that was a hypothesis purely. We have in Louisville, not only creosoted pine poles and cedar poles, but long routes of those classes of poles.

Q. Can you give some of the pole routes built of creosoted pine poles in Louisville?

A. Yes, sir.

Q. Were they there prior to March 6th, 1909?

A. Yes, sir.

Q. Give some of those?

A. On Sixth Street, West Jefferson Street, West Main Street, Bank Street, Grayson Street and others we have routes of

1471 fifty-foot creosoted pine poles. On West Market Street between Fourteenth Street and Twenty-Second Street, is a route of largely creosoted pine poles; that is one of the best routes I have ever seen anywhere; it is the kind that makes a telephone man glad to have been there.

Q. Where do those creosoted pine poles come from?

A. Originally they come from the pine belt of Mi-si-sippi, and Louisiana, they are cut there, shipped into New Orleans or some other point—all of ours are treated in New Orleans the most convenient

point we have—and they are there subjected to a special process and shipped from New Orleans to the point desired, these were shipped to Louisville, and then erected.

Q. In the figures you have given, what size pole on an average do you allow in the Louisville exchange?

A. Forty feet.

Q. Does it make any difference in the cost, the length of the poles and the size of the poles?

A. Yes, sir.

Q. Is there much difference between the cost of twenty-five foot poles, or pole route, and a forty foot pole route?

A. A great deal of difference. The cost of the pole itself and the cost of erecting the pole is always in a much larger proportion than the lengths. A fifty foot pole would possibly cost five times as much as a twenty-five foot pole.

Q. Is this average of forty foot pole in this exchange, high
1472 or low?

A. Low.

Q. Is it necessary to use poles of that height in Louisville?

A. It is necessary in Louisville to use taller poles than in any city we do business in.

Q. Why is that so?

A. It is one of the largest cities we have. The business houses there make it necessary for us to get up high enough to keep from obstructing them, and all the trees are very well set along nearly every street we have, so that it is necessary for us to get up possibly ten or fifteen feet higher than if the town was not so well shaded. Then, again, in any City where we have a large amount of business and where we have a large amount of wire and other appliances on the poles, of course the more we have, the higher the pole has to be to carry it. In one place in Louisville, there are, beginning at the main exchange and running through South Louisville and Beachmont, by the Jockey Club, we have a route of 55, 50 and 45 foot poles continuously for seven miles.

Q. How many miles of poles has the Louisville exchange?

A. About 270 miles.

Q. That places how many poles to the mile?

A. Fifty.

1473 Q. You say that is the valuation of the plant. Is that the valuation of the plant as of March 6th, 1909, or at the present time.

A. Of today.

Q. What was the value of the plant March 6th, 1909?

A. Well, I was in a measure familiar with the plant as of that date, I didn't know it as intimately as I know it now, and I have no way of judging it except to take into consideration what I know has happened to us or has not happened to us in Louisville during that period, and the general depreciation of the plant and I would say the valuation today is slightly less than it was then.

Q. Has there been any additions to the plant since March 6th, 1909?

A. No, sir.

Q. Has the property been maintained in the meantime?
A. Yes, sir.
Q. Now you have given a classification of the material in that exchange, what classification do you follow?
A. The classification that is used by this company, and it has been agreed on practically by all the big companies in the United States and by all the telephone experts.
Q. There are various other classifications, are there not, of a telephone plant?
A. Yes, sir.
1474 Q. You can make as many classifications as you have different kinds of material?
A. Yes, sir.
Q. So, at last, it is a matter of judgment and opinion as to how you will classify your plant?
A. Yes, sir.
Q. Giving the amounts and quantities of material of each particular kind?
A. Yes, sir.
Q. Have you read the deposition of Mr. Crum and Mr. Polk?
A. Yes, sir.
Q. Are you familiar with the cost units in the report made by Prof. Jackson, in valuing the New England Telephone Company properties at the instance of the Massachusetts Highway Commission, and which has been filed as an exhibit in this case?
A. Yes, sir.
Q. Is it possible to compare the quantities and prices given by Messrs. Crum and Polk and yours, accurately?
A. That depends on whether or not I understand these gentlemen right. They mention a class and in that class it is very difficult to tell exactly what they include in it. According to my understanding of the different classes it will include all of the property in one or the other, I can.
Q. Suppose we take this basis; take the Central Office
1475 apparatus, what do you put it at?
A. $309,102.93.
Q. What does Mr. Crum state it to be?
A. $200,000.
Q. Does he include the same apparatus in that, which you do?
A. Yes, apparently.
Q. Now, what does Mr. Polk state it to be?
A. $203,000.
Q. What does Prof. Jackson state it, taking his units of value?
A. $192,907.53.
Q. Now, take sub telephones, pay stations and private branch exchange boards, what do you put that at?
A. $141,604.78.
Q. Now, what does Mr. Crum place that at?
A. $100,000.
Q. And Mr. Polk?
A. $102,500.
Q. And Prof. Jackson?

A. $151,597.72.
Q. Now take conduits, what do you put them at?
A. $170,384.21.
Q. What does Mr. Crum put them at?
A. $100,000.
Q. And Mr. Polk?
A. $94,900.
1476 Q. And Prof. Jackson?
A. $224,327.80.
Q. Take the aerial cable, what do you put that at?
A. $393,709.98.
Q. Mr. Crum?
A. $225,000.
Q. Mr. Polk?
A. Mr. Polk does not separate his aerial from his underground cable.
Q. And Prof. Jackson?
A. $485,594.22.
Q. Now, the underground cable, you put it at how much?
A. $288,942.50.
Q. And Mr. Crum?
A. $200,000.
Q. And Mr. Polk?
A. Mr. Polk does not separate his from his aerial.
Q. Prof. Jackson?
A. $277,958.32.
Q. Now, you have wires, drops, poles, messenger and sub station service wire, at how much?
A. $489,795.90.
Q. And Mr. Crum how much?
A. $150,000.
Q. Mr. Polk?
1477 A. Mr. Polk does not include service wire and with that exception, values it at $248,000.
Q. And Prof. Jackson?
A. Prof. Jackson does not make that classification anything like that.
Q. So, it is impossible to compare accurately the figures given by Crum, Polk with your Figures?
A. Except in one or two instances.
Q. Now Mr. Polk undertakes to give the basis upon which he arrives at the quantities and value of the cable in the Louisville plant, is that accurate?
A. No, sir.
Q. Give us the real facts?
A. Mr. Polk was handicapped in that he did not have the time necessary to make an appraisal of this plant. In his deposition he says that there is a small amount of cable shown as No. 20 gauge which was not worthy of consideration. Now, the blue prints that are filed in the case I believe as exhibits to Mr. Crum's deposition, show on that 52,846 feet, which is more than ten miles of this cable containing 20,909,800 conductor feet of No. 20 gauge cable.

That is over one fifth of the total conductor feet of all the cable in Louisville. That is plainly marked on those blue prints as No. 20 gauge cable.

Q. Were those blue prints the ones Mr. Polk used?

A. Yes, sir.

1478 Q. You have examined them since and you say that cable is shown on those blue prints?

A. Yes, sir.

Q. As a matter of fact is the cable there?

A. It is.

Q. Go ahead?

A. Mr. Polk says what was the result of that was he divided it, some No. 19 and some 22 gauge. Now, right there I had better remark that 19 gauge cable contains over twice the amount of copper that 22 gauge cable does and the copper is the most expensive part of the cable. Now these plans did not give all the cable in Louisville, didn't show all the measurements, in a number of cases, they were only working plans of proposed cable extensions and they could not be considered absolutely accurate in any sense, but they did give us substantially the amount of cable that was in the town. Now on them Mr. Polk made an absolute division between No. 22 and No. 19 gauge cable, and I presume where the measurement and gauge wasn't given, and the number of pairs, the only way he could have done it was to guess at it. But, eliminating all that doubtful cable, not counting it in any class, I find that we have shown plainly on those blue prints, twice the amount of No. 19 gauge fifty pair cable that Mr. Polk gives us credit for. If you count that 22 gauge cable instead of 19 gauge, as it properly is, it will account for some of the variation between Mr. Polk's valuation and mine, and perhaps all of it, following out the same proportion. To be exact, Mr.

1479 Polk says that there are 37,630 feet of No. 19 gauge, fifty pair cable. Plainly marked on those maps in runs of some size, leaving out the little runs that do not count much, and which there is any doubt about at all, we have 79,571 feet of fifty pair 19 gauge cable.

Q. Are you prepared, if counsel desires, to specify the particular places in the streets of Louisville where that cable is?

A. Yes, and the length in each location.

Q. Now you can proceed?

A. Mr. Polk states that this company has 87,483 feet of 19 gauge 100 pair cable—I would like to say here, in my list of this cable, I made measurements and observations wherever the blue prints were doubtful, and ascertained exactly the right amount, so in my classification I have the cable as it is there today. But on those prints, plainly marked is over 150,000 feet of 100 pair, 19 gauge cable.

Q. Now if you take the actual amount of cable that exists in the Louisville plant and apply to it the valuation units used by Mr. Polk, is there any material difference, or any difference, between the valuation of the cable on your figures and his figures?

A. There would be very little.

Q. Now, take another big discrepancy between you and Mr. Polk,

on the question of the valuation of the poles. How does that come in?

1480 A. Mr. Polk presumes that nearly all of our poles there are are chestnut. Chestnut is the cheapest pole we could have in Louisville, because it is nearer the place of supply of chestnut poles. We have, as I have said before, a great many of other, more expensive kinds of poles in the city. Mr. Polk estimates 11,000 poles in the city of Louisville, and as he has not seen it, it is purely an estimate, and we have made an actual count of the poles in the city and the values on his pole, I believe he placed it at $15.00 per pole. We cannot set them at that price at all. There could be poles set for $15, but they would not be the length poles and class of poles we have in Louisville.

Q. Now take the next matter, take the units of value first used by Prof. Jackson, and applying to the number of poles in Louisville, what would be the result?

A. $190,379.62.

Q. Now, what have you to say with reference to his unit of value?

A. His unit of value is very close to our unit of value on all poles used within the company's territory.

Q. What does his unit of value include?

A. It includes every pole in Massachusetts, including the 25 foot poles out in the country routes. After we leave the City, the average pole is possibly about twenty-six or twenty-seven feet, and the cost of it is about $6.50 each. Mr. Jackson used of course, those poles, as well as the city poles in his estimate.

1481 Q. Of course I assume that these valuations you have given include the cost of labor, of placing the property in usable condition as it stands today?

A. All the labor, freight, cartage and all expenses incident to erection into the plant.

Q. You say you have not allowed anything for working capital, supplies on hand, teams, tools and matters of that kind?

A. No sir.

Q. How much ought to be allowed in a plant of that size knowing the conditions as you do and having had the practical experience you have had with that plant?

A. To provide for a normal growth and usual conditions there would ordinarily be kept on hand about fifteen to twenty thousand dollars' worth of material. I am not familiar enough with the working capital to pass upon that.

Q. What about the tools and teams?

A. The tools and teams in a city the size of Louisville, would be valued at twenty thousand dollars.

Q. Have you made any allowance for depreciation of plant? Are you valuing this plant as it stands today or as it would stand brand new?

A. I am valuing this plant at what it would cost to replace it today, were it all done under one contract.

Q. Now, by the time it was installed and ready for operation it would no longer be a new plant, would it?

A. No sir.

1482 Q. Now, take that plant as it stands today, in its present condition, what is its actual value, exclusive of real estate, tools and teams, working capital, supplies on hand and other elements entering into it?

A. I would value it at the figures I have given, $1,793,540.30.

Q. You have not figured anything for expenses of getting rights of way, tree-trimming privileges and getting business, franchises or anything of that kind?

A. No sir.

Q. Is Mr. Crum's deposition in detail sufficient to enable you to take up or check up any of the valuations he places upon the property?

A. No sir Mr. Crum does not give anything that would enable us to know upon what amount of property he bases those valuations, except in one instance, I believe he says we assume they have 10,000 poles in Louisville, in all.

Q. Is there any difference in the cost of a telephone plant of the same size in different cities?

A. Yes sir.

Q. Why is that?

A. There is an individuality about every plant, that you cannot separate from it. There are conditions in every city that are different from the conditions in every other city, and one of the biggest features that often escape attention is the class of
1483 service given. We can serve 10,000 subscribers in one class for one third of the construction expense that you can serve 10,000 subscribers of another class; and then, it is possible to give connection to subscribers at one price and then, by increasing the efficiency of the service or the reliability of the service, to add fifty per cent to the construction value.

Q. Can you give us an illustration of that idea?

A. Well, in the first part of it, Mr. Crum states that in Chicago the value is, I believe $99.96 per station. The plant in Chicago is undoubtedly a good plant, it is owned by a company which intends to do business in Chicago for some time to come, and their construction is good, undoubtedly, though I have not seen it. But they serve a very different class of subscribers. They have in Chicago a large number of ten-party lines. For instance in this book here, report of the Chicago Commission, reporting in August 1906, Chicago is shown to have had 23,942 private branch exchange telephones. Now you will note here this class of telephone has not any direct connection with the switchboard. They have 9,163 flat rate business telephones; 6511 flat rate residence telephones, and 30,657 measured service telephones. Now, those last three, which comprise about 46,000 telephones, include all the direct, two-party and 4-party lines in the city. They have 38,461 ten-party telephone and 6,693 extension telephones. This book does not give anywhere the number of lines in service in the City of Chicago, but
1484 by applying the ratio which would be proper, I find that the proportion of the number of lines in the City of Chicago to the instruments installed, would be about thirty per cent. The

proportion of lines in the Cumberland Telephone and Telegraph Co. plant to the number of instruments installed is sixty-two per cent, so that, except for the subscribers' instruments and the inside wiring, the proportion of all other plant including central office equipment, conduits, poles, cables and all outside plant, would be twice as large in Louisville as it is in Chicago. By running that proportion out, you will find, if we were to serve in Louisville the same class of people that they do in Chicago, we could do it for about $104 per station on our present valuation.

Q. Do you have to keep an excess of instruments and facilities on hand for new subscribers?

A. Yes sir.

Q. Suppose they are used in getting new subscribers, then what has to be done?

A. They have to be replaced by additional apparatus and equipment.

Q. Mr. Polk spoke of telephone pole routes being on both sides of the street and as I recall, intimated this was done to block the Home Telephone Co. What have you to say about that?

1485 A. That looks like ancient history, for he says the conditions did not exist at the time he was giving his testimony, and it is recognized as good, wholesome, economic practice to put parallel lines on adjacent streets or even on the same street.

Q. What is the reason for it?

A. It is pretty much as though you were to have a warehouse with capacity say for a thousand hogsheads of tobacco, and needed a capacity of two thousand. This ware-house you have is in good shape and will last you for many years, and will accommodate the thousand hogsheads, and you have space next door you can build another ware-house on, and it just resolves itself into a question of whether you will tear down your first warehouse and build a ware-house with two thousand hogsheads capacity, or would you build another one of a thousand capacity that you could later on increase to two thousand capacity. In that way, if we have a pole line on one side of the street, if we dismantle that pole route, we absolutely throw away the largest part of the investment. The material is not worth near as much, cable will suffer more by being handled once taking it down than by ten years of ordinary use upon the route, and as long as that route stands there and gives service, we will have two routes practically an insurance to half of our subscribers that they will have service all the time. That route would

1486 ordinarily, by a conservative company, be kept in commission until the maintenance of it assumed such proportions it would be more economical to tear it down and move the cables and wires to the parallel route.

Q. Is there any difference in the cost of telephone plants even in the same city?

A. Yes, difference in the cost of telephone plants in Louisville.

Q. Does it convey any intelligent idea of the value of one plant to talk about the value of the other plant?

A. No sir.

Q. Or high cost of one as compared with the other?

A. No sir.

Q. Does the cost of one have any bearing upon the cost of the other?

A. No more than it would to say the ability of every lawyer is the same.

Q. I will ask you to state whether or not any man, expert or otherwise, has a right to undertake to value a telephone plant as large as the complainant company's plant in the City of Louisville, without an accurate knowledge and a thorough investigation of it?

A. I would not do it. I don't think anybody would have the right to endanger such large property without knowing it.

Q. Messrs. Polk and Crum seem to think a telephone plant can be built in the City of Louisville for about eleven hundred thousand dollars, that will serve ten thousand subscribers. What have

1487 you to say as to that?

A. It would be impossible, in the first place, to even duplicate our plant there. We have rights of way there that it would be impossible to get now, and if it were possible if we were to have all the advantages we have, then we could not begin to do it.

Q. Aside from that question, can a plant be put up in the City of Louisville—a telephone plant that will give service to ten thousand subscribers for $1,100,000?

A. Yes sir.

Q. What kind of a plant would it be?

A. It would be one perhaps slightly inferior to the one owned by the Independent Telephone Co. in Louisville now.

Q. That would depend upon the character of material used and work done?

A. The character of material and the stability of the plant after it was erected and the class of service that plant would be equipped to give.

Q. Mr. Polk or Mr. Crum, one or the other seems, to think that other telephone apparatus is just as good as the Western Electric Co. apparatus. Have you had any experience with that?

A. Yes sir.

Q. What has been the result of your experience?

A. This company has purchased a large number of plants from independent companies. These companies nearly always have

1488 switchboards and apparatus designed and built by manufacturers other than the Western Electric Co. and in every case we have been forced to replace them with Western Electric Co. apparatus, because we found the Western Electric Co. apparatus gave better service.

Q. Does the Western Electric Co. compete with all the other concerns and manufacturers in all the markets of the world?

A. It does.

Q. Does this company buy or exercise its judgment to buy wherever it pleases, of any manufacturers?

A. It does.

Q. Why do they buy generally from the Western Electric Co.

A. Because they get a better grade of apparatus from the Western Electric Co.

Q. That is a matter that the management exercises its own independent judgment upon?

A. Absolutely, yes sir.

Q. Have you in mind any large contract in which the Western Electric Co. got the contract over independents where there was no question of Bell or independent company?

A. The biggest contract that has been given at all, except by Bell Company was given to the Western Electric Co. in London, England for that exchange and the contract was given by the English Government, amounting to twenty millions of dollars and it was secured in competition by the Western Electric Company.

1489 Q. What have you to say with respect to Mr. Polk's estimate of the iron wire in the Louisville exchange?

A. Mr. Polk estimates 3,000 miles of single No. 14 iron wire, 500 miles of single No. 12 iron wire, and he states he does not know what class of wire this company uses, but that B B iron wire is the best telephone wire made. B. B. is not the best telephone wire made or the best iron wire made. Every manufacturer that quotes B B iron wire carries and quotes prices on E B B wire, which is superior to B B iron wire. Now, we have not a single foot of No. 12 iron wire in Louisville.

Q. What have you?

A. We have No. 10 iron wire and this No. 10 weighs 95 pounds per single mile more than No. 12. No. 12 iron wire, B & S Gauge, weighs 165 pounds to the mile, so that the cost of our No. 10 wire would be about sixty per cent more than the cost of the wire which Mr. Polk estimated.

Q. What is your valuation of the aerial wire in Louisville?

A. $77,035.87.

Q. What does Mr. Polk give it?

A. Mr. Polk does not separate the wire from the poles.

Q. What does Mr. Crum give it?

A. He does not separate it from the poles.

1490 Q. Now, with reference to the substation equipment, that is, private branch exchanges, what does Mr. Polk estimate on that?

A. Mr. Polk's estimate, as nearly as I can establish, he specifies we have seventy-five private branch exchanges in Louisville.

Q. As a matter of fact, how many did we have?

A. By consulting the directory, which was in force at the time and in general use, we find 112 private branch exchanges, and it is confirmed by our records.

Q. How much is that above what Mr. Polk estimated?

A. About forty-eight per cent.

Q. Does Mr. Crum give any data from which you can ascertain what he figures on?

A. No sir he does not.

Q. I will ask you to state concisely, so it will all be together, the valuation of the Louisville plant and the classifications you make so

that it will show at a glance all the figures you have used with reference to the different classifications. Is this it, if so, read it to the stenographer.

A. Yes sir that is it, and it is as follows:

"Appraisal of the Plant of the Cumberland Telephone and Telegraph Company, Louisville, Kentucky exchange, compiled
1491 from figures and estimates made in their plant department:

13870 poles at $23.92 each	$331,769.40
22,151 miles of conductor feet aerial cable at $19.455 per mile	431,955.35
5548 miles aerial wire at $13.8853 per mile	77,035.87
42485 duct feet conduit at .4015 per duct ft.	170,676.96
18,669 miles conductor ft. underground cable at 15.477 per mile	288,942.50
Switchboard	309,102.92
9395 sub. stations at $19.63 each	184,465.15
Total	$1,793,540.30

Mr. BLAKEY, for Defendant: Without waiving my right to make a motion to have this deposition quashed, or certainly the largest part of it, I want to ask the witness one or two questions and then make my motion.

Cross-examination.

By Mr. BLANKEY, for Defendant:

Q. When did you begin making this appraisement and inventory of the property of the Cumberland Telephone and Telegraph Company in Louisville?

A. About the 15th of January.

Q. Was that after Mr. Polk, Mr. Crum and Mr. Levings had testified in this case on behalf of the defendant?

A. I don't know when Mr. Levings testified; it was after the other two gentlemen testified.

1492 Q. Did you notify the City of Louisville or anyone for the City of Louisville of the fact that you were going to make such an appraisement and inventory, and give it an opportunity to be with you at the time you made it?

A. No sir.

Q. Or give them an opportunity to have any representative of the city with you?

A. No sir.

Q. Did you know that Mr. Polk had written a letter to the Cumberland Telephone and Telegraph Company asking that company for a list or map or blue print or statement of its property in the City of Louisville?

A. I think I did; I think I saw that in his deposition.

Mr. BLAKEY: Now, Mr. Master, I wish to call your attention to a question and answer in Mr. Crum's deposition; which reads as follows: Question. You spoke yesterday of being unable to procure

a map of any sort or a blue print showing the number of poles and the aerial wire and the location thereof, used in connection with the Cumberland Telephone Company's plant. I will ask you whether you made any attempt to procure such a map or blue print or record from the Cumberland Telephone Co., other than
1493 by inquiring of the officials of the company at the Louisville office?

"A. Yes, I did. I wrote a letter to the attorney for the company, Mr. Farley, I believe his name is, or to the Cumberland Telephone Company in Louisville and it was replied to by the attorney for the company, saying that the maps were not at hand and could not be furnished.

Now, to go somewhat over my first objection, to the first witness answering the question, the complainant took its proof in this case and rested its case. The defendant got permission to inspect the plant of the company, it went to the company's office and procured such data as it had on hand and which the witness Crum testifies as represented to him by the general manager as representing the entire property included in the plant with the exception of a map or blue print or data showing the extent of their pole lines in the City of Louisville. The experts for the City then proceeded to inspect this plant and, taking the data it had obtained from the company, placed a value on it and testified in regard thereto.
1494 The company then proceeded, without any notice to the City of Louisville and without giving the City of Louisville an opportunity to be present, went into such inspection or examination or appraisal of the property on its own account, and now offers testimony which is without question original testimony, is not in rebuttal and it simply puts the City of Louisville in the attitude of having to go to work and go to the expense of employing other experts to go over this same proposition they have already gone over. It is not fair to the City of Louisville and is in violation of all rules of evidence to permit such a thing, and it simply means there is no such thing as coming to a conclusion of this case, if this testimony is to become a part of the record.

And for that reason, I move to quash, certainly all parts of this deposition which are not in rebuttal of what the defendants' witnesses have testified to, and I should like to have an adjournment until the deposition can be written out and taken up question
1495 by question, and passed on.

Mr. GRANBERY, for Complainant: When this case was at issue, we took the depositions of our auditor, president and others. That proof not only showed the cost to us of this property, but we also proved what we thought was its value and there we rested.

Counsel for the City was not content to stop there or accept either statement. The City thereupon insisted upon letting this case stand open and remain open for months while it had expert accountants investigate the records of this company with reference to ascertaining what this property had cost the company. After having done that and taken that proof the City in the meantime had employed expert engineers—so-called expert engineers to make a physical valu-

ation of the property. In order to enable them to do this work, we were called upon to furnish them all the maps of the property we had and we did it, and they are exhibited today with the deposition of Mr. Crum. They had just as much time as they desired to go there, investigate this property, count the poles, count the
1496 cables and the wires and other apparatus, and they have never been denied access to anything we had, either physical properties or the records, and they get on the witness stand and by their own testimony show that they have not given the subject enough thought to justify them in testifying what we had there or its value, but they had made a case that required us to rebut.

Thereupon we went to the expense of having our people go there and accurately see what we did have and we come here now and tell you in a deposition, exactly what we have there and what it is worth, and yet, counsel says it is incompetent testimony and direct testimony. It is strictly testimony to rebut the very statements that this man Crum and Polk and Levings have put in this record and we think we have a right to rebut that, and in addition to that, you were called upon by the Court's order to report the present value. Now this case has dragged for over a year, which was never contemplated by the Court. Now suppose we put no proof in as to the present value of the plant, how would you be able to report to the Court upon that inquiry that is propounded. The deposi-
1497 tion of the auditor and president were taken away back yonder, my recollection is in April or May.

The MASTER: When the complainant finished with its depositions here of the auditor and the president, it had made out as a matter of course a prima facie case. If there had been no proof taken at all, I take it for granted a decree would have gone down—no proof to offset that. Then the defendant took its proof and that proof tended to discredit much of the evidence of the auditor and of the president. Now after doing that, then the defendant proceeded further and took proof as to the physical properties, after exhausting the evidence on the question of the books and the book values and purchase price, they then took evidence as to the physical properties owned by the company in Louisville.

Now, the witnesses did not undertake to show that they made a very detailed examination they were in Louisville a few days every time, for several visits, and they seem to estimate very considerably the poles and miles of wire and all that sort of thing, and
1498 according to their estimates, based upon certain classifications of the property and upon certain units, they say experts have accepted as the proper basis for estimating the value of the properties, they estimate there were so many poles and so many of this, that and the other, and upon that estimate they base an opinion as to the value.

Mr. BLAKEY, for Defendant: If you will allow me to interrupt you there. What Mr. Caldwell and Mr. Smith said, who testified on direct examination, was what in their opinion was the value of that plant, and now we come along and rebut that by having our witnesses show what in their opinion that is worth. Now that is

the opinion and estimate of our people as against the opinion and estimate of the witnesses for the complainant on the direct examination. Now here is——

The MASTER: Yes, I have read all of that.

Mr. BLAKEY: Now here comes in another proposition, this direct proof, which can not be said to be anything but direct
1499 proof—he is bringing in something we are bound to rebut if it can be rebutted, we are bound to make the investigation and make the inspection. If it has taken these people three months to make up this case, we are entitled to three months to inspect it, and appraise it. We never attempted to inspect it or appraise it because they had not attempted to do it. We simply were knocking down the man they had put up, all we had to do was to meet the case they put up. Now, they are putting up another case.

The MASTER: No, I differ with you about that. It seems to me this proof here by Mr. Jagoe as to the actual number of poles and number of conductor feet of conduits and the aerial wires and the quality and the value of the wires, is strictly in rebuttal of Mr. Crum and Mr. Polk and Mr. Levings. It seems so to me, and there may be and I rather think that intermingled with the statements of Mr. Jagoe there is some proof there that possibly might have been introduced in chief.

1500 Mr. GRANBERY, for Complainant: I will state to your Honor we could not possibly anticipate and introduce that proof; we can only do it in rebuttal, because we did not anticipate there would be any such proof in the case.

The MASTER: I was going to say, under the directions to the Master Commissioner, that any proof that is pertinent to this issue, ought to be heard up to the very last day before he makes his report, and I will say very frankly, if you will put your men, any witness you want to on the matters testified to by Mr. Jagoe, and if you ascertain he is in error about any of them, that the Commissioner will hear it, just as much so as if it had been introdued here before.

Mr. GRANBERY, for Complainant: And I will add there will be no objection on the part of complainant's counsel to his doing so, either.

The MASTER: The way I feel about this matter is that everything that would tend to throw light on this matter, ought to be introduced.

It is a very serious matter both to the City and to the Com-
1501 pany. I think the evidence is all right.

And I want to say the Commissioner wants to hear some more testimony in regard to depreciation. I have been reading on the question of amount of depreciation, how that fund has been applied and used and what the annual depreciation of a plant like this, that has been in existence for fifteen years—what effect it has on the present condition and the present status of the plant. That is to say, taking up the maintenance and reconstruction and all that. That has been gone into in a general way, but I have not been able to find actual figures that are entirely satisfactory. I have read all of that proof.

Mr. BLAKEY, for Defendant: That has been discussed somewhat.

Mr. GRANBERY, for Complainant: I will state to the Master that the next witness is the general manager of this company, who has had twenty five years' experience in this business and has been doing nothing else. You will find in the testimony, statements as to the per cent of depreciation and that is as near as you can get it, until you come to apply your figures.

1502 You will recall that the president of the company said seven and a half per cent. Other witnesses put it all the way from five to twelve per cent, and it runs from five to twelve per cent in the proof. The reason I did not ask the present witness about that is that he has not had the experience in that particular part of the business that I thought justified me in making him an expert on it, as we had the general manager who had been familiar not only with this plant, but all of our plants for twenty-five years, and he probably would be a better witness.

Mr. BLAKEY, for Defendant: Going back to the motion which I made, I would like to make this further suggestion to the Master: If after this witness is concluded the City puts on three witnesses who absolutely disprove everything he says, I suppose then the complainant would have the right to put on five witnesses and prove what they say is not true.

The MASTER: No, it would not be indefinitely postponed.

1503 Mr. BLAKEY, for Defendant: On the same theory, I thought it ought to be. They put up one case, we try to knock it down and they put up another.

The MASTER: They are trying to knock down a state of facts you put up by this testimony.

Mr. BLAKEY, for Defendant: I only had my witnesses testify to the state of the case that they first proposed, which was their value of the plant; they said, we consider the plant worth a million seven hundred thousand dollars, and we put three on and they say they consider it worth a million dollars and give their reasons, and this witness says, I consider it worth a million, seven hundred and ninety thousand dollars.

The MASTER: But they are all based upon different theories. Now your witnesses testified as to the value of the physical property, reproduction value, and this testimony is strictly in rebuttal of those witnesses. Now, if you have any others, any time before the latter part of April——

1504 Mr. BLAKEY, for Defendant: I think it would take them three months to do it.

The MASTER: I suggest you take up any part, at random as to his testimony about the conduits, or aerial wires, or anything and test the correctness of his figures.

Mr. GRANBERY, for Complainant: There are two main differences

between the witnesses, witnesses for complainant and the City attorney, are these: One says there are so many actual poles in the Louisville exchange. Neither of the other two gentlemen undertake to do anything except estimate them. The City Attorney can have them counted and if a witness is put on and says I have counted them and says, there are ten thousand, I can ask how many on this street, and I check him up and I don't apprehend there will be a man that will differ with what Mr. Jagoe says. Mr. Polk, the only one of his witnesses who undertook to go the cables, the amount and size of it, Jagoe undertakes to say he didn't do it accurately by the very blue prints he had in hand.

1505 The MASTER: Crum and Levings didn't undertake to go into that at all.

Mr. BLAKEY, for Defendant: We didn't have to go into it, because they had not gone into it.

The MASTER: But they estimate it.

Mr. BLAKEY, for Defendant: That is all Mr. Caldwell and Mr. Smith did.

Mr. GRANBERY, for Complainant: Mr. Caldwell and Mr. Smith knew about it and these other witnesses did not know anything about it.

The MASTER: I somehow think this is rebut-al testimony in the main.

Exception by defendant.

Mr. BLAKEY, for Defendant:

Q. Did you count all the poles in the City of Louisville in use by the Louisville exchange?

A. I had them counted, under my supervision.

Q. They were not counted by you.

A. Not personally.

Q. You don't know whether there were ten thousand or thirteen thousand then, of your own personal knowledge?

A. I know they are there by the records of the company,
1506 as furnished by different people in the plant department.

Q. When were those records furnished?

A. The last one was made during the month of February, 1910.

Q. This year?

A. Yes sir.

Q. You don't know then, of your own knowledge whether there are thirteen thousand or ten thousand poles there?

A. Do you mean to ask did I count the poles myself?

Q. Yes?

A. No, I did not.

Q. And you don't know whether they are there then?

A. I know it as well as I am able to know anything that goes on in my department. They were counted by people under my super-

vision, who were directed to make an absolutely fair count, and to recheck that count.

Q. Now, you say there are 21,154 conductor miles of aerial cable?

A. Yes sir.

Q. Have you inspected that aerial cable yourself?

A. Part of it I took from the records, on those blue prints, where I knew the conditions were as the blue prints showed them.

Q. Do the blue prints show that many miles of conductors?

A. Yes.

Q. And those are the blue prints Mr. Crum filed with his
1507 deposition?

A. Yes sir. Just to explain that I will say that there is practically no difference in the number of conductor miles of cable as furnished by Mr. Polk and myself; in fact I believe I am a little under Mr. Polk's estimate in the mileage.

Q. What is the difference between you and Mr. Polk on the value of that aerial cable?

A. I am unable to tell.

Q. What do you value it at?

A. $431,953.35.

Q. What does Mr. Polk value it at?

A. He does not value the aerial cable separately, but includes both aerial and underground.

Q. What do you value the underground cable at?

A. I value the underground cable at $288,942.50.

Q. What is the total of those two?

A. $720,895.85.

Q. What is Mr. Polk's valuation of those two items?

A. $384,440.

Q. Do you show how many duct feet there are appearing in the conduit system?

A. Yes sir.

Q. How many?

A. 438,803.

Q. How many does Mr. Polk say there are?
1508 A. 436,890.

Q. And what do you say it would cost to reproduce that conduit system per foot?

A. $170,384.21.

Q. I asked how much per duct foot?

A. 38.829 cents per duct foot.

Q. How much does Mr. Polk place it at?

A. 20 cents per duct foot, and he adds $7,500 for the iron pipe, he says.

Q. Now did you install this conduit system in Louisville for the Cumberland Company?

A. No sir.

Q. Did you employ any of the labor or purchase any of the material which went to install that system?

A. No sir.

Q. Do you know what your conduits are constructed of, what kind of material?

A. Yes.

Q. What kind?

A. We have, in the main, three classes; Iron conduit incased in cement—in fact, the whole system is very heavily encased in cement; it was built at a time when it was considered an experiment, and it was very heavily constructed. We have the iron pipe, the Camp tile, which is one of the kinds of multiple tile now in use and the Lynch tile.

Q. When you install conduit systems now, of what is it
1509 constructed?

A. Iron pipe and some kind of vitrified tile was the ones that are commonly used I believe. It all depends on the location and the class of service it is intended to give, and external agencies liable to effect it.

Q. Have you installed any conduit system in New Albany, Indiana, in recent years?

A. Not under my direction.

Q. You didn't know about that?

A. No sir.

Q. None has been installed in Louisville in recent years?

A. None to any extent.

Q. Were those figures you gave awhile ago the figures representing the cable system both inside and outside of the conduits?

A. The underground cable figures I gave, represented the cost of replacement of cables inside of the ducts and the aerial cables are the ones outside.

Q. You gave two sets of figures there as different between yourself and Mr. Polk's estimate, and the one was seven hundred thousand dollars and one was some three hundred thousand dollars?

A. My valuation of all cable appliances in the City of Louisville was $720,895.85.

Q. And Mr. Polk's was how much?

A. $381,440.

1510 Q. What character of wire have you in these cables?

A. Copper.

Q. How is the value usually placed on cables per cable foot, or per cable mile or what?

A. The different companies have different methods of determining the value. Do you mean of the cable in the plant?

Q. Yes?

A. The usual way is to average the number of conductor feet. Other companies average the lineal feet of cable and others separate it into different lengths of each size; our estimate was based on the actual cable that went in, together with our units of cost we are using every day in the construction dpartment for the erection of it.

Q. Did you place any value on this cable system per cable foot?

A. No, sir.

Q. Did you ascertain how many cable feet there were in the system?

A. It was necessary for me to ascertain how many feet of each kind of cable we had, and I don't know whether I assembled it into one measurement or not, but I think I have the figures and can give it to you.

Q. I should like to know how you arrive at the figures you have made?

A. I took the different lengths of different pair cables, a cable having 100 conductors and having in it fifty feet, would have
1511 five thousand conductor feet.

Q. What value did you put on the cable per foot?

A. In estimating that we figure the price of cable at the factory, quotations furnished by three large cable manufacturers, and added to that freight, cartage, labor and other expenses necessary to erect it.

Q. Please give in detail and let me know how you reach those figures there as the reproduction value of the cable system in Louisville?

A. In the underground cable I estimate the total value of the whole underground plant by computing 1842 feet of twenty-five pair No. 22 gauge cable at eleven cents per foot, $202.62.

Q. Is that eleven cents per foot the cost of the cable at the factory?

A. Yes, sir.

Q. All right, go ahead?

A. 2766 feet of 50 pair No. 22 gauge cable at 17 cents, $470.22. You asked me was that the cost of the cable at the factory, that was taken, the average price for the last eight years; I ascertained the average quotations for the three large manufacturers for the last eight years; 54256 feet of 50 pair No. 19 gauge cable at 27 cents; $14,649.112. 2925 feet of 100 pair No. 22 gauge cable at twenty nine cents, $848.25; 1143 feet of 100 pair twenty gauge cable at forty cents, $457.20; 130149 feet of 100 pair 19 gauge cable
1512 at fifty two cents, $67,677.48; 8484 feet of 200 pair, 22 gauge cable at 55 cents, $4,666.20; 55,854 feet of 200 pair 20 gauge cable at seventy cents, $39,097.80; 50,276 feet of 400 pair, 22 gauge cable at ninety-three cents per foot, $46,756.68. Now all the cable in the central office preparing to terminate on the main frame, are wool covered which is much more expensive than the ordinary paper insulated cable, so we have added for the difference in value of this wool covered cable, which was computed by finding out the number of feet and multiplying that by the difference in price of the two, which was $7,950. To splice that cable would require 9400 splicers, costing $12.40 each $11,656; 9400 pounds of lead sleeving at six cents per pound, $564; 9400 pounds of wiping solder at sixteen cents per pound, $1504; 300 cable boxes with protectors, at $21 each, $6,300; 300 pot heads at $10 each, $3,000. In the splicing, pot heads we included the labor and expense of making them. The labor of pulling in these cables at .055267/4 cents per foot, $17,005.50 Laying out 21000 pairs on main frames, $795.00; teaming, $7,749; 1000 pounds of paraffine at seven and a half cents a pound, $75; 37,600 paper sleeves at thirty-five cents per thousand, $13.16; freight and supervision, $57,505.27, making a total of $288,942.50.

Q. That is for the cables inside of the conduits?

A. Inside of the conduits and laterals terminating on the buildings in the underground district and up the pole to mes-
1513 senger level where they join with the aerial cables.

Q. Did you superintend the installation of that cable?

A. No, sir.

Q. You don't know how much it cost to install it I suppose, then?

A. Part of it I do, yes.

Q. How do you know?

A. Because part of that cable work was done since I have been here and we have replaced certain parts of those cables and the cost of doing all work in Louisville during the past two years that I have had supervision of it has been used in assembling the units which we are using in this estimate.

Q. Can you tell how much cable foot per cable foot it would cost then to install that cable in the conduit system, to purchase it and install it.

A. Yes, I can find it out. (Witness figures) A shade less than ninety-four cents per foot.

Q. Now, coming to the aerial cable, please give that, go into detail, state just how you arrive at your figures as to the cost of purchasing and installing the aerial cable?

A. 1275 feet of 10 pair, 22 gauge cable at seven cents per foot; $89.25. 15,181 feet of 25 pair, No. 22 gauge cable at eleven cents per foot, $1,639.91; 22,285 feet of fifty pair 22 gauge cable at seventeen cents per foot, $3788.45; 51063 feet of fifty pair, 19
1514 gauge cable at 27 cents per foot, $13,787.01; 182,362 feet of 100 pair, 22 gauge cable at twenty nine cents per foot, $52,884.98; 155,346 feet of 100 pair, 19 gauge cable at fifty two cents per foot, $80,779.92 103,249 feet of 200 pair, 22 gauge cable at fifty five cents per foot, $56,786.95; 657,628 feet of messenger at .023 cents per foot, $15,125.44; 500 protector boxes at $28.04 each, $14,029; 2301 guy clamps at fifteen cents, $345.15; 1096 U bolts at four cents each, $43.84; 18,300 pounds of lead sleeving at six cents per pound, $1,098; 18300 pounds of wiping solder at sixteen cents per pound, $2928; 2000 pounds of paraffine at seven and one half cents per pound, $150. 372,815 cable clips at $3. per thousand $983.41; 336,000 paper sleeves at thirty five cents per thousand, $128.10; 422 coils of No. 14 iron wire at $2.00 per coil, $844. Labor stringing 530,761 feet of cable at .0505626096 cents per foot, $29,861.12; stringing 657628 feet of messenger at three cents per foot, $19,728.84. Hanging 500 cable boxes at $7.00 each, $3500; 500 pot heads complete at $10.00 each, $5,000; 1830 splicers at $12.40, $22,692; teaming, $16,155. Freight and supervision $89,563.98, total, $431,953.35.

Q. And how much is that per cable foot?

A. Eighty one cents per foot.

Q. Now you spoke of cable clips, how many cable clips did you say there were?

A. 372,815.

1515 Q. Did anybody count those?

A. No, sir. It is necessary to put them a certain distance apart on each size of cable.

Q. It is an estimate?

A. No, sir, it is not exactly an estimate. It is a condition I know exists. I have seen the cable and know it is tied in the regulation manner.

Q. You have there 2301 guy clamps, did you count those?

A. No, sir.

Q. Did anybody else count them?

A. No, sir.

Q. You have 18,300 lead sleevings, did anybody count those?

A. No, sir.

Q. 18,300 wiping solder?

A. That is pounds.

Q. Anybody count those?

A. No, sir.

Q. You have 366,000 paper sleeves, did anybody count those?

A. No, sir.

Q. That is an estimate, then, all those, are they?

A. They are the application of facts that we know; we know we require 200 paper sleeves to make 100 pair splices. Now, I don't open it and go in, could not open it and go in, would not have been practicable, but when I saw a splice, I know it is there.

Q. Did you count the splices?

1516 A. We count the splices by runs of cables and termini of them.

Q. You estimated that then?

A. Yes, sir.

Q. 530,761 of cable stringing, what is that?

A. Feet of cable strung.

Q. Did anybody count that?

A. Yes.

Q. How did you count that?

A. We took those blue prints which show the measurements on them, and where they were not on the blue prints, we measured the cable.

Q. You have 357658 feet of messenger strung, is it?

A. Yes, sir.

Q. What does that mean?

A. That is the wire that supports the cable.

Q. How did you measure it?

A. At the same time that the cable was, and by the blue prints, wherever you have to have cables you have to have messenger to support it and have to carry the messenger beyond the cable one span.

A recess was here taken until this afternoon at two o'clock.

1517 Afternoon Session.

Mr. BLAKEY, for Defendant:

Q. Now the item such as 9400 pounds of lead sleeving, and 9400 pounds of wiping solder, and items of that nature, mentioned in your itemized account of the articles going to make up the cable in the underground system are of the same nature, and the facts you have testified to in regard to the aerial cable apply to those, as they do to the underground, do they?

A. I don't remember exactly what was said about them, but I will state it this way: I did not count the splices; I counted the manholes, where I knew splices had to be made, and I made a computation of what would be absolutely necessary to splice this cable, and in doing this, I consulted recognized authorities on it and I can state positively that this amount of work is necessary for the erection of this amount of plant. Those weights of metal were gotten from my experience and the company's record on similar work, and from other authorities.

Q. Now, you place the value of purchasing and placing in position, the poles, at $23.92 each?

A. Yes, sir.

Q. Did you have anything to do with the purchasing or placing in position of those poles?

A. Very few of them, of course.

Q. You don't know that it cost that much?

1518 A. No. I know what it costs our company during the past four years to purchase and erect similar poles, and that is the amount I have given, and besides that, it seems to be the consensus of opinion among all companies, for when we buy or sell a half interest in poles to friendly companies, where we go into a joint pole agreement, the average price paid for the past two years on forty foot poles has been $22.50 per pole, and that does not include the cross-arms simply the bare pole with the guys.

Q. Do you know what size poles the Home Telephone Company has in Louisville?

A. Yes.

Q. What size poles?

A. In height?

Q. Yes?

A. They will average pretty close to thirty eight feet.

Q. Are they shorter or longer than your poles?

A. They are some shorter.

Q. Some are as long as yours, I suppose?

A. Yes, different wood, though, different class poles.

Q. What kind are they?

A. White cedar.

Q. What kind do you have?

A. Chestnut, red cedar and creosoted pine.

Q. What sort of wire do you have on these poles, aerial wire, not in cables?

A. Iron wire for our local.

Q. Do you place a separate value on that wire?

1519 A. Yes sir.

Q. What value do you place on that wire?

A. $77,035.87.

Q. How do you arrive at that figure?

A. By our experience in the past four years, of what it has cost to erect similar wire in large lumps. Understand me, this is not what I claim the wire has cost us. To put up in small items, it does cost five dollars to string half a mile of wire. If it was necessary to put up half a mile of wire to reach you, to string that individual half mile of wire would cost five dollars, but this is figured on estimate of our putting up all the wire we have in Louisville now. We have 4960 miles of the wire, of No. 14 iron wire, including the price of the wire, insulator, solder and other material, labor and other costs of erecting it, 584 miles of No. 10 iron wire, including all costs of all other material and erecting that wire, according to our average of values, it would be $13.8853 per mile, which would make the $77,035.87.

Q. Do you know how much wire of that character costs?

A. Yes.

Q. What does it cost?

A. From four to four and a half cents per pound.

Q. What does it weigh?

A. No. 10, 250 pounds to the mile of the single wire, and No. 14, 102 pounds.

Q. How much would that be for the cost of wire per mile?

1520 A. Ten dollars for the No. 10, and $1.325 for the No. 14.

Q. What would be the total of all the miles of wire you have, basing it on the cost of the wire alone?

A. $27,358.94.

Q. And how do you arrive at the difference between that and the total amount you have given as the value of the wire in the aerial system?

A. We add to that the other material that is necessary for the erection of the wire.

Q. Indicate what that is?

A. The insulators and the solder.

Q. Indicate the items and the costs for the items for the whole system?

A. There would be 277,400 insulators at two cents each, would be $5,548; labor, teaming, freight and other expenses would cost $6.00 per mile, approximately, which would be $33,288; the supervision and overhead expense would run about ten thousand dollars. That is approximately the figures. I didn't carry them out into cents where each unit applied.

Q. You mean you estimate it would be ten thousand dollars?

A. Yes.

Q. Per mile or for the entire system?

A. For the entire system.

Q. Now you have indicated the price, I believe, based on the average price for the last eight years?

1521 *Q.* How does the price now compare with the average price?

A. It is very close to the same. There has been very little change in the market right now, as compared to that.

Q. Now you say you place the switchboards at $32.90 per subscriber?

A. Yes sir.

Q. How do you arrive at that figure?

A. By the actual invoice price; that is the only class of the plant we had invoices on and I generally go by them.

Q. And you say that is just as valuable now as when purchased?

A. Well, there is a possibility of say five per cent depreciation on that now.

Q. Do you know what the switchboard in the main office cost?

A. The original switchboard, fifteen sections, when we went there, cost $100,000 and we have since added I believe $88,000 to that, additional sections and terminal facilities.

Q. How many sections are there now?

A. I don't believe I can give that to you off-handed.

Q. Did you take into consideration these sections put up and removed?

A. There were some taken out of there and moved to the west office. I made a rough estimate. It must have been about eight thousand dollars' worth of plant, but as it was taken out of one part of the city and put in the other, I didn't consider it.

1522 Q. How much does six sections cost, if you know?

A. Six complete sections would cost—that depends on the section, if they are like the ones I have in mind, would cost about six thousand dollars apiece, according to that, carrying with it all the subsidiary apparatus.

Q. Do you know how long the switchboard lasts?

A. Yes.

Q. How long?

A. A switchboard properly maintained is like the old woman's sock, it never wears out if it is patched up, except for the depreciation that comes in in the nature of improvements. A switchboard that is changed, ninety-nine times out of a hundred, is changed for no other reason than it is not large enough to take care of the business, or some more modern type is demanded.

Q. Now, the switchboard in the main office was installed prior to 1900, was it not?

A. Yes, part of it was and part of it since.

Q. Were the original fifteen sections in there in 1900?

A. Yes.

Q. And you say that is as valuable now as it was in 1900?

A. There might be five per cent depreciation on it, in my opinion. The switchboard in Louisville has been very jealously guarded, Mr. Metzger, the electrician there is the kind of a man that watches

those things and day by day makes replacements of any
1523 small part that becomes worn or inferior in any way. While those fifteen sections are there, I doubt if there is a single part of them, except the bare woodwork that was there at that time; a switchboard is composed of a multiplicity of small parts and they are from day to day changed. The cords on that switchboard, I will guarantee, have not been on there eighteen months. Those minor replacements are made from day to day and if properly maintained, except on the woodwork, would be not noticeable.

Q. Last always?

A. Yes, properly maintained, except the woodwork, would last always, provided no new discovery in the art would make it mandatory to change the type. That is the great danger in electrical apparatus like that.

Q. How about the switchboard in the East Exchange, what value did you place on that?

A. $25,310.60.

Q. When was that installed?

A. I really don't know, I have not those dates at all.

Q. How about the South Exchange, what value did you place on that?

A. $62,671.25.

Q. How about the West Exchange?

A. $16,997.14 and there should probably be an amount added to that for part of the board transferred there from the main exchange. I didn't stop to ascertain the value of that part.

1524 Q. What is the total of those four amounts?

A. $287,537.61.

Q. How do you arrive at the total of $309,600?

A. I added seven and one half per cent to that. Those prices there are invoice prices and I added seven and one half per cent for supervision and interest and overhead expense.

Q. The Western Electric Company installs it for the invoice price, does it not?

A. Yes.

Q. What supervision is necessary?

A. General expense, the engineering and supervision of the officers of the company.

Q. Is that part of the general expense that is charged up as expenses every year?

A. Yes sir.

Q. Is the general expense which you term overhead expense in connection with installing the cables and conduits and the pole lines charged up each year as a part of the general expense of operating the company?

A. I don't exactly understand you. I will state it this way; the general expenses are prorated among the different classes of work, as I understand it, but that is a question for the auditor as I do not know exactly how it is done, but the way I understand, it is usually done, the total amount spent for these general expenses is pro-

rated amongst the different kinds of construction, repairs
1525 and the large accounts or the other accounts, in the proportion of the rest of the money expended on those different classes.

Q. Do you know anything about how many miles or how extensive the conduit system was in 1900 when the company purchased the Ohio Valley Telephone Company?

A. No sir I do not.

Q. Do you know how much has been added since 1900?

A. No sir.

Q. Do you know how much has been added to the cable system since 1900?

A. No sir.

Q. How much to the pole line and wire system?

A. No sir.

Q. Do you know how much has been replaced of the pole lines and wires and cables since 1900?

A. No sir.

Q. Now, what did you include in the subscribers' stations?

A. I included the private branch exchanges, the telephone instruments, the booths, the fittings at the public stations, the coin collectors at pay stations, the interior wires, interior block wires, the protective apparatus located inside of the buildings, and the drop wires.

Q. How many private branch exchanges do you say there are?

A. 112.

Q. Do you know how many there were on April 1st, 1909?

A. 112.

1526 Q. If the statement filed by Mr. Smith, the auditor, showing the number of subscribers, class of subscribers, number of private branch exchanges, shows only 76, then Mr. Smith's statement is incorrect, is it?

A. It would be, yes sir.

Q. What value did you place on the private branch exchanges? Just go into the statement in detail as to how you arrived at $184,000 as the value of the subscribers' equipment?

A. 9395 instruments, including necessary inside drop wires, at $11.35 each, $106,633.25; 112 private branch exchanges, including 422 trunks and equipment for 2417 stations, at $15.50 each, $44004.50; 33 booths at $40.00 each, $1320; 504 pay station signs at $2.00 each, $1008. 1190 coin collectors, 504 of them at $9.05, and 686 at $4.05 each, $7,339.50. Supervision and overhead charges, $24,045.79; total, $184,351.04.

Q. Now you say 9395 instruments at $11.35 each. What does that item include?

A. That includes the instrument and all inside wiring, protective apparatus and drop wires.

Q. What do you term the instrument itself?

A. What is commonly called the instrument itself, the set.

Q. Does that include the transmitter and receiver?

A. No sir.

Q. What value do you place on the stand itself, the telephone stand, what do you mean by stand?

1527 A. Well, you see an instrument there in front of you, with cord attached to it, including the bell, $6.80 each.

Q. What are the individual items going to make up the balance of the $11.35.

A. The inside wiring, including the protector, $1.36, the cost of installing it, 78 cents, the drop wires and cost of insulator, $2.41.

Q. The cost of installing is charged up as part of the expense of operating the plant, is it not?

A. No sir it is charged up as construction expense.

Q. When it is taken out, what happens then?

A. When it is taken out it should be charged off to depreciation, expense.

Q. Now you have 422 trunks and 2417 stations connected with private branch exchanges, $44,000 is that?

A. Yes sir.

Q. $15.00 each?

A. Yes sir.

Q. How do you arrive at that item of $15.50 each?

A. That is the average cost of installing private branch exchanges as has been determined by our experience.

Q. The material or cost of installing?

A. The total cost, material and cost of installing.

Q. The material or cost of installing?

A. Switchboard, swhitchboard-cables, distributing frames

1528 and boxes.

Q. What does the switchboard cost?

A. There are about twenty-five different types, and each one costs a different amount. They will cost anywhere from $140 up to as high as you wish to make them.

Q. You have it down there $15.60?

A. $15.60 per station.

Q. If there are ten sets, would it cost $150?

A. On an average, yes.

Q. Thirty-three booths, $40 each, that is just the wooden booth itself?

A. And the expense of installing it.

Q. 504 pay station signs, those are just the signs out in front of drug stores, etc.?

A. Enameled signs, yes sir.

Q. 1190 coin collectors, what are they?

A. Those are the nickel in the slot machines.

Q. What value do you place on those?

A. We have two types in Louisville, one costing $9.05 and the other $4.05 each.

Q. Who do you get those from?

A. I believe the majority of those in Louisville came from the Gray Pay-Station Company or some such name.

Q. Isn't there some C. P. Co. that furnishes those?

A. I really don't know sir.

Q. Isn't there some company that furnishes them to you and charges you nothing for them?

A. Not that I know of; I never heard of it.

1529 Q. What is the fifteen per cent.

A. That is the expense there that is reckoned necessary for ascertaining the location and getting the proper cable and pin assignment, and looking out or laying out the work when it is necessary to install the subscriber, and the supervision and overhead.

Q. That is the cost that is then charged to the general cost of operating the plant?

A. No sir.

Q. You have placed up here, cost of installing these stations?

A. Those units represent the cost after it is determined where and how to locate the instrument and the men who actually go on the ground and do the work.

Q. The first cost you mean, in connection with each instrument?

A. Yes.

Q. Now, what is the fifteen per cent?

A. That includes the expense of laying out each installation, the furnishing of the assignments to it.

Q. What do you mean by assignments?

A. Determine just how the station will be connected up, what pair of wires it will take in the cable, what pins the wire will be strung on, and how the installation will be made.

Q. That is an overhead expense then?

1530 A. Yes.

Q. And all overhead expenses are charged up as general expense or operating expenses of the plant, aren't they?

A. No sir.

Q. Are not they apportioned among the various items?

A. Not all overhead. I cannot speak for this, but I understand that amongst the companies it is the practice to apportion general expense that way, but when an expense is incurred for a specific purpose, it should be charged to that specific account.

Q. Who does that planning and determining on what kind of wire shall be used, w-ere connected, etc.?

A. Why, the wire chiefs, the chief installer, the city foreman and another class of men we have, profile men, we call them.

Q. Their salaries are charged as part of the operating expense of the plant, aren't they?

A. I don't so understand it.

Q. How is it charged?

A. To the work which they do.

Q. That fifteen per cent item amounts to $24,000 I believe?

A. Yes sir.

Q. How do you arrive at the amount of wire in the aerial system, exclusive of that in cables?

A. I determine that by riding over the city and observing the poles and the amount of wires on each pole, and making up an average of what I conclude to be the number of wires on *on*

1531 each pole, and compute the mileage by allowing fifty poles to the mile.

Q. That is an estimate, then, is it?

A. Yes. There was no attempt made to measure the aerial wire.

Q. Can you file with the stenographer a statement showing the location of all your poles and aerial wire in the City of Louisville?

A. No sir.

Q. You cannot?

A. No sir.

Q. Have you installed, in connection with your exchange at Louisville, a piece of machinery or apparatus to locate trouble that may occur in any part of the city?

A. Yes sir.

Q. How does that operate?

A. I could not tell you.

Q. Isn't it a fact that by means of that instrument you can locate within a square, on any street in the City of Louisville, the exact position that any trouble takes place in the wire?

A. No sir.

Q. What is the object of the instrument?

A. To measure resistance. A great many kinds of trouble can be measured, that is, the location of it can be ascertained with the galvonometer by measuring the resistance, but there are a great many kinds of trouble that it will not touch.

1532 Q. Are your poles in Louisville numbered?

A. There are a large number of them that are numbered after a certain fashion, yes sir.

Q. How many of these thirteen thousand poles are being used by the Cumberland Telephone and Telegraph Company in connection with its exchange at the present time?

A. 13,870.

Q. Are they all being used at the present time?

A. It is possible that maybe from day to day wire on one or two poles will get out of use for a few days, but the poles are not taken down, because we know the pole will be used again. I would not state that they are all being used and I would not state that there are a hundred not being used but, it would be reasonable, and it is ordinary to suppose that there is a certain part of each plant that is not in use.

Q. You cannot say then how much of it is not being used at the present time?

A. There is a very small portion of it.

Q. You don't know that of your own knowledge?

A. No, I don't know the amount, but I know there is a very small part of it only, because I know the amount that is in use.

Q. Do you know how many poles are creosoted pine poles, in Louisville?

A. Individual count, I do not.

Q. Do you know how many are red cedar?

A. I could not name the exact number.

1533 Q. Do you know how many are white cedar?

A. Yes, none.

Q. What was the third kind you mentioned?

A. Chestnut.

Q. Do you know how many chestnut?

A. Not the exact number, no sir.

Q. Did you include the poles that are used in connection with the exchange outside of the City of Louisville, in your count?

A. Yes.

Q. Are those outside of the City of Louisville longer or shorter than the ones in the City of Louisville?

A. Shorter.

Q. Do you know how many of them there are?

A. I think it is very close to four thousand.

Q. What is the length of those poles?

A. They will average about thirty-three feet.

Q. How many of them inside of the City of Louisville are thirty-three feet or shorter?

A. Possibly one thousand.

Q. You don't know that, though?

A. Except in a general way; I have never counted them that way.

Q. You don't know then, how many of them are longer than thirty-three feet?

A. To give the exact number no. About nine tenths of them are.

1534 Q. Do you know of your own knowledge?

A. Yes sir.

Q. How do you know it?

A. Observation; I have driven over all the routes and observed them very closely.

Q. That is your estimate of it, then, is it?

A. Yes sir.

Q. Do you know there are fifty poles to the mile in the City of Louisville?

A. No sir, I know that averages very close to it; it might run fifty-three of fifty-four.

Q. And it might be less, for all you know?

A. It would hardly be less.

Q. But you don't know that of your own knowledge?

A. No, I have not measured them, but I have built and supervised the building of a large number of routes similar to that one, and I know that fifty is very close to the average in similar cases.

Q. And I believe you stated there had been practically no additions to the plant since March 6th, 1909?

A. No sir, I can state that very positively.

Q. Did I understand you to say the blue prints furnished Mr. Crum were practically correct representations of the conduit system and the cable system in the City of Louisville?

1535 A. Yes sir.

Q. Did this count of poles include poles extending across the river to New Albany, Ind.?

A. No sir, no poles north of the river; no poles outside of the State, and only those poles in the Louisville territory proper. After

you cross the River that becomes New Albany, and Jeffersonville, territory.

Q. Now, you refer to Mr. Jackson's report. Have you that in front of you?

A. I have not it right here with me.

Q. What price per station do your figures show to be the value of the Louisville exchange?

A. About a hundred and ninety dollars.

Q. And how much did you say should be added for tools and teams and operating capital?

A. I don't know a thing about the operating capital; I have never had any experience in that line at all.

Q. How much material did you say?

A. From fifteen to twenty thousand dollars.

Q. What value did you place on the teams and tools?

A. About twenty thousand dollars.

Q. And assuming that the real property or real estate is valued by the company at $163,000 and adding to that the $15,000 for material, and $20,000 for tools and teams, makes a total of how much?

A. $1,991,540.30.

1536 Q. Now, how much would that be per station?

A. Approximately two hundred dollars per station.

Q. Do you know anything about how that inventory was made by Mr. Jackson for the Massachusetts Highway Commission?

A. I know only what is given in the report.

Q. That inventory was made jointly by the Highway Commission and by the Telephone Company, wasn't it?

A. No sir, it was made by the Highway Commission.

Q. Didn't the Telephone Company furnish men to do it and pay for it?

A. The Telephone Company paid for it, but it was made under the direction of the Highway Commission. The Highway Commission paid all expenses of the inventories I am informed and they were reimbursed by the Telephone Company.

Q. Now coming to these independent companies that your company has purchased, they have been in small towns or have they been in large cities?

A. The largest city we do business in we purchases a plant from the independents, and I suppose the smallest, we purchased an independent plant. We purchased an independent plant in New Orleans, La., in which we have the largest number of subscribers in any exchange, and we purchased some in towns where we have twenty-five or thirty subscribers.

Q. You abandoned the equipment in New Orleans, I suppose?

1537 A. Yes.

Q. Because you already had a telephone plant there?

A. I would not be certain of that, as that was before my connection with the company?

Q. In the small places in which you have purchased independent plants, do you know how they were erected, whether or not they

were erected by local subscribers simply installing a telephone plant for themselves, practically?

A. Mutual systems?

Q. Yes?

A. We have purchased a few like that, but the majority were erected by people who went into it as a business.

Q. What is the character of equipment placed in small towns as compared with the equipment placed in the large cities?

A. The equipment in a large city is necessarily more expensive than that in a small town.

Q. Do you know anything about the equipment of the plant of the Home Telephone Co. at Louisville?

A. No sir.

Q. Do you know whether it gives as good service as the Cumberland's?

A. I have never used it; I could only judge by the class of service that could be rendered by the plant as I see it. The only interest I have in telephone service is in connection with the outside plant.

1538 Q. Does it cost more to install a telephone plant in a large place than in a small place, per station?

A. A large place.

Q. As between Louisville and Nashville, which would cost the more?

A. Louisville would cost slightly more.

Q. To what is that cost due, that extra cost?

A. The principal factor is, in a large place usually we have a larger number of subscribers to serve and it makes the apparatus more complicated and other factors are the paving in large cities are a great deal more expensive, buildings are higher, the traffic is heavier and the interference with our work is more, and the outside agencies, high induction wires like the street car wires and obstacles to economy, both in aerial and underground wires are much heavier in large places.

Q. How about the more extensive conduit and cable system affecting the cost?

A. Conduit systems, especially in very congested districts, is ordinarily more expensive, but you can reach a stage where a conduit will be cheaper than the aerial plant.

Q. I am talking now about the original construction?

A. That is to what I refer. If you install three or four ducts, that is more expensive than the aerial system would be, but if you install twenty or thirty duct conduit, the chances are it will

1539 cost less than the aerial plant, to take care of the same business.

Q. The original cost would be greater, though, where the extensive conduit system was, would it not?

A. It might, or might not, depending on local conditions. In a congested territory, aerial construction is very expensive. It is a question that is hard to determine unless you are on the ground and have the concrete conditions in front of you. I have built a pole

route on one street one half of the cost of a paralleling street, and we can lay conduits on one street for a good deal less than we will on another. We have laid conduits, made extensive runs, and struck very few obstacles and incurred very slight cost, and maybe in the next run on the same street in a different block, we will encounter obstacles every few feet. In a case like that, the conduits would be very expensive, much more so than the aerial plant.

Q. You don't know anything at all, of your own personal knowledge, about the purchase by the City of London for equipment for its exchange, do you?

A. No sir, I wasn't interested.

Q. You don't know of your own knowledge whether it purchased it from the Western Electric Company or the independent companies, do you?

A. It depends on how you mean that. We have a certain amount of knowledge, for instance, I know that Mr. Taft is Presi-
1540 dent of the United States, but I didn't see him inaugurated nor the vote counted.

Q. You have heard, in other words, that the London Exchange purchased the Western Electric Company equipment?

A. I have heard it in a most positive manner.

Q. And you don't know whether they bid more or less than the independent companies?

A. No, I don't know the amount of the bid.

Q. You don't know whether they cut prices or not?

A. No sir.

Redirect examination.

By Mr. GRANBERY, for Complainant:

Q. Did Mr. Polk allow anything for laterals in the underground system for figuring the conductor feet?

A. Apparently not.

Q. How many feet of laterals, are there?

A. 13,998 feet.

Q. What is it built of?

A. Iron pipe, incased in cement and where they leave the ground, cleated along buildings or poles.

Q. Is iron pipe laid in cement, proper construction?

A. It is the very best.

Q. Do you know of any that has been laid recently by any of the wire using companies?

A. Yes.

1541 Q. By what companies?

A. We have laid it in the past thirty days, The Western Union Telegraph Co. put in their Nashville conduits in that manner, and the Postal Company last year did a large amount of the

Q. How is this conduit work done, by contract, at so much a foot work in Memphis, Tenn. I saw that.

or how do contractors, when it is done by contract, how is it done?

A. It is done by a contract which is almost not a contract. There

are very few reputable contractors that will make a bid without specifying so much for each kind of pavement and so much if you strike certain obstacles, and so much for another, and so much for each class and every condition that can arise in the work.

Q. Now, suppose a contractor should go to a city and say, I will agree to lay so many feet of conduit in this city at twenty cents a foot, how would you consider that?

A. If he was going to have an extraordinary heavy duct run, in other words, would average something like fifteen or twenty ducts to the trench foot, and the manholes were reasonably small, I would consider that he could possibly come out on it and make a good job, but if the conditions were not the most favorable, I would consider he was going to do just as in Louisville by other companies, going to slight the work and crook the conduit. Now here is the beauty of iron pipe in cement. There are a good many people who decry that, because they believe in cheaper construction, but an
1542 iron pipe, firmly encased in cement, gives the most rigid and perfect conduit that can be made, and that is essential in conduits, absolute rigidity and protection from any accident. The biggest accident that happens to a conduit is breakage by laborers with picks. If you can make a perfectly level conduit run, you have a perfect conduit, but if you dodge an obstacle, to do that you slope up and pull over it, it makes a cheaper class of work and very undesirable.

Q. Does the cost depend on the amount of rock or earth you find in digging your trenches?

A. Largely.

Q. Does it depend upon the amount of gas pipes and water pipes and other obstructions under the street?

A. It does.

Q. Does it depend upon the paving and the character of the street and surface?

A. Yes sir.

Q. Does it depend upon whether or not you can find places for your manholes, at proper places or improper places?

A. Yes.

Q. Are there many elements of uncertainty entering into the construction of an underground system?

A. There is really more uncertainty that way than certainty. It is like the doctor's patients, he covers up all his mistakes and
1543 you don't know, until you go over it afterwards, hardly what kind of work it is.

Q. Now, you spoke of there being some Lynch tile. Is that better or inferior to the tile that is usually used now?

A. The Lynch tile is a vitrified clay tile, very much like the McCrory or Camp tile, except it is very much larger. It costs about twenty cents per duct foot and others cost delivered about six cents.

Q. Have you much Lynch tile in your underground system in Louisville?

A. We have 10,590 feet of Lynch tile.

Q. And you say that costs twenty cents a duct foot?

A. Yes sir.

Q. As against how much?

A. Six cents. These prices are delivered.

Q. What is the difference in iron pipe per foot and ordinary vitrified clay pipe?

A. The other costs us an average of twenty-two cents; the difference is sixteen cents.

Q. That is just the pipe?

A. Yes sir.

Q. Have you any maps of poles and aerial construction, either cable or open wire, that were not submitted to Mr. Polk and Mr. Crum?

A. No sir.

Q. Did they have all the information and means of ac-
1544 quiring information that you had?

A. Yes sir.

Q. Is it possible for a telephone company having a plant in a city of the size of Louisville, and serving about ten thousand subscribers, to keep each and every pole constantly in use?

A. No sir.

Q. Why is that?

A. It is a part of the business, if you may state it that way. Our wires are out of use part of the time and the poles, and each part, though it is connected up, the wire that is connected up is only used a small part of the time. Your wire here, for instance, is not in use now.

Q. If a telephone is installed today, you have to run a separate wire to that instrument?

A. Yes sir.

Q. If that telephone is ordered out tomorrow, you don't take down all that wire, but leave it there idle?

A. Yes sir.

Q. Hoping tomorrow, or the next day, you will get another telephone in that neighborhood?

A. Yes sir.

Q. And use that wire instead of stringing new wire?

A. Yes sir.

1545 Q. And in that way, makes some of the poles always idle?

A. Yes sir.

Q. Can that be avoided in any way?

A. No sir. It could be avoided by taking it down, but would run the construction cost twice as high in a few years.

Q. Now, I want to go into the question of cost per station of a telephone plant. Is there any way the engineers have ever found of estimating approximately the cost per station in a plant?

A. No sir.

Q. Now, give us some of the reasons why that is so, and I will ask you to take Boston, Chicago and Louisville as three cities to illustrate it with, as they appear to have been brought into this case?

A. The part of Boston that has entered into this case is the

metropolitan district only. I looked into that and found the value of the plant was $92.80 per station. I looked further into it and found the number of stations in the metropolitan district in Boston was divided in this way, main telephones, 20,201 or private branch exchange sets 17,142; extension telephones, 4,405, which is a total of something like 43,000 telephones, and 22,000 of those had no connection of their own with the central office or the cables or the poles or the conduit or the aerial wire. So, the only part of
1546 the investment that those 22,000 telephones affected was the sub-station equipment, as we call it. Now, had we a system of 42,000 or 45,000 telephones, all on direct lines, and all connected with the exchange, the plant would cost probably four times as much, or something like four hundred dollars per station. Now those main telephones there, I don't know how many are private lines and how many party lines, but even considering them that way, we find that half of those stations, or more than half of them, have no connection with nine-tenths of the plant, consequently, if they did, the investment would be over double.

Now in Chicago in August, 1906, the Chicago Telephone Company had 25,942 private branch exchange telephones; 9,000 flat rate business telephones; 6911 flat rate residence telephones, 30,657 measured service telephones; 38,401 ten-party line telephones; 6,053 extension telephones. So that they are divided up in this way. Over thirty thousand of those telephones had no direct connection with the poles, wires, cables, conduits or central office plant, and the right of way for them, cost nothing. 38,000 were ten-party line telephones, so that less than four thousand lines could take care of that many telephones. There were about 46,000 other telephones to be divided up between the direct lines, two-party line and four party lines. That makes less than one third the number of lines that there are telephones in Chicago. To compare that with Louisville, where there are about two-thirds the number of lines
1547 there are telephones, would not be a fair comparison.

Q. What does the Government statistics show on the subject of telephone cost per station, throughout the country?

Objected to by defendant.

Q. Go ahead and state what you are reading from?

A. The Report of the Committee on Gas, Oil and Electric Light of the City of Chicago, under date of September 3rd, 1907.

Q. That is the same book that contains the Chicago Commission Report?

A. Yes sir.

The MASTER: I don't know that it is evidence, what that book shows, but I suppose it is theorizing about it. I don't hardly think that is proper. There have been a lot of things brought in here, reports of Mr. Jackson and others, though.

Mr. GRANBERY, for Complainant:

Q. Do you know what the government reports show the average per telephone station, in America is?

A. Yes.
Q. What is it?
A. $163.00.
Q. Does that include all exchanges?
A. Yes sir.
1548 Q. What is the great bulk of the exchanges, small or large?
A. The average is about two hundred subscribers per exchange.
Q. I believe you have stated it costs less per subscriber in a small exchange than in a large exchange?
A. Yes sir.
Q. So, as a result of what you have said, is purely a local problem as to the value or cost per station in each particular plant?
A. A telephone plant is not different from any other property, real estate or any other kind of property. You can build a four room house for a couple of hundred dollars or you can build it for a couple of thousand dollars. The telephone plant is similar to any other property in that way. The better you make the plant the more expensive it is, and one peculiar condition is you can give service up to a certain point very cheaply, to everybody. But, you add to the efficiency, if you add five per cent to the efficiency and you will add more than five per cent to the cost, for the last ten per cent of the efficiency of your service will amount to fifty per cent of the cost of your plant.

Recross-examination.

By Mr. BLAKEY, for Defendant:

Q. What were those figures you gave as to Boston? The subscribers in Boston and the class of subscribers?
1549 A. In the metropolitan district of Boston we had main telephones, 20,201; private branch exchange sets, 17,142; extension telephones 5,405.
Q. Do you know how many of those 20,000 are party lines?
A. I don't know sir.
Q. Do you know how many party lines there are connected with the Louisville exchange?
A. I don't know that I have it exactly in that way. I can tell you how many lines there are in use to the switchboard and how many lines are required to serve the 9300 subscribers. 5800 lines are required for it.
Q. There are less than two thousand subscribers in Louisville having direct telephones?
A. I cannot state that; I haven't it that way. I simply ascertained the number of wires which were in use.
Q. Of course, if there were ten thousand subscribers—I mean, if there were ten subscribers to a line, at least half of them would not be on a ten-party line, would they? They might be on or might not?
A. It would be possible to call a line a ten-party line and put one subscriber on it, but in a city like Chicago, where I had reference to,

where the subscribers are in such a small territory, that is where there are so many subscribers per square mile, or per block or whatever unit you care to use, you will find that party lines are always bunched very near to their full capacity.

1550 Q. It frequently happens, however, that the party line is not full up to the capacity that it is intended to carry?

A. Such a thing does happen, yes sir.

Q. How do you know there are over five thousand lines in use running into the switchboard of the Louisville exchange?

A. By the count I made.

Q. Did you count them yourself?

A. Yes sir.

Q. Are they all in use or there for use in case new subscribers may be procured?

A. In use.

Q. Do you know there are about 2500 stations connected with private branch exchanges in Louisville?

A. No sir, there are not that many.

Q. How many?

A. About two thousand.

Q. Do you know that there are something over six hundred extension sets?

A. Yes sir.

Q. Do you know how many there are?

A. 714.

Q. They do not have lines, none of those have lines extending into the exchange, do they?

A. No sir.

Q. Do you know that there are about one thousand party

1551 lines connected with business houses?

A. No sir I don't know the proportion of that.

Q. If there are, then there would be about five hundred lines running into the exchange on account of the business exchanges?

A. If two party lines fill up, yes.

Q. And that, added to the 2750 makes a total of how much?

A. 500 to 2750 would make a total of 3250.

Q. Do you know there are about 2500 2-party residence lines?

A. No sir I don't know a thing about the division of party lines.

Q. If there are, there would be about 1250.

A. If two-party lines, full up, yes.

Q. And 1250 added to the 3250 makes a total of how much?

A. 4500.

Q. And do you know that there are about one thousand pay stations from two to four party lines?

A. No sir.

Q. If there are, there would not be more than five hundred that would have lines running into the exchange?

A. Probably.

Q. And that added to the last figure I gave you, makes how much?

A. That would make 5000 and by adding to that, 422
1552 trunks——

Q. I am not getting to that yet. Do you know there are about five hundred country subscribers who have four-party lines?

A. No sir.

Q. Two to four party lines?

A. No sir, I have not gone into that question of the class of subscribers.

Q. If you add 250, one-half of that amount, to what?

A. 5250.

Q. And that, deducted from 9300 leaves about four thousand doesn't it?

A. Yes sir.

Q. Now, do you have any reason to believe that the proportion of direct lines to party lines in Boston is any different in Boston from what it is in Louisville?

A. No sir I have no knowledge at all of the direct and party lines in the City of Boston from what it is in Louisville.

Q. Now, if a telephone were to lose two thousand of its subscribers in various parts of the city, would the poles and lines used to furnish those two thousand subscribers be idle or in use, to furnish those two thousand subscribers, as a general proposition?

A. As a general proposition, what size exchange do you mean?

Q. I said in Louisville.

1553 A. It would mean that the wires would go out of use ultimately and some percent of the poles, depending entirely on the number of wires on those poles, would go out.

Q. Do you know how many subscribers your company had the first of January 1908?

A. No sir.

Q. Isn't it a fact it had over eleven thousand the first of January 1908 and latter part of 1907, and now has only about nine thousand, then, would you say there was any considerable amount of wires and poles not in use in Louisville at the present time?

A. I don't know of my own knowledge, but from the records of the company I know perhaps there has been some wire taken down there, two or three years ago, so I presume that wire was the wire that served those subscribers.

Q. You don't know that?

A. No sir I don't know that.

Q. Did they take the poles down too?

A. I don't know sir; just answering as a general policy of the company, if it looked like would not get any more business out of it, we take the poles down, but I don't know of my own knowledge.

Q. How much time did you spend in Louisville at the time you made this inventory and appraisement of this property?

A. About five or six visits, I believe it was, at intervals of from one to three days each.

1554 Q. Did you have anybody working on it except Mr. Green?

A. Yes sir.

Q. Who else?

A. Mr. Metzger, Mr. Franz, Mr. Steinhaus and one or two other gentlemen, I don't remember their names now.

Q. And you are testifying from their reports to you, are you?

A. Part of what was said has been on what they reported, and a good part of it on personal observation.

Q. You have indicated where it has been on personal observation, have you?

A. I really could not say, I don't remember, I suppose probably so.

Q. Now I want you to look at your papers there a minute from which you have been testifying, and tell me how much 22 gauge cable you found on those blue prints about which you have testified, and in your answer, give which is ten pair, twenty-five pair, fifty pair, 100 pair, 200 pair and 400 pair?

A. Now I want to qualify that by saying that I went further than those prints. Wherever they were doubtful or obscure, I measured it, or went out and looked at it and found out by the assignments, what the proper capacity and gauge was. Now of ten pair, 22 gauge, 1275 feet; of 25 pair, 22 gauge we have 17,023 feet; of 50 pair, 22 gauge, we have 25,051 feet; of 100 pair, 22
1555 gauge, 185,287 feet; of 200 pair, 22 gauge, 111,733, feet; of 400 pair, 22 gauge, 50,276 feet.

Q. Now is that aerial, or aerial and underground both?

A. Both.

Q. Now of 19 gauge cable, please indicate what you found on that map?

A. 50 pair, 19 gauge, 105,319 feet; 100 pair, 19 gauge, 285,495 feet.

Q. What is the total of that?

A. 390,814 feet.

Q. Now, what other gauge cable did you find on that map?

A. 20 gauge.

Q. Please indicate what you found there.

A. Of 100 pair, 20 gauge, 1143 feet; of 200 pair, 20 gauge, 55,854 feet; total, 56,997 feet.

Q. Now, adding all of those together makes a total of how much?

A. 838,456 feet.

Q. Have you got Mr. Polk's figures before you?

A. No sir. I can get them though.

Q. How much cable did Mr. Polk say there was there?

A. 866,535 feet.

Q. And the only difference between you and Mr. Polk then, as to the amount of cable, is that Mr. Polk says there is more cable than you say, and in addition, Mr. Polk says and gives a
1556 different classification of the cable from what you give?

A. Mr. Polk's figures on the lineal feet, as shown by the maps, is estimated, undoubtedly on guess work, on the number of feet in runs that would be shown for several blocks, I suppose, but would approximate so many feet to the block, and for that reason and for the reason there has been a very small amount of that cable that had been taken out that I had knowledge of, and which I

didn't include, there is that difference between Mr. Polk and me on the lineal feet of cable. On the gauge of the cable, there is a big difference between us.

Q. Do your figures conform to the amounts of gauge cable, amount of feet of cable, as they appear on those blue prints?

A. Not exactly.

Q. Do you know whether Mr. Polk's do?

A. They do not, at all.

Q. Is Mr. Polk in excess of what appears on the blue prints?

A. You mean the lineal feet of cables?

Q. Yes?

A. I would not answer that one way or the other, as a question of whether another person would measure it like he did and estimate those distances, it would be speculation Mr. Polk's measurements and mine are so close together, on such a large amount, they are virtually the same, only about one-half of one per cent difference.

1557 Q. What you say about Mr. Polk's figures then is that they are different as to the gauge?

A. Yes.

Q. And you say that the 20 gauge costs more than the 22 gauge?

A. Yes sir.

Q. And the 19 gauge costs more than the 20 gauge?

A. Yes. Just to show you, 22 gauge cable, same length of cable, 22 gauge would weigh 1024 pounds; 20 gauge would weigh 1632, and 19 gauge would weigh 2049, so, that 19 gauge is practically twice the weight of copper as there is in the 22 gauge cable.

Q. As to the conduit system, I believe you have practically agreed on the number of duct feet, you and Mr. Polk?

A. Yes sir.

Q. The only difference is you say it will cost about thirty eight cents per duct foot to produce it and he says it will cost about twenty cents?

A. Yes sir. There is another difference, that he specifies the kind of duct we have there and does not seem to include this Lynch tile, and does not include the tunnels we have found it necessary to build in town. One tunnel would be equal to forty ducts.

Q. Where did you build any tunnels?

A. There in the rear of the Paul Jones Building, in the rear of the Traction Building, and other places.

1558 Q. Where else?

A. I don't know the other locations. I would not state exactly the locations, but there are those two I have seen myself.

Q. What size tunnels are they?

A. They are something like three feet in height, and three feet across. When the Paul Jones Building was going up the whole street sloughed off and rendered our conduit system useless, ruined it. It was necessary for us to put in a system that would withstand that and give service while that work was going on and to do that it was necessary to build that tunnel and the hammering and pounding at the Traction Building would destroy practically any kind of a conduit we would have put in, so we tunneled there.

Q. Do you know how many duct feet you have there of iron pipe?
A. Yes sir, 84,989.
Q. What were the other two kinds of ducts in your system there?
A. Camp, multiple tile, and Lynch tile.
Q. How much of that?
A. 10,590 feet of Lynch and the balance was Camp.
Q. What is Camp?
A. That is the tile Mr. Camp came down and laid himself, vitrified clay tile, in multiple.

Q. Now this 13,000 feet of laterals that you spoke of,
1559 what is that?

A. Well, if you want to serve a telephone over in this building, in the underground district, we have a manhole in the street and it is necessary for us to reach the building from the manhole, and we lay those iron pipes, and laterals to the building, run up the building ten or fifteen feet and open into the cable box.
Q. Do you know there are 13,000 feet of those?
A. Checks according to those blue prints and measurements.
Q. It appears on the blue prints, does it?
A. Most of them do, yes sir.
Q. And you have no reason to think Mr. Polk did not take those into consideration?
A. Yes, I have.
Q. Why?
A. Because he didn't count them at all and showed that he allowed twenty cents per duct foot for the conduit, and added $7500 for the excess cost of the iron pipe, and made the total cost of the underground conduit so much it didn't leave room for the other.
Q. He only mentioned the manholes as a part of the system, did he not?
A. Yes sir.
Q. And said he took that into consideration?
A. Yes?

1560 Q. He didn't give any specific item as the cost of the manholes, did he?
A. No sir.

Q. What do you say it cost to put in those 13,000 feet of laterals?
A. $6,760.09.

Redirect examination.

By Mr. Granbery, for Complainant:

Q. There is one question which I should have asked you and which I will ask you now with Mr. Blakey's permission. Did Mr. Polk estimate anything for trunks to the private branch exchanges?
A. I didn't see anything in any of the testimony.
Q. How many has the company, trunks to private branch exchanges?

A. 422 trunks, starting at the switchboard in our building and running to the branch exchanges.

Q. And that is to be added to the number of wires you were asked about in serving telephones?

A. Yes sir.

Further this deponent saith not.

J. E. JAGOE.

Sworn to when given, and subscribed to before me on this the 28th day of March, A. D. 1910.

BLUFORD DUKE,
Notary Public.

1561 In the United States Circuit Court for the Western District of Kentucky, at Louisville, Ky.

CUMBERLAND TELEPHONE AND TELEGRAPH COMPANY
vs.
CITY OF LOUISVILLE.

The Depositions of J. E. Jagoe, Leland Hume, H. Blair Smith and E. M. Fisher, Taken at Nashville, Tennessee, on the 18th day of March, 1910, to be Read as Evidence on Behalf of the Complainant in the Above-entitled Cause.

Present, Mr. W. L. Granbery, Counsel for the Complainant; Mr. C. B. Blakey, Counsel for defendant; taken before the Hon. Henry Burnett, Master Commissioner.

Caption, certificate and all formalities in the taking of said depositions, are expressly waived by counsel for both parties.

1562 LELAND HUME, called on behalf of Complainant, being first duly sworn, deposed and testified as follows:

Direct examination.

By Mr. GRANBERY, for Complainant:

Q. State your name, age, residence and occupation?

A. Leland Hume, forty-six years old, Nashville; General Manager of the Cumberland Telephone and Telegraph Co.

Q. How long have you been connected with the complainant company?

A. Since 1885.

Q. Just state your various positions with the company?

A. The first two years' connection with the company's service was in a clerical capacity. The last twenty-two years have been in the operating and executive departments.

Q. What positions have you held?

A. I held the position of treasurer in the beginning, and after that first two year period, I have been manager of the company's

local exchange at Memphis, Tenn., for three years, and in the Summer of 1890 I was elected assistant general manager and secretary, and about four or five years ago I was elected general manager.

Q. From the time you commenced as manager of the local exchange at Memphis, have you given your entire time and attention to the complainant company's business?

1563 A. I have.

Q. Are you familiar with its properties?

A. I am.

Q. Have many of these properties been built under your direction and supervision?

A. The most of them have.

Q. Have you had a great deal of experience in building, operating, maintaining and reconstructing telephone exchanges?

A. Since an early period of the telephone business I have devoted myself to that.

Q. Do you regard yourself as an expert and are you regarded by telephone people generally as an expert in the telephone business?

A. I think I am; I so regard myself at any rate.

Q. Are you so regarded by other telephone people?

A. Yes.

Q. How long have you been familiar with the Louisville plant of the complainant company?

A. It has been over ten years.

Q. It is ever since this company acquired the ownership of the Ohio Valley Telephone Co. is that so?

A. Yes sir.

Q. Has that plant been extended year by year and developed year by year, since the complainant company has owned and operated it?

1564 Mr. BLAKEY, for Defendant: I want to make the same objection, and the same reasons for it, that I made in connection with Mr. Jagoe's deposition. It seems in Mr. Jagoe's testimony, there were certain things in rebuttal of what Mr. Crum and Mr. Polk said, but there is no pretense here, it seems to me, that this is in rebuttal of anything. Here is the General Manager of the company, the man in direct charge of the plant, the man that ought to have known and ought to have testified on direct examination, if he was going to testify at all, and now at the close of our testimony, comes and brings this man here, who ought to have testified then, if at all, and asks him questions which call for testimony that cannot be claimed to be anything but direct testimony.

The MASTER: Mr. Granbery, what is the general purport of this testimony.

Mr. GRANBERY, for Complainant: I am merely laying out the ground to go over the ground Mr. Jagoe did, and to rebut various other things with reference to Mr. Farnham's statement, that

1565 the long distance business has been loaded over on the exchange, and the time of the employes have been used in other exchanges and a thousand of things brought out by the defendant that I never dreamed would be brought out.

The MASTER: Well, go ahead with this and Mr. Granbery has stated that he expects to take up the question of depreciation of the plant in connection with this witness, which I think is very important. I think it is all right.

Exception taken by defendant.

Mr. GRANBERY:

Q. Go ahead Mr. Hume?
A. What was the question.
Q. I asked if the plant had been extended and developed?
A. Very materially extended and developed since the Cumberland Telephone and Telegraph Co. acquired the ownership of the property.
Q. Has any part of that plant been constructed extravagantly or without due regard to the necessities of the business of the complainant company in the City of Louisville?
A. No, on the contrary, there has been the greatest care and economy practices in every extension of the plant that has been made.

Q. I will ask you to state whether or not the plant that
1566 exists today is the plant that has been built from time to time as the officials of the company believed the business of that community and city required?

A. It is.
Q. Is there any part of the plant now in existence that is not necessary and proper to be used in the business of the company in Louisville?
A. There is nothing connected with the plant at Louisville that was not put there only after a plain reason which impelled and called for such addition.
Q. I will ask you to state whether or not during any part of the time from the time the complainant company acquired this plant to the present time, you supervised and approved the vouchers and the distribution of the expenses, between the construction account, reconstruction account, maintenance, operating, local and long distance service?
A. The passing of all such vouchers and the approval of them was a part of my duties up to about two years ago, and up to that time I, of course, did go into all those items very carefully.
Q. I will ask you to state whether or not in the performance of those duties you did actually separate and distribute the expenses among all those items in the way you thought was right and proper, with reference to the Louisville plant?

1567 A. I actually went into each voucher and saw that the items composing the voucher were properly distributed and prepared for the proper entry on the company's distribution books.

Q. I will ask you to state whether or not you have looked over the quantities and the values used by Mr. Jagoe in his deposition in giving the values of the Louisville plant?
A. Yes, I went over it with him just as he was making a study and preparing his figures.

Q. Did you change any of his figures or suggest any figures for him to use?

A. No, I did not.

Q. I will ask you to state whether or not you approved those figures or what you have to say about them?

A. Well, I would say that the figures are very conservative and it would be very difficult to take any practical men and reproduce the amount of property that he shows by his inventory, for the money he has figured it out.

Q. Is it possible to ascertain all the different items of expense entering into the construction of a plant after it has been constructed?

A. No, that would only be possible in the case of each particular addition to the plant. After the work has been all what you might call completed and the plant taken just as you find it standing today, it would be impossible to include all the items and all the matters that would be an actual part of the making up of the plant and the construction cost of it.

1568 Q. What have you to say with respect to the estimates made by engineers and other people as to the cost of particular plants or particular pieces of work in telephone plants? Are they accurate?

A. They usually result in what contractors and builders know as extras, with extra good explanations as to why the extras are necessary.

Q. Do the actual costs exceed or fall below the estimates?

A. The actual cost usually exceeds the estimate and seldom, if ever, comes within it.

Q. Why is this so?

A. Well, I think, for the reason that there is such a vast difference between sitting down at a table and figuring out what a thing ought to cost and the actual carrying to completion of a particular job of work. The man at the table figures out that everything is exactly where it ought to be and we admit it ought to be there, but unfortunately when you get at it, there are always unavoidable delays, unavoidable misconnections, which simply mean unavoidable additional costs.

Q. Has a telephone plant any individuality, or are all telephone plants of the same size, the same?

A. I have never seen two telephone plants that were exactly alike, or approximately alike.

Q. I will ask you to state whether or not it is possible for anyone, however experienced, to estimate closely the cost or value of

1569 a telephone plant without familiarity and thorough knowledge of that particular plant?

A. To accomplish a result of that kind it would be necessary, in reaching an approximately correct result, for the engineer to know a great deal personally about the conditions existing in that particular city, with relation to sewers, pipes of all kinds already laid in the streets, the condition of the soil, whether rocky, sandy or alluvial, the physical conditions that must be met with and encountered and

overcome on the different streets, the things that get in your way at the time of building, that you can not see or figure on when you go over it to prepare your plans even, and to follow years afterwards and undertake, without going into all these questions in great detail, it would be impossible to get even a reasonably close figure. But, with all that information it would not be possible to get absolutely correct results.

Q. Does the location of your patrons in a city have anything to do with the cost of your plant?

A. The location of the customers has a very great deal to do with the cost of the plant, for the amount of construction in finding one thousand customers under one set of conditions, might be very much more, or very much less than the finding of one thousand customers under different conditions.

Q. Has the company developed the Louisville plant dur-
1570 ing the past year, say from March 1909 to the present time, materially. I mean, added to it or changed it?

A. During the past year or more, since the filing of these suits and the attacking of the franchise, the company has done very little, and in the matter of maturing any engineering plans calling for substantial broadening of the basis of the exchange, it has not done anything in twelve months past.

Q. Is the plant at the present time in substantially the condition it was in March 1909?

A. Yes, it has been during that time been very carefully maintained and looked after.

Q. Has it been changed materially?

A. No, it has not.

Q. I want you to state what per cent of the earnings of a telephone company, if any, must be set aside year by year to take care of what I shall call depreciation. I mean, now, in the City of Louisville, basing your opinion upon the experience you have had in building, operating, maintaining and rebuilding telephone plant in that city?

A. Well, that is a matter and a feature of the business that has called for the closest study and attention on the part of the best operating men and the best engineers that could be gotten hold of, I mean, that question of depreciation has applied to telephone prop-
erties generally. The same general conditions that govern
1571 one in reaching conclusions at one place enter into the consideration at another, but the same results are seldom found, because the conditions confronting a plant in one city are, for the most part, so radically different from the conditions that confront the same kind of a plant in a different city. In the Cumberland Telephone and Telegraph Co. system that has been markedly true, because our lines run from up in Indiana and Illinois clear on through to the Gulf Coast country, but speaking of our experience in Louisville a ten year term and during that time a great deal of the property having been put there as brand new property, you can only judge by your experience generally, and by the condition of the plant you had ten years ago and the relative condition of property that has been put in during the time, these succeeding nine,

eight or six years and on down to the present, but taking all of that into account, I am sure that the percentage we are working on is as small as we could dare take with any degree of safety, that is, seven or seven and one half per cent.

Q. Now Mr. Hume, what do you include in the term depreciation?

A. I include all of those things that at one time or another are going to actually wear out. If you will let me use the illustration, I will take a suit of clothes. During the time that suit of clothes is kept or worn, it is often brushed sometimes cleaned by
1572 a cleaner, and it is giving good service, but there does come a time notwithstanding the very best treatment that can be given that suit of clothes by a careful man, the most careful care a man can take of it, that it has to be cast aside, but, up to the day it is cast aside, it is giving, as far as wearing is concerned, one hundred per cent service. Now, during that time, using the suit of clothes in connection with the telephone plant, the plant is being maintained by a percentage or sum of money set apart from time to time as may be necessary to do that, but there comes a time, necessarily when that thing actually and in fact, goes out of commission and goes out of service, and must be taken out of the plant. Then comes in the question of falling back on this account which has been set apart for depreciation or defacto replacement of the property.

Q. Is there also an element of the city requiring changes in your plant, for instance, taking overhead wires and putting them under ground, changing pole routes from one side of the street to the other, changing location of poles and such things: Does that enter into this thing which we call depreciation?

A. Yes, that is met with, necessarily in all cities.

Q. Now, I will ask you whether or not there is anything embraced in that which grows out of the evolution of the telephone art, that is, the replacement of property or parts of a plant that have
1573 not worn out, but have served their usefulness on account of something better and more modern being invented or brought out, which must be substituted in that plant. Is that included in your estimate?

A. It is, and it is necessary to provide for that or, be like a flour mill undertaking to use machinery that was first class and up-to-date ten years ago, and is now good as far as working order is concerned, but absolutely antiquated and out of date and cast aside, because of something newer and more modern coming into use.

Q. I will ask you whether or not this seven and one half per cent must be used each and every year?

A. No, if it were used each and every year you would come to one of these periods when you would have to go to some larger renewal expense and you would not have the money set aside to do it with.

Q. Then how is that applied, this seven and one half per cent, per annum?

A. As I stated awhile ago, the study of a particular plant and

experience with plants of similar kind enable you to reach as near as you can a figure which you can stand by which you will denominate as your percentage of depreciation. You start to work and build a defacto new plant and that first year there is necessarily not apparent much depreciation. At the end of the first year, if you have spent much you can properly charge to depreciation, you
1574 have made a great mistake in the selection of your material. But, running the thing over a period of thirteen or fourteen years, as seven per cent does, you do reach a time then when by the process of decay and the processes of evolution of the business, you must have renewed in amount, a sum equal to what you had invested in your plant and not only the changes, but almost the certainty is, that the last of those years, the last half of those years will call for vastly more than seven and one half per cent of depreciation, whereas the first years will call for a small percentage, but, if you have not passed that depreciation to the depreciation account, that percentage, and put it where it would be available at the time you must have it, then the company would reach an embarrassing period in its history, and it is right there that so many telephone companies have gone on the shoals.

Q. Now you say seven and one half per cent on the average cost of plant, is the amount set aside for depreciation. After the plant has been in existence any period of time, I assume different parts are wearing out and different parts have different lives. For instance, an open wire will last much less than a cable, and——

Objected to by Defendant, because leading and suggestive.

Q. Mr. Hume, which is the longer lived, open iron wire, or cable?

1575 A. The cable has the longer life.

Q. Do all parts of the telephone plant wear out at same time?

A. No sir, they wear out at different times.

Q. Now then, if different parts of the plant have different lives, and different lengths of life, what is practically being done year by year, as time goes on, with reference to taking care of this depreciation?

A. When the life of a particular part of the plant has been reached and the period at hand when that particular part of the plant needs renewal, it is attended to at that time. To put it differently, here are poles, cross arms, insulators, wires, cables, all put up say at the same time. It is not all going to reach the period of renewal at the same time, for the simple reason that the elements and the natural life of the different materials that have entered into the construction of that plant or pole route, are reached at different periods and you have to renew each part when it wears out.

Q. When you renew any part of that, what do you call it?

A. You charge that to the depreciation account.

Q. Do you call it renewal or reconstruction?

A. It is reconstruction, I believe, is the way the auditing department handles it.

Q. Do you deduct that from your seven and one half per cent to get the net amount of depreciation for the year?

1576 A. Oh, yes.

Q. In other words you treat that as a part of your depreciation that you are caring for that year?

A. To be sure.

Q. And it is the remainder, between that and the seven and one half per cent?

A. Yes, if that particular year don't show more than seven and one half per cent, in which case you go over on the reserve account for depreciation.

Q. What has been the experience of the company say during 1909 and that part of the present year, which has already passed, with reference to the plant in Louisville: Has it been favorable or unfavorable?

A. During the past two years we have not been called upon to face any unusual plant conditions at Louisville. That is to say, cyclones or sleet storms or serious conflagrations, that do come at one time or another, have not come in or immediately around Louisville in the past fifteen months.

Q. Now, with reference to changes necessitated by a shifting of the customers of the city and the change of poles and things of that kind. What has been the experience over the fifteen months past?

A. I don't recall that during the past fifteen months we have had anything unusual along these lines.

Q. Things then have been quiet in Louisville for that

1577 period of time?

A. Quiet as far as plant is concerned.

Q. Mr. Hume it has been testified in this case by a man by the name of Settle, who seems to have been at one time a local cashier in the Louisville office, that a great many of the employés of the complainant company on the payroll at Louisville, were giving from a fourth to a half of their time to other exchanges. I will ask you to state whether or not that is true?

A. That is not true.

Q. Please explain the way that that exchange is officered and managed and the purpose of setting it up on the basis it is set up on?

A. The exchange, in addition to being under the general supervision of a district superintendent, has its local manager, its general foreman of plant or construction, its chief electrician, its chief operator, and the employés that work in these respective departments, and what is there is what would be found in the same size exchange, approximately the same size exchanges as at Nashville and Memphis, no more and no less. As to Mr. Settle's charge that there were men there who were giving one fourth of their time or any other material part of their time to outside matters, he has made the charge without personal knowledge and without fact. The matter that he has gotten on his mind in a twisted manner is

1578 simply this, that in the development of the business around what we term the metropolitan district of Louisville, we have put in a number of small switching exchanges in various sections of

the country, both in Kentucky and in Indiana, within a radius of twenty or twenty-five miles of the city of Louisville itself, and at each of those small exchanges we have employed to take care of the exchange and to give the service from the switchboard. In other words, at each of those switchboards, we have exactly the force we would be compelled to have and that would be found in other small exchanges, even though they might be a hundred miles from any large exchange, but, on account of the fact that to all those exchanges and from all those exchanges there are certain subscribers who have arranged for Louisville service, and the further fact, that all the subscribers of Louisville are given access to all these special subscribers in all these exchanges referred to and given this service without any charge whatever in the way of tolls or additional monthly rate in their exchange, in the interest of their exchange, in the interest of the Louisville service we allow the manager and the other supervising officers of the Louisville exchange to do whatever may be necessary in the way of supervising, in watching over the service, at these smaller exchanges, but whenever it comes to any actual work, the employment of any of our linemen or trouble men or electrical men or plant men or material shipped to Louis-
1579 ville for the use of Louisville, every item and every minute of time employed by such employés is reported and the proper credit given on the Louisville account and the proper charge made against these smaller exchanges that are not in every respect and in fact a part and parcel of the Louisville plant.

Q. Now, Mr. Hume, I will ask you whether or not during the past eight or nine years you have been in Louisville frequently or infrequently?

A. Very frequently.

Q. Is that a part of your duties as General Manager, and during the time you were assistant general manager, to go to Louisville, look over the results, etc.?

A. It has always been, since we purchased the Louisville property.

Q. During the time Mr. Settle was cashier, where was his office located?

A. In the front part of the Main Building on Jefferson Street.

Q. Where was Mr. Hall, the Superintendent and his force, located?

A. On the second floor, immediately above.

Q. Did the stairway leading from Mr. Hall's department come through the first floor in such a way that Mr. Settle could see anyone come in or go out of Mr. Hall's department?

A. No sir, not when Mr. Settle was Cashier.

Q. Would it have been possible for Mr. Settle to be look-
1580 ing after his duties and see what people came in and out of Mr. Hall's office, and what time they spent in his office?

A. No, at the time, it was arranged so it would have been impracticable.

Q. I will ask you, knowing the duties of the cashier, even if the cashier were in when any employé went out of the building, if the

cashier would know where he was going or what he was going to do, when he went, unless he told Mr. Settle?

A. Even then, and now, under the present arrangement of the office, the men that go out to do this work on the plant do not use for entrance purposes or egress, the portion of the building or the entrances that are used by the office force for coming in or going out; they come in on Green Street.

Q. I will ask you whether or not on any one of your visits to Louisville or during any time you have been in Louisville you ever discovered that the employés looking after the Louisville exchange, were giving a part of their time to other exchanges?

A. No, I have never found any such conditions.

Q. If it had existed, would you have known it?

A. I think I visit there often enough and go over the plant carefully enough when I am there, to have a personal knowledge, and I state that they didn't engage themselves in that way.

1581 Q. I will ask you whether or not the Louisville exchange has incurred one dollar of expense on account of the exchanges in what you call metropolitan district in Louisville that it would not have incurred if those exchanges were not in existence?

A. It has not.

Q. Now Mr. Hume, coming next to the toll and the exchange branch of the business, I will ask you to state what in your opinion is the proper amount of the toll to be allowed the local exchange for handling the toll business?

A. From twelve and a half to fifteen per cent.

Q. I will ask you to state how general is that opinion among telephone people?

A. A great majority, I believe of the companies, and certainly a majority of those I have knowledge of, consider fifteen per cent a liberal amount to allow the originating office on outgoing business.

Q. I will ask you whether or not the complainant company now, or in the past, has had the contracts with other companies under which a percentage of the toll business was divided on that basis?

A. This company has always, from the beginning of its toll business, had such contracts, and I doubt, when you take all of them, if they will average as much as fifteen per cent.

Q. Do you know of any higher than fifteen per cent?

1582 A. No, I do not.

Q. How many contracts of that kind would you say the complainant company has in existence at the present time?

A. A hundred, or maybe considerably more than that; we have a great many.

Q. Does the complainant company handle the toll business for other companies on that basis?

A. It handles it, as I say, for a large number of companies, conspicuous among the number being the American Telephone and Telegraph Co., the Southwestern Telephone and Telegraph Co. with headquarters at Dallas, Texas, Southern Bell Telephone and Telegraph Co. with headquarters at Atlanta; the Central Union Tele-

phone Co., with headquarters at Indianapolis; the Gainsboro Telephone Co., with headquarters at Cookeville, Tenn.

Q. Is that last an extensive system?

A. Yes, they operate thirty exchanges, I suppose. The Southern Telephone Co. with headquarters at Fordyce, Ark.

Q. Now I will ask you to state whether you have read the report of Mr. E. W. Farnham in this case?

A. I have.

Q. I will ask you to state whether or not his separation of the expenses of the toll business and exchange business is correct and fair?

A. It is not at all, either correct or fair.

Q. What occasions the expense of giving the toll service to the exchange subscribers at their individual stations?

1583 A. Well, a very great deal of the equipment and the expenses that are gone into in the handling of the toll business, are incurred entirely on account of the local subscriber and placing him where it will be convenient and practical for him to use these long distance lines on his desk, or on the wall in his home, instead of using the lines like the non-subscribers do, from the central station. You will bear in mind that we have for instance, in Louisville gone to the expense of preparing and fitting up and equipping a number of places in the different parts of the city where anyone can go and be waited upon by public station operators and if the equipment were stopped there, the charges against the business, the terminal charges, would be comparatively light, but the local exchange company, whether it is the company that owns the long distance lines or not, goes to the expense and a considerable expense at that, putting in facilities, switching facilities of the subscriber who gets service through the local board, to also get service from his local telephone and the long distance lines, and vice versa.

Q. Now, this expense incurred by the local exchange in giving the long distance connection to the local subscriber is paid for in what way?

A. That is figured in a part of the monthly charge, that is made against the subscriber.

The MASTER: How is that?

1584 A. The local charge that is made against the local subscriber for his monthly rate, it goes to make up one of the items that fixes the rate by the month for the subscriber's service.

Q. Part of the consideration which the subscriber gets?

A. Yes sir.

Mr. GRANBERY, for complainant:

Q. Is there a difference in expense in giving local subscribers access to the toll lines from the local station, from that above what it would incur if people had to come to the Public Station to use the toll lines?

A. There is a very decided difference in expense, as I have referred to just now.

Q. I will ask you to state whether or not placing the exchanges in

the metropolitan district of Louisville under the supervision of the Louisville employés is of any benefit to the Louisville subscribers?

A. That is the reason it is done; it is done on their account. It is a very material advantage and benefit to them to have these smaller exchanges supervised in such manner as to give to the Louisville subscribers and insure a prompt service.

Q. Is it necessary for employés to co-operate in giving service?

1585 A. Absolutely necessary, otherwise you would have chaos in those exchanges.

Q. Are there any less employés in any of these little exchanges, or their pay less than if not under the supervision of Louisville?

A. If the exchanges surrounding the Louisville exchange were entirely removed from it and not under the supervision in any form or sense of the Louisville officials, this company would not provide or be called upon to provide any more local help than is provided in each of those exchanges surrounding the Louisville exchange, and the salaries and compensation throughout would be just the same as is now paid. In fact, the mere presence of Louisville has an opposite effect in regard to salaries, than is indicated.

Q. Mr. Hume, I hand you a pamphlet which is entitled, Valuation of Public Service Corporations by W. H. Williams, which seems to have been read before the Joint Session of the American Economic Association and the American Political Science Association, Chamber of Commerce, New York, December 30th, 1909, and I will call your attention to what is stated on the bottom of page 21 and the first part of page 22, and ask you to read it to the stenographer, and what you say about it, whether you agree to it or disagree?

A. The cost of reproduction is a matter of individual opinion; no engineer in estimating on the several important items of construction work for the year, will come within ten per cent of

1586 the total aggregate cost. Many of the more important items are frequently underestimated from twenty-five to fifty per cent. If experienced engineers, knowing the local conditions, cannot estimate the exact cost, how can those without special knowledge be expected to do so. A very good illustration of this may be had by tracing the original estimate with the ultimate cost of postoffices and other public buildings, and an especially good illustration and one known to all readers of the daily press, is that of the Panama canal. The original estimate of the cost of engineering and construction work was $139,705,200, but the present estimate is $297,765,09-, and it is probable this cost will be greatly exceeded." I concur and agree to the statement made by that engineer. We meet it constantly in the results of our business.

Q. Is there any added value to a telephone plant from the fact that it has an established business?

A. Oh yes, a very decided value comes from that condition.

Q. Does it cost anything to get patronage and build up a business?

A. It costs very considerable to get a business established where you can term it an ongoing, established business.

Q. What would you say with respect to any depreciation in the

physical condition of the plant of the complainant company in the City of Louisville being less or more than the value added to
1587 the physical property on account of it having an established business in the City of Louisville, Mr. Humes?

A. I would say if you propose to make any discount in the first case, that whatever you did in the way of reason would be vastly more than overcome by the actual values on account of the ongoing established business.

Q. That leaves out of view any question of the franchise rights granted by the City of Louisville

A. Yes, we have never carried that on our books at any price at all.

Q. I will ask you to state whether or not rights of way, tree trimming privileges and things of that kind are valuable or not, in the City of Louisville?

A. They are, and they must be acquired in one way or the other.

Q. Is anything added to the physical value of the property on account of those things?

A. No, none of those things the company has had to do and that have been necessary to do, have been allowed for or figured on or given credit for in any of the estimates that have been prepared, either by the engineer that prepared the estimates for the City of Louisville or our own engineer Mr. Jagoe.

The MASTER:

Q. Is there any promotion expense carried on your books, with regard to the Louisville exchange?

1588 A. Not a dollar.

Q. No special profit or advantage to any individual or officer?

A. Not a bit, just exactly the trade that was made with Mr. Speed and associates is reflected on our books, nothing else in any manner, shape or form.

Mr. GRANBERY, for the defendant:

Q. And to that is added actual money expended on construction since?

A. Oh, to be sure, construction since.

Q. How were your branch exchanges constructed, by the company or under contract?

A. They have all been constructed by the company, through its own engineers.

Q. Have they been constructed as economically as possible?

A. They have, and I have reason to know they have been constructed as economically and in as standard condition as those of any other company.

Q. Has there been any intention or purpose or effort to do construction work at the expense of maintenance or reconstruction or operating, in Louisville?

A. There has not. On the contrary I have on several occasions had cause to believe that items that could most legitimately be charged into construction account, were given the benefit of any

doubt whatever and charged it the other way. To put it
1589 differently, I believe seriously and as solemnly as I believe anything, that a correct inventory a detailed inventory of the property at Louisville would show its intrinsic value as tangible property for more than we are carrying it on our books.

Cross-examination.

Mr. BLAKEY, for defendant:

Q. Now taking up first the question of depreciation, how much does the Cumberland Telephone and Telegraph Company set aside to take care of depreciation?

A. Seven and one half per cent.

Q. Of what?

A. Charge off seven and one half per cent each year of the cost of the plant for its reconstruction.

Q. What is done with that?

A. It is reinvested in running the business, if it is not consumed in that year's draft on the account.

Q. If money is needed to add to construction and there is a fund in the re-construction or depreciation fund, is that used for construction purposes?

A. It is. It is invested in the plant and employed along with the other monies of the company in producing its results. To put it differently, the eight per cent dividend we have been paying in the last few years to the stockholders is produced from a plant of twenty-
five million dollars, but paid to stockholders' interests of
1590 less than twenty million dollars. The company has not paid a dividend on the actual money employed and material employed, which the money represents, of six per cent. In other words the eight per cent is not six per cent on the actual cash employed in conducting the business. It is eight per cent on the capital stock, but not six per cent on the capital invested on the plant investment. Now, a part of that represents this money that has been put aside for reserve.

Q. Do you know how much of it is represented by this reserve fund?

A. I do not keep the accounts of the company at all, and I could only answer that by going to our monthly statements.

Q. You say you can answer it differently and get the exact amount. I will ask you to do so?

A. All right.

Q. Can you do it now, does it take any time?

A. Oh yes, I would have to leave and get Mr. Smith to give it to me.

Q. Never mind then if you can not give it yourself. Is seven and a half per cent of the value of the Louisville plant, or the cost of the Louisville plant, set aside each year to take care of depreciation?

A. It is.

Q. What becomes of that portion of the seven and one half per

cent so set aside which is not expended in reconstruction
1591 work in Louisville?

A. That is employed, as I stated awhile ago. We do not segregate each individual account of each individual exchange; we put aside seven and one half per cent each year for depreciation, and we charge to and draw from a general fund in which each exchange participates according to its requirements. To put it differently, if a period came, as it does in our experience every year, where a sum very much larger than seven and one half per cent depreciation on some particular plant is called for, to rehabilitate that plant, after a cyclone or some other calamity, we go and get that out of the company's general fund and put the plant in proper shape for the customers anyway. I know we put aside seven and a half per cent every year in this general fund, to take care of the item of general depreciation.

Q. And is that seven and one half per cent depreciation set aside because it is estimated that the plant will have to be reconstructed in a period of from thirteen to fourteen years?

A. Yes, that is the conclusion, and the reason for providing the seven and one half per cent depreciation.

Q. Will the plant, in your opinion, wear out in between thirteen and fifteen years and have to be reconstructed new throughout?

A. I will state that twenty-four years' actual experience in
1592 the business confirms amply that belief.

Q. Now, taking the Louisville plant and beginning with the underground conduit system there, when was that constructed?

A. The major portion of that plant was constructed under the old management of the Ohio Valley Telephone Co.

Q. At least ten years ago?

A. More than ten years ago, but then, within the last ten years we have had to do a good deal of work on that plant. The mere fact that it is buried under ground does not change at all the necessity from time to time of doing work on the plant. For instance, I know one section, I can not tell it by street, but I know one section where we passed quite an expense voucher, authorizing work which was necessitated on account of quicksand. The cables which were in there were working all right, but necessity arose for putting in additional cables, down that street and we could not pull it in, and when we dug up the street, we found in this particular place where there was quick sand, it had given away and the ducts had gotten into a curve that way, and then went on straight. That happened to be not enough of a curve to stretch the cables in there to a point where they were damaged, but made it impracticable and impossible to go through there with additional cables.

Q. Did you have to take that particular conduit out?

A. Had to take all the conduits out for that distance and press it
up. Didn't take actually the conduit and cables that were
1593 in there out, but had to build from underneath and force upward and back to its proper level, and there are a great many things that have come up in Louisville in the underground plant that have been in the nature of renewals. I remember an-

other case where in excavating for an office building, the sand came from under our ducts and we were forced to go back on that work.

Q. What was done in that instance?

A. We had to co-operate with the contractor until he got his foundation in shape, and then, of course, we filled in and put it back in its original position.

Q. Any of the conduits that were there when you purchased the Ohio Valley Telephone Company plant, that have been replaced?

A. No, the conduits have not been replaced, and we do not calculate they will be for a considerable length of time. This seven and one-half per cent depreciation don't mean by any means, every component part of the plant is to be replaced in that time. Some of it will have to be replaced in two years, some in three, a good deal in ten, some of it maybe not in twenty-five years, and our charge would have to be radically above seven and a half per cent if that does not work out in our experience.

Q. Now, take the cable system. Were there any cables used by the Ohio Valley Telephone Co.?

A. Yes, they had cables in there.

1594 Q. Are they still there?

A. Some are and some are not, some we put under ground are not there, because they have been eaten up by electrolysis, absolutely destroyed.

Q How about the switchboards?

A. The switchboards, the oldest sections of the switchboard was put in there about ten years ago, at the time of the fire in the Jefferson Street Building, which was the only exchange the Ohio Valley Company operated in Louisville.

Q. That was before you purchased it?

A. Yes, just before we purchased it.

Q. That has been substantially added to by additional sections in the last five or six years, or later.

A. Yes and we do not calculate that the renewal of those boards will come within the next few years, they ought not to.

Q. How long does a switchboard usually last?

A. Switchboards, as far as the experience of the past is concerned, have been replaced by the other process that was referred to in the examination awhile ago, that is, this process of evolution of the business. In Louisville, the first switchboards which were put in by the Ohio Valley Telephone Co., were very crude as were all similar boards over the country, they were taken out and were replaced by what is called a magnetic type of board with trunking system, which called for or necessitated the switching of a connection from

1595 one board to the other by means of a trunk line, in order that, this number for illustration is 26, and whose line is located on board No. 1, might get connection with a subscriber whose number is 407 and whose line terminates on board No. 4. Now, in that kind of connection it was necessary for the two operators to co-operate over this trunk line and make the connection out of this subscriber No. 407. In a case where No. 26 called for No. 27, that same operator waited on him, and as the exchange grew that type of switch-

board, though the best to be had at the time, was improved upon by experts working in the laboratories and manufacturing plants and it was replaced by what was called the multiple magneto switchboard, which was the same as this switchboard with the very marked advantage of expense and manipulation, so that while this operator on board No. 1 continued to answer the lines terminating on that board, being for illustration from one to one hundred, she had a duplicate or multiple in front of her of these other lines, by the use of what all telephone men understand and term switch jacks that would enable the operator on No. 1 without saying a word to any other operator, to connect up the subscribers in the exchange, and operators on down the board, having the same duplicate before them could accomplish the same result. That board was replaced I don't know the number of years, but several years prior to the installation of the present type of switchboard, and it was replaced by
1596 what is called the self-restoring drop type of switchboard. That was a decided improvement over the old magneto multiple board, but as the exchange grew and as other exchanges grew over the country this common battery flash-light multiple board, which is in use in Louisville, was evolved, and that company, along with other large companies, recognizing the superior advantages and benefits to the service by the introduction of this new type of board incurred the enormous expense, which was necessary and which they did incur, in putting in this new type of board and today there is not only a probability, but an almost certainty that that type of board is now on the verge of substitution. Our engineers spent quite a little time with the engineers of note in Chicago and New York both, during last December, consulting with them in regard to what I have just referred to as almost a certainty in the way of a radical change in the present type of switchboard equipment, and we have reason, and strong reason, to believe that within the next two years that type of board will come right into service, if it does, it will mean radical changes on our part, due not to the fact that the present board was worn out, but to the fact that it has become out-of-date and antiquated as a switchboard.

Q. Is that the automatic system you speak of?

A. No, it is not, we do not consider the automatic system an improvement, but, on the contrary, a step backward.

1597 Q. You don't mean to say in Louisville they had all those kinds you have mentioned?

A. I do.

Q. Do you know that yourself?

A. I know it just as I know anything that reliable people tell me. Of my personal knowledge I know only a portion of it because prior to our purchase of the properties I had no occasion to visit Louisville at frequent intervals, but I have seen two or three of those types of board in Louisville; I have referred to, before we had any interest in the property. I have seen the multiple magneto and self-restoring multiple board there.

Q. The same one is there now that was there when you purchased it?

A. No, we have added very materially to it; the original sections are still there; all they had is still there. We took part of the main exchange and incorporated it in one of the branch exchanges.

Q. Now, what do you say as to the life of an ordinary switchboard then?

A. I think if it was left to run its life, it might run fifteen years.

Q. Now as to the lines or poles that you erect in a city. How long do they last?

A. Well, the average life of a pole, the chestnut pole or white cedar, is from ten to twelve years; something like that.

1598 Q. What about the wire on them?

A. The local subscribers' wire has an average life in a city, of about four or five years, unless it is close to railroad tracks where the engines are constantly passing, when the life is very short, a couple of years, maybe.

Q. What about cables?

A. The life of cables ought to be quite extended, unless attacked by electrolysis. I should say twenty to twenty five years, and yet they are subject to the same conditions that were referred to awhile ago in connection with the switchboard, this question of evolution. The cables being made today are improvements over cables made ten years ago, and cables made twenty years ago could not be used in Louisville or any exchange that would be a part of or given connection with the long distance telephone system, for they were what telephone men termed straight-away cables, single line cables, as compared with the paired cables or double conductor cables, as some call them, which is necessary in connection with metalic telephone service and all the telephones working in Louisville and all these other large cities for that matter, are of that type of construction—two-wire system.

Q. What about the subscriber's equipment, what is the life of that?

A. Treated properly the life of a telephone instrument ought to be eight or nine or ten years, but the experience of the business is that few stay in longer than five years; they have to be

1599 very clever people to stay in any longer than that.

Q. Going back to these cables a moment. Of course any improvement on cables from now on, would be an improvement to extend the life of the cable?

A. No, that is not the plan that the engineers are working on, for they have used in the construction of the cables in the last ten years about as good material as it seems likely or certainly as good as is now in sight, but the improvements would come in the better arrangement of the wires in the cables, with reference to what electricians term induction and transmission. Under the present plans of manufacture, the very best that is known, the conductivity of a cable is vastly less than the conductivity of the wire outside of the cable, the same wire. There is a retardation, just like running water through an inch pipe for a distance of two miles, you have to put greater pressure to get that water through there, it meets with so much retardation, and the same difficulties are encountered in transmitting the human voice with the battery on the wire, through

these long cables. You meet with what I call retardation and induction retardation holding the voice back and induction, causing the voice to jump from one wire to the other so, when several people are talking through the same cable, and it is a very long one, they are apt to hear other voices than their own.

1600 The MASTER:

P. Mr. Hume, since the Ohio Valley Telephone Company plant was obtained, it has been about ten years?

A. Yes sir, about ten years.

Q. Now in that time, as I understand, you have constantly set aside as a depreciation fund, seven and one half per cent?

A. Yes sir.

Q. Which would make, of course, up to the present time, on the percent valuation, approximately, seventy-five per cent, wouldn't it?

A. No sir.

Q. If you set aside seven and one half per cent of the cost of the plant, in ten years you would set aside ten times that seven and a half per cent?

A. Yes, if you didn't touch it.

Q. Wouldn't that be seventy-five per cent, approximately. Of course, the plant has increased in value?

A. That is what we calculate, if you run that up to fourteen years you would have an amount equal to the first cost of the plant, it would be there if you could do that.

1601 Q. Are you able to state what part of that seventy-five per cent has been actually expended in the reproduction or repairs of the plant within the past ten years?

A. No, I cannot. Our books, of course, show it.

Mr. BLAKEY, for Defendants:

Q. Now of course if the plant simply wore out or any part of the plant wore out at one time and had to be replaced at one time, without any repairs having been made thereto, then the amount set aside would be kept in a fund and would simply be used at the end of the life of the particular part, to purchase a new part. That is true, isn't it?

A. I should say it is.

Q. In other words, if a switchboard needed no reproduction no portion of it to be reproduced for fourteen years and you were to set aside seven and one half per cent of the value of the switchboard each year, why, at the end of fourteen years you have the original cost of the switchboard set aside in a fund, which would be used to reproduce the switchboard, isn't that true?

A. Yes, if the switchboard bore that relation to the balance of the plant in depreciation that fixed it as fourteen years, but in setting aside the seven and one half per cent you set it aside as aver-

1602 age and not because any particular item of the plant is going to give out at that time.

Q. Do you know what the value of the plant was at the time it

was purchased by the Cumberland Telephone and Telegraph Company from the Ohio Valley Telephone Co.?

A. No, I do not.

Q. I believe you stated on direct examination, the first few years the amount expended in re-construction, would not be so large as the last years of the period?

A. That is right.

Q. Would you say, therefore, that the amount expended for re-construction the first years, after the purchase of the Ohio Valley Telephone Co. would be greater or less than the last half of the period since you purchased it?

A. Well, as far as the plant that the Cumberland Telephone and Telegraph Company has put there since it purchased it, the last part would be greater than the first, but as far as the plant it purchased from the Ohio Valley Company is concerned, the reverse might be true; I cannot say what the facts are.

Q. The depreciation fund is used to take care of re-construction, I believe?

A. Yes.

Q. Now, if the auditor of the company, Mr. Smith, says that the company had invested in its Louisville exchange on January 1st, 1905, $1,535,00- and expended in construction in the year
1603 1905, $60,000 how much was set aside or should have been set aside that year to take care of depreciation on the basis of seven and one half per cent?

A. There should have been set aside, seven and one half per cent.

Q. How much would that be and would you take into consideration the $60,000 which was added to the capital account that year?

A. No I would not take that into consideration, for the fact that the company is constantly furnishing money during the process, buying material during the process of construction and not charging interest up against the plant at all.

Q. You would only take seven and one half per cent to the $1,535,000?

A. Yes.

Q. What does that amount to?

A. $115,125.

Q. Now, if no part of that was expended during the year 1905, would you still take your seven and one half per cent for the year 1906, on the $1,535,000 or would you say the plant had depreciated during that year seven and one half per cent and was then worth $115,000 less than it was the year before?

A. I would add to it the amount that was expended that year.

1604 Q. What would you do with the amount that was set aside because the plant was depreciated?

A. I would not take it off that account for it has to be taken off at the time that you expend the money in reproducing it, you can not take it off twice.

Q. Why do you take it off unless it is because your plant has depreciated seven and one half per cent in value?

A. You are not taking it off, you are putting it aside, putting aside this fund to take care of it and does not reflect in the plant account until the last time, as it is carried there by its actual use.

Q. As I understand the plant depreciates in value seven and one half per cent every year?

A. To be sure it does on an average, but it does not necessarily depreciate that way each year.

Q. Isn't it seven and one half per cent less valuable than it was the year before?

A. Yes, in one sense. It may not be in fact, it would not be from the standpoint you put in figuring it, by following the whole of the accounts, but it is not in fact, necessarily.

Q. How is it possible to depreciate seven and one half per cent without being seven and one half per cent less valuable?

A. As I said while ago, we are not saying it did depreciate that year seven and one half per cent; but we are saying over
1605 a term of years, it will depreciate at the rate of seven and one half per cent, but if we actually took that seven and a half per cent off at the end of the seventh year, or the eighth year, or the tenth year, then we would come to a year when we might take off twenty-five per cent, and if we have not taken it off here, can not take it off there, twice.

Q. Now, going back to the switchboard proposition, if it was a fact the switchboard lasted fourteen years and had to be replaced and in the meantime no work of reconstruction had to be done on it and you were to set aside seven and one half per cent a year to take care of that depreciation and to purchase a new switchboard, and didn't so keep your books as to have them show that you had deducted each year seven and one half per cent from the value of the switchboard, is it not a fact that you, at the end of fourteen years would have your books showing you had a switchboard worth a hundred thousand dollars, and a thousand dollars in money besides?

A. Well, as an offset for that we would have to be able to show we had the money put aside for that purpose and that is what it is put aside for.

Q. But you would still have your books showing your switchboard was worth a hundred thousand dollars, would you not. In other words, how can you have the money representing the——

1606 A. Certainly we would have that, but we would have this explanation or offset to it available to make it good, that is what the depreciation is for.

Q. Is it a fact, as you have said, that the plant does depreciate on an average of seven and one half per cent a year?

A. Yes, I believe that it is.

Q. How is it possible to depreciate seven and one half per cent per year, unless it is seven and a half per cent less valuable at the end of the year, on an average, not any particular year, but on the average, how is it possible to depreciate seven and one half per cent per year unless at the end of each year it is seven and one half per cent less valuable?

A. I tried to explain to you this depreciation does not come exactly seven and one half per cent per year.

Q. But, if the plant depreciates seven and one half per cent a year, isn't it that much less valuable?

A. It does not depreciate seven and a half per cent a year, but at the rate of seven and one half per cent, and you have to put aside this fund to be available for renewal of plant when the time comes, when each particular part has depreciated, and that particular year may call for twenty per cent out of this depreciation fund
1607 instead of seven and one half per cent and the charge is made against the account not only by our company, but by every other company, when the money is actually spent. There is no such thing as keeping the account in such way as your question indicates, if I understand your question.

Q. The plant, as I understand your statement, actually depreciates at the rate of seven and one half per cent on the average?

A. That is true.

Q. And you have to set aside this amount each year in order to take care of the complete deterioration of the plant at the end of fourteen years, though it may deteriorate one per cent one year and ten per cent another year, is that correct?

A. Yes, I would say it is.

Q. And at the end of fourteen years, is completely deteriorated unless reproduced?

A. Experience has proven that telephone plants, as a plant has an average of from thirteen to fifteen years; say fourteen years. That does not mean, necessarily everything in the plant at the beginning has lived its life and passed its day of usefulness at the end of fourteen years, for during that time part of the original plant may have been renewed several times and other parts of it may not have been renewed at all and may not at the end of fourteen years, need to be renewed, but, there has been during that time, according to the experience of the past, enough money called for out
1608 of the treasury of the company and out of this fund set aside for that purpose, to equal an amount that represents the original cost of the plant, and therefore we say that in the run of thirteen to fifteen years that a plant must be renewed, as far as the money is concerned.

Q. Now taking the switchboard: You say that the life of the switchboard might be fifteen years if properly kept up?

A. Might be, but never has been.

Q. Well, we will say twelve years then, what would be the value of that switchboard after it had been in use eleven years.

A. If it had to be reproduced at the end of twelve years, why, you would be right where you were facing the necessity of duplicating your first cost on it.

Q. And your value would be not over ten or fifteen per cent of the original value of it, if you had to reproduce*d* it in another year?

A. Yes.

Q. So then isn't it a fact you would arrive at that conclusion by taking off seven and one half per cent each year until you reached

the twelfth year. We will say then you are down to where it was not worth over twelve or fifteen per cent of the original cost?

A. No, that would be a very poor undertaking as far as your book accounts are concerned, for as I said awhile ago, we are not
1609 saying that any one particular item or several different items are going to be renewed at the end of your thirteen or fifteen years. You say that the plant as a plant, with all its component parts, equipment inside and outside, has this average life, but to take and dissect the plant and undertake to keep account on the books and keep them with any intelligence whatever and charge them off each particular item of poles and wire and cables and switchboards and one thousand other materials that go into a telephone exchange, and say you are charging seven and one half per cent each year against each of those things and undertake to keep a renewal switchboard account, and a renewal cable account, it would be absolutely impossible and misleading and impossible of accurate results. You only take it on the average.

Q. You said awhile ago, I believe, a switchboard, whose life was twelve years and which had been in use eleven years would depreciate to about ninety per cent?

A. Yes, I was answering what I supposed you asked as a theoretical question.

Q. If you were to take off seven and one half per cent each year, you would come down to ninety per cent at the end of twelve years, wouldn't you?

A. If you would be guilty of that kind of book-keeping you would, and that would be neither good book keeping or good practice.

1610 Q. Wouldn't that keep your accounts square?

A. No sir.

Q. Wouldn't that show if the switch board cost you a hundred thousand dollars, you had ninety thousand dollars in bank, and ten thousand dollars in plant?

A. No, that would be very poor, that would be all right to have it on the plant, but to reduce that to the switchboard and the multitude of items that compose a plant, there has nobody ever suggested such a thing as that, for it is impracticable.

Q. Do you know anything about book-keeping?

A. I don't know very much about book-keeping.

Q. Take a simple matter of a wagon. We will say a wagon's life is five years and it costs a hundred dollars. Then, how much ought to be set aside each year to take care of depreciation?

A. You set it aside for the wagon, not for the tongue and wheels and fifth wheel, and nuts and bolts, washers and rims. You set that depreciation aside for the wagon.

Q. How much ought you to set aside for the life of five years and costing a hundred dollars?

A. Set aside for the wagon twenty per cent each year, but that could not be carried to the analysis that you are attempting in this interrogation.

Q. If you set aside twenty per cent in the instance I have mentioned, you would set aside $20.00 per year?

1611 A. Yes.

Q. If you wanted to keep your books so as to show your actual investment, would you continue each year when you put down an inventory, to put down your wagon as a hundred dollars, or would you put down your wagon at the end of the year as eighty dollars, and depreciation on account of the wagon, twenty dollars?

A. You had better carry your wagon on your assets side and the other as a reserve, until you come to it, for the wagon might get run away with at the end of the third years and you would have a valuation a/d book credit that would not come together:

Q. Assuming that it would not be run away with, would you inventory your wagon at the end of the first year at a hundred dollars or eighty dollars?

A. No, I would keep that wagon at what it cost and hope and trust and try to make it go longer, but if it did not go longer, but did wear out at the end of five years, I would have done what prudent business men do, take the experience of other people and my own and put aside each year in a separate account, a renewal or depreciation fund and I would not undertake to do the other, because there would be no point gained and no reflection of fact revealed.

Q. Would not it be a true reflection if you showed the actual value?

A. No, you would not be doing it, for the wagon up to

1612 fourth year or four and a half years, might be a good wagon, and then might give away.

Q. If your wagon had actually depreciated twenty per cent. wouldn't be worth but eighty dollars, would it?

A. If it actually depreciated twenty per cent., it would not be worth eighty dollars, for it had too much depreciation the first year.

Q. And if it depreciated twenty per cent., would not be worth but sixty dollars at the end of the second year.

The MASTER: That is argumentative. I think we all understand the principle.

Mr. GRANBERY, for Complainant: As we are about to adjourn for the day, I wish to bring up a matter. The deposition of Mr. Webb was taken for the purpose of showing that away back probably in 1902 or 1903, Mr. Webb, the Treasurer, gave some figures showing the value of the plant in Louisville, and the receipts and disbursements. Now Mr. Webb stated that he had not made up those figures, and that they came to him from the auditing department. I am prepared to show, and will show by the auditor, that those figures were made up by a clerk in his office, and the working papers of

1613 that clerk have been found and they are not correct. Mr. Smith, the auditor, had nothing to do with it and didn't know of it. Now, in view of the fact that the joint report states the cost of the plant year by year for the years under inquiry, it seems to me it was unnecessary to do that, but if that Webb deposition is to

be used, I want to introduce Mr. Smith to rebut it, but it seems to me that the deposition of Mr. Webb is simply refuting or contradicting the joint report of the accountants, and in taking Mr. Smith's deposition, it will simply be explaining Mr. Webb's deposition or statement which would bring it right back to where the joint report of the accountants are now.

Now, I want to know whether I shall take that deposition or whether the deposition of Mr. Webb is going to be excluded on the ground that it is undertaking to vary or disprove the report of the joint accountants.

Mr. BLAKEY, for Defendant: The reason I took Mr. Webb's deposition on that was that Mr. Smith—I think there were three separate and distinct petitions filed against the City of Louisville,
1614 in which different statements had been made about what the books showed. Mr. Smith made another statement when he gave his deposition, and the accountants found another statement to be correct, and I ran across this deposition, which showed entirely a different proposition mainly about the cost of the plant and my contention is going to be that the books of the company are absolutely unreliable in telling about the cost of the plant, for as we went over it in Mr. Smith's deposition, I tried to bring out that the items were not charged up against the proper accounts.

Mr. GRINBERY for Complainant: In view of that fact, I will take the deposition of Mr. Smith and let it go.

Now, one other thing: This case has been pending now for a year. The financial statement of receipts and disbursements was only up to the first of January 1909. If you wish me to take proof and show the result of the operations in the City of Louisville or the Louisville plant for 1909, I am prepared to do it and go into it, if you wish it done, and I tender that if the Master wishes it, or the representative of the city wishes it.

1615 The MASTER: Right now I am not able to say whether that would be important or not. When we get through with the proof if we want it, I will take it myself. I will just order that myself.

Mr. GRINBERY for Complainant: I merely make the tender, so it cannot be said later that we did not bring these things down to date.

The MASTER: I think we had better defer that for the present.

The further taking of these depositions was thereupon adjourned until tomorrow morning at nine o'clock at the same place.

1616 SATURDAY, *March* 19, 1910.

Leland Hume.

Cross-examination resumed.

By Mr. BLAKEY for defendant:

Q. Mr. Hume, when does the depreciation in a telephone plant begin?

A. Well, it is apt to begin as soon as the plant is put into commission; as soon as the material is used in the plant.

Q. When does it reach its maximum degree of depreciation? In other words, when does it require—at what period of the fifteen years does it require the greatest amount of reconstruction work, or the greatest expenditure to reproduce the parts that have depreciated?

A. It depends entirely and absolutely upon the different materials that are used, and the different conditions that they meet with, and there is no fixed times or periods when that takes place.

Q. Well, take the Louisville plant for an example; a plant such as the Louisville plant, when would that period be reached?

A. Just as I said yesterday, the various kinds of material that are used have varying periods of life, and it is impossible to tell when that takes place, when it is going to take place. We just simply know by experience that within that fifteen years you are going to meet with those conditions in that plant, and if you do not
1617 provide for them, you are in a very bad financial condition otherwise.

Q. What is the theory on which business men claim that a fund should be set aside for depreciation?

A. The theory is one of practical experience in business, and no matter whether it be telephone plant, or manufacturing concern, or what not, if that fund is not set aside, there will surely come a period in the history of the business when calamity will stare it in the face; and all lines of business are conducted, recognize, and act upon that principle, provided the results of the business enable them to set aside the fund. There are frequently cases where concerns conduct a business and when it winds up its yearly periods it finds it has not the funds to set aside and therefore it must not do so, but that does not change the principle at all, or the fact that the fund should be available, and that that must be provided for in the run of the business, or else calamity is the result.

Q. In other words, it is with the idea of preserving the capital account intact, the plant account intact, is it not, so that at the end of any one period the plant account will be the same as it was at the outset?

A. Well, from the accounting standpoint, if that is what you mean, I cannot answer; but if you mean from the practical standpoint of maintaining the property or the plant, then I can answer, that that policy is imperatively necessary.

Q. In other words, if you had a plant which cost you a
1618 hundred thousand dollars, that was going to wear out in fifteen years and have to be reproduced, unless the managers set aside a sufficient sum out of the earnings to take care and reproduce the plant as it was required to be reproduced, then your capital would be impaired, wouldn't it?

A. Oh yes, just to the extent that you should fail to do that.

Q. And it is not for the purpose of adding to your capital?

A. Not at all; it is to be sure——

Q. That you have always got a hundred thousand dollars' worth

of property, either in money or in plant or in material or in something representing the plant, is it not?

A. It is to be sure that your values are not misleading as reflected on your books, or that the condition of your plant is what it should be.

Q. Now it is immaterial to the managers of that plant whether they have this money which they deduct from their earnings and set aside to take care of the depreciation, it is immaterial to the managers whether that remains in the treasury of the company as money, or whether it is invested in material, or whether it is invested in bonds, or what becomes of it, it still represents the hundred thousand dollars capital or plant account, isn't that true?

A. I don't know how it would be carried into the books, but I know that it would be very material that this fund as set
1619 aside should be available in some form of quick asset that could be realized upon in order that the replacements called for from time to time might be secured. Just how the book keeping would be done I do not know.

Q. Do you know how much cable there is in the Louisville plant that was there when it was purchased from the Ohio Valley Company?

A. No, I do not.

Q. What would be your estimate of the present percentage of cable now in the plant that was there when you purchased the plant?

A. Without having any actual statistics or figures before me, I would say that there was not a great deal of it.

Q. How about the conduits, what percentage?

A. In all my experience in conduit building, I don't think that I have ever seen a conduit system built more substantially and with more care than that plant was constructed; the Ohio Valley Company, that built the major portion of the underground plant, used large amounts of iron pipe, and laid that pipe in Portland cement, and even when the pipe rusts out, the Portland cement around it will still provide, for a good long while, protection almost the equivalent of the original conduits; and on that feature of the Louisville plant the company stands a chance of getting good long life. What that will be we cannot possibly tell at this time.

Q. Is any of the wire other than cable wire in the plant
1620 now that was there when it was purchased from the Ohio Valley?

A. I don't believe that there is a single foot of it; in fact, I have good reason to state that there is none of the wire left that was there ten years ago.

Q. Has the amount of money expended in reproduction work been audited or gone over by you, and assigned to the item of Reconstruction?

A. Only reviewed in a general way. That work is left to the Auditor and the Plant Department, to follow out understood and usually recognized methods of making their distribution.

Q. Was there as much or more reconstruction work in 1909 than there was in 1908.

A. I cannot answer that.

Q. I believe you said there had been no attempt to do otherwise than maintain the property in its present condition for the last two years?

A. That is true.

Q. What is your opinion about the amount of reconstruction work for the year 1909 as compared with the year 1908?

A. I know that during the year 1909, pending all this litigation staring us in the face, we have only done the things that were felt necessary to do in properly maintaining the plant. Just how much has been done as compared to 1908, I could only state by surmise. I think that we very likely did some more in 1908
1621 than we did in 1909, but I cannot state that as a fact, without getting information from the Auditor.

Q. I believe you said you thought the plant was now worth over a million seven hundred thousand dollars?

A. I feel sure that it is.

Q. Mr. Blair Smith's deposition shows that for four years 1905, 1906, 1907 and 1908, the average amount of reconstruction was about $35,000.00 per year; if that was the average for the year 1909, then for the last five years the reconstruction work has amounted to only about $160,000 or $170,000, would you say then that a very large portion of the plant has been there in its present condition for more than five years?

A. The major portion of it has been.

Q. And practically all the conduit system, I believe you say, has been there for more than ten years?

A. That connected with the main exchange, by far the major portion of that connected with the main exchange has been there ten years and over. The other exchanges were builded by the Cumberland Company.

Q. Do you know how much there has been builded by the present company?

A. No, I cannot tell that; I know that there is a considerable amount of underground in the South Exchange, that was builded by the Cumberland Company, and some additions to the Main exchange; what the amounts are I could not tell, but the books
1622 of the Auditor will show that in figures.

Q. I show you what purports to be a photograph of your underground system in Louisville, and will ask you to state, from examining that photograph, how much underground or conduit work appears on that which was not purchased from the Ohio Valley Company?

A. I cannot take this map and tell you that. It would be necessary to get the plant men to do that. As I said awhile ago, this South exchange underground was builded mostly by the Cumberland Company, as it was the company that put the South exchange into service. There was at the time we took over the Ohio Valley Company some underground ducts leading from the main exchange

down into the section that is now served by the South exchange, but how much of that, and how far it extended I cannot tell from memory. Our records are in possession of the plant men.

Q. Well, would you say that your company had constructed ten per cent. of the conduit system, as it appears there now?

A. I should think so, yes.

Q. Fifteen per cent?

A. Perhaps that amount, but I couldn't tell that without getting the information from the Plant Department. The major portion, by far, of the plant, as I said awhile ago, was constructed by the Ohio Valley Company.

Q. I do not recall whether you said what was the life of the average pole in your system at Louisville?

1623 A. About ten years.

Q. Now as I understand the difference between you and Mr. Settle, Mr. Settle says that certain employees and the Cashier, Mr. Metzger, and certain trouble men, and others devote a certain portion of their time, or did during the period covered by his deposition, to work connected with the districts surrounding Louisville, and outside of the city of Louisville, and not in connection with the Louisville exchange proper. Now as I understand it, you do not say that that is not true, but you simply contend that the work these men do, or the work these men did was subordinate to their work in connection with the Louisville exchange, and their services would have been required whether or not there had been any district surrounding Louisville operated by the Cumberland Telephone Company?

A. My statement in regard to that was this, that outside of the supervisory work, which by comparison with the attention to the Louisville exchanges is almost nothing, the supervisory work on the part of the Manager, the Chief Operator, the Chief Electrician, and the General Foreman, that all work done by Louisville employees on outside and surrounding exchanges was done at the expense of those exchanges, and without expense to the Louisville exchange. To put it differently, whenever Louisville men worked on these outside exchanges, their time was charged to the outside exchanges, and not to the Louisville exchange. And the

1624 difference between Mr. Settle and I is this, that Mr. Settle has made statements that he knew he had no right or authority to make, and that he could not have made if seeking to make a statement that he knew anything about personally. And a further difference is that Mr. Settle left the company's employ, it seems, as a defaulter, and has gone out of his way to further show his dislike for the company by making statements that he had a right to know were false when he made them.

Q. Do you mean to say that a part of Mr. Boardman's salary was, during the years 1905 and '06 charged to the Districts?

A. I do not. I have twice tried to make it plain that Mr. Boardman and the Chief Operator and the General Foreman and the Chief Electrician gave such supervisory attention to these branch exchanges as they thought necessary in connection with the service

of the Louisville exchange, which service is very closely related on account of the fact that there are people in all of those exchanges that we allow the Louisville Manager to supervise who arranged for Louisville service, and to whom the Louisville subscribers are granted service without additional charge. In other words, you could say that by reason of this supervision of the Louisville manager, that the Louisville customers, all of them, get free service to those subscribers referred to in the surrounding exchanges. And we have the feeling that whatever Mr. Boardman and these other
1625 heads of departments have done was more than compensated for in additional facilities and additional service to the Louisville exchange subscribers.

Q. You don't mean to say, then, if you did say it, that their salaries were not charged up to Louisville Exchange?

A. I did not mean to say it, and I think that I said just the opposite. Their entire salary is charged to the Louisville Exchange, where we think it should be charged.

Q. And you didn't mean to say that the toll trouble man's salary, for instance, was charged up anywhere except against the Louisville Exchange?

A. I state that if the toll trouble man has done any work at any time for any of those exchanges, that his time and his material used was charged to those exchanges and not to Louisville.

Q. Do you mean to say that his salary is not paid and charged up as a part of Operating Louisville Exchange?

A. I state that if he has at any time done any work for any exchange except for the Louisville exchange, that such time and such work were charged to the exchange and credited to the Louisville exchange. He of course draws his salary each month from Louisville, but the entries would be made, and have been made according to the fact of whether or not his entire time was devoted to Louisville. If it was not devoted entirely to Louisville, Louisville has only been charged for the time that was devoted to it.

Q. You do not keep the books of the Company, do you?

1626 A. I do not keep any of the books of the Company.

Q. You don't know where his salary is charged up, then, do you?

A. I know that the statement that I have made is correct.

Q. Well, you don't know where his salary is charged up if you don't keep the books, do you?

A. I know that my statement is correct.

Q. Well, please answer my question.

A. I cannot answer it any differently from what I have. I have answered it as clearly, as plainly and as directly as I could.

Q. They have a number of toll operators there, haven't they?

A. Quite a number.

Q. Do you know where their salary is charged?

A. It is charged at Louisville.

Q. Against the Louisville Exchange?

A. Yes sir.

Q. Now coming to this question of charging the Louisville sub-

scriber for the privilege of being connected with the Long Distance Exchange, is it any advantage to the Company for the subscriber to be connected with the Long Distance exchange?

A. It is an advantage to the company to furnish, in each exchange, all the facilities that it can that will make the service more attractive and more pleasing, and save all the time of the sub-
1627 scribers that it is possible, and in that sense, it is desirable, to accomplish that result.

Q. When the subscriber wants to telephone over the long distance lines, he pays the same rate that he would pay if he were to go to the company's office or to the Seelbach Hotel, or any other such place, does he not?

A. He is not charged any more for the service than he would pay if he went to the public station.

Q. The public stations are all connected with the exchange proper, are they not?

A. They are connected, through the long distance board, with the exchange proper, yes.

Q. Do you mean to say that a public pay station in a drug store is not connected with the exchange proper and trunked from there with the long distance lines, just like the subscriber's station is?

A. That is an entirely different kind of pay station from the one we refer to as Long Distance Public Pay Stations like we maintain in our different offices in Louisville. That is a Local Pay Station, that is connected with Long Distance through extra equipment, just like the extra equipment employed in connecting other local telephones of an exchange with the long distance lines.

Q. Each one of your operators in your exchange can connect with the long distance operators, can they not?

A. Yes, they have been provided with facilities that enable them to do that.

Q. When you say your offices, do you mean your offices
1628 on Jefferson Street, in Louisville?

A. No, I mean all the telephones connected with the various exchanges that we operate in Louisville.

Q. Well, take the Willard Hotel; some one wants to telephone from the Willard Hotel over the long distance: is he connected with the exchange proper and then trunked to the long distance, just as a subscriber would be?

A. The telephones in the Willard Hotel are just exactly as the other subscribers' telephones, and are connected the same way, yes.

Q. How about the telephones in the office of the Cumberland Telephone Company, in Louisville, with what exchange are they connected, with the Long Distance, or the Local exchange?

A. We have thought it well there to provide dual connections, some trunks going direct to the local exchange, other trunks going direct to the long distance exchange.

Q. If I go into one of the booths that you have in your Jefferson Street office in Louisville, and take down the receiver, who answers the call, the local exchange operator, or the long distance operator?

A. Neither one; the public station operator that is on duty at the time in the office, right by the side of the booths.

Q. You have a private branch exchange there, then, have you?

A. Yes sir.

1629 Q. And if you want long distance, she gives you long distance, does she?

A. Yes, she makes the connection between the booth that is being used for a long distance message and the long distance switch-board.

Q. What other stations have you in the town of Louisville from which the exchange operator, or private branch exchange operator can connect you direct with the long distance, if any?

A. Well, we have the South Exchange, the East Exchange, the West Exchange, the Public Station switchboard in Seelbach's Hotel. If there are other of the semi-public station or private branch exchanges with direct trunks to the toll board, I do not recall it just now. I think those I have named are a full list.

Q. Are you a telephone engineer?

A. I have been working along that line for twenty-two years. I think I am considered by the Telephone Engineers as in good standing.

Q. What did I understand you to say about the value of your entire plant at the present time?

A. In Louisville?

Q. All over your system?

A. About twenty-five million dollars is invested in plant.

Q. Now do I understand you to say that seven and a half per cent. of that amount should be set aside for depreci-

1630 ation, or seven and a half per cent. of your capital investment?

A. I have tried to state that as the years come and go that an average of seven and a half per cent. should be set aside to insure the integrity of the property and its proper rebuild and replacement of plant, as part by part gives way; of course if seven and a half per cent. is not available from earnings to set apart it cannot be set apart, and is not set apart, and unfortunately this has been the condition at Louisville.

Q. What I wanted to know is whether your position is that seven and a half per cent. of the twenty-five million representing the value of your plant, or seven and a half of the twenty million representing the value of your investment from a capital stock standpoint, should be set aside?

A. I do not figure it from the dollars and cents standpoint at all, as a telephone engineer and construction and maintenance man; I figure it through the period of years which I stated was the experience of this and other companies that have been operating for a long time, that from thirteen to fifteen years was considered the safe and about the time that we were warned the plant would have to be renewed, no matter from which standpoint you figure, if you figure it from the capital issued standpoint or from the amount invested, that is immaterial, as far as my statements are concerned,

that you have got to renew your plant about every thirteen
1631 to fifteen years, and the seven and one-half per cent. is simply the relationship of that number of years to a hundred.

Q. Well, if it cost your company $1,600,000.00 to build its plant in Louisville, and it is now worth $1,790,000.00, do you think the seven and a half per cent ought to be calculated on the $1,790,000.00 or the $1,600,000.00?

A. Well, I have no opinion about that. I just think that no matter what the plant has cost, that is immaterial from my standpoint, it has got to be renewed within the periods mentioned, irrespective of what it cost or what it might cost now. The plant, for illustration, might have cost the amount that you say, and by reason of a radical increase in the cost of material, it would be possible for the renewed plant to cost a great deal more than it cost in the beginning; but that would not change the period or the year or the day when the plant would have to be renewed.

Q. But it would change the amount on which you would calculate your seven and a half per cent. What I want to know from you, as a telephone engineer, is whether, in your opinion, the seven and a half per cent. should be calculated on the basis of $1,600,000.00 or a $1,796,000.00?

A. As nearly as possible, I should say that it should be calculated on the basis of what the plant would cost to rebuild.

Q. That would be $1,796,000.00?

A. Whatever it would cost to rebuild, that proportionate basis should be provided for each year.

1632 Q. You say it would cost to rebuild it $1,796,000, I believe?

A. I have never made that statement.

Q. What do you say it would cost to rebuild it?

A. I have not made any estimate on that. I have seen and gone over very carefully the estimate recently made by our engineer, Mr. Jagoe, which in round figures would show $1,700,000.00.

Q. And is that the figure you think the seven and a half per cent. should be based on, Mr. Jagoe's figures?

A. I think that would be safe, yes.

Redirect examination.

By Mr. GRANBERY, for the plaintiff:

Q. Mr. Hume, I should have asked you, on direct examination, that which I shall now ask you: Mr. Farnham has stated in his report that if the Rate Ordinance should be put into effect it would result in an increase in patronage, and if not a decrease certainly no increase in expense. What have you to say to that statement?

A. I would say that no man who had any practical experience or any reasonable information about the business would be guilty of such a mis-statement, for it is not a fact, and could not be.

Q. Mr. Hume, would an increase in the number of subscribers in Louisville entail an increase in the expense of conducting the business?

1633 A. Of necessity it would.

Q. Would it decrease expenses in any way per subscriber?

A. An increase in patronage would cause and bring about a proportionate increase in the cost of operating the telephone per subscriber.

Q. Well now, would putting the ordinance rates into effect decrease your expenses in conducting the Louisville exchange in any way?

A. It would be impossible for it to have that effect.

Q. What has been the experience of the company with respect to rates in Louisville, has there been any change in the rates, or effort to ascertain what rates the public would pay, or what rates were fair?

A. When we purchased the Ohio Valley Telephone Company, we found what we considered a very small development of the telephone business in Louisville; we promptly set about to provide facilities that would enable us to take on business very rapidly, believing that by providing the facilities that we could then secure the business, and we set about it with the best traffic men that we could procure, men who had established themselves as good traffic men, and solicited business. The rates that the Ohio Valley Telephone Company had formerly charged were not increased, notwithstanding the fact that we proposed to add largely to the exchange if we could, but as the business did not respond except very slowly, we retained those rates, but at the same time added a schedule of rates

1634 that were considered very attractive, offering various kinds of service, including the metered service, and measured service, and pay station service, following plans that had been successful in other large cities. Those rates brought about some increase in business, but nothing phenomenal, or nothing that we thought was in accord with what should be accomplished, and as a consequence, we have, from time to time, put out schedules of rates with attractive features, and we have offered, at Louisville, all the features that were attractive and that were taken hold of by other communities, and I can state that we have never conducted our business in any place where more study has been given to the question of placing before the public various types of service and plans for service than has been done by us in the city of Louisville.

Q. Have you had any competition in the business?

A. Yes, for the major portion of our business career in Louisville, we have conducted the business in the face of competition.

Q. Does that competitive condition exist now?

A. It does.

Q. How long has it existed?

A. Seven or eight years, I think.

Further this deponent saith not.

LELAND HUME.

Subscribed and sworn to before me this 28th day of March, 1910.

BUFORD DUKE,
Notary Public.

1635 The deposition of H. BLAIR SMITH, taken at the same place, on Saturday, the 19th day of March, 1910. Said witness testified as follows:—

Direct examination.

By Mr. GRANBERY, for the Plaintiff:

Q. You are the gentleman whose deposition has heretofore been taken in this case?

A. I am.

Q. Have you read the deposition of Mr. T. D. Webb, in this case?

A. Yes.

Q. You observed what he stated with respect to a statement of receipts and disbursements and capital account in a deposition in the Weller case, in Louisville?

A. Yes sir.

Q. Do you know anything about those statements?

A. Yes sir.

Q. Please state what you know about that.

A. The Construction account, which he gave in the statements referred to, was made up at a time when the records had not been compiled in the condition which they are now in. It was in 1902, I think, that we determined to summarize the records and get them in ship shape. It required a considerable amount of work to do this, and I took the general book-keeper in the office from
1636 his work, giving it to some one else, and put him in charge of this work.

Q. Which work did you put him in charge of?

A. Put him in charge of the work of getting order out of the records which had been compiled from time to time but had never been put together. He was given only a very short time to get up this information, which was needed in a great hurry, and he did the very best he could from the many records which it was necessary for him to refer to. He spent more than a year in the work that was turned over to him, that is, summarizing the Construction accounts of the different exchanges and of the toll lines. The financial statement that was made up for the City of Louisville at the time——

Q. Just there, do you mean that he spent a year in getting up this statement that Mr. Webb used in his deposition?

A. I do not. I mean that he spent more than a year in getting up and tabulating the Construction accounts at the various exchanges. He was given only a few days to get up the statement to be used by Mr. Webb.

Q. Was that statement correct or accurate?

A. It was not.

Q. Have you any memoranda or records of the figures that he made at the time, showing that it is not correct?

A. Yes sir.

Q. What papers have you?

A. I have some memoranda that he pasted on a cover of a
1637 construction book at the time, and I find that in getting this up there were a number of errors made in it, and a very large one in addition.

Q. Well, now, about the receipts and disbursements that he gave in that statement?

A. The receipts and disbursements that he gave were actual for eleven months. The statement, as I remember it, was asked for in January, and at the time when we had not completed the figures for the month of December, and it was necessary to estimate this as closely as possible. We did this, and I think the statement shows only a few dollars difference from the correct statement.

Q. Well now, in this Construction account, did you prepare that?

A. I did not.

Q. Or verify it?

A. The Construction account that was filed by the Treasurer, I did not.

Cross-examination.

By Mr. BLAKEY, for the Defendant:

Q. Do you know from what source he got the data furnished Mr. Webb?

A. I think—in fact I am sure, he made an effort to get it from the many records of the company, which were not in a tabulated form enabling him to get it accurately in the little time which he had at his disposal.

1638 Q. After the purchase of the Ohio Valley by the Cumberland, were the records kept in such a manner as to show how much was expended for construction each year?

A. Yes sir.

Q. Then any errors were in connection with the data prior to the time of your purchase, I suppose?

A. No.

Q. Where were the other errors?

A. The records were kept, Mr. Blakey, showing month by month the classification of Expenses and Construction, but those months were only added, they were not tabulated, and the credits coming from the Journal and from the Auditor's Bill Book were not tabulated in connection with the charges from the vouchers; so that in getting his information it was necessary for him to refer to a great many different records. It was not all assembled in the nice shape in which we at the present time keep them.

Q. Will you let me see that statement which you speak of, or data, from which this clerk made up this statement for Mr. Webb?

A. I will. Mr. Haden was the clerk, who usually preserved the record of everything he did, even his scratch memorandum papers in regard to it.

Q. This memorandum shown me is headed "Construction for Louisville, Ky., by Months, from June, 1899 to Nov. 1st, 1901, I believe?

A. Yes sir.

1639 Q. What does that show for the aerial construction, the equipment construction, the underground construction, and the total of those three?

A. It shows:

Aerial	$203,442.12
Equipment	84,197.51
Underground	59,442.78
Total	$247,082.41

But you will notice that the total should be one hundred thousand greater.

Q. Have you added up each of the items, Aerial, Equipment and Underground, to see that the totals are correct?

A. I have not. This memorandum is only a memorandum; it has never entered into the records of the Company.

Further this deponent saith not.

H. BLAIR SMITH.

Subscribed and sworn to before me this 28th day of March, 1910.

BUFORD DUKE.
Notary Public.

1640 E. M. FISHER the next witness called, testified as follows:

Direct examination.

By Mr. GRANBERY, for the Plaintiff:

Q. Where do you reside?
A. Nashville.
Q. Do you know Mr. E. W. Farnham?
A. Yes sir.
Q. The General Manager of the Mutual Audit Company, who made the investigation of the records of the Cumberland Telephone and Telegraph Company in the summer of 1909?
A. Yes sir.
Q. What has Mr. Farnham been engaged in during his business career?
A. Locomotive engineer, telegraph operator, train dispatcher, construction work, electrician, a detective, express business, and, finally, General Manager of some railroad companies.
Q. Was he ever a telephone man?
A. No sir.
Q. Was he ever an expert accountant?
A. No sir.

1641 Cross-examination.

By Mr. BLAKEY, for the Defendant:

Q. Did you know Mr. Farnham when he was a locomotive engineer?
A. No sir.
Q. You don't know that, then, of your own personal knowledge?
A. Only what he told me.

Q. Did you know him when he was a telegraph operator?
A. No sir.
Q. You don't know he was a telegraph operator, then, of your own personal knowledge?
A. No sir.
Q. Did you know him when he was in the express business?
A. No sir.
Q. You don't know that he was in that business of your own personal knowledge?
A. No sir, my knowledge of Mr. Farnham is what he told me of his past.
Q. What is your business?
A. I am Superintendent of Traffic of the Cumberland Telephone and Telegraph Company.
Q. How did you learn that business? Are you an expert in that line?
A. Yes sir.
Q. How have you learned that business?
1642 A. I have been studying it for the past twenty-seven years.
Q. Actual experience?
A. Actual experience, telegraph and telephone combined.
Q. Do you think that is the best way to learn a business?
A. In connection with that I have taken courses of study, etc.
Q. Which do you think is actually the better way to learn a business, to practice it, or to study it?
A. Actual practice, you become familiar with more features of the business.
Q. You don't know how much practice Mr. Farnham has had in the matter of book keeping, do you?
A. No sir.
Q. Or accounting?
A. No sir, I accept what he told me.
Q. Well, did he tell you he had never had experience in book keeping or accounting?
A. He told me he was not an expert accountant.
Q. Did he tell you that while he was here?
A. Yes.
Q. What was the occasion for him telling you that?
A. I went out to dinner with him one day, and we were at the Wautauga Club, we were old telegraph men, so he claimed, that he was an old telegraph man, and we talked over our life and history, etc.
Q. Just a friendly chat?
1643 A. Yes sir.
Q. You don't know of your own knowledge that he is not an expert accountant?
A. No sir.

Redirect examination.

By Mr. GRANBERY, for the Plaintiff:

Q. You have no reason to believe that Mr. Farnham was misstating any facts to you in telling you of his life, have you?

A. He was giving me his life with the idea that I was to write it up for the Telegraph Age, and was supposed to be giving me facts that could not be controverted.

Further this deponent saith not.

E. M. FISHER.

Subscribed and sworn to before me this 28th day of March, 1910.

BUFORD DUKE,
Notary Public.

1644 CUMBERLAND TELEPHONE AND TELEGRAPH COMPANY
v.
THE CITY OF LOUISVILLE KENTUCKY.

Deposition of George Wilkinson, Taken March 23, 1910, in the City of New York, to be Used as Evidence on Behalf of the Complainant in the Above Entitled Cause.

This deposition is taken by consent, and all formalities are waived. The defendant objects to the deposition of George Wilkinson because the evidence proposed to be brought out is evidence in chief, and is not in rebuttal, and his deposition should have been taken before the defendant rested his case.

The said GEORGE WILKINSON, being duly sworn, deposes as follows:

Direct examination by Mr. W. L. GRANBERY:

Q. What is your occupation?

A. Certified Public Accountant.

Q. How long have you been engaged in that work?

A. As a Certified Public Accountant, since the passage of the law establishing that in 1903; as an Accountant, for 23 years.

Q. Were you employed to make an examination in connection with the Mutual Audit Company of the records of the complainant company during the year 1909, in the City of Nashville, Tennessee?

A. Yes.

Q. Did you make that examination?

A. I made that examination personally.

Q. Did you and Mr. E. W. Farnham, representing the Mutual Audit Company, agree on a joint report to the Master Commissioner?

1645 A. We did, on July 7, 1909.

Q. I will ask you to file a copy of that joint report as Exhibit 1.

A. I will do so.

(It is agreed that the joint report and the other reports hereinafter referred to as Exhibits 2 and 3, are now in the possession of the Master Commissioner, and may be treated as Exhibits to this deposition.)

Q. Did you make a separate report to the Master Commissioner in that matter?

A. I did.

Q. Will you file that separate report as Exhibit 2?

A. I will do so.

Q. Did you make a reply report to the individual report of the Mutual Audit Company?

A. I did.

Q. Will you attach it to your deposition as Exhibit 3?

A. Yes.

Q. Are the statements made in those three reports correct, Mr. Wilkinson?

A. They are.

Q. Mr. Wilkinson, was ther- any difficulty on the part of the employees of the Mutual Audit Company, or yourself, or your assistants, in getting access to all the books, records, vouchers and papers of the complainant company during this investigation?

A. None whatever.

Q. Was every facility offered the accountants to make this examination?

A. There certainly was.

Q. What condition were the books and records of the complainant company in, those which were examined by you and the Mutual Audit Company? I mean as to the standard of efficiency—

1646 were they in bad shape, good shape, or how?

A. The books and records we examined were posted up to date; were in balance; were agreed and were in good form.

Q. Were they above or below the standard of the records of other public service companies?

A. They were up to the standard that we meet with in our practice elsewhere.

Q. Is there such a thing as standard forms of telephone accounting in this country?

A. There is a standard form promulgated by the Bell Telephone Company, of Boston, for all telephone companies acting under their leases.

Q. Were the records of the complainant company in accordance with these forms?

A. The form provides for the distribution of accounts, all purchases and all credits arising in the telephone business; but the standard distribution, I should call it, promulgated by the Bell Company, does not stipulate as to the forms of the books and the interior workings of the office.

Q. What I am getting at is,—do the records of the complainant company conform to the standard prescribed by the Bell Company

interests of Boston with respect to the receipts and disbursements and distribution?

A. They do. The books of account of the Company are so arranged and so kept as to provide the information that is needed to meet these requirements and to comply with this standard.

Q. You know Mr. E. W. Farnham, who represented the Mutual Audit Company?

A. Only as meeting him in the City of Nashville.

Q. Is he an expert accountant?

A. He is not qualified as an expert accountant, in my opinion.

Q. Did he make any statement to you in that respect?

A. In conversing with me Mr. Farnham rather disclaimed
1647 being an expert accountant; he told me he regarded himself not as an expert accountant, but as an expert business systematizer, if I remember correctly.

Q. Did the Mutual Audit Company and yourselves examine the original vouchers and records of the company with reference to receipts and disbursements, as well as the books of the Company?

A. The employees of the Mutual Audit Company and myself did so examine the papers you refer to.

Q. The order of the Commissioner to the examiners directed that wherever they disagreed in making their report they were to refer the matter to him for advice and consideration. Why was that not done?

A. It was done to a certain extent. In the first place, in starting the examination we drew up a memorandum of the scope of the examination; that was dated, I think, May 6, 1909; a copy of that memorandum covering the proposed scope of the examination was sent to the Master Commissioner on that date; it was signed by both E. W. Farnham and Wilkinson, Reckitt, Williams & Co.; thereafter we again referred certain matter to the Master in July 1909.

Q. Now, when your joint report was made, it only covered certain matters that had been referred to you, and did not cover other matters concerning which you and Mr. Farnham disagreed. Why were not those matters referred to the Master for advice and instruction after the joint report was signed?

A. For the reason that right after the joint report was signed, namely, on July 7th, on the next day, July 8th, Mr. Farnham went away from Nashville unexpectedly, without any warning to me, without saying a word to me, and did not return. Of that fact the Master was duly advised on the following day, namely, July 9th.

Q. Have you seen Mr. Farnham since, or had any communication from him since?

A. I have not seen Mr. Farnham since. We had one communication from Mr. Farnham, a telegram, I think, asking us to send back to him a certain statement over which his employees
1648 had labored industriously for a long time, and which he had inadvertently left behind in our keeping.

Q. Mr. Wilkinson, in auditing the Construction Account of the complainant company, was that checked over by both sides, yourself and the Mutual Audit Company, and agreed to by both?

A. It was.

Q. Was that done with respect to the receipts and disbursements of the various years under consideration?

A. It was, for the reason that those were covered in the joint report.

Cross-examination:

By Mr. BLAKEY:

Q. What does Certified Public Accountant mean?

A. A Certified Public Accountant is one who has received from the Governor of the State in which his principal place of business is located a certificate authorizing him to style himself a Certified Public Accountant.

Q. That is, under some particular law of some of the States, as I understand it.

A. Under the laws of about twenty of the States. This little map would tell you, if you would care to look at it, to what extent it is the law of the United States or of the several States in the Union.

Q. What State authorized you to style yourself Certified Public Accountant?

A. In the order of date, the States of Illinois, New Jersey, New York, Pennsylvania and Colorado.

Q. Did you take an examination in any of those States?

A. As required under the law.

Q. What sort of an examination did you take?

A. The examination to which I was submitted was one which established the length of time that I had been practicing as an accountant, and covered my business and professional career for
1649 the ten years preceding the date of the examination. I think that applies to each such certificate.

Q. Any one who has practiced accounting is required under the law of those States to take an examination as to the efficiency?

A. Yes.

Q. You did some work for the Railroad Commission of Louisiana on the books of the Cumberland Telephone Company, did you not?

A. I did.

Q. What was the occasion for that examination, if you remember?

A. That examination was undertaken by consent of the parties to the litigation that was had in the State of Louisiana in 1900, an agreement having been arrived at between the Railroad Commission and the Cumberland Telephone Company, that an accountant mutually acceptable to both sides should be employed to make an examination of that Company's books at their head office at Nashville, Tennessee.

Q. Who paid for that service?

A. The cost of that work and the amount of our remuneration was, if I remember rightly, paid half by the State and half by the Company.

Q. Didn't the State refuse to pay you anything, and didn't the Telephone Company pay you the entire amount of your fees?

A. My recollection of it is, that the State paid half. I would have to refresh my memory from records that are not here at present to determine that, but there was never the slightest word about it. My recollection is, that it was an even split.

Q. Do you mean to say that the State or the Railroad Commission made no objection to paying a part of your fees in that case?

A. Not to me.

Q. You testified for the Telephone Company in that case, did you not?

A. I did not testify at all, if I remember rightly; the report was the extent of my work.

1650 I am now ready to answer and particular question. May I embody this in my answer? I have here copy of a debit note:

"CHICAGO, *1st November*, 1900.

The Railroad Commission of the State of Louisiana to George Wilkinson, Dr.

For services rendered making an examination of the books and accounts and business affairs generally of the Cumberland Telephone & Telegraph Company in so far as they relate to the State of Louisiana, and reporting fully thereupon to the Railroad Commission, in accordance with instructions received from you, dated July 12, 1900.

Time expended:

Principal, 457 hours, 65 days at $25.00	$1,625.00
Clerks, 670¾ hours, 96 days at $10.00	960.00
Traveling expenses incurred	476.70
Total	$3,061.70
Half	1,530.85

Next, is a copy of a similar debit note reading "To the Cumberland Telephone & Telegraph Company," and arriving at the same figures; and here is a copy of a letter to Mr. Sims, who was the Chairman of the Railroad Commission at that time, enclosing debit note.

Q. The Telephone Company advanced you some $700.00, didn't they?

A. They advanced me $810.00 for my expenses and my assistant's expenses from Chicago, where I was practicing, to Nashville, Tennessee.

Q. What did you say about giving a deposition in that case?

A. I do not remember having given any deposition at all. The report was accepted by both sides in accordance with the previously made agreement that it would be accepted. I am only speaking from my memory.

Q. I hand you pamphlet transcript of the record of the Supreme

Court of the United States, October Term, 1908, No. 182, and call your attention to pages 262-3-4-5-6-7-8. The particular part to which I call your attention is: "Deposition of George Wil-
1651 kinson filed August 15, 1907. United States Circuit Court, Eastern District of Louisiana, Baton Rouge Division, Numbers 61 and 66, Consolidated. Cumberland Telephone and Telegraph Co. v. Railroad Commission of Louisiana. State of New York, County of New York, ss.

Interrogatories propounded to George Wilkinson and his answers thereto. Transmitted by George Wilkinson to the Clerk of the United States Circuit Court at New Orleans, to be used as evidence on behalf of the plaintiff in the above entitled causes;" signed by George Wilkinson, and sworn to before Henry Bennett Leary, Notary Public, New York County; and ask you if you gave that deposition in that case.

A. This deposition is dated 15th August, 1907. The examination was made in the Summer of 1900. In answering your previous question as to whether I gave any testimony in regard to that report, I had not in mind this subsequent deposition which came up seven years afterward. I repeat what I said before, that in connection with the examination made by myself on behalf of the Railroad Commission and the Telephone Company jointly, in the summer of 1900, I gave no evidence at the time. I did answer these interrogatories and these cross-interrogatories in this pleading, and I did so swear to them before Henry Bennett Leary, Notary Public of the State of New York, and no doubt that is a correct transcript of it.

Q. That was the deposition, then, you gave for the Telephone Company dealing with your examination of the books of the Company, was it?

A. I did not say it was given for the Cumberland Telephone Company. It was given here in the City of New York, before a Notary Public, and in connection with that examination.

Q. I call your attention to the caption which reads in part "to be used as evidence on behalf of the plaintiff in the above entitled causes;" also, to the fact that the Cumberland Telephone and Telegraph Company was the plaintiff.

A. I see that you are right.

1652 Q. You have made investigations of other telephone companies, I presume?

A. I have.

Q. For whom, telephone companies or the rate making bodies?

A. I have made personally one examination that I call to mind now; that of the Wisconsin Telephone Company, in connection with a rate case at Marionette, Wisconsin. In addition to that, I have arranged for the audits of some other companies and examinations, and have planned the lines on which these examinations should be conducted, but I have made no personal examination of the books of the companies in any other case that I call to mind now than the Cumberland and the Wisconsin Telephone Companies.

Q. In the other instances you mention, were you representing the telephone company?

A. Do you mean in the Wisconsin case?

Q. In the others besides the Wisconsin and the Cumberland.

A. My recollection is, that the examinations were made on behalf of the companies at the direction of the Board of Directors.

Q. Were they Bell Companies or independent companies?

A. They were Bell Companies. I would like to elucidate that if I may. These matters occurred in our Western field; they were handled by our Chicago office and when the matter came up they sent to me here in New York certain papers and preliminary instructions and asked me to lay out a program for the conduct of the work, which I proceeded to do, and returned them, with the papers, to our Chicago office, and I cannot even tell you the exact name of the companies at this time. The matter was dismissed after a day's work probably in each case.

Q. Was that a rate case in which you examined the Wisconsin Company?

A. It was a rate case.

Q. You represented the Bell Company?

A. We were engaged by the Wisconsin Telephone Com-
1653 pany, which is one of the Bell Companies.

Q. I believe you say you do not consider Mr. E. W. Farnham an expert accountant?

A. I do not consider Mr. Farnham an expert accountant, based on what I have seen and what he says of himself.

Q. And you do consider yourself an expert accountant?

A. I am a Certified Public Accountant, irrespective of what I consider myself.

Q. Do you consider yourself an expert accountant?

A. I do not like the word "expert;" we will not allow the word to be applied to us because it is used by so many who are not Certified Public Accountants.

Q. You say you do not like, for reasons of policy, to have the word "expert" applied to you. Do you know whether Mr. Farnham has the same reasons?

A. I do not know what reasons are in Mr. Farnham's mind for saying he is not an expert accountant; he does not pose as an expert accountant. You will excuse me if I say to you that the certificate of the State of New York, for instance, says: "George Wilkinson has given satisfactory evidence that for more than one year before the passage of the Act creating the title of Certified Public Accountant he had practiced in this State on his own account as a public accountant and had met all other requirements prescribed by law or by the University ordinances for an expert public accountant." The University of Illinois says that "George Wilkinson has passed all examinations and met all other requirements prescribed by law or by the University ordinances for an expert public accountant." So, as these two Universities say I am an expert, I suppose I shall have to plead guilty, but I do not like the word on account of the abuse it has been submitted to.

Q. I call your attention to a paragraph on page 22 of your separate report, to the matter which reads as follows:

"By mutual consent of the Accountants, the employés of the Mutual Audit Company, acting under the direction of Mr. E. W. Farnham, expert accountant selected by the City of Louisville,
1654 made the abstract above referred to, exactly as agreed on May 6th, 1909." Now, I want to ask you to explain your use of the words "expert accountant" in connection with Mr. Farnham at that place.

A. The term there applied to Mr. E. W. Farnham, "expert accountant selected by the City of Louisville," was quoted from a letter of instructions sent to me by Judge Burnett, of Louisville, when this matter was started. He was introduced to me as an expert public accountant and I have done my best to so regard him ever since. I think I could find the letter of instructions. I think it was addressed in the first place to Mr. Granbery, and handed to me on my arrival on May 4th, 1909. I have the letter before me; it is dated 3rd May, 1909, and it reads as follows:

"This will be handed to you by Mr. E. W. Farnham, expert accountant appointed by the City of Louisville, in pursuance of the agreement made between you and Mr. Blakey.

"I have written Mr. Farnham a letter of instructions, carbon copy of which I herein enclose. Please hand this copy to the accountant selected by you."

This is signed by Henry Burnett, Special Master. That letter was handed to me as the accountant selected. The wording I have used in my report is copied from that letter.

Q. What was the first work that was taken up by you and Mr. Farnham when you begun to make this examination of the Cumberland Company's books?

A. The first work which we did together was the preparation of a memorandum, of which I have a copy here, and which reads "Memorandum for the Guidance of Accountants."

Q. I am not asking you anything except what work you did on the books of the Cumberland Telephone & Telegraph Company.

A. I understand your quetsion to be "What was the first work you did," and as this itself was quite a piece of work, I brought this in as an answer to your question. You now make your question what, please?

1655 Q. What was the first work done on the books of the Cumberland Telephone & Telegraph Company?

A. The first work we did was to prepare a continuous statement of the construction account of the Louisville Exchange from January 1, 1900, with dates and voucher numbers and other references in detail.

Q. Did you or any of your assistants do any of that work?

A. We did not do any of that.

Q. What assistance did you have during the progress of this work?

A. Mr. George W. Myer, Jr., Certified Public Accountant, and Mr. Arthur D. Hammond, both of my New York office. Also, later on, in the preparation of reports, I had the assistance of one of my stenographers, Mr. William Klein.

Q. Were these two gentlemen, Myer and Hammond, there at the same time or at different times?

A. At different times. Mr. Hammond succeeded Mr. Myer when Mr. Myer's previously made engagement to marry a young lady necessitated his returning to New Jersey.

Q. How long were you in Nashville yourself working on these books?

A. I was in Nashville, on and off, from May 4th, to about July 12th, but intermittently at different times. I could figure up, if you wish; if you wish the dates, I will have it prepared and answer you later.

Q. I wish you would; also, how long Mr. Myer and Mr. Hammond were working on these books.

A. This is a record of the actual time spent in Nashville exclusive of traveling to and from Nashville:

1656

Mr. George Wilkinson.	Mr. G. W. Myer.	Mr. A. D. Hammond.

Q. Were there certain exceptions from the Construction Account which the Accountants agreed were not the proper charge against the Louisville Exchange? I will ask you whether those exceptions were made at the instance of yourself, or the instance of the Mutual Audit Company.

A. It was agreed between the accountants that the work should be divided in a certain way, and part of the work that fell to the
1657 employees of the Mutual Audit Company was, in the first place, to make the copy which we had agreed should be made of the Construction Account, and thereafter that they should go through all the vouchers. In doing so they examined all the vouchers entering into the Construction Account of the Louisville Exchange, and in doing so took certain exceptions on the ground, in most cases, that the proportions of the amount so charged should not have been charged to the Louisville Exchange but should have been charged to the other Exchanges. These vouchers were then carefully gone over by myself and my assistant, and we found that the employees of the Mutual Audit Company were right; in almost every instance we allowed the exceptions that they claimed from the Construction Account, which amounted to $2,502.39. These were parts of vouchers. Some cases were small portions: the second item on a list I have before me was $7.00 out of $1,700.00.

Q. The only vouchers you examined, then, were the ones the Mutual Audit Company especially called your attention to and made exception to?

A. In that connection, yes.

Q. Did you or your assistants examine the vouchers to which exceptions were taken by the Mutual Audit Company?

A. We did. I will say that my assistant examined those vouchers and agreed that the Mutual Audit Company was right, showed me his working papers; showed me that they were right in their claim, whereupon their claim was allowed.

Q. You have a copy of these items?

A. Yes.

Q. I will ask you to examine your papers, especially # 325, April 25, 1900, and let me know whether any exception was taken by the Mutual Audit Company to any part of that voucher.

A. Yes, the total of the voucher was $3,460.71; the amount objected to was $156.00 even.

Q. Do you know what the objection to that particular item
1658 was?

A. The objection was, that it was not properly chargeable against the Exchange in Kentucky in respect of aerial construction.

Q. Did you examine that yourself personally?

A. I did not examine that voucher myself; my assistant, Mr. A. D. Hammond, examined that voucher and found that they were right.

Q. I will ask you whether your assistant made any report on the portion of that voucher representing shipment of poles aggregating in value $127.15; freight, $26.76, which appeared in the voucher to have been shipped from Nashville, Tennessee, to O'Bannon, Kentucky, and which was charged to the Construction Account, Kentucky.

A. He did not. The amount to which our attention was called by the employees of the Mutual Audit Company was to the sum of $156. These two amounts that you have given me would come to $154.00 of it, and the paper I have before me indicates that it was properly charged to Anchorage, Kentucky. If there was a further sum of $154.00 chargeable to O'Bannon, Kentucky, on that voucher, our attention was not called to the matter by the employees of the Mutual Audit Company.

Q. Have you any item on your working paper showing what the Anchorage amount was made up of?

A. We did not take any particulars of it because we agreed that it was not chargeable to the Louisville Exchange, and we did not care whether it was for poles or wires or cross arms.

Q. I will ask you to examine your papers and see if there was not an item representing a total of $156.00 for poles shipped from Sulphur Springs to Anchorage, Kentucky, and will ask you if that was not the item the accountants agreed upon should be taken out of the Construction Account.

A. No doubt it was. Wait and I will try to get posted as to that. My answer would be, Mr. Blakey, that I have not got before me the particulars that you have named. I have only before me the num-
ber, month and the amount of the voucher, together with the
1659 amount objected to, and the name of the Exchange to which
it appeared the items should be charged. As your question indicates that the goods were shipped from Sulphur Springs to Anchorage, and as my memorandum shows that the item should be charged to Anchorage, I have no doubt the items you have enumerated to me were those that were covered by our allowance of $156.00.

Q. Well, if your attention had been called to the fact that another item in that voucher was for $127.15, representing poles shipped from Nashville to O'Bannon, and freight $96.25, would you have considered that was not a part of the Construction Account in the Louisville Exchange?

A. We would.

Q. I will ask you if you examined any of the pay-roll vouchers which were chargeable to the Construction Account of the Louisville Exchange.

A. My assistant, A. D. Hammond, acting under my instructions, examined all of the pay-roll vouchers for construction work in the City of Louisville, covering all of the period from April, 1900, to December, 1908.

Q. What do your records show, if anything, in regard to voucher 109 for April, 1900?

A. In respect of aerial construction there was a sum of $1,132.73; in respect of under ground $135.75, expended in pay-roll and charged to the Louisville Construction Account.

Q. Anything else? Does it show what the total of the voucher was?

A. No. The total pay-roll voucher would be for a large sum of money that would cover all the pay-roll made at that time, including the other Exchanges for which construction work was then done, I think. We have no further particulars than that.

Q. Have you any record showing whether or not all of the employees whose salaries appear on that pay-roll were charged to Construction Account, nothing to Maintenance?

A. We have not. The only particulars we have here be-
1660 fore me are the two amounts I have mentioned, which were charged to Construction Account, Louisville Exchange.

Q. Did you accept the vouchers as they appeared, or did you make any attempt to see whether they were properly charged to Construction?

A. We examined the vouchers and the attached papers to see that the voucher had been distributed properly as regards this construction. The pay-rolls from which this amount was distributed were attached to the vouchers that we examined.

Q. Do you remember seeing any of these pay-rolls yourself?

A. Yes, I saw several of them.

Q. Just examined what they consisted of?

A. Well, I did not give them much attention. I indicated what they were and how the work should be done, and my assistant went ahead and did it. My recollection of those pay-rolls was, that they were very bulky vouchers to which were attached the pay-rolls which had been approved and used at the Exchange locally, and on which the men had each signed for their wages, but I would not swear that was the form of the pay-roll. This is my recollection of how they were made. I have not before me such a pay-roll.

Q. Did you accept them as they appeared, or did you make any changes in them as to the allotment to Construction or Maintenance?

A. Having satisfied ourselves that the responsible officers and employees of the complainant company had certified on the face of that voucher that a proper distribution had been made, accepted the evidence therein contained that the charge was the right and proper one to make against the Construction Account.

Q. So that, if those pay-rolls for the year 1900 were charged by the Telephone Company against Construction, though a large part of it should have been charged to reconstruction, you made no note of that at all?

A. On most, if not all of the vouchers a certain amount of the

pay-roll was charged to Construction, a certain amount to
1661 Maintenance, and a certain amount to Reconstruction. The amount which was certified by the employees of the Company to have been expended on construction was necessarily accepted by us as correct. We had no means of going behind the voucher and the pay-roll to determine what those men had been working on nine years before.

Q. So you do not know, then, that the amount of money appearing in those pay-rolls charged to Construction was actually expended in construction work at all?

A. We have no personal knowledge of the work that was done for which that money was paid.

Q. I believe you said that the Company's books were kept in accordance with the books kept by the Bell system of telephones over the country generally?

A. I did not say that. I said the books of account of the Cumberland Telephone and Telegraph Company are kept so as to provide the information that is necessary to meet the requirements of a standard distribution of telephone accounts authorized and promulgated by the Bell Company at Boston.

Q. What is their plan, if you know, as to disposition of junk, material which is displaced by new material?

A. At this time I have not in my mind what instructions have been issued by the Company in respect of the crediting of junk.

Q. Did you examine any vouchers dealing with the credits to Construction Account?

A. We examined the credits given to Construction Account in respect to material taken out, especially of instruments removed from subscribers' stations and the relative papers from which these credits have been given, the original papers.

Q. Did you find that the original cost of the article disposed of was credited to Construction, or that the sale price of the article disposed of credited to Construction?

A. My recollection of it, and I have only my recollection to go by at this time and in the City of New York, is, that the cost of the
articles taken out of construction was credited to the Con-
1662 struction Account.

Q. Was that the proper course to pursue?

A. It was.

Q. Now, I will ask you to say if you examined voucher of Auditor's bill 9197 for the year 1903.

A. Before proceeding any further in answering that question I will say this: That it was agreed between the accountants that the work should be divided; that the employees of the Mutual Audit Company should examine the vouchers of the Company, and that they should take exception to any that they did not consider right; that they should draw our attention to any vouchers they considered to be wrong in any way. Therefore, if any voucher was right, our attention was not drawn to it. If any credit was right, our attention was not drawn to it. If any voucher was wrong, we depended on them to draw our attention to it, and if our attention

was not so drawn to the voucher, we have no memorandum concerning it. Unless you can give me the month in which that Auditor's bill was credited, I can not answer your question.

Q. Have you any memorandum of any Auditor's bills examined?

A. Not with numbers attached so that I could identify them.

Q. What memorandum have you at all on the subject of Auditor's bills?

A. I would like to explain this in answering that question: The employees of the Mutual Audit Company made a complete transcript of the Louisville Exchange, Construction Account, as it was recorded on the books of the Complainant company from the beginning of 1900 up to the end of 1908, as arranged between the accountants, in a memorandum which was submitted to the Master, under whose instructions this examination was made. The object of dividing the work was to curtail expense and to arrive at the result sought as early as possible. That memorandum was the basis of our examination of Construction Account. On that memorandum were shown in detail the voucher numbers, the voucher dates, and the accountants; on that memorandum were also shown the num-
1663 ber of the Auditor's bills and the amounts credited to the Louisville Exchange from each such bill. That memorandum was left behind by Mr. Farnham when he hastily left Nashville on July 8th, and was brought away with us and on our files for some weeks, and was returned to Mr. Farnham at his request. Without that copy, which was a part of our working papers, I have no copies of the Auditor's bills as applied to Construction Account.

Q. Now, if these Auditor's bills which are part of the records of the Company, which show credits to Construction, show that the sale of articles such as mules, horses, wagons, wire, poles, etc. was credited to Construction on the basis for which such article was sold, then you do not know anything about it, I assume.

A. My answer to this is: Beginning in 1904, a separate account was opened on the books of the complainant company for tools and teams. Prior to that time mules, horses, wagons and the like, part of what you speak of in your question, had been carried in Construction Account. Beginning 1904 they were carried in a separate account so that any credits that were given in respect of the sale of horses, mules and the like were not made to Construction Account, but were made to Tools and Teams Account. In the absence of the papers referred to, I have no means of refreshing my memory as to what basis credits were given to Construction Account in respect of construction material taken out.

Q. You examined the books of the Cumberland Telephone Company for the Railroad Commission of Louisiana. Did you audit the books and ascertain what they showed, or did you ascertain whether the facts were borne out by the representations appearing on the books? Did you audit the books and find whether the items appearing on the books footed up properly, or did you dissect the accounts and find whether the items appearing on the books were properly placed on the books?

A. In making the examination jointly on behalf of the Rail-

road Commission of the State of Louisiana and the Cumberland Telephone Company, which examination was made in the Summer of 1900, I personally was the only accountant on the work.

1664 Prior to that time no separate account had been kept of construction cost in any particular State or Territory. It was, therefore, necessary for me to examine the books, vouchers, pay-rolls and other sources of information and to construct from these an accounting which showed what amount had been expended in the State of Louisiana in respect of construction, and particularly what amounts had been expended in the City of New Orleans in respect of, first aerial construction; second, underground construction, third, equipment; and this was done.

Q. How long did you spend working on those books at that time?

A. Personally I spent 457 hours on the examination of the books and the construction of my exhibits and report.

Q. How long did you spend working on the books at Nashville?

A. About two months, if my recollection is right.

Q. Did you examine all the vouchers pertaining to construction in New Orleans?

A. I did. To the best of my knowledge and belief, I examined all the vouchers.

Q. Did you accept them as you found them and charge them to construction on your report?

A. I examined the vouchers to see what portions had been charged to Construction, and I accepted the evidence contained on those vouchers and on the papers thereto attached as conclusive evidence that the work had been done, and that it had all been done for the purpose of construction as indicated. Those were the records of the Company that I examined.

Q. I believe you say that the Cumberland Telephone Company keeps a standard form of bookkeeping such as is generally kept by the Bell Company?

A. I will call upon the stenographer to read my answer to your question.

(Stenographer reads answer referred to.)

1665 Q. Now, in your examination of other Bell Companies do they charge up any sum to Reconstruction Accounts?

A. They do keep a Reconstruction Account.

Q. Did the Cumberland Telephone Company, during the year 1908, keep a Reconstruction Account?

A. During the years 1905, 1906 and 1907 a Reconstruction Account was kept, but during the year 1908 no separate account was kept for Reconstruction.

Q. Did these companies about which you testified keep a Depreciation Fund, a fund to take care of depreciation?

A. I testified only as to my personal examination of one such Bell Telephone Company, namely, the Wisconsin Telephone Company. My recollection of it is, that they did not keep a specific account on their books for depreciation.

Q. Is it proper bookkeeping for a company of this kind to have a Depreciation Fund and keep an account of it?

A. That is a question for the Board of Directors of the company to determine, whether an account should be maintained for depreciation.

Q. Does the Cumberland Telephone Company keep an account of a depreciation fund, or set aside a fund for depreciation?

A. It does not.

Q. Would you say that a company's books were properly kept when an Auditor makes three separate and distinct statements in one year of the previous year's operations, expenses, income and plant account, each of which is materially different from the other?

A. I would say that it was quite proper for an auditor of such a company to prepare from the books of account any statement that the Board of Directors or President of the company might instruct them to make.

Q. Whether the books showed the facts contained on the statement or not?

A. The matter of setting aside a portion of the earnings of a company to provide for depreciation of its plant being a
1666 matter entirely at the discretion of the Board of Directors, it is within their province to say whether or not such a provision shall be made. In the absence of any action taken by the Board of Directors of a company, no entries of this nature can be made on its books, but it is quite proper for the Board of Directors or for the executive management of a company to require a statement to be drawn up which would show what the result of the company's business would be after certain allowances had been made in respect of depreciation. It would be quite proper, in my opinion, for a series of statements to be so drawn up which would show varying results of the company's business, based on varying charges for depreciation.

Q. Would that apply to other items as well as depreciation?

A. That would not apply to any items that had to be paid out in cash, but it would apply to such items as uncollectible accounts, reserves for contingent expenses, reserves for expenses in pending litigation and similar items.

Q. As to items of operation and plant account, if an auditor of a company should make three distinct statements in one year concerning the business of the preceding year, and each of them showed separate and different figures as compared with the other two, then you would say that was not good bookkeeping, would you not?

A. I would say that the preparation of statements of account are not an essential and necessary part of the bookkeeping of a corporation. Statements of account can be made out according to varying conditions and each be true, and yet be dissimilar.

Q. Now, you don't know anything about the standard form of bookkeeping so far as the independent companies are concerned?

A. I am not aware that there is any standard form of bookkeeping in any telephone company, independent or Bell.

Q. Are you aware of the fact that the American Telephone and Telegraph Company has prepared a pamphlet to be sent to each of

its subsidiary companies in which is contained a brief outline of how the books should be kept?

A. I have before me their Circular #6, dated Boston,
1667 November 15, 1909, which begins "The following accounts are established as standard for the Bell Telephone system beginning January 1, 1910.

Q. Would you say, then, that was the standard?

A. That is standard now.

Q. They have issued pamphlets of a similar nature prior to this, haven't they?

A. I have not seen any such similar pamphlets.

Q. Do you know whether any have been issued?

A. I do not know, other than that this is #6. I should suppose that others have been previously issued. May I correct that last answer? I would like to say that this circular distinctly sets forth "This circular supercedes and cancels accounting circulars No. 1, No. 2, No. 3, No. 4 and No. 5."

Q. When you come to make up your construction account as it appears in the joint report, and as it appears in your separate report, did you place any figures in that report, in either of those reports, representing the cost to the Cumberland Company of the Ohio Valley plant?

A. At the beginning of the Construction Account, namely, on January 1, 1900, we found an entry charging to the Construction Account of Louisville Exchange, the sum of $678,354.69.

Q. Did you examine the books of the Ohio Valley Telephone Company?

A. I did examine the books of the Ohio Valley Telephone Company.

Q. Did they have a balance sheet showing their plant account, capital account and their assets and liabilities?

A. They did have such a balance sheet.

Q. Have you that before you?

A. I have before me what is virtually a copy of that balance sheet. It is not an exact copy in words. I cannot seem to put my hand on the exact copy, but I have here a substantial copy of that balance sheet, namely, the balance sheet of the Ohio Valley Telephone Company on the 31st December, 1899, taken from
1668 its Ledger, which, at the time of our examination, was in the keeping of the complainant company.

Q. I saw you Exhibit No. 1, filed with Mr. Farnham's report to the Master, which purports to be the account about which I have asked you. Will you examine that and see if it is correct?

A. I have before me a copy of Exhibit 1, made by E. W. Farnham, and, having examined same, I believe that it is a facsimile copy of a paper I prepared when at Nashville, and I further say that it agrees with the books of the Ohio Valley Telephone Company.

Q. What does that paper show to be the assets of the Ohio Valley Telephone Company at that time?

A. The total of all assets of the Ohio Valley Telephone Company

at that time, taking as such the total debit footings, which include franchise of $100,000.00, is $932,532.08.

Q. What appear on that statement as the liabilities?

A. The liabilities of the Company, including $549,400.00 for capital stock, and including bonds outstanding, including also an amount of surplus $12,322.08, amounts to the sum total of $932,-532.08.

Q. Is it proper bookkeeping for a company to have its liabilities side and its assets side balance?

A. It is.

Q. And if a company having a balance sheet such as the one before you were to issue $100,000.00 of bonds, that item would appear on the liabilities side, would it?

A. It should.

Q. And that would then make the liabilities side $1,032,532.08?

A. It would.

Q. And if it placed that money in the bank it would appear on the asset side as so much cash in bank?

A. It would.

Q. If placed in its plant it would appear as so much additional plant, would it?

A. It would.

1669 Q. If a company having a balance sheet such as the Ohio Valley Telephone Company were to sell its plant entire, the new company assuming all liabilities and paying $145,135.00 premium on the stock, then what would be the proper method for it to pursue in placing the accounts on its books, I mean the books of the purchasing company?

A. I call your attention to the fact, Mr. Blakey, that your last three or four words in your sentence contradict the rest of it. I want to know which company's books you are dealing with?

A. I mean, if such a transaction were to take place, how would the purchasing company make up its balance sheet?

A. Then I under-stand your question to be this: If a property represented by a balance sheet such as is shown on Exhibit 1, which I have identified as the balance sheet of the Ohio Valley Telephone Company, were to be sold to another company, and that other company paid $145,135.00 more for the property than the property showed on the books of the Ohio Valley Telephone Company, what entries would it be proper to make on that purchasing company's books? My answer is this: That it would be proper to include on the books of the purchasing company the additional cost of the property to the purchasing company in respect of the cash premium paid, namely, $145,135.00, this being a direct additional cost of the purchased property.

Q. And that amount would appear on the liabilities side, would it, as that much additional liabilities?

A. Your question now brings us back to the bookkeeping that should arise on the books of the Ohio Valley Telephone Company.

Q. No. If the new company desires, under such circumstances, to transfer this account to its own books, would it not have its own

books show that the liabilities were $145,135.00 in excess of what the Ohio Valley Telephone Company's books show them to be?

A. Mr. Blakey, that was not your question.

Q. It is now my question.

A. As I understand your question, it is the outcome of the same previous question, which was, "What entries would be made
1670 on the books of the purchasing company in respect of this $145,135.00 additional cost," and I have answered that it would be right and proper for the purchasing company to add that to the cost of the property, for the reason that it represents actual added cost.

Q. Then, what would they do on the liabilities side to make the two columns balance?

A. On the liabilities side of the purchasing company's balance sheet, you are speaking of?

Q. Yes.

A. In the conditions covered by the question, and answers previously given, the sum of $145,135.00 was paid in actual cash. The credit for this amount is then given to cash account.

Q. You mean they would place their accounts on the new books just as they appeared on the old books?

A. Plus the added cost.

Q. That would make the assets $145,135.00 in excess of the $932,532.08 which appear on the assets side of the Ohio Valley Telephone Company's books, would it not?

A. It would, for the reason that that added sum of $145,135.00 was paid out in cash.

Q. What would they do to make the liabilities column balance with the assets column?

A. That is a repetition, in a slightly different form, of your previous question which I have answered by saying that the $145,135.00 having been paid out in cash, has already been deducted from the assets side of the balance sheet under the item of cash.

Q. Would it be proper to place the capital stock at $694,535.11 instead of $549,400.00, and issue stock, $145,135.00, additional stock, to represent the $145,135.00 cash that was paid for the stock of the Ohio Valley Telephone Company?

A. Mr. Blakey, I understand your question to be, would it be proper for the purchasing company to issue $145,135.00 worth of capital stock to cover the purchase of this property? I would say that it would be proper for a company to issue its capital
1671 stock in payment for a property, or in exchange for money raised to buy a property.

Q. In case such method was pursued, would the liabilities then balance, each being $932,532.08, plus $145,135.00?

A. Mr. Blakey, you have now brought the question back to the balance sheet of the Ohio Valley Telephone Company, which is not the purchasing company. The Ohio Valley Telephone Company are not concerned with the source from which the purchasing company raised this sum of $145,135.00. Your question to me is, what would be the proper entries to be made on the books of the pur-

chasing company when it is found that the purchasing company has paid $145,135.00 in cash more than the assets appear to be worth on the face of the balance sheet of the vendor company.

Q. What I should like to have you to do is to eliminate from your mind the Ohio Valley Telephone Company, or any selling company at all, except in so far as the balance sheet of the selling company is concerned. The selling company has assets of $932,532.08, and liabilities of $932,532.08, part of which is capital stock. The selling company transfers all of its property to the purchasing company just as it appears on the selling company's books and balance sheets, except that the selling company pays the purchasing company a premium of $145,135.00 for its capital stock, and the selling company wants to place on its books a record of what it has purchased, and of what it has assumed; in other words, of its assets and liabilities. It has paid $932,532.08 for the purchase, plus $145,135. Now, in order to make its liabilities represent what it actually paid it issues $145,135.00 worth of its stock to its stockholders, who have furnished the money, and places its capital stock on its libilities side at $694,535.00, which makes a total liability of $1,077,767.08. Now, it wants its assets to balance with its liabilities, and my question is, whether it would be proper for the purchasing company to say that its plant which it has purchased at a value of $145,135.00 in excess of what the plant was valued at on the books of the selling company, thereby making the plant appear on the asset side of the balance
1672 sheet as being of the value of $783,304.74, instead of $638,-196.74, which difference would make the asset side of the balance sheet appear as $1,077,767.08. I want to know whether, if a purchasing company were to pursue such a course, that would be proper book-keeping.

A. Mr. Blakey, I have followed your question with all the attention I can concentrate upon it, and I am sorry to say I have failed entirely to get your meaning. You begin by making what is practically a hypothetical question, and ask me to put out of consideration the question of the Ohio Valley Telephone Company, and part of your question relates to what bookkeeping should be done on the books of the purchasing company assumed to have purchased a property for $145,135.00 more than the books of the vendor company show. Now, if that much expresses your question, I am ready to answer it.

Q. I cannot express it other than I have already expressed it.

A. Then I will have to answer the question in my own way, and I shall answer it as follows: In the event that a company purchasing a telephone property from another company, which latter company is going out of business, pays in cash $145,135.00 more than the par value of the stock of that company, such purchasing company is entirely right in adding such sum of premium to the cost of the purchased telephone property. That is my answer. Is that responsive to your question?

Q. I have spent all the time I can trying to get what I wanted.

A. I should be glad to hear your question with the hope of an-

swering it "yes" or "no" if you will read it, or if you care to have it read.

Q. Never mind; we will go ahead. If a company with balance sheet as appears on Exhibit 1 should find that $70,000.00 of the items appearing under the head of libilities were not real liabilities, and wanted to eliminate them from its books, what course would it pursue?

1673 A. If a company finds that certain accounts with credit balances outstanding on their books amounting to $70,000.00, or any other sum, do not represent actual liabilities, that is, amounts which that company will have to pay, it is quite proper for them to drop such items, to close such accounts, and to write off such credit balances to any other accounts that the Directors of that company may see fit to direct.

Q. You mean, by writing off to reduce the plant account that much?

A. If the Directors so advise, to write them off to any other account, to credit them to surplus account, or to write them off franchise account, or to write them off real estate account. In my opinion as an accountant, it would be well within the province of the Director to so advise, and it would be correct book-keeping for the accountant to do as the Directors so instructed.

Q. If a company desires to write off $70,000.00 from its liabilities side because they were not liabilities, and add $145,135.00 to its liabilities side, and to add the difference, which is $75,000.00, to its assets side, in orde- to make the two columns then balance, and desire to add the entire $75,000.00 to plant account, adding to exchange construction and toll line construction the proportionate amount of the $75,000.00 in accordance with the amounts appearing on this balance sheet before you, as being the cost of exchange construction and toll line construction, how much would they add to exchange construction and how much would they add to toll line construction?

A. In the foregoing questions, Mr. Blakey, you have asked me what would it be proper to do on the books of the purchasing company which pays $145,135.00 more in cash for a property than the property stands for on the books of the previous owners. Your question now is, as I understand it, what would be done with the difference between this sum of $145,135.00 so paid by the purchasing company and the credit balance to certain accounts, amounting in an aggregate to $70,049.75, outstanding on the books

1674 of the vendor company, in the case we have before us, the Ohio Valley Telephone Company. Now, we have two distinct and separate factors to deal with in two distinct and separate ways, $145,135.00 being on the books of the purchasing company, and $70,049.75 being on the books of the vendor company.

Q. I do not think you understand my question: My question was, not to give a dissertation on whether I was right or whether I was wrong, but simply make a calculation and tell me what proportion of the $75,000.00 should be credited to exchange construction and what proportion should be credited to toll line construction, as they

appear on Exhibit 1 before you, giving each its proportion according to the amount invested in exchange construction and toll line construction.

A. I did not so understand your question. In fact, your question was not that. As I understand your question now it is, you wish me to make a calculation right here showing you how much should be added to each class of construction with respect to this hypothetical difference, this difference you have indicated by your hypothetical question. I shall have pleasure in doing that for you.

(Recess for lunch.)

After recess (2:45 P. M.).

Q. Mr. Wilkinson, have you that calculation?

A. The amount you asked me to divide, that is to say, $75,086.00, arrived at by deducting $75,086.00 from $145,135.00, when divided pro rata between $125,406.00 and $512,789.00, results in the division of approximately $14,700.00 and $60,300.00 respectively.

Q. Adding the $14,700.00 to $125,406.00 makes how much?

A. $140,106.00.

Q. And adding the $60,309 and $512,789 makes how much?

A. $573,089.00.

Q. On this Exhibit 1 the exchange construction which makes a total sum of $512,000.00 represents the plant account for eight exchanges, including Louisville Exchange, does it not?

1675 A. Nine exchanges including the Louisville Exchange.

Q. And on what basis does your report show that the Cumberland Telephone Company distributed among those exchanges the amounts which it placed on its books as representing the construction account—I mean as to the division, and how did they arrive at the figures which they placed on their books as the value of those exchanges?

A. The total cost of the entire property was divided between the different exchanges on the basis of the number of stations at each of the exchanges, excepting that in dealing with the Louisville Exchange the number of stations was doubled.

Q. And dealing with this $573,000.00 on that basis, what percentage of that $573,000.00 would represent the Louisville Exchange Construction Account?

A. I do not know.

Q. Do you remember whether the Cumberland Telephone Company's books represent about 80% chargeable to the Louisville Exchange?

A. About 68% of the total amount was chargeable to the Louisville Exchange, the total amount being the total cost to the complainant company of all the property purchased.

Q. You mean, on the basis of giving Louisville twice as many stations as it had, that 68% should be charged to the Louisville Exchange?

A. I say that on the basis of giving the Louisville Exchange

3,536 stations, and all the other exchanges an aggregate of 1,724 stations, taking also into consideration the toll line construction, that the amount charged on the complainant company's books against the Louisville Exchange, amounted to $678,354.00 out of a total of $998,817.00, which is approximately 68%.

Q. What ratio does 1,724 bear to 3,536?

A. It is nearly one half.

Q. And if you doubled 3,536.

A. 7,072.

1676 Q. Is the 7,072 the basis on which the Louisville Exchange was charged?

A. Yes.

Q. What ratio does 1,724 bear to 7,072?

A. 27%.

Q. On the basis of those figures, what portion of the total cost should be charged to the Louisville Exchange, what percentage?

A. 68%.

Q. What is 68% of the item you mentioned, $573,144.00?

A. Your question is, what is 68% of $573,144.00? If my figures are correct, Mr. Blakey, the sum of $369,737.92.

Q. I call your attention to the paragraph on page five of your separate report to the Master, in which you say "Negotiations looking to a consolidation of the two companies had been in progress for six months, leading up to meetings of the respective Boards of Directors of the two telephone companies in 1899," and ask what knowledge you have of any such fact as stated in that paragraph.

A. At a meeting of the Directors of the Ohio Valley Telephone Company held in the City of Nashville, on December 28, 1899, as recorded in the Minute Book of the Ohio Valley Telephone Company, the following resolution was unanimously passed:

"Be it resolved that whereas negotiations looking to a consolidation of this—The Ohio Valley Telephone Company, a corporation existing under the laws of the State of Kentucky, and doing a telephone business in this State, but not in the same territory, or in competition with their company, have reached a satisfactory conclusion, and are believed to be to the interest of this Company and its stockholders—a consolidation of the two companies be effected."

In relation to that matter I had an interview with Mr. James E. Caldwell, in the course of which interview Mr. Caldwell told me

1677 that negotiations looking to the consolidation of the two telephone companies had been in progress for six months prior to that time, and the action then taken, namely, December 28th, 1899, was the result of those arrangements.

Q. Your statement, then, on page 5 of your report is based on what Mr. Caldwell said to you, is it?

A. My statement on page 5 is based on the entire conversation we had at that time with Mr. Caldwell and the sundry questions which I addressed to him at that time.

Q. Now, are you able to tell anything about the economical and business management of the affairs of the Cumberland Telephone Company?

A. I think so. I think that the experience I have had at Nashville in examining the books of the company at that time and on two previous occasions, and the very many conversations I have had with the executive officers of the company, including the President, the General Manager, Assistant General Manager, General Counsel, Secretary, Auditor and various employees, have given me, as an experienced accountant, pretty good opportunity to form a judgment as to whether their business is economically administered or not.

Q. What is your opinion on the subject?

A. My opinion on the subject is, that it is economically administered.

Q. You think they have an efficient and business-like corps of managers and employees?

A. I do.

Q. You think the business is run in a business-like, up-to-date manner?

A. I certainly do.

Q. Now, I call your attention to page 56 of your report, in which you show the net earnings of the company at the Louisville Exchange, and ask you to state what were the net earnings for the year 1905 as shown by the result of your examination.

A. The result of the examination made of the books of the
1678 complainant company, as set forth in the individual report made by myself, shows that for the year 1905 they made a loss on its business at Louisville, including the operation of its plant and property in the City of Louisville, amounting to $12,158.21.

Q. What about 1906?

A. In 1906 the net earnings of the complainant upon its plant and property employed in its business were $2,536.30.

Q. What about 1907?

A. In like manner, the net earnings were $10,111.09.

Q. 1908.

A. And in 1908, were $32,162.79.

Q. And what percentage were the net earnings to the capital?

A. The percentage of net earnings to the amount of capital employed in the City of Louisville by the complainant for 1906 is .136%.

Q. What does that mean?

A. That means a little over 1/10th of 1%.

Q. What about 1907?

A. The percentage for 1907 is .522%.

Q. What does that mean?

A. That means a shaving over 1%.

Q. What about 1908?

A. The net earnings of the complainant on its business in Louisville in 1908 were 1.656% of the amount of capital employed in conducting such business.

Q. And what does that mean?

A. That means a bit over 1½%.

Q. Now, how many stations did the telephone company have in connection with its Louisville Exchange in 1908?

A. The average number of stations in service in 1908 was 10,006.

Q. How many in 1907?

A. 10,830.

Q. 1906?

1679 A. 9,857.

Mr. GRANBERY: I object to this questioning on the ground that it has already been shown in the typewritten reports, and I object to its being put in the second time.

Mr. BLAKEY: I believe I have the right to ask the witness about the things that occur in his Exhibits; that is what the Exhibit is filed for.

Judge BURNETT: I understand the objection is not that you have no right to ask questions regarding the Exhibits; but I suggest that you ask him "Is so and so in your report?"

Mr. BLAKEY: I must do this to get at the point I wish to make.

Judge BURNETT: I would suggest, then, that you say, "I notice in your report so and so; is that correct?" Of course, I cannot anticipate what you are going to ask.

Mr. GRANBERY: I do not want to object, but I do not want the same thing put in a couple of times.

Q. I believe your report shows that on January 1, 1900, the Ohio Valley Telephone Company had 3,536 stations installed in the City of Louisville; is that correct?

A. Yes. At the time the property was acquired from the Ohio Valley there were installed 3,536 stations in Louisville.

Q. Do you know how many stations were in use by the Ohio Valley in 1895?

A. I believe I could tell you. I do not seem to have it.

Q. Do you know whether it was less or more than it was in 1900?

A. The books of the Ohio Valley Telephone Company show that in 1895 the cost of the plant up to the end of 1895 was the sum of $462,092.00, while the cost of the plant at the end of 1899 was $771,402.00. From that I should judge that there were considerably less in 1895 than there were in 1899, but I have not got the number of stations.

1680 Q. I call your attention to page 12 of your report, in which this language appears: "In all, from 1890 to 1899, inclusive, the shareholders received $291,575.00 in dividends, these being at the uniform rate of 7% per annum." That is correct, is it?

A. It is correct.

Q. You are now speaking of the Ohio Valley Telephone Company, and does that mean that from 1890 to 1899, the Ohio Valley Telephone Company paid 7% per annum to its stockholders?

A. Absolutely; it is exactly what it means.

Q. I also call your attention to the paragraph which says: "After paying these dividends, there remained a considerable surplus of

undivided net profit. This surplus was written off to plant account, as shown in the next preceding statement. In full to date, 12/31/94, $94,505.70; in part to 12/31/98, $41,000.00; together, $135,505.70." That is correct, is it?

A. It is.

Q. Now, does that mean that in addition to the 7% earned for that period of time, the company earned a surplus of $135,505.70?

A. It does.

Q. I also call your attention to paragraph on page 8 of your individual report which reads, "In addition to the lands, buildings and constructed telephone plants thus acquired, the complainant secured the sole ownership of a prosperous, dividend paying business, and the good will attaching to telephone plants in actual operation in nine cities, with a total of 5,260 stations." That is correct, is it?

A. It is.

Q. Do you mean to say that it is good management for a telephone company to take charge of a business which had accomplished the things you say the Ohio Valley Telephone Company's management accomplished during those ten years, and increase the number of telephones from 3,500 to practically 11,000 within six years, and at the sixth year lose $12,000.00 on its business, at the same
1681 time the rates having been increased over the entire period at different times?

A. In arriving at the opinion that the Cumberland Telephone Company had conducted its business in an economical manner, I had not in mind the Louisville Exchange only, but the entire field of several different States that the Company's operations cover. The Company's operations, as you know, cover several States, and their transactions, taken as a whole, are very well managed. They have been, as you know, up against a very hard proposition in Louisville, and while the result of their business in Louisville has been most disastrous, the business conducted by the Company elsewhere has made a substantial sum of money. Taken as a whole, the Directors of the Company have, in my opinion as an accountant, conducted their business in a very economical way.

Q. What do you know about the difficulties they have had in Louisville

A. I think you know more about that than I do.

Q. Well, do you know that they have had any difficulties at all?

Mr. GRANBERY: I object on the ground that it is incompetent and immaterial, and is simply an argument with the witness.

Mr. BLAKEY: Well, he has stated that they labored under difficulties in Louisville, and I want to know what they were, and what he knows about it.

Judge BURNETT: Obviously speaking, from general information and his examination of the books. His opinion about it would cut no figure.

Mr. BLAKEY: No, but he has said that the company has labored under difficulties in Louisville. Now, I want to know what he knows about it.

A. I would like to answer your question in this way: From general observation of what I learned at the time I was exam-
1682 ining the Company's books, from the officers and servants of the Company, I have formed the opinion that the Company has been strictly up against it in Louisville. If that opinion is worth while, it is yours.

Q. It is merely an opinion?

A. Yes, you are right. My statement that the Company has conducted its business in an economical manner is only an opinion, too.

Q. I notice on page 13 of your individual report a statement to the effect that from 1890 to 1899 the Ohio Valley Telephone Company spent a total of $511,675.66 on repairs, maintenance, reconstruction and new aerial construction, and that you say in regard to this the following: "This actual expenditure, which was all charged against earnings, is equal to 10.39% per annum of the cost of the plant, as shown by the books. Do I understand by that statement that that amount of money was earned by the Ohio Valley Telephone Company and expended in addition to the dividends and the $135,000.00 about which you testified a while ago?

A. From 1890 to 1899, inclusive, the Ohio Valley Telephone Company earned in respect of services rendered in the City of Louisville a sum of money of which they paid——

Q. I asked you a question about this $511,675.66, that is all.

A. Well, I will say to you that they paid, in that time $511,676.66 for repairs and reconstruction.

Q. You say also "new aerial construction," do you not?

A. I did.

Q. Is that true?

A. It is.

Q. And that was in addition to the dividends paid and the $135,000.00 charged off about which you testified awhile ago?

A. It was in addition to the dividends.

Q. I notice on page 20 of your report this statement: "Nothing whatever has been added to this, the actual cost of materials,
1683 labor, and direct expenses of construction. No charge has been made in respect of executive management expenses, interest on capital while construction was in progress, or other overhead charges." Please explain what that means.

A. Mr. Blakey, I certainly thought when I wrote it it was explanatory. I might add the further verbiage that no amount has been added to the cost of construction in respect of executive officers' salaries, office rent, traveling expenses, office expenses, stationery, postage, a whole lot of things I could take up the time to enumerate, nor for interest on capital while in the course of construction, which is sometimes charged to construction work, nor has anything been added to this construction account in respect of any kind of overhead expenses. I mean by that, expenses of management, expenses incurred at Nashville.

Q. Were any such expenses incurred?

A. The management of a large company like this is a constant

source of very heavy expense, and a portion of that expense should be, and very properly could be, added to the cost of their property, as that cost is built up in respect of the work done at headquarters in managing the Company, and that part on page 20 which you have read in my individual report, states for a fact that no charge was made to construction account in respect to this expense.

Q. What was my question?

(Stenographer reads question to witness). Will you answer that?

A. I have.

Q. I gather from that that you intended to say such expenses were incurred—is that correct?

A. I think you are correct in gathering that.

Q. Were they paid by the Cumberland Telephone Company?

A. They were paid: the President's salary was paid; the Assistant General Manager's salary was paid; the General Counsel's salary was paid; traveling expenses and other expenses they incurred during all that time, were paid.

1684 Q. Out of what?

A. Out of the earnings acquired in other territory or out of the general earnings.

Q. The proceeds of the sale of stock usually furnishes the capital account, does it not?

A. Yes.

Q. These expenses of conducting the Company's business were paid out of earnings, I believe you said?

A. I believe they were.

Q. On page 28 of your report you repeat substantially the same statement I read to you from page 20, do you not?

A. What part do you refer to, please?

Q. To the second paragraph on page 28.

A. On page 28 the part I have before me is in regard to the amount expended in cash for the purchase of land and buildings. Is that the part to which you refer?

Q. The part to which I refer reads as follows:

"All of this sum had been expended in actual cash, not a dollar being added in any shape or way in respect of executive management expenses, interest, or any other overhead charges." Is that correct?

A. That is correct. It applies to the sum paid for the purchase of land and buildings in the City of Louisville, the other having applied to the cost of construction.

Q. When we were on the construction account this morning I believe you said the extent of your examination of the items and vouchers making up the construction account was the checking over such of them as the Mutual Audit Company objected to—is that correct?

A. No, I did not say that; if I did, I was mistaken. I said that in regard to the Auditor's bills we were speaking of. I say we did examine the vouchers for construction account. I told you my assistant, Mr. A. D. Hammond, had examined the construction

vouchers; or if I did not say so this morning, I will say so now.

1685 Q. Have you any record of his showing such examination?

A. I have.

Q. I would like to see it.

A. Answering your question, Mr. Blakey, I have before me ten sheets of working papers showing the amounts and vouchers and distribution of those vouchers examined by my assistant, Mr. A. D. Hammond.

(Working papers are handed to Mr. Blakey for examination.)

Q. What does the first page show?

A. The first of these ten sheets show the recapitulation of the other nine sheets.

Q. In whose handwriting?

A. Mr. A. D. Hammond's.

Q. Do you know where he took it from?

A. From the other nine sheets.

Q. Do you know where he took the other nine sheets from?

A. He copied the other nine sheets from the abstract of construction account prepared by the employees of the Mutual Audit Company.

Q. Did he prepare it after the examination was closed, or while it was in progress?

A. He prepared this memorandum while the examination was in progress, on that date or after the employees of the Mutual Audit Company had withdrawn from the offices of the Company.

Q. That was after July 7th, 1909, was it?

A. No, I don't think it was; it was in July, 1909.

Q. Did his examination include looking at the vouchers themselves, or simply looking over the working papers of the Mutual Audit Company?

A. It included the examination of the vouchers themselves, for which purpose he spent two or three days, if I recollect right, at the office of the Company, going over the vouchers the Mutual Audit people had already gone over.

Q. Merely over those they had objected to, or all of them?

1686 A. He went over a total of $944,667.00 out of a total of $1,023,545.00.

Q. Did all that in two or three days?

A. In three days, if I recollect right. He was assisted in the handling of the vouchers by the employees of the Company.

Q. Did you see him do it?

A. I did not.

Q. Did he examine any vouchers the Mutual Audit Company did not examine, so far as you know?

A. So far as I know, he did not for the simple reason that the Mutual Audit Company examined all the vouchers except one little one that was missing.

Q. Do you know that to be true?

A. Yes.

Q. How do you know it?

A. Because he told me so.
Q. He told you. Who told you so?
A. Mr. Hammond.
Q. Was he with the Mutual Audit Company representatives when they examined these vouchers?
A. He was in the same room.
Q. Did any one else representing you or your Company or firm examine any vouchers?
A. Yes.
Q. Who else?
A. Mr. G. W. Myer.
Q. What vouchers did he examine?
A. A great many in connection with charges against the earnings.
Q. Did he examine any in connection with the construction account?
A. Not to my knowledge. He was not instructed by me so to do, outside of those vouchers which had been objected to by the
1687 Mutual Audit Company during the time Mr. Myer was there, and to which they may have invited Mr. Myer's attention.
Q. Did Mr. Hammond examine any vouchers in the Supply Department?
A. Mr. Hammond did examine 105 monthly vouchers of the Supply Department.
Q. Are those the vouchers that were filed by the Supply Department with the Auditor of the Company?
A. Yes.
Q. Did he go into the Supply Department and examine any of the records from which these vouchers were made up?
A. He did.
Q. When did he do that?
A. During the progress of our examination.
Q. How long did it take him to do that?
A. Between two days and a week; I am not quite sure.
Q. Do you know whether the Mutual Audit Company examined any of the vouchers in the Supply Department?
A. To my knowledge, the employees of the Mutual Audit Company did not visit the Supply Department, but I do not know that they did not.
Q. Then your assistant did examine vouchers that they did not examine; is that correct?
A. No. The employees of the Mutual Audit Company did examine the supply vouchers because they are on file in the Auditor's office, but it is not within my knowledge that the employees of the Mutual Audit Company visited the Supply Department. They spoke about doing so, but they did not do so as far as I know.
Q. And you know your man did?
A. He did examine all of them. We examined all of the Supply Vouchers, 105.
Q. In the Supply Department?

A. With the Supply Department, but made to the Audi-
1688 tor's Department. It is expressed on page 64 of my separate report exactly what we did.

Q. Have you any record showing what he found to be the state of the case regarding those supply vouchers?

A. These same sheets that I have before referred to show the number of each month's supply voucher, and the amount distributed against the Louisville Exchange Construction Account divided into three headings—aerial, underground and equipment. The total amount of those supply vouchers that we examined is the sum of $447,260.76.

Q. Have you any data showing what those vouchers contained or represented, or what their condition was?

A. Our data does not show what they were, such as the number of poles and the length of the poles, or any such thing; it shows simply the amount of money and the number of vouchers, and the date on which that voucher was put through the accounts.

Q. Was that item copied from the papers of the Mutual Audit Company also?

A. The items contained on the nine pages of this statement were in the first place copied from the transcript the employees of the Mutual Audit Company had made of the Construction Account of the complainant company in the City of Louisville; afterwards they were checked to the books so as to see that they were exactly right. Then they were checked with the vouchers.

Q. You do not know how those papers are kept in the Supply Department, I suppose. You have no record showing the number, or distribution or anything?

A. The vouchers here referred to on this statement are the vouchers filed in the Auditor's office of the complainant company; attached to those vouchers are papers made up in the Supply Department which show the name of each Exchange and the value of materials and supplies issued to each Exchange, and the amounts showing separately for construction, maintenance and reconstruc-
1689 tion. In the Supply Department are books of account in which are recorded the details making up these items; in the Auditor's office the totals only are dealt with, that is to say, the monthly totals for each branch of the Construction Account.

Q. Have you any record showing the number of the vouchers or paper that appears, in the Supply Department? In other words, as I understand it, the number of the voucher you have on these nine sheets is the number as appears in the Auditor's office. Have you any papers identifying or indicating how the papers could be found in the Supply Department from which these vouchers in the Auditor's Department were made up?

A. In the Supply Department, the Louisville Exchange has an account which shows all the detail, each particular charge being therein posted. The account runs probably several pages in that book in an active month, and the amounts on the papers shown you are the totals for each month. The detail is part of the records of the complainant company which are in the Nashville Supply Department.

Q. On pages 29 and 30 you say that $69,919.92 is proportioned to the Louisville Exchange as its pro rata proportion of the supplies necessary for the Louisville Exchange. That is correct, is it?

A. It is. It is the result of my calculation on this subject.

Q. In arriving at this figure, did you proportion any amount to the toll business of this Company?

A. The basis of the proportionment was by number of stations.

Q. Well, did you proportion any amount to the toll or long distance business of the Company?

A. It does not appear so.

Q. I notice on page 34 of your individual report that you say in substance, that 15% of the long distance messages originating at Louisville is credited to the Louisville Exchange, and that, in your opinion, this is sufficient for all purposes. I assume that is

1690 your opinion?

A. It is.

Q. I ask you how much is credited to the Louisville Exchange by the Cumberland Telephone Company for the long distance business; what percentage of the receipts?

A. We have stated in this individual report that, for convenience of book-keeping, the entire receipts from long distance business originating at Louisville is credited on the books of account in the first place to Louisville Exchange. The books of account of the complainant company, as they stand, show that credit. In the accounting that has been drawn up here, as shown by the joint report, signed by both accountants, we have included 15% of the total receipts as the compensation to be allotted to the Louisville Exchange in respect of its services in that direction.

Q. Is that ample compensation, in your opinion?

A. In regard to whether that is adequate compensation or not, we submit in our individual report that it is the amount of compensation which the complainant company gets from other companies for like business.

Q. And you consider it ample, I suppose?

A. On pages 38 and 39 of our report we submit some particulars with the purpose of showing that this 15% commission is ample.

Q. Where does the other 85% go?

A. The other 85% of those earnings goes to the Company.

Q. How does the Company keep its real estate so far as any rental therefrom or income therefrom is concerned?

A. The Company carries on its general books of account an income account to which is credited an estimated amount representing the rental value of its premises, which amount is charged to operating expenses. In our individual report we include that account as part of the income. The Company treats it on its books of account as income.

Q. It is credited to the general income of the Company?

1691 A. It is.

Q. I notice on page 27 of your individual report the following language: "The amount expended for actual reconstruction of plant, replacing equipment and rebuilding aerial or underground

construction, has been charged to Reconstruction; it equals 2.38% of the average cost of the plant in service." Was the amount expended for reconstruction prior to 1905 charged to reconstruction?

A. No. The Reconstruction prior to 1905 was charged to Maintenance.

Q. Was the amount expended for Reconstruction in 1908 charged to Reconstruction?

A. No, there was no separate account for Reconstruction in 1908.

Q. And do your figures, 2.38%, represent the average per year on the cost of the plant which has been expended in reconstruction?

A. The figures given represent the percentage covering the four years, 1905 to 1908, inclusive.

Q. And that is the average per year?

A. Yes.

Q. What do you say in your individual report as to the amount that should be set aside each year for depreciation? What percentage of the value of the plant, the cost of the plant?

A. In our individual report we submit for the consideration of the Special Master four plans of calculating the depreciation; one we call "Plan A," the Chicago plan; another "Plan B," the diminishing value plan; another we call "Plan C," complainant's plan; and the fourth we call "Plan D," the plan recommended. The plan we recommend for favorable consideration contemplates charging a flat rate on the cost of the plant, calculated at 7%.

Q. You think that is ample to take care of depreciation?

A. I believe that it is sufficient to take care of the depreciation on that plan for those years.

1692 Q. I call your attention to the transcript of the record of the Supreme Court of the United States in the case of the Cumberland Telephone and Telegraph Company vs. Railroad Commission of Louisiana, and to your deposition which was referred to this morning, and ask you whether the question regarding your examination of the records relating to the State of Louisiana was asked you, and whether you answered it in that way.

(Transcript of the record is handed to witness.)

A. I believe that is correct. I assume that is a correct copy of the transcript.

Q. What do you mean by "depreciation"?

A. I mean by depreciation—"depreciation may be defined as the loss in value of some destructible property over and above current repairs." Quoted from a lecture by deponent delivered 1st May, 1905, to the Evening School of Accounts and Finance at the University of Pennsylvania, Philadelphia.

Q. What do you mean by "loss of value of destructible property"? Do you mean less valuable?

A. I do. I mean there is a constant loss going on in any destructible property through its use, through time, through various causes, which press particularly heavy upon a telephone plant.

Q. You mean, then, that a plant gets less valuable year by year until it di-integrates, do you?

A. I mean to say that if a plant is not constantly reconstructed,

rebuilt, renewed, as it goes along, in the course of time it will all go to pieces and drop down in a state of decay.

Q. And you think 7% a year should be set aside to take care of that?

A. I do.

Q. Is that because the plant depreciates 7% each year in value?

A. Not necessarily.

Q. Does it mean that it depreciates 7% each year, plus
1693 such an amount as may be expended during the year in reconstruction?

A. It does not. I mean, that the average rate of depreciation of the property should be calculated at 7% per annum on the cost of the property, and that any unexpended portion of the sum so arrived at, should be set aside by the owner of the property to be expended at some future time on the reconstruction of that property.

Q. Well, should the value of the plant be placed on the books at any less year by year to make the books balance when you put aside a sum of that kind to take care of depreciation in the future?

A. In order to take care of depreciation to be made in future years by replacements, a charge should be made against the earnings at the rate of 7% per annum on the cost of the property. An amount of those earnings should be taken and set aside to expend in future years. It may be that a larger sum than 7% on the cost of the plant is expended in one year. In the case of the Wisconsin Telephone Company, at their Marionette Exchange, which has been brought into evidence here, there were two years in which the plant was largely reconstructed, so largely reconstructed that the amount expended on reconstruction exceeded the provision made for that reconstruction. In the case of the complainant company's accounts, that has not been the case. The amount which should be reserved, calculated on the basis of 7%, comes to the sum, for the four years under consideration, of $456,662.00. The amount actually expended for reconstruction during the like period comes to $155,022.00, leaving a sum unexpended of $301,640.00.

Q. Take a simple proposition: a man had a shoe shop with one machine for making shoes which would last five years. There was no reconstruction during the five years; at the end of five years it would be of no value at all, and that the machine cost $100.00. How much should be set aside for depreciation?

A. On a machine that cost $100.00, and that is going to last five years, the cobbler chap should set aside 20% each year out of his earnings to provide for a new machine at the end of five years.

1694 Q. And if he was going to keep a plant account, what would he have his books show at the end of the first year that he had set aside for depreciation?

A. He could have his books show two separate ways to suit himself. Either his machine would stand on his books at a value of $80.00, or his machine would stand at a value of $100.00 and he would have a liability expressed on his books for $20.00, represent-

ing the sum he had put aside out of his earnings to replace his machine.

Q. If he had spent $5.00 during the year on reconstruction, would it be proper for him to put down his machine at $85.00 and $15.00 into his depreciation fund?

A. It would be proper for him to charge this $5.00 to his depreciattion fund, reducing it from $20.00 to $15.00, provided that the expenditure of $5.00 prolonged the life of his machine,—if it was, in other words, really a replacement.

Q. If he loaned his $20.00 out at interest, the next year he would not have to set 20% aside, would he?

A. If the cobbler's business was of such an unprofitable nature that he could better afford to put his $20.00 in the savings bank, and draw 3% interest rather than employ it in his business, it would be a good plan to set it aside in the savings bank.

Q. Then, it would not be necessary for him to set aside the 20% each year?

A. It would not. In the meantime, he would have lost the profit on his business which he could derive from the use of $100.00 in in his business for a part of five years.

1695 Redirect examination by Mr. GRANBERY:

Q. Mr. Wilkinson, who employed you to make the examination of the complainant company's affairs in 1900?

A. Mr. R. N. Sims, then Chairman of the Louisiana Railroad Commission.

Q. How did Mr. Sims happen to know you?

A. I was introduced to Mr. Sims at the office of one of the insurance companies in New Orleans by the Hon. Eugene J. McGivney, Assistant Secretary of the State of Louisiana, and ex-officio Commissioner of Insurance under the then recently enacted law creating that office.

Q. Had you been doing any work for the Insurance Commissioner?

A. At that time I was examining the accounts of the fire insurance companies domiciled in the State of Louisiana, on behalf of the State Insurance Commission.

Q. At that time were you acquainted with anybody connected with the complainant company?

A. I was not.

Q. Did Mr. Sims state to you when he employed you that it had been agreed that your compensation would be divided equally between the Company and the Railroad Commission?

A. I do not think so.

Q. When did you first learn that that expense was to be divided between the two parties?

A. I learned that later when I was in Nashville, and I wanted some money. I asked Mr. Sims for an advance on account of expenses, and he said he would let me know later, and when he did let me know he at that time advised me in Nashville that he had ar-

ranged that half of my remuneration would be borne by the Company. That is my recollection.

Q. There was no law suit about that investigation?

A. Not to my knowledge.

Q. This deposition you have given in 1907, was that in
1696 connection with this same matter or another matter?

A. I believe it was seven years later; my recollection of it is, that this deposition was made in regard to proceedings that were had in connection with another matter.

Q. In this same deposition where you speak of 10% being the proper charge for depreciation, I will ask you to quote your answer to the question "State any fact within your knowledge which will add to or elucidate any of the foregoing interrogatories."

A. In writing off 10% per annum on the diminishing value for depreciation, the plant account is not written off entirely in ten years, as some suppose, but it is gradually reduced by the same which diminishes each year, thus the charge for the first year is 10%; that for the third year is 8 1-10%; for the seventh year, 5.314%; for the tenth year, 3.874%, and for the fourteenth year, 2.542% of the original principal; thus, at the end of the fourteenth year there remains 22.9% of the original principal. In making the above answer I referred to the so-called "Plan B," diminishing value plan, referred to on page 61 of my individual report.

Q. Now, Mr. Wilkinson, you have had a simple proposition of a machine which wears out all at the same time, and has to be replaced again—can that be compared or likened to a telephone plant?

A. The illustration used is about as far removed from a telephone plant as I can conceive one.

GEORGE WILKINSON.

1697 EXHIBIT #1, WITH DEPOSITION OF WILKINSON.

Incorporated.

Accountants-Auditors.

E. W. Farnham, General Manager.
Cable Address, Muauco.

PAUL JONES BUILDING,
LOUISVILLE, KY., *July* 9, 1909.

Honorable Henry Burnett, Special Master, Cumberland Tel. & Tel. Co. vs. City of Louisville, Ky., Louisville, Ky.

DEAR SIR: Enclosed herewith I have the honor to hand to you for your information, copy of Joint Report of comparisons of figures as between the accountant for complainant and accountant for the defendant in the above entitled action, having attached thereto state-

ment of reference to the Joint Report as it was understood during the conference.

We are now compiling our individual or separate report to meet the conditions of the Joint Report and as contemplated therein, which we will present to you at the earliest possible moment with full explanation of variations and our reasons therefor.

Very truly yours,

(Sgd.) E. W. FARNHAM,
Representing Defendant.

Copy.

1698 THE CUMBERLAND TELEPHONE & TELEGRAPH COMPANY
vs.
CITY OF LOUISVILLE.

To the Honorable Henry Burnett, Special Master, Louisville, Ky.

DEAR SIR: Acting in accordance with your instructions to us, given in conformity of order dated April 2nd, 1909, by the United States Circuit Court, for the Western district of Kentucky, at Louisville (Hon. Walter Evans, Judge), we the undersigned Accountants, for the Complainant, and for the Defendant respectively, have made an examination of the books and account of records of the Cumberland Telephone & Telegraph Company, kept in the principal office of that Company at Nashville, Tennessee, for the purpose of determining the cost to the complainant of its plant and property in the City of Louisville, Kentucky, to date of March 6th, 1909, and the Income derived from the operation of said property for the years 1905, 1906, 1907 and 1908.

The Examination.

Said examination was begun on May 4th, 1909, and has been in progress ever since that date. We now beg to report as follows:

Said examination involved a close enquiry into all matters relating to the business of the Complainant in the City of Louisville, including the books of account, vouchers, payrolls, agents' reports and other original sources of information, kept at the principal office of the Complainant in the City of Nashville, Tennessee.

Answering each of the several paragraphs of the Order of Court, dated April 2nd, 1909, by a separate section, we beg to report as follows:

Section #1.

The Accountants have drawn off an abstract from a subsidiary book of account, kept for the purpose, which shows the cost to the Complainant, of its telephone plant in Louisville, as of record and as indicated by the Vouchers and Payrolls.

1699 The total cost thus recorded, up to March 6th, 1909, is the sum of $1,700,536.91: to this has been added the sum of $4,707.16 (Voucher #2588—April 17th, 1902, for Switchboard

Equipment which should have been charged to Louisville, but was improperly charged to Nashville).

From these amounts we have deducted a total of $2,852.39, in respect of certain items improperly distributed against "Construction Account—Louisville."

Synopsis of the Above.

Shown by the books	$1,700,536.91
Add Equipment	4,707.16
	$1,705,244.07
Deduct Sundry Items	2,852.39
Corrected Total	$1,702,391.68

Expended on Construction, 1900 to 1908.

The Accountants agree that the books of account of the Complainant shows that the amount expended on Construction from 1900 to 1904 was the sum of	$857,310.39
and the amount similarly expended from 1905 to 1908, was the sum of	166,234.95
Making a Grand Total for the 9 yrs. of	$1,023,545.34

Stated by years, the amount so expended was as follows:

Expended in 1900	$166,775.23	
do. do. 1901	178,549.14	
do. do. 1902	217,128.05	
do. do. 1903	163,486.84	
do. do. 1904	131,371.13	
Total 1900 to 1904		$857,310.39
Expended in 1905	$60,691.21	
do. do. 1906	89,125.15	
do. do. 1907	20,770.42	
Taken out during 1908, net	4,351.83	
Total 1905 to 1908		166,234.95
Total		1,023,545.34

1700 Section #2.

We have discussed the method to be followed in arriving at an estimate of the present value of the telephone plant of the complainant in the City of Louisville, and we find that we cannot agree as to said method.

Section #3.

We agree that the Gross Earnings of the Complainant, during the four years 1905, 1906, 1907 and 1908, as shown by the books of the Complainant, and as classified therein, and placed to the credit of Louisville Exchange, including 15% of the Toll Earnings, were as follows:

1905	$269,823.38
1906	294,498.44
1907	319,758.51
1908	325,838.30

The Gross Earnings are classified as follows:

	1905	1906	1907	1908
1. Exchange Service	$264,675.13	$280,076.12	$297,501.14	$307,431.85
2. Proportion of Toll Earnings	6,539.92	7,064.91	8,030.15	7,632.11
3. From Telegraph Companies	983.88	1,018.12	939.48	761.79

Year 1907	246,598.61

Section #4, Probable Result for 1910.

We have made a calculation showing the amount in which the Complainant's Gross Earnings will probably be cut down by the enforcement of the rates fixed by the Ordinance adopted by the Legislative body of the City of Louisville and approved by the Mayor March 6th, 1909. We have used as the basis for this calculation, a typewritten list of the names of the Subscribers to the Louisville Exchange on April 1st, 1909, copies from the records of the Company kept at Louisville Exchange, the correct amount chargeable to Subscribers for the month of April (face of contracts) is the sum of $27,270.31.

1702 To this list we have applied the maximum rates fixed by the Ordinance and we find that the total gross earnings on this same list of Subscribers for the same month of April, 1909, at the Ordinance rate, would be only $20,486.92 net.

The terms of all telephone rentals provide for an allowance in the form of cash discount of fifty cents a month on all rental contracts that are paid three months in advance.

The actual cash discounts allowed to the Louisville Subscribers during the three months, March, April and May, 1909, in respect of quarterly payments made in advance, came to $7,919.74. One-third of this sum—$2,639.91—would be a fair deduction to make from the Gross Earnings for the one month of April (face of contracts).

This would, leave the sum of $24,630.40 to represent the measure of the Earnings actually collectible for April, 1909, under the contracts in force on April 1st, 1909.

Thus we have this calculation:

Gross Earnings for April, 1909.

At Contract Rate (after deducting Discounts)	$24,630.40
At Rates Fixed by Ordinance (which are net)	20,486.92
Loss of Gross Earnings for one month	$4,143.48

This is equal to a loss of $49,721.76 a year.

Against this probable loss of $49,721.76 a year there will probably be an increase in gross earnings in respect of the natural growth of the business and the increased number of subscribers and to the lowering of the rates upon the enforcement of the Ordinance. What this increase will amount to we cannot definitely determine.

The foregoing joint report shows the money charged as the cost of the plant at Louisville: the Gross amount credited to the Louisville Exchange as Earnings, and the Operating Expenses charged

as appertaining thereto; as recorded on the books of the Cumberland Telephone and Telegraph Company. It is not an agreement that the said accounts are properly distributed or charged as we believe they should be, therefore, the right is reserved by each
1703 of the undersigned to make such individual report and statements relative thereto, as each may feel justified in doing.

Section #5, Charge for Depreciation.

Having discussed the matter of Depreciation, we find we cannot agree in regard thereto.

Section #6 to Section #11.

We agree that the remaining paragraphs, from #6 to 11 inclusive, of the Order of Court dated April 2nd, 1909, do not call for any report from us.

Respectfully submitted.

On behalf of the Complainant:

WILKINSON, RECKITT, WILLIAMS CO.,
Certified Public Accountants.

Witness:

A. D. HAMMOND.

On behalf of the Defendant:

E. W. FARNHAM.

Witness:

H. B. WARREN.

Dated at Nashville, Tennessee, 7th day of July, 1909.

1704 E. W. Farnham signed the above joint report because ordered by the Master to make a joint report with the Complainants' accountant, if any facts could be agreed on between them and for no other reason.

The facts agreed to in the above report go to the extent only that, as the books are kept, they show the figures named in this report. A proper charge and allocation of the true cost of its plant in the city of Louisville; a true statement of its gross and net earnings and a true statement of the operating expenses of its Louisville plant and business as shown by actual records of the company, will show results different from those stated in the foregoing report, which results—with the reasons therefor—will be fully set out in a separate report which will be filed by said Farnham as a supplement to and as a part of the foregoing report and as contemplated therein.

CUMBERLAND TELEPHONE AND TELEGRAPH COMPANY
vs.
THE CITY OF LOUISVILLE, KENTUCKY.

NASHVILLE, TENNESSEE, *July 12th*, 1909.

To the Honorable Henry Burnett, Master Commissioner, Louisville, Kentucky.

DEAR SIR: We now beg to make our individual report to you, on behalf of the Cumberland Telephone and Telegraph Company, the Complainants in the above entitled case.

Under date of Nashville, Tenn., 7th July 1909, we signed a Joint Report upon the examination we have made of the books and records of the Complainant, said Joint Report being also signed by Mr. E. W. Farnham, expert accountant, selected by the City of Louisville, defendant in the above entitled case.

Said Joint Report was, in accordance with your instructions (Order dated the 12th day of June 1909), transmitted by registered mail, to yourself, as Master Commissioner, from Nashville on July 9th 1909.

It will be necessary, in making this individual report, to refer repeatedly to said Joint Report and to quote extensively
1709 therefrom. To facilitate the reading of this report in conjunction with said Joint Report, the latter is reproduced herein, in full, section by section—in purple.

The examination of the books and records of the complainant, made in accordance with your instructions, was begun on May 4th 1909, at the head office of the complainant. There were then present, on behalf of the defendant, Mr. Edwin Wilson Farnham, General Manager of The Mutual Audit Company, of Louisville, and a member of his staff, Mr. Henry B. Warren; also, on behalf of the complainants, George Wilkinson, C. P. A., Senior member of the Firm of Wilkinson, Reckitt, Williams & Company, Certified Public Accountants, of New York City.

A conference was held between the above named to determine the scope of the examination of the complainant's books and records, and the methods to be pursued in making the same. As a result of this conference, and for the purpose of expediting said examination, a typewritten memorandum of four sheets was drawn up, dated and signed thus:—

Nashville, Tenn. E. W. Farnham.
May 6th, 1909. Wilkinson, Reckitt, Williams & Co.

A copy of this Accountants' Agreement or "Memorandum" was mailed to you by Mr. E. W. Farnham, under date Nashville, Tenn., May 6th 1909, "for your information and approval or otherwise."

It will be necessary, in making this individual report, to refer repeatedly to said Accountants' Agreement and to quote extensively therefrom. To facilitate the reading of this report, such quotations are made—in green.

1710 *Quotation from Joint Report.*

Acting in accordance with your instructions to us, given in conformity with Order dated April 2nd 1909, by United States Circuit Court for the Western District of Kentucky, at Louisville (Honorable Walter Evans, Judge), we, the undersigned, Accountants for the complainant and for the defendant, respectively, have made an examination of the books of account and records of the Cumberland Telephone and Telegraph Company kept at the principal offices of that company, at Nashville, Tennessee, for the purpose of determining the cost to the complainant of its plant and property in the City of Louisville, Kentucky, to date of March 6th 1909, and the income derived from the operation of said property for the years 1905, 1906, 1907 and 1908.

The Examination.

Said examination was begun on May 4th 1909, and has been in progress ever since that date. We now beg to report as follows:—

Said examination involved a close inquiry into all matters relating to the business of the complainant in the City of Louisville, including the books of account, vouchers, payrolls, agents' reports and other original sources of information, kept at the principal office of the complainant in the City of Nashville, Tenn.

Answering each of the several paragraphs of the Order of Court, dated April 2nd 1909, by a separate section, we beg to report as follows:—

(Joint report continued on page #16.)

Section #1.

Cost of the Plant.

Order of Court dated April 2nd 1909, calls for:—"The cost to " the complainant of its plant and property in the City of Louisville, " Kentucky * * *."

1711 The permanent plant and property of the complainant, in the City of Louisville, consists of a modern telephone plant, together with a Main Exchange and three subordinate Exchanges, known respectively as "South," "East" and "West" Exchanges; a Warehouse; a Stable; and the lands whereon these buildings stand; also a pole storage yard.

Cost to March 6th, 1909.

Up to date of March 6th 1909, this plant and property had cost the complainant the sum of $1,864,583.10, made up as follows:

Telephone Plant.

Aerial Construction	$831,067.48	
Equipment	571,750.86	
Underground Construction	287,910.91	
Tools, Teams and Furniture	11,662.43	
Total Plant		$1,702,391.68

Land and Buildings.

Main Exchange	$103,769.20	
South Exchange	15,195.00	
East Exchange	17,734.11	
West Exchange	15,964.10	
Warehouse	8,025.27	
Stable	1,503.74	
Total Buildings		162,191.42
Total Cost to the complainant of its plant and property in the City of Louisville, Ky., up to March 6th, 1909		$1,864,583.10

1712 In order to satisfy ourselves that the figures shown in the books of the Company truly represent the cost to the com-

plainant of its plant and property in the City of Louisville, we have examined carefully (First) the manner in which the complainant acquired said property; (Second) the initial cost to the complainant of said property at that time; (Third) the expenditures made by the complainant, from 1900 up to 1909, in the form of new construction.

Sub-Section #1 (*a*)—How the Property was Acquired.

The complainant acquired possession of its plant and property in the City of Louisville, as it then stood (December 1899), by making a consolidation with The Ohio Valley Telephone Company.

Negotiations looking to a consolidation of the two companies had been in progress for six months, leading up to meetings of the respective boards of directors of the two telephone companies in December 1899.

Consolidation of Companies.

At these meetings the officers of the respective telephone companies were authorized and directed to effect the consolidation of the two existing companies, under the name of the Cumberland Telephone and Telegraph Company.

The consolidation of the two telephone companies was duly approved by the Stockholders of the Cumberland Telephone and Telegraph Company on January 25th 1900, and by the Stockholders of The Ohio Valley Telephone Company on January 26th 1900,
1713 after all legal formalities had been complied with and duly recorded.

As a necessary part of the consolidation, the entire property and assets of The Ohio Valley Telephone Company were taken over by the new Cumberland Telephone and Telegraph Company, and with them, all the liabilities of the old company were assumed. It then and there became necessary to consolidate the books of account of the two telephone companies, and this was done as of date January first 1900.

Accordingly, all the current assets, consisting of supplies, accounts receivable and cash, and all the current liabilities, consisting of notes and accounts payable, were taken over and entered upon the books of account of the Cumberland Telephone and Telegraph Company, as of date January 1st 1900. These current assets and current liabilities have since been liquidated.

The real and personal property, up to that time, belonging to The Ohio Valley Telephone Company, was taken onto the books of the complainant at cost, which included the then existing premium on the company's shares, as established in the open market, as hereinafter set forth.

Purchase of Shares in Ohio Valley Co.

Acting in accordance with instructions from the Directors of the complainant company, the President and one of the Directors had, from time to time, from June to December 1899, purchased an aggregate of 3557 shares of the capital stock of The Ohio Valley Telephone Company.

702 shares bought at $140	$98,280.
2855 shares bought at $141	402,555.
Total—3557 shares for	$500,835.

1714 Some of these shares were purchased by the President and some through the First National Bank of Louisville. All these shares were bought in the open market and paid for in money, which established a market price, at that time, for the shares of The Ohio Valley Telephone Company of $140. and $141. per share.

The stock of the Cumberland Telephone and Telegraph Company was first quoted on the Boston Stock Exchange in 1901, and therefore, no official quotation is available for 31st December 1899. The value of the Cumberland stock appears to be satisfactorily established at $140. by the fact that the holders of The Ohio Valley Telephone Company stock accepted shares of the Cumberland Company on an even exchange, and at a time when The Ohio Valley stock had just sold, in large blocks, at $140.

After the above described purchase of 3557 shares had been made, there remained outstanding 1937 shares of The Ohio Valley Telephone Company's capital stock, of which the American Telephone and Telegraph Company held 1920 shares.

In pursuance of an agreement so to do—1937 shares of the Capital Stock of the Cumberland Telephone and Telegraph Company were issued in exchange for the 1937 shares of The Ohio Valley stock, (an even exchange).

The Articles of Consolidation were drawn, approved by the respective boards of directors, and consented to, in writing, by more than two-thirds of the shareholders of the two companies. The basis of consolidation was one share of the consolidated company's stock for each share of the old companies' stock.

1715 *Sub-section* #1 (*b*).

Property Acquired.

The plant and property thus acquired by the complainant in 1900, consisted of lands and buildings in Louisville, Ky., and in New Albany, Ind., also Aerial Construction, Underground Conduits, Underground Cables, Exchange Equipment and Subscribers' Stations at Louisville and at other points in Kentucky and Southern Indiana; also Toll Line Construction. These telephone plants were located at:—

Louisville, (Ky.) with 3536 stations.
New Albany, (Ind.) with 614 stations.
Jeffersonville, (Ind.) with 383 stations.
Six other Exchanges, with 727 stations.

In addition to the lands, buildings and constructed telephone plants thus acquired, the complainant secured the sole ownership of a prosperous, dividend paying business, and the goodwill attach-

ing to telephone plants in actual operation in nine cities, with a total of 5260 stations.

Sub-section #1 (*c*).

Initial Cost to Complainant.

The properties thus acquired were taken onto the books of the Cumberland Telephone and Telegraph Company at cost to the Complainant—made up as follows:—

(A) Lands and Buildings	$115,765.46
(B) Telephone Plants	$998,817.55

Should be 1,077,667.08 (see No. 1-A).

1716 (A) Land and Buildings Made up of Louisville Property.

Main Exchange:	
Land and three-story brick building 44′ by 210′ on Jefferson Street, in the City of Louisville. This property had been purchased, on June 3rd 1899, by The Ohio Valley Telephone Company, from James B. Speed and others, for the sum of	$100,000.00
South Exchange:	
Lot 50′ by 200′ on Ormsby Street, in the City of Louisville, with a cottage, purchased in April 1898, for	4,500.00
Warehouse:	
Lot on Green Street, in the City of Louisville, with a building, used as a warehouse (afterwards—March 12th 1904—sold for $3,500.)	3,534.50
Total	$108,034.50
New Albany Property:	
Land and Building used as a telephone Exchange at New Albany	7,730.96
Total Land and Buildings acquired by the Complainant from The Ohio Valley Telephone Company, on January 1st 1900	$115,765.46

(B) Telephone Plants.

We have made certain enquiries from the President of the Cumberland Telephone and Telegraph Company, who conducted the negotiations for the consolidation of the two telephone companies in 1899, and from the Auditor of the Company, as to the terms and conditions of said consolidation, and as to the way in which the

cost of the telephone plants ($998,817.35) was made up. We have also perused the minute book, kept by the Secretary of The Ohio Valley Telephone Company, in which are recorded the proceedings of Directors' meetings and of the Shareholders' meetings.

1717 We have also examined the books of account of The Ohio Valley Telephone Company, which are in the possession of the complainant, and we find that the actual cost of construction of these several telephone exchanges and of the toll lines, built by that company, as recorded in its books of account, up to 31st December 1899, was the sum of $773,702.44, made up as follows:—

Balance of the Actual Cost of Construction, left standing on the books of The Ohio Valley Telephone Company, on 31st December 1899, (see "Ledger C," page #77) as follows:—

Aerial Construction	$149,740.64	
Underground Conduits	108,313.61	
Underground Cables	126,512.24	
Equipment	128,223.45	
Toll Line Construction	125,406.80	
Balance of Account, 12/31/99		$638,196.74
Portion of the Actual Cost of Construction, written off the account to dispose of the profits (see page #11 for explanation)		135,505.70
Total Cost to The Ohio Valley Telephone Company of its telephone plant and equipment, up to December 31st 1899, as recorded on the books of that Co.		$773,702.44
Add		
Additional Cost of the Plant and Property to the Complainant, in respect of the Cash premium paid on the purchase of 3557 shares of The Ohio Valley Telephone Company Stock, at a cost of $500,835		145,135.00
Carried forward		$918,837.44
1718 Brought forward		$918,837.44
Add		
Additional Cost of the Plant and Property to the Complainant, in respect of equal premium (approximately) on the 1937 shares of the Cumberland Telephone and Telegraph Company Stock, issued in exchange for Ohio Valley Stock;—computed at		79,979.91
Total Cost to the Complainant of the telephone plants acquired from The Ohio Valley Telephone Company, in December 1899		$998,817.35

Explanation Regarding $135,505.70. it is Portion of the Actual Cost of Construction.

The following amounts, being part of the actual cost of the telephone plant at Louisville, were written off Construction Account, on the books of The Ohio Valley Telephone Company, on the dates named, by order of the Directors of the Company.

December 31st 1891	$15,000.00	
December 31st 1892	25,000.00	
December 31st 1893	25,000.00	
December 31st 1894	29,505.70	
Total to Date, 12/31/94		$94,505.70

Please note at this point that the last named entry (12/31/94—$29,505.70) was made in accordance with the resolution of the Directors at a meeting held February 13, 1895, and that it disposed of the entire credit to Surplus Account.

Carried forward		$94,505.70
1719 Brought forward		$94,505.70
December 31st 1895	$12,000.00	
December 31st 1896	14,000.00	
December 31st 1897	9,000.00	
December 31st 1898	6,000.00	
Total 1895 to 1898		41,000.00
Total written off		$135,505.70

Ostensibly these sums were written off Construction Account to provide for "Depreciation," but as a matter of fact, we are informed that it had been the fixed policy of the Board of Directors of The Ohio Valley Telephone Company to dispose of the surplus net profits of the business, after paying 7% per annum, in just this way.

Dividends Paid (Ohio Valley).

From 1890 to 1898, inclusive, The Ohio Valley Telephone Company paid to its Shareholders regular quarterly dividends of $31,500, every year, except in 1894, when the fourth quarterly dividend was passed making only $23,625, paid for that year.

In 1899, two quarterly dividends of $7,875, each, were paid, making $15,750, for that year.

In all, from 1890 to 1899, inclusive, the Shareholders received $291,375, in dividends, these being at the uniform rate of 7% per annum.

After paying these dividends, there remained a considerable surplus of Undivided Net Profit. This surplus was written off to "Plant Account," as shown in the next preceding statement.

In full to date 12/31/94	$94,505.70
In part to 12/31/98	41,000.00
Together	$135,505.70

1720 No Such Depreciation.

No such charge for Depreciation was called for at all. The amount actually expended by The Ohio Valley Telephone Company upon the up-keep of its telephone plant, was ample to provide for all reconstruction.

Cost of Maintenance and Reconstruction to the Ohio Valley Paid Out of Earnings, Also Entire Plant.

During the ten years immediately preceding the consolidation with the Cumberland Telephone and Telegraph Company, namely from 1890 to 1899 inclusive, The Ohio Valley Telephone Company had expended upon its telephone plant, a total sum of $511,675.66, or equal to an average of $51,167.56 a year. This sum of $511,675.66 included all repairs, maintenance and reconstruction, and, in addition, it included almost all new aerial construction. Not one dollar was added to "Aerial Construction Account" on the books from 1890 to 1897. This actual expenditure, which was all charged against Earnings, is equal to 10.39% per annum of the cost of the plant, as shown by the books.

Cost of Maintenance and Reconstruction to the Complainant.

We wish now to compare the large expenditures of The Ohio Valley Telephone Company for Maintenance and Reconstruction (10.39% of the cost), with the amounts expended for the same purpose by the complainant.

During the four years for which we have examined the accounts of the complainant, namely from 1905 to 1908, inclusive, the complainant has expended in actual repairs, reconstruction and replacement of its telephone plant at Louisville, the total sum of $377,960.55, or equal to an average of $94,490.14 a year.

This actual expenditure was equal to 5.79% per annum on the cost of construction.

1721 As stated elsewhere in this report, a further charge is made against the earnings of the complainant's Louisville plant, to provide for reconstruction of plant and replacement of equipment (see under heading of "Depreciation"). For the four years under review, namely 1905, to 1908 inclusive, this charge amounts to the sum of $301,640.45, or equal to an average of $75,410.11 a year.

It is calculated that the two above-stated amounts taken together ($377,960.55 expended, and $301,640.45 set aside), will provide for

the proper maintenance and complete reconstruction of the property. These two sums taken together make an aggregate of $679,601.00, or equal to $169,900.25 a year. This is equal to a little over ten percent (10%) of the cost of the plant at Louisville.

This provision was ample in 1905 to 1908 for the maintenance and reconstruction of the Louisville telephone plant, while under the control of the complainant, and it goes to show that the amount actually expended by The Ohio Valley Telephone Company for repairing and reconstructing its telephone plant in the City of Louisville (namely $51,167.56 a year, or 10.39% on the cost of construction) was enough to provide for the proper maintenance and complete reconstruction of the property during 1890 to 1899.

We are therefore justified in saying that the amounts written off the "Plant Account" by order of the Directors of The Ohio Valley Telephone Company, from time to time, as detailed on page #11., amounting to a total of $135,505.70, were not a necessary and proper charge for Depreciation or Reconstruction reserve; but rather, as we are in fact informed they were, simply a disposition of the balance of Net Earnings on the business.

It was, we are informed, in view of the facts and considerations above stated, that, in taking the plant and property acquired from The Ohio Valley Telephone Company on 1st January, 1900 onto its books, the complainant disregarded these charges for "Depreciation", and restored the amounts written off "Plant Account" to the cost of the property.

1722 We have shown (on page #11) that the Total Cost to the Complainant of the telephone plants acquired from The Ohio Valley Telephone Company, in December 1899, was the sum of $998,817.35.

This sum was originally entered upon the books of the complainant, on January 1st, 1900, at page #331 of the General Journal, thus:

Exchange Aerial	$469,444.15
Equipment	329,609.73
Toll Line Construction	199,763.47
Total	$998,817.35

Later on, namely on November 4th 1903, when a more definite system of bookkeeping was established, it was found necessary to have a separate construction account for each exchange in the complainant's entire system. At that time, a re-distribution of the cost of the plant acquired from The Ohio Valley Telephone Company, was made on the books of the complainant, resulting in this re-division:

Louisville Exchange (3536 stations):

Aerial	$264,127.37	
Equipment	189,245.37	
Underground	224,981.95	
		$678,354.69

(See note as to apportionment.)

New Albany Exchange (614 stations):		
Aerial	$22,934.13	
Equipment	16,451.51	
Underground	9,843.90	
		49,229.54
Jeffersonville Exchange (383 stations):		
Aerial	$14,305.81	
Equipment	10,262.10	
		24,567.91
Carried forward		$752,152.14
1723 Brought forward		752,152.14
Four Other Kentucky Exchanges (503 stations): Two Other Indiana Exchanges (224 stations):		
Aerial	$27,181.31	
Equipment	19,720.43	
		46,901.74
Total Plant at nine Exchanges		$799,053.88
Toll Line Construction		199,763.47
Total		$998,817.35

Note.—The above reapportionment of the cost of the plant was made on the basis of the number of subscribers at each exchange; except in the case of Louisville. To meet the fact that the cost of construction was very much greater in the City of Louisville, owing to its large number of subscribers, its underground system and multiple switchboard, and the greater cost of construction in a large city; the calculation of cost of that portion of the plant, was made in the ratio of two subscribers to one elsewhere.

So that the number of subscribers, upon which the proportion of initial cost allotted to Louisville, was computed, was taken at 7072.

Cost of the Telephone Plant.

What the Books Show:

The general books of account of the complainant contain one account called "Construction Account", representing the cost to the complainant of all its telephone plants, Louisville included.

The Accountants have drawn off an abstract from a subsidiary book of account, kept for the purpose, which shows the cost to the complainant, of its telephone plant in Louisville, as of record, and as indicated by the vouchers and payrolls. The total cost thus
1724 recorded, up to March 6th 1909, is the sum of $1,700,536.91; to this has been added the sum of $4,707.16 (Voucher #2588 —April 17th, 1902, for switchhboard equipment, which should have been charged to Louisville, but was improperly charged to Nashville).

From these amounts we have deducted a total of $2,852.39, in respect of certain items improperly distributed against "Construction Account—Louisville".

Synopsis of the Above.

Shown by the books	$1,700,536.91
Add Equipment	4,707.16
	$1,705,244.07
Deduct Sundry Items	2,852.39
Corrected Total	$1,702,391.68

Expended on Construction, 1900 to 1908:

The Accountants agree that the books of account of the complainant show that the amount expended on Construction from 1900 to 1904, was the sum of	$857,310.39
And the amount similarly expended from 1905 to 1908, was the sum of	166,234.95
Making a Grand Total for the Nine Years, of	$1,023,545.34

This total sum expended, during the nine years, from 1900 to 1908, was paid for:

Aerial Construction	$565,790.99
Equipment	383,292.07
Underground Construction	62,928.96
Tools, Teams & Furniture	11,533.32
Total Expended in nine years	$1,023,545.34

1725 Quoted from Joint Report:

Stated by years, the amount so expended, was as follows:

Expended in	1900	$166,775.23	
do	1901	178,549.14	
do	1902	217,128.05	
do	1903	163,486.84	
do	1904	131,371.13	
Total 1900 to 1904			$857,310.39
Expended in	1905	$60,691.21	
do	1906	89,125.15	
do	1907	20,770.42	
Taken out during 1908 (net)		4,351.83	
Total 1905 to 1908			166,234.95
Total			$1,023,545.34

Note A.—The Credit to "Construction Account" in 1908 of $4,-351.83, by which the cost of the telephone plant to the complainant was reduced, was made up in this way:

Aerial Construction—Expenditures	$5,332.48
Equipment—Credit (see Note B)	11,430.72
Underground Construction	15.43
Tools and Teams—Credit (see Note C)	48.44
Furniture and Fixtures (see Note D)	1,779.42
Balance (Credit)	$4,351.83

Note B.—The credit of $11,430.72 to "Equipment" arises as to $10,906.39 in respect of station equipment taken back from Louisville subscribers who have discontinued the service; as to $1,472.68 in respect of office furniture, transferred to a separate classification in 1908, and other credits. Against these credits a certain amount of new equipment has been installed.

1726 Note C.—The credit of $48.44 to "Tools and Teams" arises as to $1,200 in respect of two Ford Automobiles transferred during 1908, from Louisville to Nashville; and as to $727.31 in respect of sundry tools returned by construction gangs to the Supply Department, upon completion of construction work. Charges amounting to $1,878.87 were made to "Tools and Teams" during 1908.

Note D.—"Furniture and Fixtures" occurs for the first time, as a separate classification in 1908. Same had previously been included in "Equipment". In 1908 the sum of $1,472.68 was transferred from "Equipment" and $306.74 more was expended.

Expended on Construction in 1909.

Between January 1st and March 6th 1909, the complainant made further expenditures on its telephone plant in the City of Louisville, amounting to the sum of $491.65, as follows:

On Telephone Plant—	
Aerial Construction	$1,149.12
Equipment—taken out	786.58
Tools and Teams	103.19
Furniture and Fixtures	25.92
Total Expended on Plant in 1909	491.65

Summary of the Cost of Plant.

The cost of the Telephone Plant owned by the complainant in the City of Louisville on March 6th, 1909 ($1,702,391.68) is therefore made up thus:

Acquired in 1899 from The Ohio Valley Telephone Company (particulars on pages #3 to #16, inclusive)	$678,354.69

Additional Expenditures made by the Complainant:

1900 to 1904 inclusive	$857,310.39	
1905 to 1908 inclusive	166,234.95	
Jan'y 1 to March 6, 1909	491.65	
		1,024,036.99
Total Cost to the Complainant of its telephone plant in the City of Louisville, Ky., up to March 6th, 1909		$1,702,391.68

1727 No Overhead Charge.

Nothing whatever has been added to this, the actual cost of Materials, Labor and direct expenses of Construction. No charge has been made in respect of Executive Management Expenses, Interest on capital while construction was in progress, or other overhead charges.

Cost of Lands and Buildings.

The cost to the complainant of its lands and buildings used exclusively for the purposes of its telephone business, up to March 6th 1909, was the sum of $162,191.42, made up as follows:

Acquired in 1899 from The Ohio Valley Telephone Company (particulars on page #9 of this report).		$108,034.50
Additional Expenditures made by the Complainant:		
1900 to 1904 inclusive	$49,136.77	
1905 to 1908 inclusive	3,670.15	
January 1st to March 6th 1909	1,350.00	
		54,156.92
Total cost to the Complainant of its Lands and Buildings in the City of Louisville, Ky., up to March 6th 1909		$162,191.42

Synopsis.

Total cost of the Telephone Plant	$1,702,391.68
Total cost of Lands and Buildings	162,191.42
Grand total cost to the Complainant of all its plant and property in the City of Louisville, Kentucky, up to March 6th, 1909	$1,864,583.10

1729 Explanation of Method Followed.

Quotation from Accountants' Agreement:

"Cost of Plant—

"(c) Prepare a continuous statement of the Construction Account at the Louisville Exchange, from January 1st 1900, with dates and voucher numbers and other references in detail, showing in separate columns cost of construction—"Aerial", "Equipment", and "Underground."

"(d) Upon the completion of this statement for a period Accountants will designate thereupon and call for such vouchers as they wish to examine.

"(e) The Abstract of Ledger Account to be brought down to date of March 6th 1909.

"(f) Accountants will verify the Ledger Abstract with original payrolls and original vouchers, to such an extent as may be mutually agreed upon as the work progresses.

"(g) Accountants will make such analysis and redistribution of charges made to "Construction Account" as in their judgment is right and proper."

By mutual consent of the Accountants, the employees of The Mutual Audit Company, acting under the direction of Mr. E. W. Farnham, expert accountant selected by the City of Louisville, made the Abstract above referred to, exactly as agreed on May 6th 1909.

Remark: Mr. Warren and Mr. Castleman spent many days making this Abstract.

On behalf of the complainant, we have examined said Abstract and compared it with the books of the company, and we find same is correct.

In the course of the examination, and with the object of satisfying ourselves definitely that the books of account of the complainant are correctly kept, we called for the original vouchers and original payrolls, covering the entire period, from January 1900 to December 1908, inclusive.

A few vouchers in January 1900 could not be found, as these were part of the old records of The Ohio Valley Telephone Company.

1730 With this exception all vouchers and payrolls requested were produced. These were examined most carefully, the original papers attached to the vouchers were scrutinized and notes made in regard to any apparent irregularity.

Remark: Mr. Warren and Mr. Castleman worked industriously for many days on a detailed examination of these vouchers and payrolls and the relative papers attached thereto.

Subsequently, we examined all the vouchers and payrolls covering the charges for (1) Supplies and Materials used at Louisville; (2) Interior Equipment purchased for Louisville from the Western Electric Company; (3) Payrolls for Construction work in the City of Louisville. We have compared these Vouchers and Pay rolls with the Abstract before mentioned, and we find same to have been correctly recorded.

We also examined the detailed records of the Supply Department and verified the charges to "Louisville Exchange—Construction Account" for construction materials used. We were able to check these charges from June 1903 to March 1909. The record was found complete and in good order. The earlier records were not available.

In conducting this part of the investigation, we examined vouchers and payrolls for an aggregate sum of $944,667.64. This is 92% of the total sum expended by the complainant on its telephone plant in the City of Louisville during the nine years from 1900 to 1908, as shown by the Joint Report (see page #17).

1731 Charges Objected To.

During the progress of their detailed examination of the vouchers above referred to, the employees of The Mutual Audit Company took exception to certain payments charged to "Louisville Exchange—Construction Account", on the ground that the amounts or, in most cases, portions of the amounts so charged, should have been charged to other exchanges than Louisville.

Having looked into the facts, we find that the above contention is well founded and we have accordingly made due allowance for the full amount claimed, by deducting same from the Cost of Construction, as recorded on the books of the Company. This deduction is shown in the Joint Report (see page #17).

The full list of these items follows:

Year. Month.	Voucher.	Chargeable to—	Classification.	Amount.	Part of*

1733 *Section #2.*

Valuation of Property.

Order of Court dated April 2nd 1909, calls for: "The fair valua-
"tion of the plant and property of the complainant employed in its
"business in said City on March 6th 1909 * * *".

Quotation from Accountants' Agreement:

"(*a*) Accountants agree that "a fair valuation of plant and property" can only be arrived at by a detailed physical appraisal of the said property.

"(*b*) Accountants agree on the other hand that they can and will produce a detailed statement showing the original cost of the property as of record, brought down to date of March 6th 1909, as shown by the records, vouchers, payrolls, etc. of the Company, subject to their making such changes and modifications as they deem right and proper."

Quotation from Joint Report:

We have discussed the method to be followed in arriving at an estimate of the present value of the telephone plant of the complainant in the City of Louisville, and we find that we cannot agree as to said method.

On behalf of the complainant, we consider it our duty to provide in this, our individual report, such facts and figures as may aid the Master Commissioner in determining what would be "the fair valuation of the plant and property of the complainant".

(First.) Telephone Plant.

Condition of Plant.

We learn, in answer to our inquiry in this regard, that the telephone plant owned and operated by complainant in the City of Louisville, has been maintained in the highest state of efficiency and that the equipment and apparatus in use, in all exchanges and at subscribers' stations, is the most modern known to the art of telephony.

Maintained Out of Revenue.

This condition has been maintained out of revenue. The cost of all current repairs and of keeping the plant in efficient
1734 working condition, has been charged to "Maintenance". It equals 3.41% of the average cost of the plant in service.

The amount expended for actual reconstruction of plant, replacing equipment and rebuilding aerial or underground construction, has been charged to "Reconstruction". It equals 2.38% of the average cost of the plant in service.

Equipment Taken Out.

Where equipment and apparatus has been taken out of service the cost of the same has been credited to "Construction" and charged

to the Supply Department. This was particularly noticeable in 1908, when an unusually large number of subscribers in Louisville discontinued the service. In that year a total of $10,906.39 was credited to Construction Account (Louisville) in respect of subscribers' station equipment taken out.

Plant Actually Cost in Cash.

In the foregoing pages we have shown that the total cost to the complainant of its telephone plant in the City of Louisville, up to date of March 6th 1909, was the sum of $1,702,391.68 (see page #4).

We have also shown that this entire amount was for actual expenditures of materials, labor and direct expenses of construction and was paid in cash; except that part of the initial purchase which was paid with 1937 shares of Cumberland stock.

We have also shown that nothing whatever has been added to the cost of this Louisville plant, in respect of Executive management expenses, Interest on capital while construction was in progress, or other overhead charges.

1735 (Second.) Lands and Buildings.

In Section #1 of this report, we show that the Real Estate owned by the complainant in the City of Louisville, on March 6th 1909, consisted of certain lands and buildings, used exclusively for telephone business. These had cost the company a total of $162,191.42.

All of this sum had been expended in actual cash, not a dollar being added in any shape or way in respect of executive management expenses, interest, or any other overhead charges.

The Ohio Valley Telephone Co.:	
Paid June 3rd 1899 (for Main Building)	$100,000.00
Paid in 1898 (or before)	8,034.50
The Cumberland Telephone & Telegraph Co.:	
Paid in 1900 to 1904	49,136.77
Paid in 1905 to 1908	3,670.15
Paid in 1909	1,350.00
Total Amount paid in Cash for lands and buildings in the City of Louisville	$162,191.42

No depreciation has been charged in respect of the wear and tear and decay of these buildings.

The income arising in the form of rentals of these buildings has been included in our statement of Income Account.

The examination of the accounts for the last four years, shows that the complainant has drawn out of Louisville, in the form of Net Profit, an amount equal to only .4346 of one percent on the average amount of its investment during that period.

We submit for your consideration the fact that the complainant has drawn practically nothing out of Louisville in excess of the amount needed to provide adequately for the reconstruction of the plant, and that therefore the amount of capital invested in its plant and property in the City of Louisville, is exactly the
1736 amount the complainant put there, namely the cost to date of March 6th 1909, as shown on page #4:

Telephone Plant	$1,702,391.68
Lands and Buildings	162,191.42
Together	$1,864,583.10

Subsection #2 (*a*).

Working Capital.

In addition to the lands, buildings, telephone plant and equipment, the complainant has at all times invested in the operation of its business, a large amount of actual working capital. This exists chiefly in the form of materials and supplies kept on hand for repairing and maintaining its telephone plants, and in cash in banks and on hand.

On March 6th 1909, the complainant had invested in its business of operating its plant and property in the City of Louisville, including pro-rata proportion of supplies and cash held at headquarters in Nashville, for the benefit of said plant and property, the sum of $69,919.92, made up as follows:

Working Capital for Louisville.

Materials and Supplies in Stock for Repairing and Reconstructing Telephone Plant.

At Louisville, 3/1/09:		
(Apportioned between Louisville Exchange and Louisville District on the basis of the number of stations)	$22,175.15	
At Nashville, 3/1/09:		
(Materials and Supplies in storage and in Machine Shop, held for the use of entire system, apportioned between Louisville Exchange and the rest of the Company's territory on the basis of the number of stations)	17,182.12	
		$39,357.27
Carried forward		$39,357.27

1737	Brought forward		$39,357.27

Cash in Banks and on Hand.

At Louisville:		
Balance March 6th 1909	1,426.30	
At Nashville:		
(Proportion of $457,208.99 cash in the Treasurer's Department, used for the purposes of all exchanges; apportioned between Louisville Exchange and the rest of the Company's territory, on the basis of the number of stations) say	29,136.35	
		30,562,65
Total Available Working Capital held for the benefit of Louisville Exchange, on March 6th 1909		$69,919.92

Grand Total.

The addition of this sum to the actual cost of the plant, as previously stated, makes up a Grand Total of $1,934,503.02, as representing the valuation (taken at cost) of all the plant and property of the complainant employed in its business in the City of Louisville on March 6th 1909.

Capital Invested in Louisville.

Telephone Plant	$1,702,391.68
Lands and Buildings	162,191.42
Working Capital	69,919.92
Grand Total	$1,934,503.02

1738 *Section* #3.

Gross Earnings.

Order of Court dated April 2nd 1909, calls for:—

"The Gross Earnings and the net earnings of the complainant upon its plant and property employed in its business in said City, for the years 1905, 1906, 1907 and 1908, stating separately as to each of said years,* * *."

Quotation from Accountants' Agreement.

"(*a*) Accountants will prepare a classified statement of the gross earnings of the Louisville Exchange, by months.

"(*b*) Also separate statements of gross earnings for each year, for the years 1905, 1906, 1907 and 1908.

"(*c*) Accountants will verify statements of gross earnings from exchange reports or other original data, to such extent as may be considered necessary during the progress of the work."

The above program was carried out to the letter. The several statements called for were made out and verified by our accountants, same are filed as working papers.

Quotation from Joint Report.

We agree that the Gross Earnings of the complainant, during the four years 1905, 1906, 1907 and 1908, as shown by the books of the complainant, and as classified therein, and placed to the credit of Louisville Exchange, including 15% of the Toll Earnings, were as follows:—

1905	$269,823.38
1906	294,498.44
1907	319,758.51
1908	325,838.30

In explanation of the Gross Earnings, stated in the Joint Report as above quoted, we beg to report as follows:—

The complainant collects part of its Gross Earnings from its plant and property in the City of Louisville for the unlimited use of local telephone service, at fixed monthly rentals established by contract; part from local pay stations, and part of said gross earnings for the use of complainant's long distance telephone lines to other points.

The complainant also receives revenue from the American Telephone and Telegraph Company, in respect of terminal facilities for that company's long distance traffic. Also for rentals of
1739 private telephone lines not connected with the exchange. Also for Pole Service, Advertisements in Telephone Directory, Messenger fees, Removals and miscellaneous.

Another part of the complainant's revenue from its property in the City of Louisville, is the income from the Buildings. These buildings are occupied entirely by the complainant and are used exclusively for the purposes of the complainant's telephone business.

The main book of account of the complainant, that is the "General Ledger," contains certain accounts showing the aggregate gross earnings of the company for its entire system. In a subsidiary book of account, are separately shown the gross earnings of each exchange. From this subsidiary book we have compiled a statement of Gross Earnings of the Louisville Plant and Property, of which the amounts quoted from the Joint Report on the previous page, are the yearly totals.

In order to satisfy ourselves that all of the gross earnings of the complainant, upon its plant and property, employed in its business in the City of Louisville, for the years under review, are surely in-

cluded in said statement, we have examined the exchange reports on file in the complainant's office, and other sources of original information. We beg to report that we find the Gross Earnings, as stated in this report, to be correct.

These Earnings have arisen as follows:—

(1st) Exchange Service being the net amount received from the regular subscribers to the Louisville Exchange, in respect of rentals of business and residence telephones; also from the public at pay stations:—

1905	$264,675.13
1906	280,076.12
1907	297,501.14
1908	307,431.85

(From the amount originally charged on the books of the Company to subscribers for rentals, we have deducted all rebates and allowances, also all discounts allowed to subscribers, who pay three months' rent in advance.)

1740 (2nd) Proportion of Toll Earnings calculated at 15% on the amount collected at Louisville for all out-going messages over the complainant's toll lines.

1905	$6,539.92
1906	7,064.91
1907	8,030.15
1908	7,632.11

(The amount on which the 15% is calculated is the total gross amount taken in at the Louisville Exchange and at certain adjacent points, known as "Louisville check stations," less the proportion of such receipts due and payable to connecting telephone companies for the use of part of their lines, also less uncollectible accounts.)

(See further mention as to Toll Earnings.)

(3rd) Receipts from Telegraph Companies—Amounts received from the Western Union and Postal Telegraph Companies for use of telephones in their offices:—

1905	$983.88
1906	1,018.12
1907	939.48
1908	761.79

(The two telegraph companies have contracts with the complainant, under which they are supplied with telephone connections and pay therefor, in lieu of the regular business rates, 15% of the telegraph companies' tolls on telegrams transmitted from any of the complainant's stations, and two cents (2¢) for each telegram delivered by them over the complainant's wires.)

(4th) Originating Commission received from the American Telephone and Telegraph Company for terminal facilities for long distance messages:—

1741

1905	
1906	$2,865.29
1907	3,427.09
1908	3,864.17
	3,272.37

(The amounts above stated were actually received from the American Telephone and Telegraph Company during the period under review. This commission is computed under the terms of a certain agreement by which the complainant receives 15% of the cost of all originated tolls; said commission, however, was not to exceed ten cents (10¢) on any one message. The contract further provided that the complainant should receive an additional 15% on long distance messages originated at attended pay stations (not to exceed 10¢ on any message). The carrying out of this agreement proved to be very cumbersome and laborious, so it was simplified by a supplemental agreement to compute the commission at an average rate of 10.21 cents per outgoing message, which was found to be the average amount of commission per out-going message, allowed under the contract, during the period studied.)

(5th) Private Line Rentals being the amount received from sundry parties for use of private telephone lines not connected with the exchange.

1905	
1906	$1,342.01
1907	1,079.92
	1,153.91

(In 1908 these private line rentals were reported by the Louisville Exchange as part of the "Exchange Service"—same are included in $307,431.85.)

1742 (6th) Pole Service and Attachments—Being amount received from telegraph and other companies for use of poles and for carrying other companies' attachments on complainant's poles.

1905	$953.11	1907	$1,177.75
1906	1,096.28	1908	1,229.99

(7th) List Advertisements—Amount received by complainant for advertising space in the Louisville telephone directory.

1905	$751.83	1907	$2,984.22
1906	2,497.25	1908	3,151.59

(8th) Telegraph Drops—Amount received from sundry parties for rental of "telegraph drops"—lines from the complainant's telephone wires leading to telegraph keys in customers' premises.

1905	$215.49	1907	$2,110.61
1906	976.40	1908	2,130.55

(9th) Messenger Fees.—Amount collected at the Louisville Exchange for messenger service rendered by complainant, in part at Louisville, and in part at other exchanges.

1905	$862.02	1907	$769.15
1906	812.40	1908	658.30

(10th) Removals and Miscellaneous.—Amount received at the Louisville Exchange for removal of subscribers' stations and from miscellaneous sources.

1905	$1,001.12	1907	$3,278.70
1906	680.53	1908	2,682.97

Bad Debts.—From the total of all these Gross Earnings, have been deducted the amount of uncollectible accounts:—

1905	$10,366.42	1907	$2,050.77
1906	4,230.58	1908	3,113.22

1743 The following Classified Summary of Gross Earnings is quoted from the Joint Report.

The Gross Earnings are classified as follows:—

	1905.	1906.	1907.	1908.
1. Exchange Service	$264,675.13	$280,076.12	$297,501.14	$307,431.85
2. Proportion of Toll Earnings	6,539.92	7,064.91	8,030.15	7,632.11
3. From Telegraph Companies	983.88	1,018.12	939.48	761.79
4. From American Telephone & Telegraph Company	2,865.29	3,427.09	3,864.17	3,272.37
5. Private Line Rentals	1,342.01	1,079.92	1,153.91	*
6. Pole Service and Attachments	953.11	1,096.28	1,177.75	1,229.99
7. List Advertisements	751.83	2,497.25	2,984.22	3,151.59
8. Telegraph Drops	215.49	976.40	2,110.61	2,130.55
9. Messenger Fees	862.02	812.40	769.15	658.30
10. Removals and Miscellaneous	1,001.12	680.53	3,278.70	2,682.97
Gross Total	$280,189.80	$298,729.02	$321,809.28	$328,951.52
Deduct Bad Debts	10,366.42	4,230.58	2,050.77	3,113.22
Total Gross Earnings of the complainant as placed to the credit of Louisville Exchange:				
Year 1905	$269,823.38			
Year 1906		$294,498.44		
Year 1907			$319,758.51	
Year 1908				$325,838.30

*In 1908 "Private Line Rentals" were reported from the Exchange and included in $307,431.85 "Exchange Service".

1744 *Sub-Section #3 (a).*

Toll Earnings.

Quotation from Accountants' Agreement:

"Toll Earnings—

"(*d*) Accountants will prepare a statement of toll earnings originating in the Louisville Exchange, showing the total number of calls and the total amount earned thereon, such statement to be made by months, separately for each year, for the years 1905 to 1908.

"(*e*) Such statement to also show the amount credited to Gross Earnings of the Louisville Exchange in respect to commission or percentage of Earnings credited to the Louisville Exchange."

We beg to report upon our findings in this matter. We have examined the original toll reports from the Louisville Exchange, on file in the complainant's office, from April, 1906, to December, 1908, inclusive. The reports prior to April, 1906, are not to be found, and we are informed that same are not kept for a longer period. We have also examined the Vouchers and other original sources of information in this regard.

Number of Toll Calls.

The toll reports above referred to show the number of out-going toll calls from the Louisville Exchange and from certain stations adjacent thereto, whose toll traffic is handled through Louisville—these are known as "Louisville check stations."

The total number of out-going toll messages originated at the Louisville Exchange and at the "Louisville check stations," by years, for 1906 to 1908, were:

	Louisville.	Louisville check stations.
January to March (estimated)	29,805	484
Year 1906, April to December	119,220	1,937
	149,025	2,421
Year 1907	147,558	2,044
Year 1908	115,404	1,474

1745 Method of Handling.

For convenience of bookkeeping, and to save clerical labor, the total gross amounts collected for tolls, on messages going over complainant's long distance wires, are credited on the books to the exchange collecting such amounts.

These tolls are earned for the use of the complainant's long distance telephone lines and may extend throughout the company's

entire system, involving the services of any of the 517 other telephone exchanges operated by the complainant.

It is an essential part of the business of the complainant to render this long distance service to its Subscribers, through their individual telephone stations installed in their places of business and in their residences; also to the public through its pay stations.

The work done by the employees of the complainant, in handling these toll messages, includes making the out-going connections, receiving in-coming calls, making "Toll Tickets," recording charges for tolls, collecting and accounting for amounts received. The expense of rendering these services is included in the operating expenses of the exchange.

Remuneration to Exchange.

It is therefore proper that the exchange should receive some remuneration for the services thus rendered, and for this reason, a proportion of all the tolls collected is credited, in the form of originating commission. The rate at which this commission is computed is designated by the complainant to be fifteen per cent (15%).

The complainant's ground for fixing 15% as a fair basis for the remuneration of its exchanges, for the services they render in handling this long distance traffic, is that this is the rate at
1746 which substantially all connecting telephone companies render similar service at the hands of their exchanges to the complainant, or remunerate the complainant for the latter's service to them.

Rate to Connecting Companies.

We find that the complainant does business with a great many other telephone companies, whose toll lines connect with the complainant's exchanges, at various points throughout the state of Kentucky, excepting Louisville.

19 companies or individuals receive from the complainant a commission of 15% (or less) on original messages.
11 companies or individuals agree to interchange services without charge.
2 companies receive 15% with a small added charge for extra facilities furnished.

35 in all.

We submit for your consideration the suggestion that the foregoing facts establish that the 15% Commission allowed to the Louisville Exchange for the terminal facilities and recording furnished, is a sufficient remuneration for the service rendered.

In this connection, it is proper to bear in mind that the plant and property owned by the complainant in the City of Louisville, includes the switchboard and other exchange equipment used in affording terminal facilities for long distance traffic.

Toll Earnings Classified.

The so-called Toll Earnings have arisen as follows:

(1) Total Gross Amount taken in at Louisville for messages over complainant's long distance lines, as shown by the Toll Reports and the books.

1905	$47,467.80
1906	50,096.78
1907	56,687.10
1908	52,936.88

1747 (2) Total Gross Amount taken in at the Louisville Check Stations (same as above):

1905	$545.18
1906	447.86
1907	356.56
1908	266.76

From the above gross amounts taken in, the following deductions must be made.

(3) Other Line Charges.—Amounts due connecting telephone companies, for their proportion of the gross amount collected:

1906	$201.50
1907	287.47
1908	218.74

(4) Rebates.—Amounts returned or allowed to subscribers in respect of errors, overcharges, or the like:

1905	$1,229.49
1906	407.04
1907	559.07
1908	868.13

(5) Discounts on Coupons.—Pro-rata proportion of discounts on telephone coupons taken in at Louisville:

1905	$1,723.52
1906	2,134.06
1907	2,084.84
1908	50.35

(6 Bad Debts.—Uncollectible accounts written off. These are found, upon examination, to have arisen from toll earnings.

1905	$1,460.52
1906	702.55
1907	577.97
1908	1,185.61

After deducting all of the above (3, 4, 5 and 6) from the gross amounts taken in (1 and 2) we find that the amount on which the originating commission of 15% should be calculated, for each year, is:

1905	$43,599.45
1906	47,099.49
1907	53,534.31
1908	50,880.81

1748 The amount credited to the Louisville Exchange in respect of its services in originating and handling the toll traffic, being 15% on the above, was:

1905	$6,539.92
1906	7,064.91
1907	8,030.15
1908	7,632.11

Recapitulation of Toll Earnings by Years.

Total Gross Amount Taken in for Tolls—

	1905	1906	1907	1908
1. At Louisville	$47,467.80	$50,096.78	$56,687.10	$52,936.88
2. At Check Stations.	545.18	447.86	356.56	266.76
Deduct—				
3. Other Line Charges		201.50	287.47	218.74
4. Rebates & Allowances	1,229.49	407.04	559.07	868.13
5. Discounts on Coupons	1,723.52	2,134.06	2,084.84	50.35
6. Bad Debts	1,460.52	702.55	577.97	1,185.61
Amount upon which the originating commission of 15% is computed	$43,599.45	$47,099.49	$53,534.31	$50,880.81
Amount credited to the Louisville Exchange in respect of originating commission on Tolls	$6,539.92	$7,064.91	$8,030.15	$7,632.11

1749 *Sub-Section* #3 (*b*).

Operating Expenses.

Order of Court dated April 2nd, 1909, calls for: "The Gross Earnings and the Net Earnings of the complainant upon its plant and "property employed in its business in said City, for the years 1905, "1906, 1907 and 1908, stating separately as to each of said "years, * * *."

Quotations from Accountant's Agreement:

"(*h*) Accountants will prepare a classified statement of operating expenses, by months, for each year.

"(*h*-2) Accountants will make their examination of Operating Expenses, in detail, direct upon the book of record, using exchange reports, vouchers, payrolls and other original data. First examining the months of Jan. 1905, May 1906, August 1907, and November 1908.

"(*i*) If, in the progress of the work, it appears to be advisable to examine into the operating expenses for the entire period under review, or any part thereof, such examination shall be made in like manner."

The above program was carried out. The several statements were made by our accountants and the vouchers, payrolls and other evidences were examined by the employees of The Mutual Audit Co.

The expenses of operating the complainant's telephone plant in the City of Louisville is divided under the following principal headings:

(1) General Expenses (pro-rated).
(2) General Expenses (direct).
(3) Operating Expenses.
(4) Maintenance.
(5) Reconstruction.
(6) Instrument Expense.

(1) General Expenses (pro-rated).

These consist of the pro-rata proportion of Executive Management Expenses at the complainant's principal office at Nashville, which include general Officers' Salaries and their assistants, Salaries and Wages of clerical force, Rent, Light and Heat at principal offices, Traveling expenses of Officers, and Incidental Expenses. The apportionment of these expenses, which appertain to the conduct of the complainant's business, as a whole, has been made pro-rata on the basis of the direct charges for Operating, Maintenance and Reconstruction.

1905	$11,205.34
1906	11,270.15
1907	11,226.76
1908	9,531.29

1750 (2) General Expenses (direct).

These consist of direct expenses, mostly incurred at Louisville, in conducting the business of the complainant, which do not come

under the head of "Operating Expenses," "Maintenance," or "Reconstruction." Same include Postage, Printing, Stationery, Directory expenses, including local canvassing, Taxes on real estate, personal property and franchise, and Legal expenses directly applying to the operation of the plant. To a minor extent, as shown below, these general expenses include a pro-rata proportion of expenses, exactly similar in nature to the above, which have been charged for convenience of bookkeeping, to "General Account," because same are chargeable in common to all or many exchanges.

	Direct.	Proportion of "General."	Together.
1905	$26,131.56	$3,139.93	$29,271.49
1906	32,488.17	3,460.20	35,948.37
1907	31,212.54	3,614.37	34,826.91
1908	30,624.43	1,921.03	32,545.46

(3) Operating Expenses.

These comprise salaries of local manager and superintendent, local clerical force; wages of operators, supervisors, and all those directly connected with the operation of the plant; proportion of Rent, Light and Heat of Buildings; Advertising and canvassing for subscribers, and other expenses incidental to the operation of the telephone plant of the complainant in the City of Louisville.

1905	$84,264.54
1906	80,738.06
1907	79,661.04
1908	75,440.28

1751

(4) Maintenance.

The charges under this heading are for current repairs, mending breaks, tightening wires, rectifying "trouble," and generally maintaining the property in first class running order.

The expenses include Salaries and Wages of foremen, linemen, electricians and troublemen; Materials used in repairing the plant and in replacing small parts which wear out in less than a year; Traveling expenses and keep of teams, Repairs to wagons and vehicles; Pole, conduit and roof rent; Fire Insurance on plant; Payments for damages to persons and property and Miscellaneous expenses incident to maintaining the telephone plant in good working condition.

1905	$49,819.14
1906	52,796.93
1907	65,616.31
1908	54,705.91

(5) Reconstruction.

The charges under this heading are for new work put into old places—for replacement of equipment that is worn out or obsolete, for rebuilding construction that has become worn out, except that which is worn out in less than a year.

The cost includes Wages of construction gangs, Superintendence; Wages of foremen, linemen, electricians and others, while engaged on reconstructing plant; Materials used for replacement and reconstruction; Traveling expenses, hire of teams for reconstruction gangs, and other Expenses incidental to rebuilding the telephone plant.

1905	$41,051.02
1906	40,626.07
1907	41,895.10
1908 (estimated)	31,450.07

1752 During the period from 1900 to 1904, no separate account was kept on the complainant's books of the cost of reconstruction. During part of 1904, and all of 1905, 1906 and 1907, a separate account was kept of the cost of reconstruction, but this was again abolished in 1908.

For this reason we are only able to state definitely the amount expended for Reconstruction during 1905, 1906 and 1907, and have estimated the amount for 1908, on the same ratio.

The figure stated above for 1908 was the estimated proportion of the total amount expended for all repairs ($86,155.98).

(6) Instrument Expense.

The amount charged to Operating Expenses each year in respect of what is known as "Instrument Expense" is calculated at four and one-half per cent. (4½%) on the actual gross earnings arising from the use of telephone instruments. "Instruments" are the "transmitters" and "receivers" manufactured under patents owned exclusively by the American Bell Telephone Company. The arrangement to pay this rental to the American Bell Telephone Company was entered into in November 1902 and was made effective as on January 1st 1902. It superseded a previous contract with the same company, under which the complainant paid the Bell Company a flat rental per instrument—at one time one dollar per annum.

Rental is payable on all instruments in use including those used in switchboards and elsewhere upon the company's premises. The American Bell Telephone Company allows the users of instruments under its licenses—known by it as Licensees—to deduct from the amounts on which the rentals are computed, all uncollectible accounts.

We have carefully recalculated the "Instrument Expense" for each of the four years under review, going back to original sources of information for the figures used, and making all necessary and proper allowances.

1753	1905	$11,559.76
	1906	12,518.70
1907		13,372.49
1908		13,722.52

The following quotation from the Joint Report supplies the place of a classified Recapitulation of Operating Expenses by years:

Operating Expenses of the Complainant in Conducting Its Business in the City of Louisville During 1905, 1906, 1907 *and* 1908.

	1905.	1906.	1907.	1908.
1. General Expenses (pro-rated)	$11,205.34	$11,270.15	$11,226.76	$9,531.29
2. General Expenses (direct)	29,271.49	35,948.37	34,826.91	32,545.46
	$40,476.83	$47,218.52	$46,053.67	$42,076.75
3. Operating Expenses	84,264.54	80,738.06	79,661.04	75,440.28
4. Maintenance	49,819.14	52,796.93	65,616.31	54,705.91
5. Reconstruction	41,051.62	40,626.07	41,895.10	31,450.07
6. Instrument Expense	11,559.76	12,518.70	13,372.49	13,722.52
Total Operating Expenses:				
Year 1905	$227,171.29			
Year 1906		$233,898.28		
Year 1907			$246,598.61	
Year 1908				$217,395.53

1754 Remarks.

In the course of the examination of the books of account and vouchers of the complainant, with the object of satisfying themselves that the Operating Expenses of the complainant's plant and property in the City of Louisville were correctly stated in the books, a careful check was made of the vouchers, and payrolls, which are the basis of the original entries for all operating expenses. This examination of the payrolls and vouchers was made by the employees of The Mutual Audit Company, and was very carefully conducted.

As a result of the above scrutiny made of the vouchers and payrolls, several deductions have been made from the operating expenses, shown by the books of account of the complainant.

These deductions are for proportion of Wages paid at Louisville, and charged on the books of the complainant to "Operating Expenses—Louisville," which are considered to apply to work done for neighboring exchanges; also for Traveling and other expenses improperly distributed to Louisville. A great many small items are included in this latter category, but after all, the amount involved is comparatively quite small.

Year.	Proportion of wages applying to neighboring exchanges.	All other items cut out of operating expenses.
1905	$8,435.89	$512.46
1906	9,984.03	609.04
1907	5,725.72	725.19
1908	4,159.24	

1755 *Subsection* #3 (*c*).

Income from Buildings.

As shown in Section #1 of this individual report (at page #4) the complainant owns certain lands and buildings in the City of Louisville. All of these are used exclusively for the purposes of its telephone business.

Gross Rentals.

A monthly rental is charged to the Louisville Exchange in respect of the use of the properties, same being distributed to appropriate Operating and Maintenance Accounts in proportion to the space occupied by the different departments. The rentals so charged have been computed at what is regarded as a fair return on the amount invested. For the four years under review, the amounts so charged for Rental of Premises, have been:

1905	$13,050.00
1906	13,500.00
1907	13,720.00
1908	13,800.00

The amount charged in 1908 ($13,800.) is made up thus:

Main Exchange	$9,000.00
South Exchange	900.00
East Exchange	1,500.00
West Exchange	1,320.00
Warehouse	660.00
Stable	300.00
Material Shed	120.00
Total	$13,800.00

These rentals are part of the income of the complainant upon its plant and property, employed in its business in the City of Louisville. As such they are credited to Louisville in our Statement of Income Account.

1756 Repairs to Buildings.

On the other hand, the cost of maintaining the several buildings and keeping them in tenantable condition, which cost has been borne by the complainant and charged to its general Income Account (not to Louisville), is a proper charge against these rentals. To determine exactly what this cost of maintenance has been, we have drawn off a statement thereof from the books of the complainant, and have examined the relative vouchers. We find that the repairs to buildings owned by the complainant in the City of Louisville, and used for the purposes of its telephone business there, during the four years under review, were:

1905	$1,414.77
1906	445.01
1907	680.24
1908	2,092.48

Taxes and Insurance.

Under the terms of the arrangement, and in view of the amount charged as "Rentals," the Taxes on Real Estate and the Insurance on the buildings, have been charged to the Louisville Exchange, and are included in the Expenses previously enumerated, in this report.

Net Income from Buildings.

There remain, therefore, only the Repairs to take off the Gross Rentals charged, and these being deducted, we find that the Net Income from Buildings, for the four years under review, were:

1905	$11,635.23
1906	13,054.99
1907	13,039.76
1908	11,707.52

1757 *Subsection* #3 (*d*).

Net Earnings.

Order of Court dated April 2nd 1909, calls for:—

"The Gross Earnings and the Net Earnings of the complainant "upon its plant and property, employed in its business in said City, "for 1905, 1906, 1907 and 1908, stating separateley as to each of said "years * * *."

The Net Earnings of the complainant upon its plant and property employed in its business in the City of Louisville, were as follows:—

Year 1905, Loss	$12,158.21
Year 1906, Net Earnings	2,536.30
Year 1907, Net Earnings	10,111.09
Year 1908, Net Earnings	32,162.79

This result is arrived at in the following manner:—

(1) Gross Earnings:

Fully dealt with in Section #3, pages #31 to #36.

1905	$269,823.38
1906	294,498.44
1907	319,758.51
1908	325,838.30

(2) Net Income from Buildings:

Fully dealt with in Sub-Section #3 (*c*), pages #48 to #49.

1905	$11,635.23
1906	13,054.99
1907	13,039.76
1908	11,707.52

(3) Operating Expenses:

Fully dealt with in Sub-Section #3 (*b*), pages #42 to #46.

1905	$227,171.29
1906	233,898.28
1907	246,598.61
1908	217,395.53

1758 (4) Depreciation Reserve:

Fully dealt with in Section #5, pages #59 to #62.

Year.	Reserve for reconstruction.	Amount expended for reconstruction.	Unexpended portion to be charged.
1905	$107,496.55	$41,051.02	$66,445.53
1906	111,744.92	40,325.07	71,418.85
1907	117,983.67	41,895.10	76,088.57
1908	119,437.57	*31,450.07	87,987.50
Total Reserve for Reconstruction	$456,662.71		
Expended portion of Reserve		$155,022.26	
Unexpended portion of Reconstruction Reserve, to be charged against the earnings			$301,640.45

*Estimated.

After deducting the Operating Expenses and "Depreciation" from the Gross Earnings on the Plant and Income on the Buildings, we reach the Net Earnings as previously stated.

Income Account.

Credits.

	1905.	1906.	1907.	1908.

1907 Net Earnings			$10,111.09	
1908 Net Earnings				$32,162.79

1760 *Subsection* #3 (e).

Average Investment.

Order of Court dated April 2nd 1909, calls for:—"The gross "earnings and the net earnings of the complainant * * * for "the years 1905, 1906, 1907 and 1908, stating separately as to each "of said years, and giving the percentage of net income in each "year * * * ."

In order to correctly state the percentage of net income in each year, we must first establish the average amount of Capital employed by the complainant in its business in the City of Louisville, in each year, 1905 to 1908.

The capital invested by the complainant in its business in the City of Louisville is made up of the following four principal items:—

(1) Cost of Telephone Plant and Equipment.

(2) Cost of Lands and Buildings used exclusively for its telephone business.

(3) Materials and Supplies in stock for the maintenance of the plant and property.

(4) Cash in Bank and on hand at Louisville and proportion of Cash in the Treasury of the Company for the benefit of all exchanges.

(1) Cost of Telephone Plant and Equipment:

Full particulars of the cost to the complainant of its plant and property in the City of Louisville, from year to year, are given in Section #1 of this report.

We find that the average amount of the complainant's capital employed in its telephone plant and equipment each year was:—

1905	$1,566,010.68
1906	1,640,918.86
1907	1,695,866.65
1908	1,704,075.94

(2) Cost of Lands and Buildings:

As stated fully in Section #1 of this report, the lands and buildings owned by the complainant in the City of Louisville, are used exclusively for the operation of its telephone business.

1761 We find that the Average amount of the complainant's capital invested in lands and buildings used for telephone purposes, was:—

1905	$158,827.89
1906	160,641.12
1907	160,819.57
1908	160,841.42

(3) Materials and Supplies:

As related in "Sub-Section #2 (*a*)" of this report (on page #29)—"The complainant has at all times invested in the operation "of its business, a large amount of actual working capital. This "exists chiefly in the form of Materials and Supplies kept on hand "for repairing and maintaining its telephone plants, and in Cash in "Banks and on Hand.

We find that the Average amount of the complainant's capital invested in Materials and Supplies and held for the benefit of the Louisville Exchange proper, was made up of two amounts:—

(*a*) Proportion of Materials and Supplies in the warehouse at Louisville, held for Louisville Exchange.

(*b*) Proportion of the General Inventory of Materials and Supplies held in the warehouse and at the machine shops in Nashville, for the benefit of all exchanges.

Average for the year—	Louisville.	Nashville.
1905	$18,133.47	$5,738.60
1906	26,496.58	8,823.89
1907	32,934.12	14,551.62
1908	27,054.47	17,113.60

(4) Cash in Banks and on Hand:

We find that the Average amount of Cash in Banks and on hand for working capital, and held for the benefit of the Louisville Exchange proper, was made up of two amounts:—

1762 (*a*) Average cash on deposit in Bank at Louisville and Cash at the Louisville Exchange.

(*b*) Proportion of average cash balance held by the Treasurer's Department, used for the purposes of all exchanges; apportioned between Louisville Exchange and the rest of the territory, on the basis of the number of stations.

Average for the year.	Louisville.	Nashville.
1905	$3,223.77	$22,293.28
1906	2,800.82	18,881.52
1907	2,524.95	31,312.31
1908	1,890.18	31,462.97

Recapitulation of Average Investment.

	1905.	1906.	1907.	1908.
(1) Average Cost of Plant	$1566,010.68	$1640,918.86	$1695,866.65	$1704,075.94
(2) Average Cost of Lands & Buildings	158,827.89	160,641.12	160,819.57	160,841.42
(3) Average Value of Supplies:				
At Louisville	18,133.47	26,496.58	32,934.12	27,054.47
At Nashville	5,738.60	8,823.89	14,551.62	17,113.60
(4) Average Cash Balance:				
At Louisville	3,223.77	2,800.82	2,524.95	1,890.18
At Nashville	22,293.28	18,881.52	31,312.31	31,462.97

Average Total Capital invested by the Complainant in its business in the City of Louisville:				
For the Year 1905	$1774,227.69			
For the Year 1906		$1858,562.79		
For the Year 1907			$1938,009.22	
For the Year 1908				$1942,438.58

1763

	1905	1906	1907	1908
Average number of Stations in Service	8,836	9,857	10,830	10,006
Average Investment per Station in Service	$200.79	$188.55	$178.95	$194.13

Sub-section #3 (*f*).

Percentage of Net Earnings.

The Order of Court calls for:— "* * * the "Percentage of Net Income in Each Year, * * *."

We find that the percentage of net income in each year upon the average amount of Capital employed by the complainant in its business in the City of Louisville, has been as follows:—

	1905.	1906.	1907.	1908.
Net Earnings	$12,158.21	$2,536.30	$10,111.09	$32,162.79
See Sub-Section #3 (*d*).	Loss			
Average Investment	$1,774,227.69	$1,858,562.79	$1,938,009.22	$1,942,438.58
See Sub-Section #3 (*e*).				
Percentage of Net Earnings to Capital		.136%	.522%	1.656%

Average investment for the four years..... $1,878,309.57
Average annual net income..... $8,162.99

Average percentage of net income to investment covering four years .4346 of one percent.

Synosis of Net Result.

During the first three years of the period we have examined, the net earnings of the complainant upon its plant and property employed in its business in the City of Louisville, amounted in the aggregate to the sum of $489.18. During the year 1908, the best year of the period under review, after raising the rates, the complainant made a net income of $32,162.79, or at the ratio of a little more than one and one-half percent (1.656%) on the capital invested.

1764 *Section #4.*

Probable Result 1910.

The Order of Court dated April 2nd 1909 directs:—
"The said special master is directed to make an estimate upon the "testimony, and state his conclusions thereupon as to what would "be the reasonably probable Gross and the reasonably probable Net "Income of the complainant, from its said plant and property em-"ployed in its business in said City, for the current year and the year "1910, if the rates of telephone charges fixed by the ordinance en-"acted by the legislative body of defendant and approved by the "Mayor, on March 6th 1909, should be put into operation and "effect."

First as to the reasonably probable Gross Income:

The Ordinance adopted by the legislative body of the defendant and approved by the Mayor on March 6th 1909, fixes the maximum rates to be charged for telephone service in the City of Louisville, Kentucky, as follows:

Business (unlimited service):

Private Line	$5.50	a month
Party line	4.00	"

Residence (unlimited service):

Private Line	$3.00	a month
Party Line	2.00	"
Extension Set	1.00	"

The record of Subscribers to the Louisville Exchange of the complainant is kept at Louisville in three volumes.

Quotation from Joint Report.

Section #4.

Probable Result for 1910.

We have made a calculation showing the amount in which the complainant's Gross Earnings will probably be cut down by the enforcement of the rates fixed by the Ordinance adopted by the Legislative body of the City of Louisville and approved by the Mayor March 6th, 1909. We have used as the basis for this calculation, a typewritten list of the names of the Subscribers to the Louisville Exchange on April 1st 1909, copied from the records of the Company kept at the Louisville Exchange, the correct amount
1765 chargeable to Subscribers for the month of April (face of contracts) is the sum of $27,270.31.

To this list we have applied the maximum rates fixed by the Ordinance and we find that the total gross earnings on this same list of Subscribers for the same month of April 1909, at the Ordinance rates, would be only $20,486.92, net.

The terms of all telephone rental contracts provide for an allowance in the form of cash discount of fifty cents a month on all rentals that are paid three months in advance.

The actual cash discounts allowed to the Louisville Subscribers during the three months, March April and May, 1909, in respect of quarterly payments made in advance, came to $7,919.74. One-third of this sum—$2,639.91 would be a fair deduction to make from the Gross Earnings for the one month of April (face of contracts).

This would leave the sum of $24,630.40 to represent the measure of the Earnings actually collectible for April 1909, under the contracts in force on April 1st 1909.

Thus we have this calculation:—

Gross Earnings for April, 1909.

At Contract Rates (after deducting discounts).....	$24,630.40
At Rates fixed by Ordinance (which are net).....	20,486.92
Loss of Gross Earnings for one month.....	$4,143.48

This is equal to a loss of $49,721.76 a year.

Against this probable loss of $49,721.76 a year, there will probably be an increase in gross earnings in respect of the natural growth of the business and the increased number of subscribers, due to the lowering of the rates, upon the enforcement of the Ordinance. What this increase will amount to, we cannot definitely determine.

1766 *Section #5.*

Depreciation of Plant.

Order of Court dated April 2nd 1909, says:—

"He (the special master) will ascertain and report from the testi-"mony, what would be a fair amount or proportion of annual in-"come to be set aside as a substantial provision and allowance for "depreciation of complainant's plant and property employed in its "business in said City, and the basis of his estimate thereof."

Quotation from Accountant's Agreement.

"(*m*) A further reduction from gross earnings is to be allowed in respect to depreciation of property and plant."

Quotation from Joint Report.

Charge for Depreciation.

Having discussed the matter of Depreciation, we find we cannot agree in regard thereto.

On behalf of the complainant, we beg to report that, during the progress of our examination of the books of account and records of the company, we have given careful thought to the question of depreciation, especially with a view to what would be a fair proportion of annual income to be set aside as a substantial provision and allowance for depreciation of complainant's plant and property employed in its business in the City of Louisville.

As a result of the special study we have made, we beg to submit for the consideration of the Master Commissioner, the result of four calculations of Depreciation Reserve.

Plan A. "Chicago Plan."

We call this the "Chicago Plan" because it is based upon the Report of the Special Telephone Commission, appointed by the City Counsel of Chicago. This Commission consisted of Messrs. Dugald C. Jackson, William H. Crumb and George W. Wilder, and was appointed to examine into and report upon the Telephone situation in the City of Chicago. The report of the Commission was dated April 3rd 1907, and is a public document. The rates used by the Chicago Commission in calculating Depreciation are found tabulated on page #73 of the printed and published report.

1767 Plan B. "Diminishing Value Plan."

Under this plan, the charge is calculated at ten percent (10%) per annum, on the depreciated value of the telephone plant, arrived at by deducting from the cost of the plant 10% of the average cost of the plant employed during each year, beginning in 1900 and coming right down to 1908 on the same diminishing plan.

This diminishing value plan was discussed briefly and figured concurrently by both Accountants; the calcualtion being agreed on June 10th 1909.

Plan C. "Complainant's Plan."

The Cumberland Telephone and Telegraph Company claims that the provision for depreciation reserve should be calculated at seven and one-half per cent (7½%) per annum, flat, on the cost of the plant, as shown by the books of the Company.

Plan D. "Plan Recommended."

We recommend to the Special Master a plan by which the provision for depreciation reserve should be calculated at seven percent (7%) per annum, flat, on the cost of the plant, as shown by the books of the complainant.

The result of the four calculations, is stated on the following page.

1768 Plan A.—"Chicago Plan."

Year	Principal.	* Amount.
1905	$1,535,665.08	$137,851.30
1906	1,596,356.29	143,759.73
1907	1,685,481.44	152,249.06
1908	1,706,251.86	154,376.22
In the aggregate		$588,236.31

Plan B.—"Diminishing Value Plan." (10%.)

Year	Principal.	* Amount.
1905	$1,110,701.01	$111,070.10
1906	1,115,377.73	111,537.78
1907	1,100,048.32	110,004.83
1908	1,034,925.37	103,492.53
In the aggregate		$436,105.24

Plan C.—"Complainant's Plan." (7½%.)

Year	Principal.	* Amount.
1905	$1,535,665.08	$115,174.87
1906	1,596,356.29	119,726.70
1907	1,685,481.44	126,411.07
1908	1,706,251.86	127,968.82
In the aggregate		$489,281.46

Plan D.—Plan Recommended (7%.)

Year	Principal. *	Amount.
1905	$1,535,665.08	$107,496.55
1906	1,596,356.29	111,744.92
1907	1,685,481.44	117,983.67
1908	1,706,251.86	119,437.57
In the aggregate		$456,662.71

*At the beginning of each year.

1769 Amount Expended on Reconstruction.

As shown in Section #3 (b) of this individual report, the amounts actually expended in Reconstruction of Plant and Replacement of Equipment—except that which is worn out in less than a year—were:

1905	$41,051.02
1906	40,626.07
1907	41,895.10

while the estimated amount similarly expended during 1908 (part of $86,155.98) was $31,450.07.

The amounts expended for Reconstruction, as above stated, must be deducted from the amount taken out of the Earnings for this purpose, leaving the unexpended amount to be charged as Depreciation for each year.

Synopsis of Plan D.

This table shows how the plan recommended works out: (a) the amounts which should be reserved out of the earnings to provide for the reconstruction of the plant; (b) amounts actually expended for this purpose and charged against the earnings as "Reconstruction;" (c) Unexpended portion of depreciation reserve to be now charged against the earnings.

	(a) Amount of Reserved for Reconstruction.	(b) Amount Expended for Reconstruction.	(c) Unexpended portion to be Charged now.
1905	$107,496.55	$41,051.02	$66,445.53
1906	111,744.92	40,626.07	71,118.85
1907	117,983.67	41,895.10	76,088.57
1908	119,437.57	31,450.07 (estimated)	87,987.50
Total Reserve for reconstruction	$456,662.71		
Expended portion of Reserve		$155,022.26	
Unexpended portion of Reconstruction Reserve, to be charged against Earnings			$301,640.45

1770 Method in Regard to Vouchers.

An orderly and efficient voucher system is maintained. Vouchers are kept on file at the head office of the complainant, in the City of Nashville, for a number of years. With the exception of a few in January 1900, all the vouchers called for by the Accountants were produced. Vouchers are divided into three classes, and may be described as follows:

(1) Cash Vouchers.

Payments for all materials purchased, or for services rendered to the company, by others than regular employees, are covered by vouchers properly checked by employees in the auditing department, and approved by Officers of the company. These vouchers are kept in the office for record, and are accompanied by the original documents, evidencing precisely for what materials or services such vouchers were issued. These cash vouchers are paid by regularly drawn bank voucher-checks, approved by the Auditor, signed by the Treasurer and countersigned by the President of the Company. These bank voucher-checks, when returned by the banks, are filed with the original record—vouchers and documents above mentioned. All vouchers are made, checked and approved in ink.

(2) Payroll Vouchers.

These are very complete, showing the name and occupation of each employee; the days worked or absent; the rate of pay, and the amount earned. Each employee has his place on the payroll, and signs for his wages at the time of payment. The payroll is checked and certified as correct by responsible employees at the local exchange, and again, by a clerk in the auditing department; certified by the Auditor, and approved for payment by the General Manager or Secretary. Wages were paid to employees at the exchange in currency, from 1900 to 1907, inclusive. During 1908, payments of wages were made by individual bank checks to employees,
1771 said checks being signed by the Manager and Cashier of the local exchange. The payrolls for 1908 are much the same form as above described, and have the same approvals.

The distribution of the total amount shown by each payroll is written on the back of each voucher. All signatures and endorsements are made in ink.

(3) Supply Vouchers.

Supply vouchers are made monthly. Attached to each is a schedule, showing the name of each exchange and the value of materials and supplies issued to each exchange during the month, showing separately for Construction, for Maintenance and for Reconstruction.

These supply vouchers are checked as correct by the Voucher Clerk; approved by the Supply Agent; examined and found correct by the Auditor, and finally approved by the General Manager. Behind these supply vouchers are the records, kept in the Supply Department, in an orderly and efficient manner, showing in detail, what materials and supplies have been issued each day, to each exchange, the price at which same are to be charged, and the amount of money involved.

General Remarks.

As previously related the examination of the books and records of the complainant was begun on May 4th, and was continued, without interruption, from that date to June 23rd, when the Accountants withdrew from the complainant's offices. Since the latter date, we have been continuously engaged in the construction of this, our individual report, and in compiling the information herein contained.

From May 4th to June 23rd—a period of seven weeks—
1772 the Accountants were provided with adequate quarters in the complainant's principal offices in the City of Nashville, and were afforded every facility for conducting the examination.

The Memorandum drawn up on May 5th for the guidance of the Accountants in making said examination, was adhered to and was carried out completely. Much additional clerical work was performed by the employees of the Mutual Audit Company, the result of which is known only to themselves. All demands for information and assistance were promptly met by complainant's employees. The General Books of the company were shown to the Accountants on both sides, all subsidiary books of account and books of record were placed unreservedly at their disposal; all vouchers, payrolls, exchange reports, traffic statements, auditor's bills, and other original sources of information, which the Accountants called for, were promptly provided.

Nothing was held back and no information pertinent to the enquiry was refused.

* * * * * * *

We beg to submit the foregoing as our individual report, on behalf of the complainant, in supplement to the Joint Report, dated July 7th, 1909, signed by us and by E. W. Farnham, expert accountant on behalf of the defendant.

This report is made in accordance with your order of April 27th 1909, and your further written instructions in relation thereto.

Respectfully submitted,

WILKINSON, RECKITT, WILLIAMS & CO.,
Certified Public Accountants.

NEW YORK, *August 31st*, 1909.

To the Honorable Henry Burnett, Special Master, Louisville, Kentucky.

DEAR SIR: Cumberland Telephone and Telegraph Company vs. the City of Louisville, Kentucky.

We now beg to reply to the individual report, made to you on behalf of the Defendant in the above entitled cause, by Mr. E. W. Farnham, General Manager of The Mutual Audit Company of Louisville, Ky. So far, there have been submitted to your Honor the following Accountants' reports, to each of which it will be necessary for us to refer.

(First.) Joint Report—Dated at Nashville, Tenn., 7th July, 1909, and signed by Wilkinson, Reckitt, Williams & Company, Certified Public Accountants, on behalf of the Complainant; and by E. W. Farnham, on behalf of the Defendant.

1774 (Second). Individual Report—dated at Nashville, Tenn., 12th July, 1909, and signed by Wilkinson, Reckitt, Williams & Company, Certified Public Accountants, on behalf of the Complainant. (This report will be briefly referred to as "Wilkinson's Report").

(Third). Individual Report—dated at Louisville, Ky., 26th July, 1909, and signed by E. W. Farnham, on behalf of the Defendant. (This report will be briefly referred to as "Farnham's Report").

In the Joint Report the Accountants agreed upon essential facts shown by the books of account and records of the Complainant, to-wit:

(1) Cost of the telephone plant owned by the complainant in the City of Louisville.

(2) Gross Earnings of the complainant, placed to the credit of Louisville Exchange (1905-1908).

(3) Operating Expenses of the complainant in conducting its business in Louisville.

(4) Loss of Gross Earnings, if the Ordinance approved March 6th, 1909, should go into effect.

* * * * * * *

In the two Individual Reports the two Accountants, after starting at the same point, having at the same time examined the same books of account and records, having been afforded the same facilities by the complainant, and having had the same opportunities to question the officers and employees of the complainant company, have arrived at very dissimilar results.

* * * * * * *

The scope of our reply to Mr. Farnham's Individual Report, and the extent to which we shall encumber the record and burden
1775 your Honor with further written evidence in the matter, being left to our discretion, we shall refrain, at this time, from replying to each and every claim made by said Farnham on behalf of the Defendant.

* * * * * * *

Farnham's Individual Report.

The first six pages of Farnham's Individual Report are devoted to the early history of the complainant company, which we do not care to comment upon at this time, except to remark that most of the subject-matter contained therein is in evidence before your Honor and is irrelevant to the enquiry the Accountants are instructed to make.

* * * * * * *

The next ten pages are devoted to a labored attempt to explain away a considerable portion ($384,228.83) of the cost of the property, as recorded on the books of the complainant. No less than fourteen sheets of exhibits (#1 to 4 inclusive) are offered to assist in this effort.

Finally, Farnham comes back to the figures contained in the Joint Report, for he states the total cost as $1,702,391.68 (Exhibit #5-B).

* * * * * * *

As opportunity will be had later for counsel on both sides to examine the Accountants, we would prefer to content ourselves with laying before your Honor at this time a compact statement of the Differences between the Individual Reports of the two Accountants. What are these?

Differences.

The following comparative table shows, at a glance, the extent of the variation between the two Reports. The reasons therefor will be stated later.

1776 Farnum for Defendant. Wilkinson for Complainant.

References to respective Individual Reports are given in red.

Cost of Telephone Plant.

$1,702,391.68 Exhibit #5-B	$1,702,391.68 (page #19)

Cost of Lands and Buildings.

(no mention)	$162,191.42 (page #20)

Value of Plant and Property.

$1,318,162.85 Exhibit #4.	$1,864,583.10 (page #29)

Net Earnings of Business.

$101,010.80	Net Revenue	1905	Loss	.....	12,158.21
118,737.95	" "	1906	Net Earnings	.....	2,536.30
130,012.58	" "	1907	" "	.....	10,111.09
151,612.74	" "	1908	" "	.....	32,162.79
Exhibit #15					(page#52)

Probable Result, 1910.

$166,585.14 "Profit" (page #29)	"Deficiency" $18,852.97 (see page #29 of this Reply)

Capital invested in Louisville.

(no mention)	$1,934,503.02 (page #30)

* * * * * * *

We will first state briefly how the Differences tabulated above are explained.

(1st) Cost of Telephone Plant.

Order of Court dated April 2nd, 1909, calls for:

"The cost to the complainant of its Plant and property in the City of Louisville, Ky.

* * * * * * *

1777 Both Accountants agree that the cost of the telephone plant, up to March 6th, 1909, is the sum of $1,702,391.68. It will therefore not be necessary to discuss this item.

References:

Joint Report ..... Page #2
Farnham's Report .....
Wilkinson's Report ..... Page #19

* * * * * * *

(2nd) Cost of Lands and Buildings.

Order of Court, as above quoted, calls for the Cost of the Property, as well as the plant.

Wilkinson reports that the complainant owns certain lands and buildings in the City of Louisville which are used exclusively for the purpose of its telephone business, and which cost the complainant the sum of $162,191.42 in cash.

Farnham's report is silent on this subject.

Reference—Wilkinson's Report, page #20.

* * * * * * *

(3rd) Value of Plant and Property.

Order of Court dated April 2nd, 1909, calls for:

"The fair valuation of the plant and property of the complainant employed in its business in said City on March 6th, 1909. * * *"

Both Accountants submit their views as to the present value of the Plant, but Farnham is silent as to the value of the Property (lands and buildings). Farnham claims (1st) that the cost of property acquired from the Ohio Valley Telephone Company was not properly carried on to the books of the complainant (difference, $190,453.83); and (2nd) that $38,755.00 a year, for five years, should be deducted arbitrarily in respect of Reconstruction (difference, $193,775.00).

1778 After deducting these two sums Farnham states that the value of the Plant on March 6th, 1909, is the sum of $1,318,-162.85.

Wilkinson claims that nothing be deducted fro mthe actual cost of the plant, which was, as stated in the Joint Report—$1,702,-391.68 plus the cost in cash of the lands and buildings, $162,191.42 —making in all the sum of $1,864,583.10.

* * * * * * *

This matter of Value of Plant and Property and the difference above stated, is taken up again and gone into fully on page #8 of this Reply.

* * * * * * *

(4th) Net Earnings of Business.

Order of Court dated April 2nd, 1909, calls for:

"The Gross Earnings and the Net Earnings of the complainant upon its plant and property, employed in its business in said city for 1905, 1906, 1907 and 1908, stating separately as to each of said years * * *".

Farnham sets up a statement purporting to show the "Net Revenue" on the Louisville Exchange, taken by itself, eliminating the Earnings and the alleged Operating Expenses of what he calls the Toll Department, also eliminating all charges for Reconstruction.

Wilkinson shows "the Net Earnings of the complainant upon its plant and property employed in its business in the City of Louisville"—same being stated after all proper charges have been made.

1779

Farnham's "net revenue."		Wilkinson's "net earnings."
$101,010.80	1905	$12,158.21 Loss
118,737.95	1906	2,536.30
130,012.58	1907	10,111.09
151,612.74	1908	32,162.79

This matter of Net Earnings of Business and the difference above stated is taken up and gone into fully on page #12 of this Reply.

* * * * * * *

(5th) Probable Result for 1910.

Farnham undertakes to show that the complainant will be very largely benefitted by the enforcement of the Ordinance. He states there will be such a large increase in the business that the complainant will make $14,972.40 more money in 1910 than in 1908.

Wilkinson shows that the earnings of the complainant will be completely wiped out if the Ordinance goes into effect. In place of a profit, there will be a deficiency of $18,852.97 for the first year.

* * * * * * *

1780 *Value of Plant and Property.*

Order of Court dated April 2nd, 1909, calls for:

"The fair valuation of the plant and property of the complainant employed in its business in said city on March 6th, 1909 * * *."

Quotation from Accountant's Agreement:

"(*a*) Accountants agree that "a fair valuation of plant and property" can only be arrived at by a detailed physical appraisal of the said property.

"(*b*) Accountants agree on the other hand that they can and will produce a detailed statement showing the original cost of the property as of record, brought down to date of March 6th, 1909, as shown by the records, vouchers, pay-rolls, etc., of the company, subject to their making such changes and modifications as they deem right and proper."

Quotation from Joint Report:

We have discussed the method to be followed in arriving at an estimate of the present value of the telephone plant of the complainant in the City of Louisville, and we find that we cannot agree as to said method.

* * * * * * *

The Accountants Disagree.

Wilkinson claims that nothing should be deducted from the actual cost of the plant and property which is made up thus:

Cost of the Telephone Plant to March 6th, 1909, as per Joint Report (page #2)	$1,702,391.68
(Agreed to by Farnham—see his Exhibit #5B.)	
Cost of Lands and Buildings owned by the complainant and used exclusively for its telephone business.	162,191.42
(See page #20 of Wilkinson's Report.)	
Total cost is total value	$1,864,583.10

1781 Farnham claims that the real cost value of the Telephone Plant to the complainant is the sum of 1,318,162.85

(See Exhibit #4 of Farnham's Report.)

The Difference is..... $546,420.25

This difference of $546,420.25 is accounted for in three items:

(1) Difference in Initial Cost.....	190,453.83
(2) Arbitrary Deduction for Reconstruction.....	193,775.00
(3) Cost of Lands and Buildings (omitted).....	162,191.42
Total Difference	$546,420.25

We will explain each item.

(1) Difference in Initial Cost:

Amount shown by the complainant's books of account as being the initial cost of the plant taken over from the Ohio Valley Telephone Company (*a*) (References—page #15 of Wilkinson's Report and Exhibit #5B of Farnham's Report.		$678,354.69
Total allowed by Farnham as cost of plant at Louisville (*b*) (Reference—Farnham's Exhibit #4.)		487,900.86
		$190,453.83

Explanation: (*a*) The complainant's books and records show distinctly that the cost of the telephone plant acquired in 1900 by amalgamating with the Ohio Valley Telephone Company was the sum of $678,354.69. The method by which this sum was arrived at is set forth in Wilkinson's Individual Report, the information having been derived from an examination of the records and from enquiry of the President of the complainant company.

1782 Explanation: (*b*) Farnham works up his own figures for the initial cost of the plant in 1900, and "Allows" the sum of $487,900.86. The theory on which this particular sum was arrived at is an Artificial Creation of Farnham's Own, is not founded upon the facts and is unsupported by any enquiries made by Farnham when in Nashville.

(2) Arbitrary Deduction for "Reconstruction":

Farnham deducts the sum of $193,775.00 from the actual cost of the telephone plant, as recorded on the books of the complainant, for what he calls "Reconstruction."

Farnham argues that, because the complainant expended $155,022.26 for "Maintenance-Reconstruction," during the four years under review, making an average annual charge of $38,755.00, all of which was taken out of Earnings, he (Farnham) is justified in deducting an equal amount, each year, from 1900 to 1904 inclusive, (or a total of $193,775.00) from the amount complainant paid for New Construction.

The figures made use of are these:

Amount actually expended for "Maintenance-Reconstruction" (a sub-division of "Maintenance," as shown by the books of the complainant—		
Year 1905	$41,051.02	
Year 1906	40,626.07	
Year 1907	41,895.10	
		$123,572.19
Estimated amount for year 1908, part of $86,155.98 expended for "Maintenance," pro-rated as between "Current Repairs" and "Reconstruction"		31,450.07
Total		$155,022.26

The above stated sums were part of the ordinary operating expenses, and are so agreed to in the Joint Report. Same have nothing whatever to do with Construction, nor with the cost or
1783 value of the plant.

It is the equivalent of these items, for the five years 1900 to 1904, as calculated by Farnham, which he deducts from the cost of the plant, in attempting to arrive at an estimate of its present value.

Farnham attempts to justify this fallacy by pointing out that the telephone plant was fourteen years old when the complainant took hold of it in 1900, and that it doubtless needed reconstructing. Further, that because no separate account was kept during the five years from 1900 to 1904 inclusive, the money spent by the complainant during those years for Reconstruction must have been charged to Construction Account.

In answer to this claim, we would say that Farnham and the other employees of The Mutual Audit Company spent weeks in making a detailed examination and careful scrutiny of the vouchers, pay-rolls and entries covering the entire Construction Account of the Louisville plant, from 1900 to 1909, and failed to find any charges therein contained for Reconstruction.

Fearing that some such question as this might arise, we had our Accountant go over the same ground—with the same result.

(3) Cost of Lands and Buildings:

Farnham's Individual Report contains scant mention of the lands and buildings owned by the complainant. He does not iclude them in the Cost of the Property.

Farnham claims that these lands and buildings are conducted "as an Outside Operation and Not as a part of the Exchange." This is not the fact in any sense. The lands and buildings owned by the complainant in the City of Louisville are essentially a part of and a most important part of, the "Plant and Property of the complainant employed in its business in said city on March 6th, 1909 * * * ."

(Quoted from Order of Court, April 2nd, 1909.)

1784 As shown on page #20 of Wilkinson's Report, these Lands and Buildings cost the complainant the sum of $162,-191.42 in cash.

* * * * * * *

Net Earnings.

Order of Court dated April 2nd, 1909, calls for:

"The Gross Earnings and the Net Earnings of the complainant upon its plant and property, employed in its business separately as to each of said years * * *."

Farnham States the "Profit."

On page #25 of his Individual Report, Farnham claims that the Gross Earnings, "Exchange Expenses" and "Profit" of the "Louis-

ville Exchange" during the four years under review were as follows:

Year.	Gross Earnings.	"Exchange Expenses."	"Profit."
1905	$259,556.15	$158,545.35	$101,010.80
1906	283,194.04	164,476.09	118,717.95**
1907	307,095.04	177,082.46	130,012.58
1908	314,275.52	162,662.78	151,612.74

(Annual average "Profit"—$125,338.52.)

Farnham States the "Net Revenue."

On Exhibit #15, filed with his Individual Report, Farnham states what he calls the "Net Revenue." He reaches it in this way:

From the Gross Earnings of the Exchange (after eliminating all "Toll Revenue") Farnham deducts the expenses and Current Repairs, which in his estimate attach to Louisville Exchange, leaving this result:

"Net Revenue"	1905	$101,010.80
do	1906	118,737.95**
do	1907	130,012.58
do	1908	151,612.74

**Error of $20.00 in Farnham's work for 1906.

1785 Fanrham's Result Described.

Mr. Farnham's result, when fully and correctly described, is the profit derived by the telephone company from its subscribers and the public in Louisville for Exchange Service Only, before setting aside anything whatever "from the net earnings for the reconstruction of the physical properties."

Wilkinson States the Net Earnings.

On page #50 of our Individual Report we show:

"The Net Earnings of the complainant upon its plant and property "employed in its business in the City of Louisville" as follows:

Year 1905—Loss	$12,158.21
Year 1906—Net Earnings	2,536.30
Year 1907—Net Earnings	10,111.09
Year 1908—Net Earnings	32,162.79
(Annual Average Net Earnings	8,162.99)

How Wilkinson's Result is Reached.

The following summary shows how the result shown in our Individual Report is reached. The red notes show where further particulars will be readily found, if desired:

See Notes.	Gross Earnings. (a)	Income from Bldgs. (b)	Operating Expenses. (c)	Unexpended portion of Reconstruction. (d)	Net Result. (e)
1905 ..	$269,823.38	$11,635.23	$227,171.29	$66,445.53	$12,158.21
1906 ..	294,498.44	13,054.99	233,898.28	71,118.85	2,536.30
1907 ..	319,758.51	13,039.76	246,598.61	76,088.57	10,111.09
1908 ..	325,838.30	11,707.52	217,395.53	87,987.50	32,162.79

(a) See Joint Report, pages #3 and 4.
(b) " Wilkinson's Report, page #49.
(c) " Joint Report, page #5.
(d) " Wilkinson's Report, page #62.
(e) " " " " 50.

1786 The Results Compared.

In the following table we compare the two showings and state the Difference.

	Farnham (his page 25)		Wilkinson. (his page 50)	Difference.
1905, "Profit"....	$101,010.80	Loss.	$12,158.21	$113,169.01
1906, "Profit"....	118,717.95	Net..	2,536.30	116,181.65
1907, "Profit"....	130,012.58	Net..	10,111.09	119,901.49
1908, "Profit"....	151,612.74	Net..	32,162.79	119,449.95

The Difference.

The difference between the two showings, stated in figures, is given below:

	No. 1 Gross Earnings cut out by Farnham.	No. 2 Operating Expenses cut out by Farnham.	No. 3 Income from Buildings not included.	No. 4 No provision made by Farnham for Depreciation Reserve.	Difference.
1905,	$10,267.23	$68,625.94	$11,635.23	$66,445.53	113,169.01
*1906,	11,304.40	69,442.19	13,054.99	71,118.85	116,181.65
1907,	12,663.47	69,516.15	13,039.76	76,088.57	119,901.49
1908,	11,562.78	54,732.75	11,707.52	87,987.50	119,449.95

*Error of $20.00 in Farnham's "Exchange Expenses" for 1906.

Each of these Differences is explained in turn, as follows:

#1 Gross Earnings Cut Out.

Year.	Joint Report. (Page No. 3)	Farnham's Individual Report. (Page No. 25)	Cut out by Farnham.
1905	$269,823.38	$259,556.15	$10,267.23
1906	294,498.44	283,194.04	11,304.40
1907	319,758.51	307,095.04	12,663.47
1908	325,838.30	314,275.52	11,562.78

1787 The Gross Earnings cut out are what Farnham styles "Toll Revenue credited Louisville Exchange." Same is made up of these three factors:

(1) Commission on Cumberland long distance tolls (calculated at 15%);

(2) Commission on American Telephone and Telegraph Company long distance tolls computed at 15%; (for convenience and to save work in reporting, the actual calculation is made at 10 21/100 per message); and,

(3) Messenger fees. These three factors are stated on lines #2, #4 and #9, on page #4 of Joint Report.

Farnham's Deductions.

The amounts deducted by Farnham are stated in detail by years, as follows:

15% on long Distance Tolls:	1905.	1906.	1907.	1908
Cumberland	$6,539.92	$7,064.91	$8,030.15	$7,632.11
American	2,865.29	3,427.09	3,864.17	3,272.37
Messenger Fees	862.02	812.40	769.15	658.30
Total deducted by Farnham from the Gross Earnings, shown by the Joint Report	10,267.23	11,304.40	12,663.47	11,562.78

These three factors constitute what Farnham designates repeatedly as the Toll Department, which he describes "as separate and distinct from the Exchange."

On page 18½ of his Individual Report, Farnham writes:

"* * * the Toll department of the Louisville Exchange is operated as an outside "financial operation" so far as earnings are concerned. * * *."

The books of account and records of the complainant distinctly prove that the contrary is true.

1788 These commissions on long distance business and these messenger fees are part of the "Gross Earnings of the complainant upon its plant and property employed in its business" in Louisville. Same were included in the Gross Earnings shown in the Joint Report (Section #3, page 4), and cannot rightfully be set aside "as separate and distinct from the exchange."

This whole matter of Toll Earnings is explained fully on pages #37 to 41 of our Individual Report.

* * * * * * *

#2 Operating Expenses Cut Out.

Year.	Joint report (page #5).	Farnham's report (page #25)	Farnham's deductions.
1905	$227,171.29	$158,545.35	$68,625.94
1906	233,898.28	164,476.09**	69,442.19
1907	246,598.61	177,082.46	69,516.15
1908	217,395.53	162,662.78	54,732.75

**Error of $20.00 in Farnham's "Exchange Expenses" for 1906.

These "Deductions" are covered by certain items of Operating Expenses which Farnham excludes as follows:—

(1) Amount expended for Reconstruction of Plant;

(2) Insurance and Taxes on Real Estate and Supplies;

(3) Wages of certain employees and portion of expenses, claimed by Farnham to belong to "Toll Department."

By years, these "Deductions" are as follows:—

	1905.	1906.	1907.	1908.
(1) Reconstruction.	$41,051.02	$40,626.07	$41,895.10	$31,450.07
(2) Insur. & Taxes	4,038.67	4,144.22	3,142.19	3,043.03
(3) "Toll Department"	23,536.25	24,671.90	24,478.86	20,239.65
Total	$68,625.94	$69,442.19	$69,516.15	$54,732.75

1789 In regard to the three "deductions" which Farnham makes from the operating Expenses, he agreed to in the Joint Report, we give the following explanation:

(1) Reconstruction.

Farnham cuts out of the Operating Expenses the total amount expended for reconstruction during the four years, namely, the sum of $155,022.26. The cost of partially reconstructing the plant, whenever and wherever necessary, is part of the cost to the complainant of maintaining and operating its plant and property employed in its business in the City of Louisville. Same is included in the operating expenses shown in the Joint Report (section #3, page #5) and cannot rightfully be set aside.

In this regard, on page #17 of his report, Farnham writes:

"During the years 1905 to 1908, the complainant company charged to reconstruction out of earnings, entering the various amounts as an operating expense, the gross sum of $155,022.26, or an average of $38,755.56 per annum."

And again on page #27 he writes in regard to Reserve Account for Reconstruction:

"As this is an account which contemplates a "Reserve" to be set aside each year from the net earnings for the reconstruction of the

physical properties, as same may be required, it should be treated only in connection with "Earnings Account."

Just why, in face of the above, Farnham reports the "Profit" (on page #25) and the "Net Revenue" (on Exhibit #15) before making any charge for a "Reserve for Reconstruction," he does not explain.

* * * * * * *

This so-called "Reconstruction Account," as it has been kept by the complainant, is really a sub-division of Maintenance. As explained on page #45 of Wilkinson's Report, "no separate ac-
1790 count was kept on the complainant's books of the cost of reconstruction" prior to 1904.

From 1905 to 1907, inclusive, the cost of Maintenance was subdivided on the complainant's books into these two accounts:

(*a*) "Maintenance—Current Repairs:"

(*b*) "Maintenance—Reconstruction."

Both are operating expenses, pure and simple. The names of the two accounts are as above quoted: the use for which they are kept is covered in the name given to both, "Maintenance."

(*a*) The charges to "Maintenance—Current Repairs" are for mending breaks, tightening wires, rectifying "trouble," and generally maintaining the property in first-class running order. Anything that wears out in less than a year is charged to this account when replaced.

(For further particulars see page #44 of Wilkinson's Report.)

(*b*) The charges to "Maintenance—Reconstruction" are for new work put into old places—for replacement of equipment that is worn out or obsolete, for rebuilding any part of the plant which has become worn out, except that which is worn out in less than a year.

(For further particulars see page #44 of Wilkinson's Report.)

During the short period of three years (1905, 1906, 1907) when Maintenance of the plant was kept in two accounts instead of one, as above described, it was found to be an extremely difficult matter to differentiate between the two accounts. In 1908, the division was abandoned as valueless and misleading.

* * * * * * *

(2) Insurance and Taxes.

The deductions made by Farnham from the Operating Expenses include Insurance and Taxes on the complainant's buildings. These are part of the cost to the complainant of its business in the City
of Louisville. Under the Company's regulations, Insurance
1791 and Taxes are charged to the operation of the plant. It is found necessary, for the proper control of the complainant's business, to have these items booked where they really belong.

These charges are included in the Operating Expenses shown in the Joint Report (section #3, page #5).

Farnham claims that Insurance and Taxes on the buildings are not properly chargeable as Operating Expenses, but should be charged against the revenue derived by the complainant from said buildings in the form of Rentals.

On behalf of the complainant, we claim that it is proper to charge Insurance and Taxes to Operating Expenses. However, as we include the Rentals on all the buildings owned by the complainant in Louisville, as part of the Income, any further discussion of the propriety of charging Insurance and Taxes would be futile.

(3) "Toll Department."

In his individual report Farnham cuts out certain items of operating expenses which he claims to be the cost of operating the so-called "Toll Department," which he claims is conducted "as separate and distinct from the exchange."

By years these deductions are as follows:

	1905.	1906.	1907.	1908.
General Expenses..	$4,750.42	$5,557.33	$5,670.32	$5,074.08
Operating Expenses.	16,517.88	18,247.44	17,660.18	14,535.13
Current Repairs...	2,267.95	867.13	1,148.36	630.44
Total	$23,536.25	$24,671.90	$24,478.86	$20,239.65

The principal item in the above deductions is that of Wages which Farnham arrives at by picking out certain employees of the Louisville Exchange who, he says, give all or a portion of their time to handling the Toll Traffic.

The other expenses and the repairs are arrived at by taking an arbitrary proportion of the Louisville expenses upon a sliding
1792 scale which Farnham describes as "pro-rated upon the basis of the respective collections."

These expenses are a part of the cost to the complainant of conducting its business in the City of Louisville. Same are included in the Operating Expenses, shown in the Joint Report (Section #3, page #5 and cannot rightfully be set aside "as separate and distinct from the exchange."

#3 Income from Buildings.

The statement of earnings contained in Mr. Farnham's Individual Report does not include any credit for the rentals of the buildings owned by the complainant in Louisville. All of these buildings are used exclusively for the purposes of its telephone business. Rents are charged to Operating Expenses and shall be accounted for as part of the Income.

This whole matter is fully dealt with on pages 48 and 49 of our Individual Report.

The amount which we have credited as part of the Income on the property each year is arrived at as follows:

Year.	Gross rentals.	Repairs to buildings.	Credited to income.
1905	$13,050.00	$1,414.77	$11,635.23
1906	13,500.00	445.01	13,054.99
1907	13,720.00	680.24	13,039.76
1908	13,800.00	2,092.48	11,707.52

* * * * * * *

1793 #4. Depreciation Reserve.

In the Agreement, dated at Nashville, Tenn., May 6th, 1909, between the Accountants, it was stipulated:

"A further deduction from Gross Earnings is to be allowed in respect to depreciation of property and plant."

In the Joint Report the matter of Depreciation was dismissed in these words:

"Having discussed the matter of Depreciation, we find we cannot agree in regard thereto."

A Matter of Judgment.

The rate at which a charge should be made for Depreciation Reserve is a matter of judgment. In our Individual Report, on pages #59, #60 and #61 we state four alternative methods of computation.

"We recommend to the Special Master a plan by which the provision for depreciation reserve should be calculated at seven (7%) per cent per annum, flat, on the cost of the plant, as shown by the books of the complainant."

(Quoted from page #60 of Wilkinson's Report.)

Synopsis.

This table shows how the plan recommended works out:

(*a*) Amount which we recommend should be charged against the Earnings as a "Reserve to be set aside each year from the net earnings for the reconstruction of the physical properties, as same may be required;"*

(*b*) Amounts actually expended for this purpose and charged to Operating Expenses;

(*c*) Unexpended portion of depreciation reserve to be now charged against the earnings.

*Quoted from page #27 of Farnham's Report.

1794

* * * Year.	(a) Amount of reserve for "reconstruction."	(b) Amount expended for reconstruction.	(c) Unexpended portion to be charged now.
1905	$107,496.55	$41,051.02	$66,445.53
1906	111,744.92	40,626.07	71,118.85
1907	117,983.67	41,895.10	76,088.57
1908	119,437.57	31,450.07 (estimated)	87,987.50
Total Reserve for Reconstruction	$456,662.71		
Expended portion of Reserve		$155,022.26	
Unexpended portion of Reconstruction Reserve, to be charged against Earnings			$301,640.45

***Table of figures copied from page #62 of Wilkinson's Report.

Probable Result for 1910.

The order of Court dated April 2nd, 1909, directs:

"The said Special Master is directed to make an estimate upon the testimony and state his conclusions thereupon as to what would be the reasonably probable Gross and the reasonably probably Net Income of the complainant, from its said plant and property employed in its business in said City for the current year and the year 1910, if the rates of telephone charges fixed by the ordinance, enacted by the legislative body of defendant and approved by the Mayor, on March 6th, 1909, should be put into operation and effect."

1795 In the Joint Report (page #6) the Accountants agree upon a calculation which shows that the Gross Earnings of the complainant in the City of Louisville would be cut down $4,143.48 per month by the enforcement of the rates fixed by the ordinance adopted by the legislative body of the City of Louisville, and approved by the Mayor March 6th, 1909.

Section #4 of the Joint Report was concluded as follows:

(Page #6)

This is equal to a loss of $49,721.76 a year.

Against this probable loss of $49,721.76 a year, there will probably be an increase in gross earnings in respect of the natural growth of the business and the increased number of subscribers, due to the lowering of the rates, upon the enforcement of the Ordinance.

The Accountants Disagree.

Wilkinson shows that the earnings of the complainant will be entirely wiped out.

Farnham undertakes to show that the complainant will make an additional profit of $14,972.00.

Farnham's Calculation.

In a very ingenious manner, on page #29 of his Individual Report, Mr. Farnham computes what the increase in the number of subscribers might have been had nothing happened to check the steady growth of the business.

Mr. Farnham's calculation is based upon "the normal increase in the average monthly subscribers in 1906 over 1905,"* which he says was 2.17%.

*Quoted from page #29 of Farnham's Report.

1796 Starting in 1906 with the average number of real subscribers (5,956) Mr. Farnham builds these up on paper, year by year, at 2.17% until, in 1910, he reaches a total number of real (?) subscribers of 6,631 (on paper.)

Carrying his calculation further, Mr. Farnham computes that there will be "an aggregate increase in the earnings of $14,972.40 for the year 1910."*

*Quoted from page #29 of Farnham's Report.

Unfortunately, the complainant has not been able to realize Mr. Farnham's fantastic calculation.

* * * * * * *

On Behalf of Complainant.

As Accountants for the complainant we have to deal with facts—not fancies. The fact is, that the complainant began the year 1907 with 5,890 real subscribers * * * (January, 1907,) before the main increase was made in the telephone rentals, and ended the year 1908 with 5,165 real subscribers * * * (December, 1908)—Decrease 725 * * *.

***Mr. Farnham supplied us with these particulars in Nashville.

In the event that the lower telephone rates prescribed by the Ordi- that a fair proportion of the subscribers lost between January 1st, 1907, and December 31st, 1908, will come back.

Decrease Analyzed.

In order that we may make an intelligent estimate of the number of real subscribers, the complainant is likely to regain, by reducing the rates, we must first see how many subscribers were lost between January, 1907, and December, 1908, apparently through raising the rates to Exchange Subscribers. We must also see

1797 what proportion of subscribers take business telephones and what proportion take residence telephones.

* * * * * * *

In January, 1907, the complainant had in service 10,516 stations, of which 4,626 were extension sets, private board extensions, pay stations, dead-heads and others, not affected by the Ordinance. The individual subscribers numbered..... 5,890

In December, 1908, (two years later) the complainant had in service 9,657 stations, of which 4,492 were extension sets, private board extensions, pay stations, dead-heads and others, not affected by the Ordinance. The individual subscribers—those who would be benefited by the change numbered..... 5,165

1,874 Business Telephones;
3,291 Residence Telephones;

Decrease in number of individual subscribers..... 725

Subscribers Regained.

It may fairly be expected that the complainant might regain two-thirds (2/3) of this loss, say 483.

It is also fair to expect that the subscribers thus to be regained will be in the same ratio, as to business and residence, and as to private and party lines, as are the now existing subscribers.

On April 1st, 1909, (March 22nd report) the complainant had in service 9,525 stations, of which 4,371 were private branch extensions, extension sets and others, not affected by the Ordinance.

The individual subscribers numbered 5,154, distributed as follows:

Business Telephones:

Private Lines.....	948		
Party Lines	961		
		1,909	37% of total.
1798 Forward		1,909	37% of total.

Residence Telephones:

Private Lines	1,050		
Party Lines	2,195		
		3,245	63% of total.
Total		5,154	

Probable Regain.

It is very reasonable to expect that the probable subscribers to be regained by reducing the exchange rates, will be distributed on this same basis. If so, the increase in gross earnings would be at the rate of $18,666 00 per annum, made up thus:

Business Telephones (unlimited service):

Private Lines	89 at $5.50.....	$489.50
Party Lines	90 at $4.00.....	360.00

Residence Telephones (unlimited service):

Private Lines	98 at $3.00	$294.00
Party Lines	206 at $2.00	412.00
Total new subscribers	483	

Total Added Earnings per month.....$1,555.50
$1,555.50 x 12, equals $18,666.00 per annum.

Recapitulation.

Probable Loss (see Joint Report, page #6)	$49,721.76
Probable Regain (see above calculation)	18,666.00
Estimated loss in gross earnings	$31,055.76

No Increased Operating Expenses (says E. W. Farnham).

On pages #29 and #30 of his Individual Report, Mr. Farnham questions whether

"* * * an increase in the number of subscribers, increases the cost" of operating. Farnham claims that, by reducing its exchange rates, as provided in the Ordinance, the complainant would make a clear gain of $14,972.40 for the year 1910, and $21,441.82 for the year 1911.

1799

Mr. Farnham contends that all this additional revenue can be collected from the Louisville public without a dollar more expense to the complainant. He adds the whole of this $21,441.82 additional revenue to his paper "profit" of $151,612.74 (page #25), thereby making a paper profit for 1910 of $166,585.14. He concludes his argument (page #29) by saying:

" * * * * so that the net earnings for the latter year (1911) should aggregate approximately $173,054.56."

Operating Expenses Were Reduced.

The complainant has conducted its business in the City of Louisville with all due regard to economy of operation. As the number of stations fell off, so did the operating expenses.

Year.	Average actual subscribers.	Operating expense.
1906	5,956	
1907	5,746	$80,738.06
1908	5,158	79,661.04
		75,440.28

*These Operating Expenses "comprise salaries of local manager and superintendent, local clerical force; wages of operators, supervisors and all those directly connected with the operation of the plant; proportion of rent, light and heat of buildings; advertising and canvassing for subscribers and other expenses incidental to the operation of the telephone plant of the complainant in the City of Louisville."

*Quoted from Wilkinson's Report, page 43.

1800 Estimated Increase in Expenses.

Increase in Number of Circuits: In the event that the Ordinance rates should be enforced, the reduction in price will enable subscribers, now content with party lines, to take private lines. This will lead to an increase in the number of circuits, without any—or with very litle—increase in revenue. Let us see how this will be brought about:

The monthly report on "Classification of Rates," dated at Louisville, March 22nd, 1909 (nearest report to April 1st) shows this:

961 Business Party Lines paying an average of $5.11 a month; and

2,195 Residence Party Lines paying an average of $3.03 a month.

It is expected that a considerable proportion of these party line subscribers will contract for private lines, the rates for which are fixed by the Ordinance at $5.50 and $3.00 a month (net) respectively.

The present contract rates are subject to a discount of 50 cents a month to such subscribers as pay three months' rental in advance; not by any means all of them take advantage of this discount.

This anticipated increase in the number of circuits would involve the use of considerably more capital for extra wiring; it would also lead to more direct expense in operating.

Increased Expense.

It is inevitable that an increase in direct operating expenses will follow an increase in the number of stations and circuits. There must be more operators to handle the increased number of openings on the switchboard (two operators for every hundred direct lines).

1801 There will be more lines to care for and maintain and more reconstruction to provide for.

The average cost of Operating, Maintenance and Reconstruction per station, during the year 1908, amounted in all to $24.95 per station, made up thus:

Operating	$7.54	per station
Maintenance	5.47	" "
Reconstruction	11.94	" "
Together	$24.95	" "

We estimate that 483 prospective subscribers, to be regained during the first year by reducing the rates, would be equivalent to approximately 800 stations. At the above stated average costs per station, this increased number would make $19,960.00 more expense. Thus:

Operating	800 at	$7.54	$6,032.00
Maintenance	800 at	5.47	4,376.00
Reconstruction	800 at	11.94	9,552.00
Total Increased Cost			$19,960.00

Reasonably Probable Net Income.

It remains for us to recapitulate the foregoing calculations and submit for your consideration our estimate of what will be "the reasonably probable net income of the complainant from its plant and property employed in its business in said City for the current year and the year 1910, if the rates of telephone charges fixed by the Ordinance * * * should be put into operation and effect."*

*Quoted from Order of Court April 2nd, 1909.

1802–1830 *Recapitulation.*

Estimated Loss of Gross Earnings:		
Gross Loss (shown by Joint Report on page #6)	$49,721.76	
Probable Regain (shown on page #26 of this Reply)	18,666.00	
Loss of Gross Earnings		$31,055.76
Estimated Increase of Operation Expenses (shown on page #28 of this Reply)		19,960.00
Total Loss to the complainant if the terms of the Ordinance should be put into operation and effect,		$51,015.76
Net Earnings for year 1908, (shown on page #52 of Wilkinson's Individual Report)		32,162.79
Estimated Deficiency for the first year, should the terms of the Ordinance be put into operation		$18,852.97

We beg to submit the foregoing as our reply on behalf of the complainant, to the Individual Report made by Mr. E. W. Farnham, on behalf of the Defendant, and dated at Louisville, July 26th, 1909.

This Reply is made in accordance with your order of April 27th, 1909, and your further written instructions in relation thereto.

Respectfully submitted,

WILKINSON, RECKITT, WILLIAMS & CO.
Certified Public Accountants.

1831 City to Receive all Profits Over Ten Per Cent on the Average Net Investment of Any Year.

A provision is inserted in the proposed ordinance which will serve as an automatic regulation of rates. It is made a requirement of the ordinance that all net profits over ten per cent. on the average investment of any year shall be paid to the City. Manifestly, if the Company finds itself able to make more than ten per cent. on its average investment, under the rates fixed by the
1832–1845 Council, it will voluntarily reduce its rates, thereby making its service more popular and increasing its business. If it fails to do so the City gets the excess profits. The ordinance expressly states that this provision shall not be taken

as an admission on the part of the City that a rate of income of less than ten per cent. on the average investment is not adequate or reasonable.

1846 *Report of Special Telephone Commission.*

CHICAGO, *April* 3, 1907.

To the Honorable Linn H. Young, Chairman, and Members of the Committee on Gas, Oil and Electric Light of the City Council of the City of Chicago.

GENTLEMEN: We have industriously worked at the problems which you laid upon us at the time of our appointment as a commission to advise you on matters relating to the telephone situation in the City of Chicago, and by instructions from time to time since, and we beg leave to hand you our report.

A telephone company in a large city must face a problem in many respects more complex than that of any other public utility corporation. The water department is called upon to sell a single commodity, namely, water, and at prices which are fixed with comparative readiness. The gas company also is called upon to sell a single commodity, metered for nearly every customer, and its conditions in dealing with customers are relatively simple. It may sell some additional by-products, as coke, tar and ammonia, but the quantities and market values of these are readily arrived at. The traction company has a more complex problem than some of the other purveyors of public utilities, but even here the price paid by the several patrons is uniform and the substantial difference between patrons lies only in the lengths of the rides which they may choose to take.

The telephone problem, on the contrary, involves many complexities, partially caused by the relatively large number of classes of service which the telephone company must offer to its patrons for the purpose of fully developing the telephone service of the city, and partially by the intangible character of the electric medium with which the telephone business is carried on, the delicacy of the apparatus used, and the wide differences in the manner and extent of the use of the apparatus by the various subscribers.

1847–1854 If a telephone company properly extends the telephone service in the city, it must be prepared to take care of the requirements of a range of patrons as wide as the interests of the city itself, including the largest business organizations, the hotels, the newspapers, the professional men, the small business houses, and residences of all classes. It must provide apparatus for the service of each class of patrons which will enable it to furnish the service to each subscriber at an appropriate price within his means. It is desirable for the prices to be graded so that the largest user shall not pay less than his fair share of the expense of maintaining the traffic and the remuneration to the company for its investment, and equally so that the smallest user may get his telephone service at a price which is within his means and yet is reasonably remunerative to the company for its outlay.

TABLE No. 1.

Manufacturers' Telephone Company—Construction Estimates.

	Manufacturers' Telephone Co. original estimate.	Manufacturers' Telephone Co. revised estimate.	Chicago Telephone Co. estimate.	Telephone Commission estimate.
1. Conduit	$3,425,000	$3,425,000	$4,290,000	$2,970,000
2. Pole lines	1,350,000	1,300,000	1,350,000	1,380,000
3. Cable, underground and aerial	3,800,000	3,274,000	4,873,500	4,785,000
4. Line wires	157,500	135,000	310,500	525,000
5. Drop wires	400,000	480,000	721,000	420,000
6. Substation equipment	1,450,000	1,450,000	1,770,000	1,620,000
7. Switchboards	2,430,000	1,580,000	3,120,000	2,326,000
8. Main Building	500,000	400,000	1,000,000	500,000
9. Small buildings	300,000	432,000	600,000	480,000
10. Fitting rented space	25,000	15,000	.....	15,000
11. Tools and supplies	*a*235,000	235,000	*a*770,000	250,000
12. Furniture and fixtures	15,000	20,000	50,000	25,000
13. Supervision and engineering	250,000	600,000	917,750	700,000
14. Interest and insurance	570,000	*c*550,000	*b*90,000	600,000
15. Bank balance	100,000	*d*400,000	500,000	300,000
Total	$15,007,500	$14,296,000	$20,362,750	$16,896,000
16 Brokerage	.....	687,300	.....	1,877,333
Total investment	.....	$14,983,300	.....	$18,773,333

a—Includes stable and supply buildings.
b—Insurance only.
c—Interest only.
d—Bank balance and insurance.

1868–1872 Four hundred thousand telephones is too low an estimate to be reasonable, especially in consideration of the fact that a first class and cheapened service is likely to increase the number of telephones beyond ten per cent per 100 inhabitants, and may increase the development to a point where as many as fifteen telephones will be introduced to that number of inhabitants.

1873 The average rate paid in 1897 was $123.53, as indicated on the chart, and it has fallen year by year since, until it has now become as low as $53.29. The figures on this chart do not include "neighborhood" telephones.

With continued careful management, improved methods of keeping records for the determination of the costs of the different classes of service, and a greater extension of the measured rate service, we believe that the Chicago Telephone Company, in case it should be granted a franchise, can continue this decrease in the average yearly rate that the subscribers pay per telephone, until the average yearly rate does not exceed forty dollars, or perhaps less, and a large proportion of the telephones will be paying not more than eighteen dollars per year. On the other hand, our study of the problem convinces us that an extension of the flat rate telephone service would tend to so greatly increase the useless calls over the telephones, and so overload the lines, that the unavailing calls would increase tremendously, making the daily calls per telephone even larger than they were in 1896, and thus increase the annual expense of the service so largely that the average price per telephone would be given a tendency to rise instead of fall.

It is a tradition in telephone circles that the service per telephone costs more as the number of telephones connected with the plant increases. As the number of telephones increases, each subscriber has the opportunity to call upon more people by telephone, and the law of averages would indicate that the number of calls per day from each telephone should increase, thus making the service more expensive to the operating company, provided the service is flat rate service and unnecessary use of the telephone is not deterred by a measured rate charge. This condition seems to have worked out in practice, according to the statements of telephone companies at Cleveland, Indianapolis and elsewhere, and flat rate service seems to increase in cost per telephone as the number of telephones attached to a system increases.

On the other hand, a different condition exists in connection with measured rate service. With the measured rate service the message is the unit instead of the rental of the instrument; and it is the message that the subscriber ought to pay for, because it is for the purpose of sending his messages that he provides himself with a telephone. With measured rate service, and a reasonable use of the telephone lines, the unavailing calls are reduced to a minimum. The number of calls per telephone per day, apparently, are not inclined to increase as the system increases in extent. This is illustrated in our Charts Nos. 9 and 10. But the total number of messages handled increases approxi-

1874–1881

mately in proportion to the number of telephones. Under these conditions, the ordinary laws regulating the difference between the cost of producing articles in large and small quantities comes into play, and the actual cost per message ought to steadily decrease. Since it is the messages that are paid for under the measured rate system and the actual cost per message ought to steadily decrease as the system enlarges, the average amount paid by each subscriber will decrease if the subscribers limit the use of their telephones to their actual needs, and the telephone company is well managed.

The difference thus arising between flat rates and measured rates is very marked. The flat rate telephone user tends to increase his number of messages as the system enlarges, so that the average calls per day per telephone may be expected to increase and the proportion of unavailing calls also to increase. The consequence is that the company is forced to handle more calls per telephone as the system becomes larger, and the price per telephone has to increase under flat rate charges; while the subscribers limit their use of the telephone to their actual needs under measured rates and the number of calls per telephone does not have a tendency to increase as the system increases in size after it has reached a considerable development such as is now found in the City of Chicago. Under these conditions the principle of wholesale production makes it possible for the company to reduce its cost of operating per message and thereby reduce the average price charged the telephone subscribers.

The telephone hanging on the wall appeals to the average telephone subscriber as constituting the total expense to the company through the maintenance of the instrument and lines. The maintenance and the interest on the equipment does constitute a considerable expense to the company, but a great deal of the expense to the company is due to the actual cost of handling each message. This expense composes a large proportion of the annual expenditures of the Chicago Telephone Company.

1882 The book value of the entire fixed plant, including real estate and buildings, of the Chicago Telephone Company on December 31, 1905, aggregated, according to the report of the City Auditor, $15,827,033.42. The company's construction account for the year 1906, to be added thereto, amounted to $3,343,673.88 according to the statement of the company's auditor.

1883-1888 The City Auditor has examined these expenditures and traced the charges, and has found that they are properly posted and agree with the statement submitted. Our examination of the plant leads us to believe that the figures are correct.

Subtracting $700,000, which was written off by the company for depreciation for the year 1906, makes a total book value for fixed plant, including real estate and buildings, at the opening of 1907 of $18,470,707.30. This is the valuation shown on the books of the company for the entire system, which gives service to 170,834 telephones inside and outside of the limits of the City of Chicago, of which 131,747 (on January 1, 1907) are within the limits of the city.

1889 Consideration of the contract with the Western Electric Company is a delicate question, because we understand that the American Bell Telephone Company owns a controlling interest in both the Chicago Telephone Company and the Western Electric Company. We have therefore scrutinized the contract between the Chicago Telephone Company and the Western Electric Company with much care. This is a contract which makes the Western Electric Company the purchasing agent for the Chicago Telephone Company under certain conditions which seem to us to be reasonable and to the advantage of the Chicago Telephone Company. The Western Electric Company is a large manufacturer of electrical apparatus, and therefore a large user for itself of copper wire and of other materials needed by the Chicago Telephone Company, which makes it a purchaser that is able to gain the best market prices for large purchases.

1890–1892 The Western Electric Company is also the purchasing agent of other Bell telephone operating companies, which farther improves its opportunity for purchasing at low figures. The contract between the Chicago Telephone Company and the Western Electric Company may be terminated by either party upon three months' notice given in writing. The telephone company is privileged to purchase of other parties any materials that can be purchased for less money direct than through the Western Electric Company. The Western Electric Company is under obligation to sell any of its manufactured products to the telephone company for not exceeding the price at which similar products could be bought elsewhere, and at a price not exceeding that at which it sells to any other purchaser. The Western Electric Company receives two per cent. commission for handling the general supplies furnished to the telephone company which the Western Electric Company does not manufacture, but this commission is only paid to it on condition that the total price to the Chicago Telephone Company, with the two per cent. commission added, shall not exceed the price the telephone company would pay if it purchased its supplies at the most favorable figures in the open market. The telephone company has the privilege of buying a special list of apparatus and supplies anywhere at its pleasure, and this list of apparatus and supplies may be changed by adding thereto or deducting therefrom at the pleasure of the telephone company.

This contract appears to us favorable to the telephone company, and it is in such form that it gives the telephone company the privilege of purchasing in the lowest market in case the Western Electric Company fails to meet the prices of other vendors.

* * * * * * *

1893-1913 The last item mentioned above, namely, the toll business from Chicago to points outside of the city limits done by the Chicago Telephone Company over its own lines or its own lines in association with those of the Central Union Telephone Company in Illinois and Indiana and the Wisconsin Telephone Company in Wisconsin, amounts to a much larger sum.

During December, 1906, there were 112,775 outgoing messages handled in this service solely over lines of the Chicago Telephone Company, bringing a revenue of $23,370.95 for the month, according to the books of the company; besides which there were 7,495 messages from Chicago to points in the Central Union territory, affording total receipts of $3,823.20, of which $2,677.22 belongs in the gross receipts of the Chicago Telephone Company, and there were 2,889 messages from Chicago to points in the Wisconsin Telephone Company's territory, bringing the total sum of $1,183.80, of which $1,072.23 belongs in the gross receipts of the Chicago Telephone Company. This gives a gross revenue to the Chicago Telephone Company from the aforesaid toll connections of $27,119.40 for the month of December, 1906. The statement of the toll business of the Chicago Telephone Company for December, 1906, shows that 49.6 per cent. of this sum was earned on account of mileage within the City of Chicago. This is so near 50 per cent. that we feel justified in recommending that the ordinary toll service of the company, aside from that going to the long-distance company (American Telephone and Telegraph Company), shall be considered as having an earning capacity of 50 per cent. within Chicago and 50 per cent. outside of Chicago. It is reasonably fair to assume that as much traffic comes into the city as goes out over the toll lines. Upon these assumptions, it is proper that the three per cent. compensation (if applied at all to the service to exterior points) shall apply to all of the receipts of the Chicago Telephone Company for toll business originating in Chicago, except as described for the long-distance company. This arrangement, it will be noted, makes it unnecessary in the accounting with the city to enter upon any consideration of incoming toll messages, because the receipts of the Chicago Telephone Company for the ordinary outgoing toll messages aggregate substantially an amount which will account for both outgoing and incoming toll messages when prorated according to the proportion earned within the City of Chicago.

* * * * * * *

1914 It is well understood that operating plant is limited in life, and (however well ordinary repairs have been kept up) after a period of years the generally worn out condition of the equipment or the advance of the art makes a substitution of new equipment desirable and economical. The expense of this substitution which does not increase the gross earning capacity cannot be fairly charged to capital account, but should be defrayed out of a suitably supported depreciation fund which has been gradually accumulated out of the earnings during the life of the equipment, and which, at the end of the life period, has become equal to the first cost of the original equipment diminished by the amount of any "scrap" value or salvage which may be obtained from the discarded equipment. Interest accretions will add to the amount as the fund grows, and the annual sum set aside out of the earnings should be adjusted with this in view. Three per cent. is a con-

servative rate of interest to set as the minimum which ought to be accepted on the moneys of a trust fund, within which category this depreciation fund belongs, and our table is computed on the basis of that percentage. A higher rate of interest would
1915-1916 obviously decrease the size of the annual contributions to the fund which must be made from earnings, but it is not safe to count upon a higher rate of interest being procurable for a trust fund.

The rate at which the telephone art is advancing, and the delicacy of the apparatus used, makes it a matter of particular importance for a telephone company to establish a proper depreciation fund. Depreciation is distinct from maintenance, which latter includes current repairs that are required to keep the plant in first-rate working order as long as it is economically workable at all.

When dealing with reconstruction we have tried to arrive at the best judgment of the effect of future street and park improvements on the existing plant of the Chicago Telephone Company; and we have given due consideration to the fact that the telephone conduit and cable equipment in the heart of the city is likely to be soon disturbed by the construction of street railway subways.

The computations of the Commission are made on the basis of the original cost of the tangible property, excluding land, stock of materials and cash on hand, owned by the Chicago Telephone Company within the City of Chicago at the end of 1905. This differs from the "book value" of the same part of the property by an amount equal to the sums heretofore written off for depreciation. We consider it proper to make our estimate of the depreciation rate on the basis of the first cost. The percentage values attributed to the depreciation fund will be approximately the same for other years, and are applicable to present conditions within the City of Chicago. We have taken the estimate of the relative values of the different subdivisions of the plant as set forth by the engineers of the Chicago Telephone Company. An independent verification of the accuracy of these subdivisions of the total cost was impossible on account of the limited time at our disposal, but they appear to us to be reasonably accurate.

TABLE No. 8.

Estimate of Depreciation and Insurance Fund Made by Commission.

1	2	3	4	5	6	7	8	9
Property.	Original cost.	Life in years.	Per cent. to depreciation account.	Per cent. salvage.	Annual contribution for depreciation.	% to reconstruction & ins. acct.	Annual contribution for reconstruction and insurance.	Total annual contribution to fund.
Underground conduit, main, clay in concrete	$1,126,200	50	.89	0	$10,000	1½	$22,500	$46,500

2094 Circuit Court of the United States for the Western District of Kentucky.

CUMBERLAND TELEPHONE AND TELEGRAPH COMPANY,
Complainant,
vs.
CITY OF LOUISVILLE, Defendant.

The depositions of James E. Caldwell and E. D. Green, taken on the 18th day of April, 1910, at the law office of Judge Henry Burnett, in the Paul Jones Building, Fourth and Jefferson streets, at Louisville, County of Jefferson and State of Kentucky, to be read as evidence on behalf of the Complainant in the above entitled action, caption, certificate and formalities being waived.

Present:
For Complainant: Mr. Granberry.
For Defendant: Mr. Clayton B. Blakey.

By Mr. BLAKEY: As I understand this notice, so far as I am concerned at least, it is a notice on behalf of the Master that he desires the depositions of Mr. Caldwell taken on the question of depreciation solely.

Is that your understanding, Mr. Burnett?

2095 The COMMISSIONER: I would like to hear him on that subject, and I so expressed myself to Mr. Granberry.

Mr. BLAKEY: What I was going to say was this: The Complainant took depositions on the question of the value of the plant at Nashville, and rested its case. The Defendant went to the expense of some fifteen or sixteen hundred dollars to meet that case. The Complainant was then permitted to take other proof, which was certainly not in rebuttal, but direct evidence, establishing another basis on which to determine the value of its plant, and the city went to the expense of some $500 to meet that case, and it is certainly my understanding that the evidence was closed, and any depositions that the Master wants to take on any particular subject, of course, that is with the Master to determine. I understood this was a deposition of Mr. Caldwell, taken partially, at least, at the request of the Master as to Depreciation. Mr. Green, as I understand, is Superintendent of Construction in Louisville, and is one of the men whom Mr. Jagoe spoke of as having made an inventory of the property at Louisville. Of course, I don't know what it is intended to ask Mr. Green, but I assume it is along the line of fixing the value on the plant. Should Mr. Green testify—of course, what he would say, no one can tell until he says it, but it would mean that the city would be put to the expense of employing other experts possibly to meet what Mr. Green had to say. I did not want to put the city to any further expense in meeting these various cases that they

2096 may seem to put up.

The MASTER: I suppose Mr. Green's testimony will be confined to rebuttal.

Mr. BLAKEY: That is what they said about Mr. Jagoe, and we had to go to the expense of $500 to meet it. It was not rebuttal. I do not think the Master ought to permit Complainant to take any further depositions. Complainant has rested its case. Defendant has rested its case. The Complainant rested its case again, and the Defendant rested its case again.

Mr. GRANBERY: I would like to make a statement on that before the Master rules. When the Defendant closed its case, the Complainant set about taking its rebuttal proof. When Mr. Jagoe was on the stand testifying in rebuttal, he was asked on cross examination, if he actually counted the poles in person in Louisville. He stated that he had not, but that Mr. Green had done it under his direction, thereupon, I ask the City Attorney if he was going to object to Mr. Jagoe giving this information. He then stated in the presence of the Master, that I could take Mr. Green's testimony at any time, before the proof was closed on that point. Thereupon, we proceeded to New York to take the deposition of Mr. Wilkerson. While we were in New York, or coming back from New York, the City Attorney stated that he wished to take the deposition of Mr. Polk, and wanted me to meet him the following Monday in
2097 Toledo, stating that he could not get hold of Mr. Polk after the first day of April, and it would be necessary for him to take his deposition at some time prior to that date. I assented and agreed to go to Toledo the following Tuesday, but was notified by the City Attorney that it would not be necessary to go to Toledo, that he would arrange for Mr. Polk to come to Louisville. I agreed to let Mr. Polk's deposition be taken out of order and before I had closed my rebuttal proof purely as an accommodation to the City Attorney, understanding from him that unless he took Polk's deposition prior to the first of April, he could not get it at all, but I had never closed my case in rebuttal, and I have allowed Mr. Polk's deposition to be given out of time, as a pure accommodation to the City Attorney.

Mr. BLAKEY: Mr. Polk's deposition was not taken until the 10th of April. The conversation you speak of on the train was certainly with the distinct understanding on my part that you had closed your case and I had to give you notice to take Mr. Polk's deposition any time I saw fit. It was merely a discussion of whether you could make it suit your convenience to take it before the first. I never agreed that Polk's or Green's deposition might be taken at any time, except as Jagoe's deposition was taken. I said, if anything, if Mr. Jagoe's deposition was allowed in, of course, I supposed Mr. Green's deposition would be allowed in for the same reason, and that it certainly ought to be taken before the city was re-
2098 quired to meet the case you made at that time.

Mr. GRANBERY: I will ask the Master Commissioner to state his recollection of the fact as to Mr. Caldwell's deposition, whether it is not a fact that it was understood by him all the time that Mr. Caldwell's deposition would be taken in rebuttal.

The COMMISSIONER: My understanding has been—I don't remember whether I suggested it or whether Attorney for Complain-

ant suggested it, but in any event, I thought that the question of evidence on the subject of depreciation, when you consider that Mr. Wilkerson filed some exhibits showing from his standpoint the proper allowance for depreciation, which are not taken from the books of the company, as I understand it, in reading his deposition—I thought and still think that matter ought to be made a little more clear. I think it is all right, but I think it ought to be confined, this deposition and Mr. Green's, strictly to rebuttal matters, and it may be that I will, of my own accord, ask some questions.

Mr. GRANBERY: I will ask the Master to state his recollection of the City Attorney's statement at Nashville about the taking of Mr. Green's deposition on the pole account.

The COMMISSIONER: I do not recall that matter. I did not pay much attention to it. I thought it was in my own hands,
2099 and I will overrule any objections. I want the evidence to be as full as possible, except that I think that we ought now at this stage of the procedure, confine the proof strictly to rebuttal matters on such questions as the Master may see proper to ask.

Mr. BLAKEY: I think we might get some idea about what rebuttal matter is. Mr. Jagoe says there was 14,000 poles here in round numbers, which he says is his information and Mr. Polk says there are, according to his estimate, about 10,000 poles here. After we have closed our case, the city has closed its case, I don't think that the Complainant should be allowed to introduce evidence on that subject, because all we did was to say what we thought was the estimated number of poles here.

The COMMISSIONER: Nobody has testified that he counted the poles, and that he knows how many poles there are. All the evidence, as I remember it, was based largely on estimates.

Mr. GRANBERY: The sole purpose in taking Mr. Green's deposition is to prove two facts by him: One is, that he actually counted these poles, pole by pole; and the second is, to prove that the company does have No. 10 iron wire serving surburban subscribers, and that is strictly in rebuttal to the testimony of Mr. Polk, given this month, that the company had no No. 10 iron wire in this
2100 exchange for subscribers' use.

The COMMISSIONER: Well, let's get along.

JAMES E. CALDWELL, called in rebuttal for the Complainant, being duly sworn and examined by Mr. Granbery, deposed as follows:

Q. 1. You are the President of the Complainant Company?

A. Yes, sir.

Q. 2. And you have heretofore given your deposition in this case?

A. Yes, sir.

Q. 3. Evidence has been introduced by the defendant as to the rates charged in Kansas City, St. Louis, Columbus, Toledo, and possibly other places: I will ask you to state whether that information has any bearing or throws any light upon this controversy in any way?

Mr. BLAKEY: That is a question that is not on the subject of Depreciation, evidence that could have been brought out when you were rebutting defendant's evidence, and therefore, I object to it.

Mr. GRANBERY: I have never closed my case in rebuttal. I have never had a chance to close it.

The last question was read by the Stenographer.

The COMMISSIONER: I don't think that is evidence, but to
2101 save time, go ahead.

Mr. BLAKEY: I want to make it now, because if that is his line of questioning, he is going to indulge in, it means we are going over the whole case again.

The COMMISSIONER: I understand you are objecting to everything most. Just let the witness go on and make the statement. That is the shortest way out of it.

A. I regard it as very irrelevant and largely academic.

Q. 4. Please give your reasons.

A. For the reason that local conditions are so entirely different in various places, the quality and quantity of service rendered for the respective rates are also different, that it makes it quite impossible to draw any parallel or definite conclusion from such information.

Q. 5. Does it throw any light upon the reasonableness or unreasonableness of the rates in other places, in Louisville, for instance?

A. I don't think it does, as I say, I regard it as entirely irrelevant and academic.

Q. 6. Mr. Polk stated that the Western Electric Company not only made up plans and specifications, and supervised the installation of the telephone switch-board for the Complainant company, but had often times refused to permit the Complainant's employés access to the room, where they were installing the apparatus. Is that so?

A. We have never had any such experience. On the contrary, our experience with them has been just the opposite.

Q. 7. Who makes up the specifications, and who supervises the installation of the switch-board in the Complainant com-
2102 pany's system.

A. Our Engineers.

Q. 8. What is the theory upon which the rates of the city of Louisville are established and charged?

A. Upon the theory——

Mr. BLAKEY: Do you think that is in rebuttal of anything, even if he is entitled to introduce rebuttal proof.

The COMMISSIONER: I will hear it.

A. It is upon the theory of paying for what—the customer paying for what he actually gets, and considering the use and value. Those are the two basic principles upon which rates are made by us in Louisville.

Q. 9. What would be the effect with reference to patrons in your judgment if the rates prescribed in the rate ordinance under consideration should be put into effect?

A. Well, it would have the effect of possibly causing a considerable increase in the patronage on that line, calling for a very considerable increase of capital stock. In other words, they would have a right to consider it as people do bargains, and their action would be very much the same as the public is when they consider that they are getting a thing below its cost. In other words, the incentive to buy bargains is very great, meaning thereby that they are getting a thing at a price that it will not be furnished permanently at.

Q. 10. What are the maximum business and residence
2103 rates in Louisville?

A. Net $7.50 a month for straight or private lines, and $3.50 net for private lines in residences.

Q. 11. What would you say would be the immediate effect on the patrons who are paying more than the rate ordinance prescribes, the maximum rate ordinances for unlimited business and unlimited residences.

A. They would, of course, drop at once to that class of service and the income that is derived by them, that would be lost.

Q. 12. What effect would the introduction of those rates have upon the company and its business in Louisville?

A. As I said before, it would necessitate upon the part of the company a very—possibly and almost certainly a very large increase in its investment here. It must be borne in mind that for every customer an additional investment has to be made, and that it might and very likely would, necessitate quite a revolution in its whole engineering plans—outlay.

Q. 13. Would the expenses be increased or decreased?

A. Expenses would be increased in proportion as the business rose, and increases. The rates that the customer pays for the service has no bearing on the expenses. I mean by that, that it would be just as much expense to supply service to a customer having a direct line,—the expense would be just the same if he paid nothing as it would be if he paid $20 a month for it, and as the business increases, and as the greater number of lines are connected with the
2104 exchange the expense would rise in a proportionate ratio. The fact would be that the ratio of expense would increase, and the ratio of income would decrease.

Q. 14. Mr. Polk has stated that the company had excess cable facilities in the Louisville plant, sufficient to accommodate 8,000 additional subscribers. Do you know whether that is true or not?

A. I don't know that fact. It is new to me, and I don't think it is true. We carry and aim to carry a certain excess service to take care of customers, as they would come in the ordinary growth, and I do know that we have some surplus here. It might be that we would have that amount of surplus in some conduit space. We might have it in buildings. We might have adequate space in our buildings, and as I say, in the conduits, but to say that we have that as a complete equipment, ready to take on those customers, that would not be true.

Q. 15. Is the company contemplating at the present time any extension of the cable system in the city of Louisville?

A. Yes, sir; we have under consideration, right at once, an extension which is estimated to be something like $20,000, that is to take on customers in a part of the city where the facilities are already exhausted and the growth is increasing.

Q. 16. How far has that progressed? Have the local rep-
2105 resentatives——

Mr. BLAKEY: I don't think we ought to go into all these questions. They are not in rebuttal of anything and they are not matters which were left open at all.

The COURT: Let the witness go on.

Mr. BLAKEY: I would like the Master to state whether or not it was his understanding, when we left New York, after taking Mr. Wilkerson's deposition that Mr. Granbery had closed his case?

The COMMISSIONER: I understood that Mr. Caldwell was going to testify. I don't know whether I got it right at that time or when it was, but I have been under that impression, and at some stage of the proceedings since we were in Nashville, I know I suggested that I would like to hear Mr. Caldwell on several points.

The last question was read to the witness by the stenographer.

Q. 17. Have the local representatives of the company taken any action in regard to that extension of the cable system in Louisville?

A. They have notified the central office that there was a need for such facilities, and the engineers have the matter up for making up the estimates.

Q. 18. Did the general manager have anything to do with the matter?

Question objected to as hearsay.

2106 A. Yes, sir; the General Manager has been here and had the matter up with me, and discussing the kind and extent of the investment that will be made.

By the COMMISSIONER:

Q. 19. Do you apprehend that a reduction in the rates here would bring about a sudden increase in the number of subscribers?

A. The effect, I think, would be two-fold: First, that there would be an immediate and sudden increase in business, and that the effect on our business at large, would be to drag it all down. In other words, we could not possibly sustain rates elsewhere out of parity with Louisville.

By Mr. GRANBERY:

Q. 20. Now, on that point: Suppose the rates should be reduced at other points in the company's system on a parity with the rates prescribed by the Louisville rate ordinance, what would be the effect on the company's business?

A. It would be very pronounced, and to the extent that I unhesitatingly say that it would bankrupt it.

Q. 21. Now, coming to the question of Depreciation, I will ask you to state in your own way as fully as you can, what is depreciation, how it is treated by your company, and how it is handled?

A. Depreciation covers—in other words, when I am considering depreciation and when I am discussing it, it covers quite a wide field. Not only is contemplated the wear and tear that is not observable or that does not require immediate attention, but it
